# ATOMIC ENERGY COMMISSION FELLOWSHIP PROGRAM

MONDAY, MAY 18, 1949

CONGRESS OF THE UNITED STATES,  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The committee met at 2:30 p. m., pursuant to call, in room 301, Senate Office Building, Senator Brien McMahon (chairman) presiding.

Present: Senator McMahon, Representative Durham (vice chairman), Senators Knowland and Hickenlooper; Representatives Price, Kilday, Cole, and Elston.

Also present: William L. Borden, Executive Director, and Harold Bergman, Deputy Director, Joint Committee on Atomic Energy.

The CHAIRMAN. The meeting will come to order.

As the committee knows, we have scheduled a full investigation of the fellowship program of the AEC. The fellowship program is a matter on which the staff and the chairman of the committee at least, and the ranking member have been working for some time. A preliminary meeting was held about 10 days ago in executive session.

We have before us, the Senate members of the joint committee, the nominations of Dr. Smyth and Mr. Dean. In Dr. Smyth's hearing on last Thursday, he was interrogated as to his attitude on the fellowship program. In view of the fact that confirmation hearings have been set for tomorrow morning on both Dr. Smyth and Mr. Dean, it is only fair to the nominees, to the Commission, and to the public that this matter should be gone into at least in a preliminary way as expeditiously as possible. I have therefore requested the Commission to come up here today; and Mr. Lilienthal, Mr. Strauss, and Mr. Pike, the three members of the Commission who are in office, are here with us.

Mr. Lilienthal, I would appreciate it if you would sit down next to the stenographer. Would you prefer to make a statement on the fellowship program at this time?

## STATEMENT OF DAVID E. LILIENTHAL, CHAIRMAN, ATOMIC ENERGY COMMISSION, WASHINGTON, D. C.

Mr. LILIENTHAL. Yes, Mr. Chairman and members of the committee, I would like to make a general statement.

The members of the Commission and of its scientific and technical staff are glad of an opportunity to discuss with the members of the joint committee some of the difficult and very trying and puzzling problems that arise in connection with the administration of the fellowship program in the nonsecret fields.

There is present in the hearing room the President of the National Academy of Science, Dr. A. Newton Richards, who is in charge of the

program of medical study and research at the university, and as President of the National Academy of Science, is head of the organization of which the National Research Council is the agency. This latter agency is the organization which is actually administering and awarding fellowships under this program. I should hope that before the hearing is over, the committee would hear the views of Dr. Richards.

Dr. Bronk, the president of Johns Hopkins and the head of the National Research Council, is out of the city today, but is expected back, I should think, tonight; and I should hope that his views would be received by the committee.

The Commission also has present, in addition to our colleagues on the Commission, Dr. Shields Warren, distinguished pathologist, and director of the Commission's Division of Biology and Medicine, and I believe his views would be of relevance and useful to the committee.

### BACKGROUND OF FELLOWSHIP PROGRAM

I would like to make a brief statement of the background of the fellowship program and its purposes, and I should like to emphasize first of all that this program does not relate to the secret side of atomic energy development; that these fellows have nothing to do with atom bombs; that the purpose of the fellowship program is to uncover and to develop great and rare talents for an urgent need in the fundamental sciences, to increase the knowledge of this country in the fundamental sciences, and to emphasize that the Commission, being reluctant that the Federal Government should directly intervene in educational efforts in this country; anxious that the Federal Government should not meddle in education, has adopted the expedient of asking the National Research Council, a private organization with a distinguished membership, to administer this fellowship program and to select the fellows, to make the awards.

We are concerned about the problems that these selections have raised. We are glad that the committee is conducting hearings on them. We want to assure the committee that these have been given as much time as the Commission could possibly devote to the matter and that this delima presented by this problem will be before the country, we are sure, for years and years. There is no easy solution, we believe, to the problem presented.

In January of 1948, the Atomic Energy Commission established a fellowship program providing stipends for graduate students for study and research at universities in biology and medicine and the physical sciences. The program was established in compliance with responsibilities assigned the Commission by the Atomic Energy Act. Specifically, the act directs the Commission, in section 1b (1), to set up a program of—

assisting and fostering private research and development to encourage maximum scientific progress.

These are words from the McMahon Act. And in section 3a, again quoting:

to insure the continued conduct of research and development activities by private or public institutions or persons, and to assist in the acquisition of an expanding fund of theoretical and practical knowledge—

in fundamental science.

Senator HICKENLOOPER. Mr. Chairman?

Would you mind if I interrupted, Mr. Lilienthal?

Mr. LILIENTHAL. I would like to finish this brief statement, if it is possible, Senator.

Senator HICKENLOOPER. I merely wanted to inquire whether you interpret that as extending to all the fundamental sciences, that is, all of the sciences, or whether in the act it connotes enlargement of knowledge in the nuclear field:

Mr. LILIENTHAL. I believe the answer is that it is not limited, as you suggest; although it may not be as broad as the other alternative.

The work carried on under the fellowship program is overwhelmingly concerned with nonsecret areas of research in the fields of biology and medicine and in the physical sciences. These are, of course, fields in which there is graduate work being done by private institutions and in which there is no security interest to prevent the traditional openness and free exchange of science of which this country is proud, and so rightly proud.

Research projects in the medical field include, for example, such studies as developmental genetics, the biophysical study of the nervous system, fundamental physical aspects of structure, and function of cells and tissue, nuclear acids, and nucleo proteins in normal and cancer tissue, the effect of radiation on viruses, and other comparable subjects.

A fellow in the physical sciences may study quantum mechanics and statistical mechanics applied to rate processes, or such a subject as the relativistic invariant meson theories as applied to the explanation of nuclear forces.

Dr. Warren will later describe, if there is an opportunity, the purpose and the need of a fellowship program in somewhat more detail.

Ever since the war, it has been generally recognized, and especially by such distinguished gentlemen as Dr. Conant of Harvard and Dr. Bush and others, that to carry forward the Nation's scientific development, means must be found to insure our continued scientific advance and in particular to overcome the critical shortage of trained scientists. Most of the discussion of the proposed National Science Foundation has, therefore, centered not about the need for such an agency but about the manner in which it is organized and administered.

In the absence of a special agency such as the proposed National Science Foundation, the Commission undertook the fellowship program in an effort to assist in enlarging the reservoir of trained scientific personnel in selected areas of physics, biology, and medicine.

The establishment of the fellowship program was strongly urged on the Commission by its scientific advisors. And you will recall, Mr. Chairman and members of the committee, that the system of advisory committees is not only authorized by law, but, in the case of the general advisory committee, and, I believe, in the case of one or two other committees, it is clearly the policy of the Congress that the Commission should be assisted by these advisory committees. The General Advisory Committee set up by the McMahon Act to advise on scientific and technical matters, recommended strongly the setting up of such a fellowship program.

The Advisory Committee on Biology and Medicine, which is headed by Dr. Alan Gregg of the Rockefeller Foundation, director of medical studies for that foundation, strongly endorsed the establishment of such a fellowship program, especially in view of the lack of any other agency to take immediate steps to build up the number of scientists trained in these fields of such wide consequence to our daily life.

It is expected that some of the scientists trained through the fellowship program may be utilized in the national atomic energy program, although no commitments as to employment are made at the time of the fellowship award. Many of the fellows, however, will continue in nonsecret work outside the Commission's program where they will make substantial contributions to scientific progress.

For the administration of the program, the Commission turned to the most experienced agency for the development of scientific talent, the National Research Council, chartered by the Congress as the primary scientific advisory group to the country. There is, we believe, no other group so well qualified and experienced to select and develop young scientists of unusual ability and promise. These are the men who have searched for rare talents, who have been really looking for nuggets of great value; and these they have succeeded in finding.

The success of the Council's methods and procedures, which the Commission, of course, considered in deciding whether it was not the most appropriate agency for the selection of these fellows, is attested by even a brief listing of some of the fellowship holders of the past. Included among them are names that are very familiar in the scientific field, including Dr. J. Robert Oppenheimer, the wartime director of the Los Alamos laboratory; Dr. Robert F. Bacher; Dr. Samuel K. Allison, director of the Institute of Nuclear Studies of the University of Chicago; Dr. Norris E. Bradbury; Dr. E. U. Condon, the present Director of the National Bureau of Standards; Dr. Lee A. DuBridge, president of the California Institute of Technology; Dr. W. V. Houston, president of Rice Institute; Dr. E. O. Lawrence, the inventor of the fabulous cyclotron; and Dr. Henry D. Smyth. These are among the men whose names are now famous throughout the world, but who were selected as research fellows when they were relatively young men.

The Commission gave long and careful consideration to the question of requiring investigation and security clearance of fellows engaged in nonsecret work comparable to or parallel to that kind of investigation which the law requires and which is carried out in the case of those who have access to restricted data; that is to say, the FBI investigations and so on. The views of the Commission on this question were transmitted to the Joint Committee in our letter to the chairman of the Joint Committee, Senator Hickenlooper, under date of October 11, 1948. This letter also includes a list of the fellowship boards, the names of the gentlemen who would administer this program, the so-called fellowship boards of the National Research Council. And I would think it would be appropriate if, with your permission, Mr. Chairman, I were to insert this letter into the record at this point.

The CHAIRMAN. Without objection.

## CORRESPONDENCE REGARDING FELLOWSHIP PROGRAM

(The letter referred to, together with prior and subsequent correspondence later directed to be inserted at this point, is as follows:)

JULY 30, 1948.

Mr. DAVID E. LILIENTHAL,  
*Chairman, Atomic Energy Commission,*  
*Washington, D. C.*

DEAR MR. LILIENTHAL: The fellowship program of the Atomic Energy Commission has been reviewed with considerable interest by various members of the Joint Committee. The question has arisen as to the nature of the investigation, if any, which is performed on the character, loyalty, and associations of these individuals prior to the awarding of such fellowships.

It is an assumption on the part of the Joint Committee that the purpose of this fellowship program is to establish a nucleus of highly trained individuals who will increase the general knowledge in scientific fields and at the same time provide a pool from which some individuals will be drawn to active employment on the atomic energy program.

Unless an investigation is performed, is it conceivable that we may someday find ourselves in the position of having, with Government money, subsidized the education of a potential subversive who is not eligible for employment on the atomic energy program?

The Joint Committee will appreciate a statement of the views of the Atomic Energy Commission on this subject.

Yours sincerely,

B. B. HICKENLOOPER,  
*Chairman, Joint Committee on Atomic Energy.*

---

UNITED STATES ATOMIC ENERGY COMMISSION,  
*Washington, D. C., August 24, 1948.*

Hon. BOURKE B. HICKENLOOPER,  
*Chairman, Joint Committee on Atomic Energy,*  
*Senate Office Building, Washington, D. C.*

DEAR SENATOR HICKENLOOPER: Your letter of July 30, 1948, requested a statement of the Commission's views on the nature of the investigation which should be conducted on individuals who are awarded fellowships under the Commission's fellowship program.

This matter has been under continuous review by the Commission and its staff. We had hoped at this time to be able to furnish you with a complete report, but now find that the Commission will not be in a position to discuss it again until its next regular meeting, which is now scheduled for early in September. At that time we shall give you a full statement of our views.

Sincerely yours,

UNITED STATES ATOMIC ENERGY COMMISSION,  
SUMNER T. PIKE, *Acting Chairman.*

OCTOBER 11, 1948.

Hon. B. B. HICKENLOOPER,  
*Chairman, Joint Committee on Atomic Energy,*  
*Senate Office Building, Washington, D. C.*

DEAR SENATOR HICKENLOOPER: This is in response to your letter of July 30, 1948, inquiring as to the procedure followed in the selection of fellows for the Commission's fellowship programs, which are administered by the National Research Council. You will recall that we wrote you regarding this matter on August 24, and advised you that we were working on a statement of our views for submission to the Joint Committee.

As you know, the National Research Council was selected for administration of the fellowship programs in view of its long and distinguished record in such work. It was felt that the fellowship programs would benefit from the Council's long experience in this field, and at the same time the Commission would be free from the burdens of detailed administration.

In order to assure the selection of well-qualified fellows, the National Research Council has established fellowship boards which review the applications received for AEC fellowships. The membership of these fellowship boards is as follows:

### MEMBERSHIP OF FELLOWSHIP BOARDS

#### Predoctoral Fellowship Board in the Biological Sciences:

- Douglas Whitaker, Chairman, professor of biology, dean of the School of Biological Sciences, Stanford University, Calif.
- Eric G. Ball, professor of biochemistry, Harvard Medical School, Cambridge, Mass.
- J. H. Bodine, professor of zoology, University of Iowa, Iowa City, Iowa.
- Howard B. Lewis, professor of biological chemistry, director of the College of Pharmacy, University of Michigan, Ann Arbor, Mich.
- Raymond E. Zirkle, professor of botany, director of the Institute of Radiobiology and Biophysics, University of Chicago, Chicago, Ill.

#### Postdoctoral Fellowship Board in the Medical Sciences:

- Homer W. Smith, Chairman, professor of physiology and director of physiological laboratories, New York University College of Medicine, New York, N. Y.
- Austin M. Brues, associate professor of medicine, University of Chicago, Chicago, Ill.
- Sam L. Clark, professor of anatomy, Vanderbilt University, Nashville, Tenn.
- Hymer Louis Friedell, professor of radiology, Western Reserve University, Cleveland, Ohio.
- Joseph G. Hamilton, assistant professor of medicine and radiology, University of California, Berkeley, Calif.
- Roy R. Kracke, dean, School of Medicine, University of Alabama, Birmingham, Ala.

#### Postdoctoral Fellowship Board in Biology and Agriculture:

- R. G. Gustavson, Chairman, chancellor, University of Nebraska, Lincoln, Nebr.
- H. K. Hartline, professor of biophysics, Johnson Research Foundation, University of Pennsylvania, Philadelphia, Pa.
- G. Evelyn Hutchinson, professor of zoology, Yale University, New Haven, Conn.
- William J. Robbins, professor of botany, Columbia University, director of New York Botanical Gardens, New York, N. Y.
- L. J. Stadler, professor of field crops, University of Missouri, Columbia, Mo.

#### Predoctoral Fellowship Board in the Physical Sciences:

- Henry A. Barton, Chairman, director, American Institute of Physics, New York, N. Y.
- John C. Bailer, Jr., professor of chemistry, University of Illinois, Urbana, Ill.
- Tom W. Benner, professor of physics, Rice Institute, Houston, Tex.
- William J. Buchta, professor of physics and chairman, department of physics, University of Minnesota, Minneapolis, Minn.
- G. A. Redlund, professor of mathematics, University of Virginia, Charlottesville, Va.
- Charles C. Price, professor of chemistry and head, department of chemistry, University of Notre Dame, Notre Dame, Ind.

#### Postdoctoral Fellowship Board in the Physical Sciences:

- Roger Adams, chairman, professor and head, department of chemistry, University of Illinois, Urbana, Ill.
- Carl D. Anderson, professor of physics, California Institute of Technology, Pasadena, Calif.
- Kenneth T. Bainbridge, professor of physics, Harvard University, Cambridge, Mass.
- George Clockler, professor of physical chemistry and head, department of chemistry and chemical engineering, State University of Iowa, Iowa City, Iowa.
- William W. Rubey, principal geologist, United States Geological Survey, Washington, D. C.
- Marshall M. Stone, Andrew MacLeish Distinguished Service professor of mathematics, and chairman, department of mathematics, University of Chicago, Chicago, Ill.

These fellowship boards were chosen by the National Research Council particularly with a view to their ability to evaluate the scientific promise and moral character of prospective fellows. In considering applications, the fellowship boards have before them confidential reports on the candidate which are received

from men of proved scientific ability who are familiar with the candidate and in whom the fellowship boards have confidence. In addition, in the case of the postdoctoral fellowships in the medical sciences, the candidate is also interviewed by a member of the fellowship board. In the deliberations of the fellowship boards, we understand that careful consideration is given to the question of character.

Before any fellow is given access to restricted data or permitted to work on a Commission project where security clearance is normally required, the usual AEC security clearance must be obtained.

On the other hand, if the fellow does not have access to restricted data or does not work on a Commission project where security clearance is normally required, it is our policy that security clearance need not then be obtained. Some of the reasons underlying this policy are enumerated below.

(a) The Commission has confidence in the methods of selection followed by the National Research Council, which are in line with the experience accumulated by the Council over the last 25 years in handling National Research Council fellowships.

(b) To a large extent, the work to be done under the fellowships will not involve access to restricted data, and the fellows will receive training in fields which are and will remain proper fields for unclassified work in which security clearance will not be necessary.

(c) The requirement for full background investigation and security clearance would place a heavy administrative burden on the fellowship program, and such a requirement appears inadvisable except where it will genuinely serve the interests of security.

Attached for your information is a letter dated July 27 from NRC setting forth their views in this regard.

In your July 30 letter you pointed out that unless an investigation is performed at the outset, it is conceivable that a person may receive a fellowship award who would not be eligible for employment in the atomic energy program. Since it is our policy that fellows will receive security clearance only when they have access to restricted data or work at classified projects, we recognize the possibility of a fellow being barred from certain work after he has received his fellowship. We have considered this carefully and have decided that the interests of the fellowship program as a whole will best be served by the policy we have outlined. It is our firm conviction that by pursuing this policy we will obtain more qualified fellows and achieve fuller cooperation from the scientific community of this country than would be the case if we adopted the principle of requiring security clearances at a time when it is contemplated that fellows will not have access to restricted data.

Furthermore, in terms of expense, it must be recognized that security investigations are costly, and that the cost of these investigations will be kept to a minimum when they are carried out only when the particular person is to have access to restricted data. It is probable that many of the fellows will always be engaged in unclassified work, so that the costs of security investigations as to them could well be an unnecessary expense to the Government if undertaken prior to the award of the fellowships.

One applicant in the field of medical research, who was selected by the postdoctoral fellowship board as having outstanding ability and awarded a fellowship, had applied to work in the Berkeley Laboratory of the University of California, where he would come in contact with restricted data. A security check developed that derogatory information existed. In this case, arrangements have been made for the individual to carry on his fellowship work at a hospital where it is believed that no possible questions of security would be involved. Our Director of Biology and Medicine, who has carefully considered this case, is of the opinion that this particular individual shows sufficient scientific promise to give grounds for believing that the country will obtain a good return on its investment in his fellowship award.

It is the Commission's view that the selection procedures outlined in this letter are procedures well adapted to furthering the needs of the atomic energy program, and that they should continue to be followed, subject to such modifications as may be desirable in the light of further experience. Procedures along these general lines are believed to strike a satisfactory balance between the traditional ideals of scientific freedom, long proved to be essential to productive thought within the framework of democracy, and the special requirements which the national interest dictates shall be observed in the atomic energy program.

Sincerely yours,

UNITED STATES ATOMIC ENERGY COMMISSION,  
DAVID E. LILIENTHAL, *Chairman*.

JANUARY 12, 1949.

Mr. DAVID E. LILIENTHAL,  
*Chairman, United States Atomic Energy Commission,  
Washington, D. C.*

DEAR MR. LILIENTHAL: On July 30, 1948, I addressed a letter to the Commission inquiring as to the procedure followed by the Commission in the selection of fellows for the Commission's fellowship programs. The specific question which I raised was whether or not candidates for fellowships were investigated as to their character, loyalty, and associations prior to the granting of such fellowships. I pointed out that in the absence of the investigation it was possible that the Commission might one day find itself in the position of having expended Government funds for the education of a potential subversive who could not be utilized on any restricted phase of our atomic energy program.

By letters dated August 4 and October 11, 1948, the Commission has clarified the procedures which are being followed in the selection of these fellows and the joint committee has been informed of the policy decision by the Commission not to require investigations as to the character, loyalty, and associations of applicants prior to the granting of a fellowship.

In the interim period between the establishment of the fellowship program and the setting up of this policy by the Commission I am informed by the staff of the joint committee that some fellowship applicants were investigated. Since the records of these investigations are, of course, included in the Commission files, it would be presumptuous of me to call your attention in detail to the substantial derogatory information which has been disclosed upon some of the candidates who were subsequently authorized to receive Government stipends. However, to take one example—i. e., the case of (name deleted)—a situation now exists where public funds are being expended for the education and training of a specialist in the nuclear field who is potentially subversive and whose record surely precludes his utilization on any restricted phase of our atomic energy program.

There are other cases where the investigations revealed Communist membership or long association with potential subversive organizations to such a degree as to cast reasonable doubt and strong suspicion upon their desirability.

Since only a few of the present fellows were investigated before the Commission inaugurated the policy of not requiring investigations, the Joint Committee on Atomic Energy has no way of knowing how many of the rest of the present fellows have similar proclivities.

I realize that the decision not to require prior investigations as to the character, loyalty, and associations of these fellows is an administrative decision of the Atomic Energy Commission but I must reiterate that in my personal opinion, when the facts are known, the expenditure of Government funds for the education of a Communist is indefensible and could easily subject our atomic energy program to justified criticism.

This is a matter which I intend to call to the attention of the joint committee at its first session.

Very truly yours,

B. B. HICKENLOOPER,  
*Chairman, Joint Committee on Atomic Energy.*

Mr. LILIENTHAL. It was the opinion of the National Research Council, and of the scientific advisers and staff with whom the Commission consulted, including Dr. Shields Warren, from whom I hope the committee will hear today, that the extension of the investigative process to nonsecret study and research would seriously threaten the interests of the fellowship program as a whole and therefore of scientific progress. More than that, the introduction of security procedures into nonsecret fields, it was feared, would establish a precedent of grave and far-reaching consequence to our scientific and educational system.

The nonsecret research and training work in science carried on under this fellowship program is but a small part of the education and research now financed wholly or in part with Federal funds. Every educational institution in the country, and thousands of students and teachers, are concerned in education under the GI Bill of

Rights, in nonsecret research financed by funds from the agencies of Government, including the National Military Establishment.

The proposed National Science Foundation, and the proposed program for \$300,000,000 annually in educational aid to the States, would greatly widen the range of influence of Federal funds, and therefore increases the potentialities of an error in the decision in this matter.

There would appear to be no question of national security at issue here. The sole question, it seems to us, is how best to operate a fellowship program so as to advance the scientific assets of the country. As I have indicated, it was the conviction and experience of the best-qualified people in the country we could find, a conviction with which we agree, that the Nation will get the most return from its investment by adhering to the procedures for the development of scientific talent tested in the past, and not by adding to these investigations of students engaged in nonsecret studies.

In view of the interest in this question in the scientific and educational community of the country, and of the very great importance, Mr. Chairman, that their confidence and respect and adherence to this program, and other scientific programs of government, be not lost, and because they may well have suggestions to offer that will be helpful to the committee and to the Commission, we respectfully suggest that the Commission may wish to invite the views of representative scientific and educational leaders.

I would say, in conclusion to this general statement, that the Commission is well aware that this is a difficult question. The National Research Council and our staff are anxious to find an answer that will not run counter to the firmly held views of the scientific community upon which this program and other programs depend; and at the same time to take care not to run counter to those deeply held feelings that almost all people have about the payment of public funds to those people who avow, or are discovered to have, views completely antagonistic to those held by this Government and the Constitution.

We see no easy solution. If we can't rely on the judgment of a private, nongovernmental agency, the National Research Council, to select these fellows on the basis of ability and of their indications of great promise in the future, and without the consideration of the political and economic views of such potential fellows, we fear it would invite the danger of the Federal Government itself tying strings related to political and economic views and opinions to educational funds. On the other side, there are the obvious objections involved in some of these particular cases, in which it is proposed on the part of the National Research Council to award fellowships to individuals who have views that at this stage in their lives certainly are completely contrary to the views of most of us, and the purposes of this Government.

As I have said, Dr. A. Newton Richards, the president of the National Academy of Sciences, is here today, and Dr. Shields Warren, and my colleagues, Commissioners Strauss and Pike, and the General Manager, and they will be glad to try to answer questions. I would hope that before the end of the afternoon, in view of the fact that Dr. Richards is from out of town, he might be heard.

The CHAIRMAN. We will endeavor to get to him.

I think it would be well, since you have referred to the National Research Council, for me to read into the record a very short paragraph [reading]:

The National Research Council was organized in 1916 by the National Academy of Sciences under the congressional charter of the Academy. Its organization was requested by President Wilson as a measure of national preparedness. The National Research Council was perpetuated by the National Academy of Sciences on April 29, 1919, in response to President Wilson's further request as expressed in Executive Order 2859, dated April 11, 1918, with duties as prescribed in the order.

Mr. LILIENTHAL, I call your attention to page 14 of the act, under (B), subsection (ii) [reading]:

Except as authorized by the Commission in case of emergency, no individual shall be employed by the Commission until the Federal Bureau of Investigation shall have made an investigation and report to the Commission on the character, associations, and loyalty of such individual.

You stated in the course of your remarks that the Commission had given consideration to the procedures by which these selections were made. Did you consider this section of the act as bearing upon the method of selection?

Mr. LILIENTHAL. Yes; in this sense, Mr. Chairman: The question was raised, of course, as to whether the recipients of these awards, these fellows, are employed by the Commission. And you were advised they were not employed by the Commission.

The CHAIRMAN. I would be interested in the opinion on that. I think the average layman reading it might come to a contrary conclusion. Could you give us the basis upon which, or the reasoning upon which, that finding has been made?

Mr. LILIENTHAL. I am unable to. Mr. Volpe is here, and we might also put into the record at this point a memorandum of law on this and related questions. There are other questions of a similar character.

The CHAIRMAN. Have you got it with you, Mr. Volpe?

Mr. VOLPE (Joseph Volpe, Assistant General Counsel, AEC). Yes; we have.

The CHAIRMAN. I think you will agree that that is a basic question. If the legal interpretation of this section would include "stipends," as I believe you called it, then the Commission would have no right to exercise any jurisdiction at all. And it is mandatory; they had to have these boys investigated.

Mr. LILIENTHAL. That is correct.

The CHAIRMAN. While he is locating that opinion: How many fellowships have been granted to date?

Dr. WARREN (Dr. Shields Warren, Director of Biology and Medicine, AEC). There have been 497 granted to date, Senator McMahon.

The CHAIRMAN. How many have been investigated by the Federal Bureau of Investigation?

Dr. WARREN. I believe my information is correct that there are 103. I would like an opportunity to verify that. These were men who were intending to work in fields in which there was classified or restricted data, actually.

The CHAIRMAN. In other words, do I understand that all of the men who, it was anticipated, would engage in secret research were investigated by the Federal Bureau of Investigation?

Dr. WARREN. Yes; all such were investigated. It is also my memory that there were some 48 others who were investigated in a

very early stage of the program, in an effort to determine what sort of individuals were applying for these fellowship programs, and to determine the way in which security clearance might be a factor one way or the other.

The CHAIRMAN. Then do I gather that you desisted after you had begun the program of investigation; that you desisted and changed your policy?

Dr. WARREN. I do not think that it was actually a change in policy, sir. It was simply an experiment carried out initially before the policy had been finally set.

The CHAIRMAN. It has always been, and I am sure will always be, the policy of this committee not to try anybody in absentia. There has been a question raised as to one other in addition to Mr. Freistadt, and I think it would be well if his name should remain unknown at the present time until we can determine what course we are going to take in the future. I think it is fair to mention Mr. Freistadt, because he has chosen to give out interviews in the press, and he has chosen to state his opinions.

Was he investigated by the FBI?

Dr. WARREN. So far as I know Mr. Freistadt has not been investigated by the FBI.

The CHAIRMAN. He was one of those who came in after the policy of investigating was stopped?

Dr. WARREN. Yes; that is correct.

The CHAIRMAN. He had to have recommendations to get into the program, did he not?

Dr. WARREN. He did, sir. He had to have three recommendations from recognized scientists in the universities under whom he had worked.

The CHAIRMAN. And were those recommendations furnished?

Dr. WARREN. Those recommendations were furnished.

The CHAIRMAN. By professors of what university?

Dr. WARREN. The Virginia Polytechnic Institute, and the University of North Carolina.

Representative DURHAM. Could you give us the names?

Dr. WARREN. I can.

May I refer to Dr. Richards for the names of the men recommended?

# STATEMENT OF DR. A. NEWTON RICHARDS, PRESIDENT, NATIONAL ACADEMY OF SCIENCES

Dr. RICHARDS. Professor Rosen, the head of the department of physics of the University of North Carolina, Associate Professor Bowers in the same institution, and Professor Wright of the Virginia Polytechnic Institute.

The CHAIRMAN. Now, have I got that right? Professor Rosen?

Dr. RICHARDS. Rosen, R-o-s-e-n.

The CHAIRMAN. Professor Bowers? And they were both of North Carolina?

Dr. RICHARDS. Yes.

The CHAIRMAN. And Professor Wright of the Virginia Polytechnic Institute.

Dr. RICHARDS. Yes.

The CHAIRMAN. What was their opportunity for knowing Freistadt?

Dr. RICHARDS. I will have to refresh my memory for a moment, Mr. Chairman, but I think I can do it quickly.

Representative DURHAM. Could you give us the initials of those professors?

Dr. RICHARDS. I will. Mr. Freistadt worked at the University of North Carolina from 1946 to 1948, and he worked at the University of Chicago from 1942 to 1944. He was in the service from 1944 to 1946.

The CHAIRMAN. Whereabouts?

Dr. RICHARDS. In ASTP. That means Army Students Training Corps.

The CHAIRMAN. Where did he spend his time on that?

Dr. RICHARDS. I am not sure, Mr. Chairman. I had better not guess.

The CHAIRMAN. He was not investigated by the Federal Bureau of Investigation, was he?

Dr. RICHARDS. Not to my knowledge.

The CHAIRMAN. From 1946 to 1948 he was at the University of North Carolina. From 1942 to 1944 he was at Chicago. And in the middle years, 1944 to 1946, he was in the Army students training program.

Dr. RICHARDS. Yes. And as such, he was a member of the Army of the United States. Three-quarters of the time he was in that Army students training program.

Representative COLE. Mr. Chairman, I did not understand the Doctor's response. Three-quarters what?

Dr. RICHARDS. I have a note here. I can get it absolutely correct by getting the original document.

Representative COLE. I just did not understand what it was you said, Doctor. I was not asking for amplification.

Dr. RICHARDS. His statement here is in answer to the question as to a brief outline of wartime research, military or other Government service during World War II. The answer is, "Army of the United States, 1944 to 1946 (three-quarters ASTP) inclusive."

The CHAIRMAN. What are you reading from, Doctor?

Dr. RICHARDS. I am reading from a photostat of his application for a fellowship.

The CHAIRMAN. Could I see that?

Dr. RICHARDS. Certainly.

The CHAIRMAN. Was there any mention by these three professors who recommended him, or any comment as to his loyalty?

Dr. RICHARDS. No comment as to his loyalty. He had, of course, to take an oath of allegiance when he joined up, in 1944.

The CHAIRMAN. One of these gentlemen said that in his judgment the candidate was of excellent character and personality. Another one said: "I believe candidate is of good character. He does not have an outstanding personality. If he has any physical handicaps, I am not aware of them." Another one: "He has a pleasant personality, is serious and conscientious, leads a sober, well-regulated life, has strong will power and the courage of his convictions."

It goes on to say that he is a man of his word and unusually efficient and reliable in carrying out the assigned tasks.

Have you, since this question has been raised, been in touch with any of these three men?

Dr. RICHARDS. No, sir.

The CHAIRMAN. Do you not think it is somewhat unusual that they recommended him for a fellowship, in the light of what has now developed?

Dr. RICHARDS. In retrospect; yes.

Representative DURHAM. In other words, Doctor, you do not believe in educating Communists?

Dr. RICHARDS. That question I hope I will not be required to answer by "Yes" or "No."

Representative COLE. Mr. Chairman, may we have the considerations which the doctor has in mind when he requests that he not be required to answer the question categorically?

Dr. RICHARDS. I will be glad to.

May I interject this, before I answer the gentleman's question: I have prepared a short general statement, yesterday afternoon, as a matter of fact, which I hoped to be able to read before questions came to me. However, I am at your disposal.

The CHAIRMAN. I think it is all right, Doctor, that you be permitted to read your statement. We will probably be back to that question, though.

Dr. RICHARDS. I haven't the slightest doubt that you will.

With your permission I would like to say that I approached this hearing not in any sense to speak for the National Academy of Sciences.

I have been a teacher in schools of medicine at three universities for 41 years, and more recently vice president of one of them, the University of Pennsylvania, and have had the experience that came from chairmanship of the Medical Research Committee of the Office of Scientific Research and Development during the war.

I was saying that I am in no way authorized to speak for the National Academy of Sciences, and I want to tell you, too, that in a sense, I am pinch-hitting for the Chairman of the National Research Council, because of his absence.

The National Research Council is the operating agency, as you have been told, of the National Academy, and as such the National Academy has to assume responsibility for what the Research Council does. But my next duty, of fellowship appointments, or considerations, has not been a direct one, and that is responsible for some of the hesitation that I may have in answering your question.

Here is the statement:

The question as I understand it is: Shall the young men and women who have been selected by the National Research Council to receive fellowships in the nonsecret study and research supported by Atomic Energy Commission funds be subjected to investigation as to their political beliefs or affiliations—specifically their attitude toward communism?

Security considerations are not involved. Any AEC fellow, who is to be placed in an institution in which he would have contact with or access to secret data, must be investigated and obtain formal, official clearance.

The vast majority of fellowships already awarded—and I am confident that this will be true of those of the future—are given in fields of study and research which are nonsecret—fundamental physics,

mathematics, medicine, biology, agriculture, metallurgy—fields in which all agree that the free exchange of results by publication is in the national interest. The official announcement of the fellowships contains the statement that—

the research to be pursued by a Fellow should preferably be conducted with a problem which will permit unrestricted publication of results.

As I understand it, the primary purpose of the Atomic Energy Commission in financing fellowships is to recruit into new and fertile areas of investigation in the physical, medical, biological, agricultural sciences which have been opened up by developments in nuclear physics, young men and women of unusual ability and promise in large numbers. Thus the advance of knowledge in those sciences shall be accelerated for the good of the whole people—indeed of the whole world. It is not the sole purpose to train young scientists to go to work in the Government-financed atomic energy programs, though it is expected that some will go into this program.

My approach to the question of whether investigative procedures should be applied to young people who might enter nonsecret study and research is influenced by the fact that the greater part of my life has been spent in teaching and research; and by the knowledge which I have thus acquired of the character and qualities of mind of just such young people as those who have been and will be selected for Atomic Energy Commission fellowship awards.

Understand that the very small fraction of our population who are eligible for these fellowships is made up of unusual individuals. Their mental qualifications have been found to be exceptionally high; commendatory references have been obtained from their professors with whom they have worked; they have become enamored of science and are preparing to devote their lives to it. Their devotion to science implies curiosity, love of nature, and desire to understand her laws, sincerity, honesty, and devotion to truth. It implies eagerness to explore new fields, to learn something which no one else at the time knows and to contribute such knowledge as they may gain to the common pool.

Suppose there is a Communist among those selected, and that he receives a fellowship. Whether or not he can be used in secret governmental projects, his training will have added one more to the group—now far too small—of those capable of utilizing knowledge of nuclear energy and of its products in the advancement of medicine, biology, agriculture, and, at need, could release for Government classified service another who possessed no disqualifications. The country will have been the gainer by his training. That is point No. 1.

Next, I hope you will consider what the effect upon future applicants will be, if a rule be made that each successful applicant shall be subjected to an investigation of his political and social views. If not generally known now, it would soon become generally known that the information collected about an individual in such an investigation is not limited to probable facts, but of necessity includes hearsay accounts of associations, of the opinions or suspicions of neighbors or companions possibly colored by personal prejudice—

The CHAIRMAN. Doctor, can I interrupt you right there?

Dr. RICHARDS. Certainly.

The CHAIRMAN. Of course, an applicant for a United States attorney's job takes the same kind of a report. You realize that. In other

words, if the Attorney General is going to designate John Brown to be an assistant United States attorney for the district of Philadelphia, before he is sworn in as assistant district attorney there is an investigation made by the FBI of his character, loyalty, and associations. That is so for every employee of the Federal Government, as I understand it.

Dr. RICHARDS. Yes.

The CHAIRMAN. Is that not true?

Dr. RICHARDS. Yes. I would certainly agree with you. But we are not now talking about employees of the Federal Government.

The CHAIRMAN. Of course, I have just been looking at this opinion, which is quite a lengthy opinion, from Mr. Volpe. I think it is quite an important matter in this proceeding. I have great respect for Mr. Volpe, who is associate general counsel, but I certainly want to read this opinion very carefully, in which he comes to the conclusion that they are not within the operations of the provisions of the act that I read to Mr. Lilienthal.

You are proceeding, however, now, on the basis that there is no question about that at all, and that they are not employees under the law.

Dr. RICHARDS. I am not maintaining that I am competent to decide such a question. I do know, however, that these stipends are not taxable.

The CHAIRMAN. They are not taxable?

Dr. RICHARDS. No.

The CHAIRMAN. That has been ruled on by the Bureau of Internal Revenue?

Dr. RICHARDS. Yes.

The CHAIRMAN. Are they not taxable as gifts?

Dr. RICHARDS. Gifts are not taxable except through gift tax.

The CHAIRMAN. Of course, there is an exemption of a certain amount. The exact amount, I am not aware of. The gift tax supplements the income tax.

Dr. RICHARDS. Who, in this case, would pay the gift tax?

The CHAIRMAN. I am not worried about that. What I am trying to find out is whether you are assuming, as you start your statement, or as you proceed, that the legal conception of these men as not being employees of the Federal Government is correct.

Dr. RICHARDS. Yes, I have to assume that, on the basis of such knowledge as I possess.

The CHAIRMAN. And it is upon that distinction that you rest your opinion that it is not necessary to have these men examined by the Federal Bureau of Investigation?

Dr. RICHARDS. Yes, sir. Shall I proceed?

The CHAIRMAN. Yes.

Dr. RICHARDS. I was about to say that knowledge that successful applicants were to be subjected to FBI investigation would, I believe, act to deter sensitive young people, some of them desirable, from applying.

The FBI does not, as I understand it, pronounce a judgment; it simply provides data upon the basis of which the agency at interest would judge. The decision would have to be made by the Atomic Energy Commission. The National Research Council, not being a Government agency, ought not to be empowered to make such a

decision, and if empowered should not accept the responsibility as not being within its competence. The Atomic Energy Commission would therefore be faced with decisions, extraordinarily difficult in some cases, whether a leaning, an association, a tendency to be critical of some of the weaknesses in our form of government constituted a basis for disqualification.

The effect of a disqualification by AEC of a successful applicant on political grounds, would be a stigma—a wound—which would be apt never completely to heal—and it would be given at an age at which it could well produce the greatest degree of damage. It is intolerable to me to think that in order to assure our taxpayers that their money is not being spent in the training of Communists, we must subject a most precious part of our intellectual resources to the risk of hurt involved in such investigation, where no question of security is involved.

If saving of taxpayer's money is an issue, a balance should be drawn between the cost of conducting FBI investigations of the hundreds of successful applicants and the cost of the fellowships for the one or two per hundred who might be disqualified. Is it wise to spend thousands in an effort to avoid an expenditure of hundreds—particularly when one cannot be sure that the expenditure of the hundreds would not be a good investment?

Senator KNOWLAND. Mr. Chairman, right at that point, might I interrupt the doctor to ask a question?

The CHAIRMAN. Yes.

Senator KNOWLAND. You say, Dr. Richards, that one per hundred or so, might be discovered by such an investigation as made in the case of the 103, plus the 48 others who, it has been testified, have been investigated. How many of those, was it indicated, did have Communist affiliations?

Dr. RICHARDS. May I ask Dr. Warren to answer?

Dr. WARREN. There is one in that group who had not had proven against him the matter of membership in the Communist Party, but who, it was proved, had very strong Communist associations. I think in addition there were two others with Communist associations. I would like to check those figures, briefly.

Senator HICKENLOOPER. Just for the record, Doctor: If you and I are thinking of the same case, and one which we discussed at one time, I think the cell to which that man belongs, and I think the cell to which his wife belongs, is known and is in the record.

Dr. WARREN. Thank you very much, Senator.

Senator HICKENLOOPER. That is my belief; I believe the record will bear that out.

The CHAIRMAN. You fully agree, Senator, that we should not mention any names?

Senator HICKENLOOPER. I have no intention of bringing out anybody's name here unless, under other circumstances, it may be absolutely necessary. But I do not believe in unnecessarily bringing out names.

The CHAIRMAN. I knew that that was your position. I just wanted to make it clear so that we can all realize the restrictions, self-imposed, under which we are operating, at least for the present.

Senator HICKENLOOPER. I felt free to mention this to Dr. Warren, because we had had a specific discussion about this case.

The CHAIRMAN. I think that is perfectly all right.

Senator HICKENLOOPER. So we can talk about names here, and about whom we are speaking.

Senator KNOWLAND. As I understand it, in the 151 cases that have been investigated, according to your testimony, there were only three that the FBI indicated had Communist affiliations. Is that the testimony? I want to be clear in my own mind.

Dr. WARREN. As far as I can recall, there are two, Mr. Freistadt and one other, in which the Communist affiliation is definitely established. There are, I think, two additional in which Communist association enters into the picture but affiliation does not.

Senator HICKENLOOPER. Mr. Freistadt was not investigated, however?

Mr. WARREN. We received, after Mr. Freistadt's award had been announced, a report from the FBI which stated that they had certain information that indicated that he was a member of the Communist Party. That was not done as a matter of routine investigation, but was information that was sent by the FBI when the award was announced.

Representative DURHAM. Was that before the award was announced, Doctor?

Dr. WARREN. It was after the award was announced, as far as I am aware. Let me check that with Mr. Volpe, please.

Was that before or after the announcement of the award that we received that FBI information?

Mr. VOLPE. I believe it was after the announcement.

Representative DURHAM. Did you ask for that report from the FBI in the Freistadt case?

Mr. VOLPE. I believe not.

Representative COLE. How soon after the award was the report submitted to the Commission?

Mr. VOLPE. I don't know that.

Representative COLE. Would you mind getting the date and putting it in the record?

Mr. VOLPE. Yes.

(The information referred to is as follows:)

UNITED STATES ATOMIC ENERGY COMMISSION,  
May 25, 1949.

To: Joint Committee on Atomic Energy.

From: David C. Acheson, Office of General Counsel.

On Wednesday, May 25, 1949, the Joint Committee on Atomic Energy called and requested confirmation of the date on which the FBI report on Freistadt was submitted to the Commission and information as to whether an opinion of the General Accounting Office was rendered on the legality of the expenditure of funds for the fellowship program.

I am told by our Security Division that the report on Freistadt was delivered to the Division of Security on April 20, 1949.

The General Accounting Office did not render a formal ruling on the expenditure of funds for the fellowship program, nor was one requested. Mr. Lillenthal appears to have been referring to an informal discussion between representatives of GAO and members of the Commission's staff.

The CHAIRMAN. I would like to place in the record Mr. Volpe's opinion on the nonapplicability of the act to these fellowships.

(The opinion referred to is as follows:)

### NONAPPLICABILITY OF McMAHON ACT TO FELLOWSHIPS

UNITED STATES ATOMIC ENERGY COMMISSION,  
Washington 25, D. C., May 17, 1949.

HON. BRIEN McMAHON,  
Chairman, Joint Committee on Atomic Energy,  
Senate Office Building, Washington 25, D. C.

DEAR SENATOR McMAHON: During yesterday's hearings relating to the Commission's fellowship program you requested that memoranda discussing certain legal questions be furnished for the information of the Joint Committee on Atomic Energy. Accordingly, you will find enclosed the following memoranda:

1. A memorandum dated August 23, 1948, from the associate general counsel to the Commission, considering the question whether there was any requirement of law that security clearance procedures be established for persons receiving the fellowships.

2. A memorandum prepared in the Office of the General Counsel, dated January 22, 1948, relating to the statutory basis for the Commission's fellowship training program in the field of atomic energy as applied to medicine and biology. You will recall that this phase of the fellowship training program was approved by the Commission prior to the research fellowship program. The research fellowship program, which received the Commission's approval on January 28, 1948, provided that each of the fellowships granted should be for research within the fields specified by section 3 (a) of the Atomic Energy Act of 1946.

3. A memorandum dated May 16, 1949, prepared in response to your request at yesterday's hearing, which deals at greater length with the reasons why persons granted fellowships are not employees of the Atomic Energy Commission and why section 102 of the Supplemental Independent Offices Appropriation Act, 1949, is inapplicable to them.

Sincerely yours,

JOSEPH VOLPE, Jr.,  
Associate General Counsel.

UNITED STATES ATOMIC ENERGY COMMISSION,  
Washington, D. C., August 23, 1948.

Memorandum

To: The Commission.

From: Joseph Volpe, Jr., associate general counsel.

Subject: Security clearance of fellows.

This memorandum is submitted in response to the Commission's request for the opinion of the Office of the General Counsel as to whether there is any statutory requirement for security clearance of individuals who are awarded AEC fellowships by the National Research Council. The facts as we understand them are briefly as follows:

The Commission early this year approved the inauguration of two fellowship programs to be administered by the National Research Council. One of these programs is a fellowship training program in the field of the application of atomic energy in biology and medicine; the other is a research fellowship program in the fields of science basic to atomic research and development, within the scope of section 5 (a) of the Atomic Energy Act of 1946. The National Research Council was selected as the contractor for the administration of these fellowship programs, because, as the Commission has previously informed the Joint Committee on Atomic Energy, the Council has a long and distinguished record in administering fellowship programs, and it was felt that the fellowship programs would benefit from the Council's administrative experience and at the same time the Commission would be free from the burdens of detailed administration. Pursuant to arrangements which have been worked out with the National Research Council (a definitive contract, superseding an earlier letter contract, was executed in August) the Council has undertaken the administration of these two fellowship programs on a reimbursable, no-fee basis. In order to assure the selection of qualified fellows, the National Research Council has established fellowship boards which review the applications received, together with reports (which include information on character and personality) on the applicant which are obtained from persons given as references; in the case of postdoctoral fellowships in the medical sciences, the applicant is also interviewed by a member of the board. The National Research

Council has informed the Commission that these selection procedures are in line with the experience accumulated by the Council over the last 25 years in handling National Research Council fellowships.

The Commission is now in receipt of a letter dated July 27, 1948, from the National Research Council, inquiring as to the policy of the Commission regarding security clearance of fellows. The letter states that it is the general, and possibly the unanimous, hope of the members of the Council's fellowship boards that a man should not be barred from participation in the fellowship program because he cannot be cleared; and that it is felt that objections would be encountered with serious consequences if the mere participation in the academic study and research under these fellowships were made conditional on security clearance. The letter recognizes that security clearance would be necessary in the event that a fellow were to have access to restricted data.

It is also our understanding that this question as to security clearance has an immediate importance because, in the case of one of the persons to whom a fellowship award has been announced, information from existing FBI reports indicates probability that the individual is or has been a Communist.

The security provisions of the Atomic Energy Act of 1946 are directed primarily at safeguarding "restricted data" as defined by section 10 (b) (1) of the act. Thus, section 10 (a) states that—

"It shall be the policy of the Commission to control the dissemination of restricted data in such a manner as to assure the common defense and security."

By section 10 (b) (5) (B) (i), provision is made for security clearance by the Commission, after receipt of a report of investigation from the Federal Bureau of Investigation, for persons permitted access to restricted data; this provision is by its terms inapplicable to a fellow who would not have access to restricted data. In addition, section 10 (b) (5) (B) (ii) contemplates the security clearance of all persons who are employed by the Commission, regardless of whether they have access to restricted data. In view of the fact that persons awarded fellowships are in no sense in an employment relationship to the Commission, this provision is likewise inapplicable. Accordingly, in our opinion, the Atomic Energy Act of 1946 does not require that the Commission make the awarding of a fellowship conditional on security clearance, in cases where the fellow will not have access to restricted data during the course of his fellowship.

The next question to be considered is whether there are any other applicable statutes which would prohibit reimbursement of the National Research Council for its expenditures in paying out, pursuant to its contract with the Commission, a fellowship award to a person who is a Communist. Section 102 of the Supplemental Independent Offices Appropriation Act, 1949 (the act which contains the Commission's appropriation for the fiscal year 1949), incorporates the following provision which has appeared in appropriations acts for a number of years:

"Sec. 102. No part of any appropriation contained in this Act shall be used to pay the salary or wages of any person who engages in a strike against the Government of the United States or who is a member of an organization of Government employees that asserts the right to strike against the Government of the United States, or who advocates, or is a member of an organization that advocates, the overthrow of the Government of the United States by force or violence: *Provided*, That for the purposes hereof an affidavit shall be considered *prima facie* evidence that the person making the affidavit has not contrary to the provisions of this section engaged in a strike against the Government of the United States, is not a member of an organization of Government employees that asserts the right to strike against the Government of the United States, or that such person does not advocate, and is not a member of an organization that advocates, the overthrow of the Government of the United States by force or violence: \* \* \*

It is believed that this provision is probably applicable by its terms only to the salary or wages of persons who are direct employees of the Government, and that it accordingly would be inapplicable to the reimbursement of a Government contractor for expenditures made by him for salaries and wages pursuant to his contract. In any event, it is our opinion that a fellowship award cannot properly be considered "salary or wages" within the meaning of this statute, and consequently the restriction would not by its terms be applicable.

A related statute is section 9A of the Hatch Act (18 U. S. C. 61 (i)), which provides as follows:

"(1) It shall be unlawful for any person employed in any capacity by any agency of the Federal Government whose compensation, or any part thereof, is paid from funds authorized or appropriated by any Act of Congress to have membership in any political party or organization which advocates the overthrow of our constitutional form of government in the United States."

As appears from a recent opinion of the Attorney General dated May 27, 1948 (see Annex), the Communist Party is an organization which is to be considered within the scope of section 9A of the Hatch Act. The opinion of the Attorney General reviews a considerable body of evidence establishing a congressional intent to exclude from Government employment any person who is a member of the Communist, Fascist, or German Bund parties. It is to be noted, however, that section 9A of the Hatch Act by its terms is applicable only to persons "employed in any capacity by any agency of the Federal Government." As indicated above in the discussion of section 10 of the Atomic Energy Act of 1946, an individual awarded a fellowship is not so employed, and hence is not subject to this provision of the Hatch Act.

From our examination of the Federal statutes, we have not found any provision which would require that a person who is a Communist be barred from an award of an AEC fellowship of the National Research Council, pursuant to the contract between the National Research Council and the Commission.

It is, of course, the statutory responsibility of the Commission, in determining the scope of its fellowship program, to approve such policies governing the selection of fellows as are consistent with the prudent expenditure of appropriated funds. It thus is a matter of policy, to be decided by the Commission after consideration of the many relevant factors, whether a requirement of security clearance of all fellows would or would not be in the best interests of the atomic energy program. On the basis of such consideration, it is for the Commission to determine whether there shall be a requirement of full security clearance, whether complete reliance shall be placed upon established selection methods of the National Research Council, or whether there shall be followed a middle course in which there is superimposed on the Council's selection methods some additional precaution.

JANUARY 22, 1948.

To: Joseph Volpe, Jr., Associate General Counsel.

From: Bennett Boskey.

Subject: Fellowship training program in the field of atomic energy as applied to medicine and biology.

This memorandum summarizes the results of the examination made of the Commission's statutory authority, in connection with our advising the Commission that in our opinion there is a proper legal basis for the proposed fellowship training program in the field of atomic energy as applied to medicine and biology.

The nature of this fellowship training program is set forth in some detail in the report presented to the Commission by the Division of Biology and Medicine. Its general outlines are given in the letter forwarded by the Commission to the Joint Committee on Atomic Energy, a copy of which is attached so that repetition of the facts in this memorandum is unnecessary.

In considering legislation applicable to other Government agencies, instances have been found where an agency was enabled by explicit statutory provision to carry on a fellowship or scholarship program. This has been the case, for example, with the United States Public Health Service (58 Stat. 685, 42 U. S. C. 209 (d); 58 Stat. 691, 42 U. S. C. 241). Similarly, the National Science Foundation bill, recently passed by the Congress and vetoed by the President (S. 1850, 79th Cong., 2d sess.), contained such provisions, as does the bill which has been reintroduced at the present session (H. R. 4852, 80th Cong., 2d sess.).

The authority of the Commission to inaugurate the proposed fellowship training program rests upon a broader base. Among the primary statutory responsibilities of the Commission are the conduct of research and the rendering of assistance to research conducted by others in specified fields (sec. 3 of the Atomic Energy Act of 1946), the production of fissionable materials (sec. 4), and atomic weapon research and production (sec. 6).

There should be noted particularly the strong emphasis which the Atomic Energy Act places upon the medical and biological phases of atomic energy. Of the five fields of research and development specified in section 3, two are directly related to biology and medicine, namely, "(3) utilization of fissionable and radioactive materials for medical, biological, health, or military purposes", and "(5) the protection of health during research and production activities."

In addition, section 3 (a) specifies that arrangements made pursuant to that section shall contain "such provisions to protect health, to minimize danger from explosion and other hazards to life and property \* \* \* as the Commission

may determine;" and section 4 (c) (2) provides that contracts for the operation of the Commission's production facilities shall contain provisions obligating the contractor to comply with all safety regulations which may be prescribed by the Commission. Section 5 (a) (4), which relates to the distribution of fissionable material, requires that applicants observe "such safety standards to protect health and to minimize danger from explosion or other hazard to life or property as may be established by the Commission;" and section 5 (c) requires that applicants for byproduct materials "observe such safety standards to protect health as may be established by the Commission." Similarly, section 7 (c), relating to utilization of atomic energy, requires that licensees be "equipped to observe such safety standards to protect health and to minimize danger from explosion or other hazard to life or property as the Commission may establish." Complementary to some of the provisions of the act just referred to is the authorization in section 12 (a) (2) for the Commission to "establish by regulation or order such standards and instructions to govern the possession and use of fissionable and byproduct materials as the Commission may deem necessary or desirable to protect health or to minimize danger from explosions and other hazards to life and property." Further, section 12 (a) (5) authorizes the Commission to "construct, acquire, provide, or arrange for such facilities and services (at project sites where such facilities and services are not available) for the \* \* \* health, safety \* \* \* of personnel employed by the Commission as it may deem necessary."

It is in light of these statutory responsibilities, and of the practical problems confronting the Commission, that the proposed fellowship training program should be examined. Experience has demonstrated the vital relation of biology and medicine to the successful conduct of these atomic energy activities. Health and safety requirements imposed by novel and special hazards of radioactivity and toxicity, for example, constitute a serious limiting factor on the research and production output at Commission installations. Adequate control of such hazards, and prompt development of new knowledge concerning them, is necessarily an urgent concern of the Commission.

As is indicated in the attached letter to the Joint Committee, the Commission has obtained the advice of some of the country's most distinguished scientists on the methods by which its responsibilities can best be discharged in the field of atomic energy as applied to medicine and biology. These scientists, including the group designated to serve as the Medical Board of Review, all have recommended that the Commission take measures to overcome the critical shortage of trained technical personnel in this field. After careful study of these recommendations by the Commission's staff, the Commission has determined that the inauguration of the fellowship training program is the most practicable way to meet this need for trained technical personnel.

It may be noted that many of the fellows under this training program will during the period of their fellowship, be themselves engaging in research and development activities in the fields specified in section 3 (a) of the Atomic Energy Act. It may also be noted that many of the fellows, particularly those receiving predoctoral training in health physics, will be undergoing a type of training somewhat similar to the occupational training which is provided for in other Government contracts with industrial concerns whose employees must receive special training before they can efficiently perform the job for which the contract calls.

The numerous provisions of the act specifically relating to health and safety and protection from hazards give emphasis to the statutory responsibility of the Commission to assure adequate development of the atomic energy program as applied to medicine and biology. Since such development is directly dependent upon a sufficient supply of technical personnel with the special training needed, the Commission is acting in the discharge of its statutory responsibility, in determining to inaugurate a fellowship training program which would vitally contribute toward obtaining a sufficient supply of such personnel.

It thus appears that the fellowship training program has as its objective the supplying of technical personnel with special training essential for the continued progress of the atomic energy program. The record provides a proper basis for the Commission to conclude that this action will make an important contribution to the major programs relating to atomic energy, as specified in section 1 (b) of the Atomic Energy Act. There is likewise a proper basis for the Commission's determination that the action comes within the direction of the Congress, in section 3 (a) of the act, that the Commission "exercise its power in such manner as to insure the continued conduct of research and development activities in the fields specified below."

MAY 16, 1949.

To: The Commission.  
From: Joseph Volpe, Jr., associate general counsel.  
Subject: AEC fellowship program.

This memorandum is prepared as a result of the request made at yesterday's hearing before the Joint Committee on Atomic Energy for more detailed information concerning the opinion previously rendered that persons awarded AEC fellowships are not employees of the Commission. It will be recalled that in my memorandum of August 23, 1948, it was concluded that such fellows are not employees of the Commission and that section 102 of the Supplemental Independent Offices Appropriation Act, 1949, was inapplicable to them.

The Commission's authority to appoint its employees is set forth in section 12 (a) (4) of the McMahon Act. It was contemplated, however, that the Commission would carry out only a portion of its responsibilities through its direct employees. The Atomic Energy Act authorized and directed the Commission, for example, to make arrangements for the conduct of research and development activities under section 3 (a) of the act, in order to assure the continued conduct of research and development activities by "private or public institutions or persons." The mere fact that funds appropriated by the Federal Government are used for carrying on the activities under such arrangements and contracts does not establish Federal employment status for persons who enjoy none of the incidents of Federal employment.

First, it should be noted that the fellows do not have an employment relation either to the Atomic Energy Commission or the National Research Council. The fellowship grants which they receive as a result of their selection by the National Research are neither salaries nor wages. In this connection, attention is invited to the fact that since 1925 the National Research Council has been administering its fellowships on the basis of a ruling it received from the Bureau of Internal Revenue that the recipients of fellowship grants awarded by the Council should not include the grants in the amounts of their taxable income; the basis for this ruling is the fact that the grants were to be regarded as gifts or gratuities, since the fellows who received them were not employed by the Council nor did they render services to the Council.

It is even clearer that the fellows selected by the National Research Council in the AEC fellowship program do not have an employment relation to the AEC. None of the incidents of Government employment attach to these fellows. They acquire no Government employment status; they do not obtain Government sick-leave or annual-leave rights; they do not participate in the Government retirement system; they do not receive compensation for injuries under the United States Employees' Compensation Act; they are not entitled to Federal overtime pay; their work is not supervised by the Commission.

Second, the AEC fellowship program is being conducted by the Commission through its contract with the National Research Council. The provisions of section 102 of the Supplemental Independent Offices Appropriation Act of 1949 do not extend to those persons whose sole relationship to the Commission is a derivative relationship through one of the Commission's contractors. Somewhat similar questions have previously been considered by the Comptroller General. In an opinion, dated August 13, 1946 (26 Comp. Gen. 111, 113), the Comptroller General ruled:

"With respect to point No. 3, the prohibition in the statute is against the use of the appropriation to pay the salary or wages of persons who engage in a strike against the Government of the United States or who are members of an organization of Government employees that asserts the right to strike against the Government. This language clearly indicates that it relates to Government employees whose salary or wages are payable directly from appropriated funds and was not intended to be extended to the employees of private contractors who may be engaged upon Government contracts."

In another opinion, dated July 26, 1948 (28 Comp. Gen. 54), the Acting Comptroller General ruled that the antistrike provisions of section 601 of the Labor-Federal Security Act of 1948 have no application requiring the submission of antistrike affidavits by State employees employed in State public employment offices supported by Federal grants. It may also be of interest to note rulings of the Comptroller General that the antistrike affidavit provisions are inapplicable to persons who, even though they were rendering services to a Government agency, did not have an employment relationship to that agency, in that they were not subject to direct supervision or administrative control of offices of the department. See the opinion, dated July 26, 1948 (28 Comp. Gen. 50), involving part-

time and intermittent physicians and dentists of the Public Health Service; and also the opinion, dated November 5, 1948 (28 Comp. Gen. 296), involving an alien lecturer who had a contract with the Department of State to prepare and deliver lectures on foreign languages.

By way of analogy, the Attorney General has ruled that the Hatch Act does not apply to persons who receive benefit payments such as old-age assistance and unemployment compensation under the Social Security Act, rural rehabilitation grants, and payments under the agricultural-conservation program. (See Circular No. 3301 of the Attorney General's Office, dated October 26, 1939, quoted in United States Civil Service Commission publication Political Activity and Political Assessments of Federal Officeholders and Employees, p. 8.) Similarly, it will be noted that the appropriations of the Veterans' Administration are, like those of the Atomic Energy Commission, subject to the provisions of section 102, and, so far as it is known, it has not been suggested that the veterans' benefits which that agency is charged with administering are "salaries or wages" within the meaning of section 102, or that the recipients of such benefits are Government employees.

The CHAIRMAN. I have no further questions to direct to Mr. Lilienthal, and Dr. Richards, although I may have some later.

Did you have a statement, Dr. Warren?

Dr. WARREN. I would like to speak, very briefly, sir.

The CHAIRMAN. You have a statement?

Dr. WARREN. Yes.

The CHAIRMAN. Before we get into your statement, it is necessary, I think, that the committee have the opportunity to address some questions to Dr. Richards.

Dr. RICHARDS. Mr. Chairman, I have one final paragraph.

The CHAIRMAN. I beg your pardon. I thought you had finished, Doctor. Go right ahead.

Dr. RICHARDS. I don't want to use more of your time than necessary.

The CHAIRMAN. Go right ahead. I thought you had finished.

Dr. RICHARDS. Not quite.

I have referred to the age of the group whose fortunes are being considered. It is made up of individuals at the beginning of professional careers devoted to the quest for truth. Must we not assume that that ideal will be their guide in social relations as well as scientific? They are not mature; and, if our social and political system is as worthy as we believe it to be, can we not assume that it will so prove itself to them as their experience broadens?

A third point—the most important that I have to present—seems to me to be this. If it is ruled that the Atomic Energy Commission fellowships cannot be granted to any except those who have successfully passed an examination of their economic and social views, a first step will have to be taken toward a disastrous intervention of Government in education. The press last week reported that one of the members of this committee expressed the view that if a National Science Foundation is created, he would advocate that an investigation should be conducted of the social and economic views of every applicant for a scholarship or fellowship granted by it. I believe, with all due respect to the patriotic impulse which animated the Senator, that such action would be a blow to the principles of freedom of thought on which this country was founded. It would introduce an element of educational procedure so closely akin to those by which the Russian bureaucracy controls science in that country as to be scarcely distinguishable from them.

The education and training of the young people of this country is the heaviest responsibility which the older generations of us carry.

Damage to a single unit of it is damage to the country; damage to such a specially qualified group as that of which we are speaking would, I think, be irretrievable.

The CHAIRMAN. Doctor, we are going to proceed with the questioning in order, taking Senator Hickenlooper and Mr. Durham. I would like, however, to ask you this question.

Do you think the three gentlemen who screened this man Freistadt for your body did a good job?

Dr. RICHARDS. No. May I qualify that?

The CHAIRMAN. All right.

Dr. RICHARDS. From the standpoint of potential scientific value to the country, I think I would have to say "Yes" to your question. From the standpoint of promotion of the whole program in which the AEC is concerned, "No."

The CHAIRMAN. Senator Hickenlooper?

Senator HICKENLOOPER. Dr. Richards, taking this thing from the back first: I was intrigued and interested by your last reference. I hope I did not note a touch of sarcasm in the last paragraph or two about those views, which happen to be mine.

Dr. RICHARDS. Not a sign of it.

Senator HICKENLOOPER. I noticed an editorial in the local paper which quoted that statement. And, of course, the statement is picked out of context and used to support the objective and the purposes to which the editorial was directed. The whole connotation of that sentence was that in any National Science Foundation I would be utterly opposed to taking public money for the training of those Communists. They can get their education on their own power if they want to, but whether it be the Atomic Energy Commission funds, or any other public funds directly devoted in that way, I am against the use of the taxpayers' money to educate those people who will overthrow our Government if they get their way. So that is my position, very clearly, I hope.

Dr. RICHARDS. May I say to you that there wasn't the slightest element of sarcasm in anything I said or any element of lack of respect.

Senator HICKENLOOPER. Well, I am glad to know that, Doctor. I said I hoped that I did not detect an element of sarcasm, and I thought maybe there might have been just a little.

Dr. RICHARDS. There was not.

Senator HICKENLOOPER. I want to ask you a question at the outset, Doctor, and perhaps we can clarify the issues. We will take the known case where a man has been named who has, at least in the public press, admitted he is an active Communist, Mr. Freistadt. We now know that he is an active Communist, assuming the reliability of the newspaper reports and other information. We know that he has had a history of communistic activities, allegedly, at least, in two universities, of which he has been a member, two universities which he has attended. He has now been awarded a fellowship which carries with it some \$1,600 a year of public money to pursue his education.

I think it is fair to ask you, in view of your statement: Do you believe that that fellowship should be continued, or discontinued?

Dr. RICHARDS. In preparing myself to answer that question, I would like to find out from that man himself, what is going on within

him. He signed an oath of allegiance when he joined up, in 1944. Is he so committed to the principles of the Communist Party that he has forgotten that oath and the obligations which it entails? He is false to one or the other. If he is false to this Government, he ought not to get it.

Senator HICKENLOOPER. I presume that it is well nigh impossible to test the secret workings of a man's mind. We have to go on whatever information and evidence can be picked up surrounding the situation. The latest evidence, according to the newspapers, that we have on this man is that within the last few days he has again reaffirmed that he is a Communist. And he made no denial of it. He said that no one had ever asked him, but of course he was a Communist.

Now we go a step further. If we believe what we see in the Communist principles as they have been recited and laid down in this country, to the public, they have as one of their principles allegiance to communism, international, and not allegiance to any particular government or country, unless it be to Soviet Russia. I do not know about that, particularly.

Then we also know, if we can believe the tremendous volume of evidence that has been developed, that it is a part of the fundamental Communist philosophy to use falsification, deception, and any other means at hand to gain their ends, even to the denial that they are Communists. We are told that it is part of what they are taught to, if they have to, even deny their communism, deny their membership, as a matter of subterfuge, to advance their cause.

I knew nothing about Mr. Freistadt. It took me entirely by surprise. I knew nothing about him until, I think, late in the afternoon when the news commentator, Mr. Fulton Lewis, Jr., had it on the air, and I understood that it had been bandied around in other places for several days. But that was the first I knew of it, when somebody called me about it. The latest evidence we have is that he is now a believing Communist, by his own admission, according to the newspaper report.

So that is the only evidence I have about his belief. And that, among other things, generated my question.

Dr. RICHARDS. If I were possessed of the convictions which I believe you hold, I would say that he ought not to have that fellowship.

Senator HICKENLOOPER. But, Doctor, what convictions?

Dr. RICHARDS. The convictions that Freistadt is an active Communist, and that he accepts the principles of the Moscow Politburo.

Senator HICKENLOOPER. The only knowledge I have is his statement as reported in newspapers that he is a Communist. And I go back to the other matter, of the historical communistic philosophies, and hook them all up together, as a matter of fact. As I say, that is the reason I asked the question.

Under all the circumstances that you know now, would you be prepared to say that he should continue, as a fellow, to receive these public funds, or that he should not? I am not trying to force you, but I would be delighted to have your opinion.

Dr. RICHARDS. No, Senator; but, of course, you have me in a corner, and I am trying to slip out of it. I want to get out straightforwardly. If he is committed to the principles and practice of communism, then he is false to his oath. He is a dishonest person, and he shouldn't have any fellowships of any sort.

Representative DURHAM. Doctor, at that point: You say, as I understand you, if he admitted that he was a Communist—

Dr. RICHARDS. No, I don't think I used the word "admitted." I think I said "if he is," and "if he follows."

Representative DURHAM. I beg your pardon. I misunderstood you.

He has, in public statements, admitted that he belongs to the Communist Party. He has conducted a Karl Marx Club since coming to the university, for several months.

Now, in the face of those facts, you do not believe, as I understand your statement, that he should have a scholarship.

Dr. RICHARDS. If the extreme implications—I mean the sinister implications—of all of those things are borne out by the facts, he should not have a scholarship.

The CHAIRMAN. Well, the doctor said this Board had made this recommendation, and it is his opinion, in view of what we now know, that it did a very poor job.

Dr. RICHARDS. Yes; it has worked out as a poor job from the standpoint of the task of the Atomic Energy Commission.

The CHAIRMAN. Senator Hickenlooper?

Senator HICKENLOOPER. The great emphasis has been placed upon the difficulties which lie in this program, and on the freedom of selection, and I believe that you mentioned the cost factor. Do you know what it costs to investigate an individual for clearance under the atomic energy program?

Dr. RICHARDS. I only know what has been told to me.

Senator HICKENLOOPER. I believe the cost is approximately \$100.

Dr. RICHARDS. That is what I understand.

Senator HICKENLOOPER. And these fellowships run into better than \$1,000. This one is \$1,600. Some of them are up to \$3,600 or \$4,000.

Dr. RICHARDS. Up to \$4,000, if a man has a wife and two children.

Senator HICKENLOOPER. So that any place from \$1,600 a year to \$4,000 a year is the amount that is being spent of public funds on the education of these people in scientific fields. Does it seem to you that \$100, from the purely economic standpoint, should be a deterring thing, in order to be assured that the very few, perhaps that might slip under the wire would be eliminated?

Dr. RICHARDS. No; I was basing the theory on investigating all of the 350 or the 497.

Senator HICKENLOOPER. Yes, but the total amount of income that they will receive would run into the thousands of dollars apiece, and the investigation would only be \$100.

Dr. RICHARDS. But it is only a matter of one out of a hundred. Are you not spending some \$50,000 or \$60,000 or more in order to save \$8,000 or something like that? In my statement I implied that I didn't think you should. I think spending \$40,000 to do something right is better than spending \$8,000 to do it wrong.

Senator HICKENLOOPER. There is no question but what the matter of the righteousness of the project should be the controlling thing, without any doubt. But why do you believe that it is any more offensive to investigate, or to look into the backgrounds of some of these people who are going on the pay roll in this educational field than it is to thoroughly investigate and look into the backgrounds of

people becoming United States attorneys general or Federal judges, as Senator McMahon mentioned awhile ago?

Dr. RICHARDS. Well, I think you are dealing with two orders of people. People who are entering Federal employment are not, in my opinion, in the same category as people who are receiving a fellowship in order that the pool of trained personnel in this country, capable of utilizing science for the general good, shall be increased.

Senator HICKENLOOPER. Does it make any difference what the color of a man's eyes is, or what his station in society is, if he believes in the overthrow of this Government by force and violence?

Dr. RICHARDS. No.

Senator HICKENLOOPER. And is that not the issue: Whether or not public money is being spent to educate subversive people? It is not a question of general education. We have lots of support for general education, for fundamental education.

Dr. RICHARDS. It seems to me that the greatest issue is the advance of scientific competence in this country capable of providing us, should another emergency arise, with the people on whom we can rely to help us out as scientists helped us out in the last war.

To go back to your other question, you said something to this effect: Why should a young man object to being examined by the FBI? Well, have I stated your question correctly?

Senator HICKENLOOPER. Yes, that is about it. I think that is fair enough.

Dr. RICHARDS. The FBI, as I have said in the statement I read, gets all the provable facts that it can find. It gets all of the opinions that it can find. I have had numbers of FBI investigators come to me and ask me for my knowledge and my opinion about this, that, and the other person, and I am assuming that it all goes into the folder. And there is fact and hearsay mixed up, on which some agency has to pass.

Now, there are sensitive people who don't like that, who don't like to subject themselves to that sort of thing.

Senator HICKENLOOPER. Yes, I presume almost everyone is sensitive. I presume people all have reasonable sensibilities. But I do know a great many people who feel that they have no resentment against being investigated for some important assignment. Maybe some do. But if there really is nothing fundamentally wrong with them, it would seem to me that they should not have too much resentment against someone making an inquiry as to whether they do meet the standards.

Dr. RICHARDS. I don't disagree with you.

Senator HICKENLOOPER. We have, I believe, some 140 or 150 that have been investigated. And Dr. Warren stated that in that number there have been but three or four cases where substantial suspicion or criticism could be raised. Would the elimination of those four or five, if that were the percentage, or even if it were less—would the elimination of those from the entire program wreck the fellowship program, do you believe?

Dr. RICHARDS. The mere elimination would not wreck it. The system which provided the elimination might damage it badly.

Senator HICKENLOOPER. Do you believe it would be necessary to make fellowship appointments and then investigate? Or could not.

the investigation be done very quietly, prior to the selection, and avoid the necessity?

Dr. RICHARDS. I do not think it would be within the competence of the National Research Council Committee to pass on a candidate's, an applicant's political views.

Senator HICKENLOOPER. Of course, the National Foundation technically does not put these people on. It is the Atomic Energy Commission that has the sole right and power and the final authority in putting them on. The National Foundation, while I presume their judgment is given almost controlling weight, probably controlling weight, is only a recommending body. The Commission is the one that furnishes the funds.

Dr. RICHARDS. I have got to consult with Mr. Lilienthal or Dr. Warren to answer that question.

The AEC contracts with the National Research Council through the parent agency, the Academy, to administer the contract money for the selection and appointment of the fellows.

Senator HICKENLOOPER. Yes. But it comes from the fountainhead of the authority, the Commission. The Commission secures the services of the National Foundation to do a job for the Commission.

Dr. RICHARDS. Yes.

Senator HICKENLOOPER. So the Foundation is acting in a contractual capacity in that case.

I notice that you referred to the nonsecret work. I am thoroughly aware that this program, as such, is not designed to take these fellows into secret work during the time they are receiving the benefits of the scholarship. That is very true. But as I understand it, the fellowship program is designed to give special education and training to this group of fellows in specialized fields, and for the purpose of creating a reservoir and backlog of knowledge and abilities in these various fields which may eventually be brought to the use of the public generally, and in some cases to the Commission itself.

I probably should not discuss this with you, because you probably have not discussed the act from that standpoint. I think I will leave the question out because it is a technical question of interpreting the authority of the Commission, going into the general educational field, which I have some question about.

Dr. RICHARDS. I would not be competent to answer as to that.

Senator HICKENLOOPER. I believe that is all.

The CHAIRMAN. Mr. Durham?

Representative DURHAM. Doctor, I believe I understood you to say that this was an important program. I agree with you on that. I believe you said it was important.

Dr. RICHARDS. I believe it to be very important.

Representative DURHAM. That brings up the question as to who is the sufferer in this action taken by your group. You have said that this was a very poor report. Who else is the sufferer, except the Commission? I agree with you on academic freedom. I was born and raised to believe in that type of thing. But how are we going to insure against making another mistake as serious as this if we do not have some kind of FBI report or some kind of examination? Why, this report here would hardly be recognized as sufficient for admitting a high-school student who had transferred from one high school to

another, if this is all this man was accepted on. I do not want to be critical, but here are the facts before us.

Dr. RICHARDS. If this is a mistake, and I have admitted that I think it is, it may be the most wholesome mistake that has been made.

Representative DURHAM. Well, I certainly hope so, Doctor.

Dr. RICHARDS. I have ventured to suggest to my friends, here, near me, that one simple thing might be done: That after a man has passed the scrutiny of the National Research Council Committee, and it is planned that he shall have the award of a fellowship, that he should be asked to sign an oath of allegiance. That puts him on record with an oath which is utterly contrary to the Communist principles and practice. If he is false to that oath, get rid of him.

Representative DURHAM. Of course, they have a habit of infiltration, too, Doctor, that is not only damaging the most important program we have from a military standpoint, but is also damaging what we are trying to do, here, from a humanitarian standpoint in this program. We are also aiming at that.

Dr. RICHARDS. Certainly.

Representative DURHAM. We hope to be successful with it.

Dr. RICHARDS. That is the big thing.

Representative DURHAM. And I do not think we can be successful if we make such mistakes as that, and if we do not adopt some procedure that will clear the atmosphere on an individual, somehow, when he is accepted.

Dr. RICHARDS. The procedure which I have just suggested is one which has occurred to me as being straightforward and simple, and which no true citizen of this country could possibly object to.

Representative DURHAM. And you do not believe the scientists would object to such a procedure as that?

Dr. RICHARDS. I cannot believe that 1 in a hundred, or 1 in 500 would be false to it.

The CHAIRMAN. You mean by taking an oath of allegiance, the filling out of a questionnaire, a sort of a personal security form, in which they should allege or should state the organizations they belong to, and their history, in addition to their oath of allegiance?

Dr. RICHARDS. I simply meant the form of oath, with the unnecessary phrases taken out of it, that a person becoming a naturalized citizen signs when he finally receives his citizenship.

The CHAIRMAN. Incidentally, I understand that Mr. Freistadt is a naturalized citizen.

Dr. RICHARDS. Yes, sir.

The CHAIRMAN. And he did take such an oath.

Dr. RICHARDS. He must have taken such an oath. I have a certificate of his naturalization here.

Senator KNOWLAND. Doctor, along the lines that Senator McMahon discussed, would you see any objection, in the questionnaire they must fill out when they apply for one of these scholarships, one of these fellowships, to asking the question, "Are you now or have you ever been a member of the Communist Party?"

Dr. RICHARDS. I think I see objections to that. And if it became necessary to put that in—would like to be convinced that it were necessary—I would have to answer your question as you perhaps think I should. But the fundamental point, it seems to me, is including political faith as a criterion for educational opportunities.

Senator KNOWLAND. Doctor, I just cannot quite accede to what you have said on that point. You treat the question of membership in the Communist Party as though it were a simple political question as to whether you belonged to the Democratic or Republican Parties, or the Socialist Party or the Progressive Party. You apparently do not feel that the Communist Party is in effect an international conspiracy.

Now, do you feel that they are in exactly the same category, as the Communist Party, as are other parties in the United States?

Dr. RICHARDS. No; but I think this: That young people, particularly young people of an inquiring trend of mind, may go all out and be professed and active Communists. On the other hand, there are shades. I regard them as immature and capable of revising their beliefs. To make it all black or all white seems to me to make the question too simple, far too simple. That is why I am perhaps confused and confusing, in answering your question.

Senator KNOWLAND. Of course, it seems to me that this is a little different problem, a considerably different problem than whether a person, regardless of his beliefs, will attend an educational institution. Here are funds being provided by the Government of the United States. They are being provided, first of all from the Congress to the Atomic Energy Commission. The Atomic Energy Commission is set up with vast powers, far greater powers than we have ever given a commission before this in the history of our country, to deal with a subject which has world-shaking possibilities.

Now, presumably one of the reasons these funds are being provided is to supply this Nation with a reservoir of trained people, with the hope that ultimately out of that reservoir of trained people there will be developed additional personnel that can work in the atomic field both from the weapon point of view and in the broader scope from the point of view of benefiting mankind. But both of them are certainly of considerable importance. If you take a known Communist and educate him up to that point, and then you discover that he is a Communist, you certainly do not believe that you can take him from that step into the next one, where he would have access to secret information, I take it.

Dr. RICHARDS. I wouldn't think of that. But the vast majority of the people that we are talking about this afternoon are in fields remote from military importance, as I take it. I think of them as being inducted into the use of isotopes in the study of medical problems, cancer; agricultural problems, crop production; and so forth and so on—rather more than problems that are even indirectly associated with the atomic bomb or atomic energy as a military weapon.

Senator KNOWLAND. But at the same time you do not ignore the fact that the atomic weapon is still a pretty vital factor insofar as the national security of this country is concerned. The only thing I am trying to get at is that I do not think you should underemphasize the problem of getting only one of these people ultimately into the secret phases of this work. It only took one man, a Canadian spy, as disclosed in the report of the Canadian commission, to get what probably was very vital information into the hands of the Soviet Union. So if you only had one who ultimately gets access to secret information, you will agree that that is one too many, will you not?

Dr. RICHARDS. It would be one too many.

Senator KNOWLAND. That being so, do you not feel that where you have an acknowledged member of the Communist Party, assuming that he is an acknowledged member of the Communist Party, that then there should be some process whereby these funds can be withheld from him?

Dr. RICHARDS. Is he to be given the privilege of answering these charges?

Senator KNOWLAND. Assume for the moment that he has answered the charges and has admitted that he is a member of the Communist Party.

Dr. RICHARDS. With all that that implies?

Senator KNOWLAND. With all that that implies.

Dr. RICHARDS. I would say that he would have no business to be in the fellowship program.

THE CHAIRMAN. I want to be very clear, Doctor, because I do not want this committee to be in any position of trying anybody in absentia. But Mr. Freistadt has made at least three or four statements since this whole thing came to public attention. He has stated his own beliefs, and that he has headed what he calls the Karl Marx Study Club at the University of North Carolina. He commented on Dr. Smyth's testimony of Thursday, and he said, according to the Associated Press dispatch, that he congratulated Dr. Smyth on his tolerance, but in answer to Dr. Smyth's hope that he might change, Freistadt wanted it known that Dr. Smyth was under an illusion, because he never would change.

I want to make it very clear that we are not engaging in any trial in absentia on Freistadt; and if Freistadt, speaking for myself, wanted to come before this committee, I certainly think that he should have an opportunity to do so. In fact, we may ask him to come up here before we get through with this thing. But it should be very clear that we are not conducting any ex parte trial of his activities. We are only stating what he says they are. I hope that is very clear to you, and clear for the record.

Dr. RICHARDS. It is certainly clear.

Senator HICKENLOOPER. Mr. Chairman, may I just make one statement in commenting on that.

Just in case, Doctor, I might have created in your mind some idea that I am at all hostile to the fellowship program, I may say that I did the other day, and a good many months ago, in discussing this matter, state that I thoroughly agreed with the philosophy of the fellowship program. I have stated that I thought it was a fine thing when they finally developed this type of a program for educating a reservoir of capable and top-flight people for the future benefit of science. And I have no resistance whatever against the spending of public money where it would contribute to that end. But I did have some correspondence, Mr. Chairman, at that time, and Chairman Lilienthal put in a letter to me in the record a moment ago.

I would like to have the series of correspondence, my letters to him, and the replies back, all put in at that point, so that the whole series of letters will be in the record here, rather than scattered through. There is one exception. In the last letter that I wrote, I mentioned the name of the man that I referred to a while ago in speaking to Dr. Warren. I would like to have the privilege of deleting that name from the letter as it goes in the record. That can just be left blank, so that in the public record the particular name will not go in.

The CHAIRMAN. Without objection, that will be done.

Senator HICKENLOOPER. I will furnish the reporter with a copy of the correspondence, which I have here.

(The correspondence referred to will be found on p. 5.)

Senator KNOWLAND. I would like to finish with the doctor.

I also would like to ask the same question of Mr. Lilienthal: As to whether, in the case of a known Communist, assuming that it is proven or admitted, you feel that a fellowship should be available to him on the same basis as any other applicant.

Mr. LILIENTHAL. My answer, Senator Knowland, is to refer to the relation that we have established with the National Research Council. I certainly would not take action on such a matter independently of that Council, as long as we have this arrangement with them. And I would assume that we should ask them about the effect upon the fellowship program of the application to it of the investigative process. They say that to impose that kind of a standard is the wrong way to handle it from the point of view of scientific progress. They may review this matter and find some better way of answering the question than that, some more discriminating way of answering it. But as long as we have in the country an agency which is recognized as the scientific adviser to the Federal establishment, I would not set myself up to say that we should take out of their hands the decision about whether it is to the best interests of scientific progress.

I would add this further comment: I have the feeling that the question hides some of the differences that there are in this problem. And I am sure nobody wants to hide them. I think it is in their mind, and I think it would be in my mind, that if it was simply a question of saying that those men who are professed and avowed Communists, shall under no circumstances be granted fellowships, or anything else in the way of public educational funds, that would be a relatively simple question.

Senator KNOWLAND. I am not getting into other types of funds. I am dealing specifically with funds appropriated by the Congress of the United States to the Atomic Energy Commission, which you are responsible to the Congress for expending. And if you delegate any of your power, you are delegating it with the ultimate responsibilities still in your hands to the Congress of the United States.

It may be necessary to ask Mr. Freistadt to come here and give this information, under oath if necessary. But assume for the moment that is a case where he admits membership in the Communist Party. Do you believe, as Chairman of the Atomic Energy Commission, that the payment of funds in that case, that specific instance, should be continued?

Mr. LILIENTHAL. I believe that where the relation of science to the Federal Government is involved, I would feel that the judgment of the National Research Council on this thing would be a judgment that I would accept. I have a very strong fear of the Federal Government directing that, or the Federal Government withholding or granting approval in respect to education on any basis, because of the dangers of the domination by the Federal Government of education. That is why my answer is: Let's turn to the National Research Council, a private independent agency, and see what they think is the wise thing to do under this set of circumstances.

It is true, and you are quite right, that the responsibility is ours. If they have made a decision, if they have made a recommendation, to award a fellowship, which is wrong, which is recognized as wrong, we are responsible for having followed their judgment. But I would a lot more happily carry that responsibility than to feel 10 years from now that I had been a party to a very terrible turn of the road in the relations between the Government and education. I think the Government should keep its fingers out of education and I think this is one of the ways to do it in the atomic energy program. Those are my feelings about it.

Senator HICKENLOOPER. It would just appear to me that this is the Government sticking its finger directly into education when it supports subversive people with public funds.

Mr. LILIENTHAL. No, because we have sought to place this in the hands of a private, nongovernmental institution which is not part of the political structure of our country, the National Research Council. And when the day comes when the Federal Government selects individuals for educational fellowships, that I think will be a sad day for this country. I am very much disturbed about the fact that that kind of a solution presents great difficulties here, of which I am just as aware as you are. You have worried about this a great deal, and I have, and all of us who are familiar with it realize that we have a tough problem here. But it is one of those dilemmas in which it seems to me that the lesser evil is to ask the National Research Council, as a nongovernmental institution, to try to frame policies in respect to education in this field, and perhaps to serve as models elsewhere, rather than for the Federal Government to begin putting strings on educational funds. Because I want to tell you that with what is going on in the development of additional funds for education, this \$300,000,000 program the other day is just the beginning, and everybody here knows it. And the kinds of tests that will be applied by the political side of this Government as to who shall and shall not receive the benefits of educational funds, in the high schools and the colleges, and even in the grade schools 10 years from now will make our hair stand on end. That is my own feeling. That is why I think it is a terribly serious case.

Senator KNOWLAND. Mr. Chairman, since Mr. Lilienthal has raised that point:

Do you not think there is a difference between a situation in which these fellowships are being granted by the Atomic Energy Commission in the field of nuclear science, and a general education program? And is there any more reason to feel that properly safeguarding the security of the United States in this field should establish a precedent than that because we gave vast and heretofore unprecedented power to your commission we ipso facto have to give it to every other commission we create?

Now, we do not do that, because we have recognized that in this field of nuclear science and in the atomic field it is an unprecedented development. And we have done things that this country has never done before.

Therefore, I say that if you can draw a line of distinction there, you can certainly draw a line of distinction in these fellowships to train a reservoir of people to work in this specialized field.

Mr. LILIENTHAL. Senator, it seems to me a line has been drawn in this law. And I agree with the way it has been drawn. The line has been drawn essentially between those individuals who have access to restricted data, which is broadly defined, and those who are engaged in nonsecret work. That is contrary to the general traditions of the country, but necessity dictated it. And it is a line that can be fairly well followed.

But when we get out of the secret work, it seems to me, then, while we may find some other line, I, myself, have not seen it. I hope perhaps it will evolve out of these discussions.

We are, I think, out on uncharted and new seas. Because the fields of study in this fellowship program, many of them are matters of fundamental science. Here is one going on at Duke, the theory of the extensive showers of cosmic radiation. Well, this has no more to do with the atomic bomb than astronomy has. It is a very important fundamental study. And so on through the list.

I find it very difficult, Senator, to pass this milestone, to find any other line, since we are in nonsecret work. If someone can come up with a line, I am sure the National Research Council is just as anxious as we are to find a rule that will be self-defined.

Senator HICKENLOOPER. Of course, Mr. Lilienthal, let me suggest this. I think you have just announced a rather startling departure from normal Government operations, when you say that you turn over the ultimate decision of a governmental function to a private body.

The CHAIRMAN. He did not quite say that.

Senator HICKENLOOPER. He said that they turned over the decision to this national council, and that he would accept their decision on this matter.

The CHAIRMAN. Accept their advice, perhaps. Was that not it?

Mr. LILIENTHAL. Well, I don't shy away from that. I don't shy away at all from that, where the field of education is involved.

Senator HICKENLOOPER. But I feel we are not justified in having the Secretary of Defense select an advisory committee of private citizens and letting them make the decisions which he will accept *per se* on the programs of our national defense. In other words, I believe that there is a complete area where Government bodies must accept and discharge the ultimate responsibility. They may receive advice. And I do not mean to say that you have done this. This is a little harsh.

Mr. LILIENTHAL. You are not being harsh at all.

Senator HICKENLOOPER. But to abrogate the responsibility of a public body, especially one that has such vast authority as the Atomic Energy Commission, to a private group which is in no way responsible to the Congress or to the public, except as private citizens, is rather a departure. I mean, I think we are getting dangerously close to the adoption of that philosophy, perhaps, in the operation of Government activities.

I say "perhaps." I do not know.

Mr. LILIENTHAL. I can only say that I have so deep a distrust of political domination of education that I think that whatever the theoretical objections—and they are considerable, as this is not an easy question, as you suggested—that is a far preferable course to the other one. And we have some history, some current history, to

show those dangers. Is this not an answer? I do not feel that I know the answer, but the answer that occurs to me, that I have been thinking about, is that the Commission is responsible. That is why I am here today. If there is anybody to be shot, you have the guys to shoot. The reason I don't feel that we will be shot is that I really believe, after you think this thing over carefully, you will agree that it is better to turn to a group of men who are nongovernmental, nonpolitical in the governmental sense, with a record of competence, and accept their judgment about educational matters.

Senator HICKENLOOPER. You are doing just that. And nobody is trying to interfere with that. The only question at issue, here, if we can just narrow this down, and get away from the broad field of education, is the use of Government funds to support and to educate in very, very rare instances, known subversives who belong to a party whose purpose is to destroy this Government.

Now, then, as we have shown, here, only maybe three or four questionable characters out of, let us say 150, would even be given a second thought as potentially dangerous or bad people, under that classification. I do not take it to the Commission, nor am I advocating that the Commission go out and order the course of study, or that any Government body prescribe the textbooks; nor do I say that the Government body should support just this public institution because it happened to preach the philosophy that they wanted.

The only issue, in my mind, is the use of public funds in the rare instances in this program to which reference has been made, to support known subversives. And my whole point is that that could very easily be screened in advance, and the rare instances could be eliminated.

I apologize, because some of the other gentlemen have not even had a chance to talk here, and we have monopolized all of it. If you have any comments you wanted to make on it, all right, but I think we could talk about that tomorrow or another day, when we have a meeting.

The CHAIRMAN. Mr. Elston?

Representative ELSTON. Mr. Lilienthal, I do not think you answered Senator Hickenlooper's question entirely. You said that you would accept the opinion of the National Research Council; that you would accept their opinion about any boy who is placed in the fellowship class.

Mr. LILIENTHAL. Yes. They set up procedures, and they say, "Here is a man whom we believe to be the best qualified person." I certainly would accept that.

Representative ELSTON. Now just take the Freistadt case as an example. They still approved of him, let us say, as a student. What would you do about it?

Mr. LILIENTHAL. I think we would have to accept that. I don't see how we could deal with them as a consulting body and break with them on this.

Representative ELSTON. Let us bear in mind all the statements that Freistadt has made during the past few days, which indicate clearly that he is a Communist and does not intend to change his position. If, notwithstanding that fact, the National Research Council recommends that he be continued as a student, what are you going to do about it?

Mr. LILIENTHAL. It seems to me we would only have two choices. If they say, "We believe an important principle in the field of science and the freedom of education is involved, when a political or economic test"—I am assuming that they make this statement—"is imposed in respect to otherwise worthy and promising individuals, and we stand on that," then it seems to me we have only two alternatives. One is to accept that, and the other is to accept the resignation of the National Research Council. I think this latter course would be a very unfortunate one for the country.

Representative ELSTON. You still have not answered what I am getting at. Are you going to keep Freistadt, a Communist, in this program if the National Research Council recommends that he be kept?

Mr. LILIENTHAL. I would like to see what the National Research Council's restudy of this question turns up. I believe that having it reexamined, we would be in a better position to say.

Representative ELSTON. Suppose on reexamination they still decide to keep him, but the evidence that you have in your possession is that he is a Communist, as indicated by his own statements. Now, which would you do? Accept the word of the council and keep him in the program? Or would you get rid of him?

Mr. LILIENTHAL. I would feel obliged to accept the judgment of the Council.

Representative ELSTON. Even though you knew he was a Communist?

Mr. LILIENTHAL. Even though they knew he was a Communist.

Representative ELSTON. Even though they knew it, and even though you knew it, you would keep him in school?

Mr. LILIENTHAL. I think this may well be an unlikely speculation. But you put it in that form, and I would say that rather than have the National Research Council withdraw from the program, which might be the result, the lesser of the two evils would be recommended.

Representative ELSTON. So you would keep the Communist in and let the Government go ahead and pay his tuition.

Mr. LILIENTHAL. I think this would be the lesser of the two evils.

Representative ELSTON. And how many years would you keep him in school?

Mr. LILIENTHAL. I don't know what kind of scholarship he has. I am told it is a 1-year scholarship.

Representative ELSTON. Your whole theory is educating these students at the taxpayers' expense is that they might be useful to the Atomic Energy Commission?

Mr. LILIENTHAL. No; I think it is a great deal broader than that, Mr. Elston. The program was recommended to us by the General Advisory Committee, and more particularly by the Advisory Committee on Medicine and Biology, and they have quite a different premise.

Representative ELSTON. A boy who is a Communist certainly could not ever be of value to the Atomic Energy Commission.

Mr. LILIENTHAL. Not in classified work.

Representative ELSTON. And yet you would go ahead and educate him at the expense of the Government?

Mr. LILIENTHAL. Under the circumstances of an award of a fellowship by the National Research Council, an expression of their judg-

ATOMIC ENERGY COMMISSION FELLOWSHIP PROGRAM

ment that his political and economic views are irrelevant to his future promise, I personally would feel bound to accept that judgment.

Representative ELSTON. And you know that if he is a Communist he could not even work for the Government, because he would have to take a loyalty test.

Mr. LILIENTHAL. Yes; but it would be pointed out to me—and this will be of especial interest to everyone who is worried about the prospect of cancer in his family, or as to himself in the next 10 years—that this might be the mind that would break the last barrier to the solution to the problem of cancer. There are many instances in which people of unworthy political beliefs have the kind of genius that the country needs in nonsecret aspects of development. And, although I realize that the categorical answers here represent quite an unpopular and to me a distasteful alternative, I think the alternative in respect to the damage to science and free education would be even greater, and we will all realize this, not today or tomorrow but some years later.

Representative ELSTON. You do not think we can find that genius among 100-percent-loyal American boys?

Mr. LILIENTHAL. One never knows where genius is, Mr. Elston.

Representative ELSTON. Where do you get any authority in the Atomic Energy Act to embark on a general program of education?

Mr. LILIENTHAL. There are sections of this—

Representative ELSTON. Yes; I heard you quote the sections before. You think Congress intended that the Atomic Energy Commission embark on a general educational program of any kind?

Mr. LILIENTHAL. I think Congress intended the Commission to foster and advance general scientific progress, with emphasis on those matters related to atomic energy. It just so happens that nuclear science, the fundamentals of atomic energy, and its application reach into almost every field of science.

Representative ELSTON. Well, you have got pretty good help from the universities and private industry, have you not?

Mr. LILIENTHAL. Yes.

Representative ELSTON. You did not have to go out and embark on an educational program of your own, did you?

Mr. LILIENTHAL. Well, it is not our own. We are supplying funds. And we are directed to encourage private research and research in universities. These men are in universities.

Representative ELSTON. Does that not mean through universities? Is there anything in the act that gives you authority to supply funds to students to go to school?

Mr. LILIENTHAL. We so believe; yes.

Representative ELSTON. Did you get an opinion from anyone on that?

Mr. LILIENTHAL. Yes. I asked counsel about it. I do not think there is any question about it under the terms of this law.

Representative ELSTON. Did you take it up with Congress?

Mr. LILIENTHAL. We examined the act that Congress passed.

Representative ELSTON. Did you come before this committee and explain your program and ask if it would be all right to go ahead with it?

Mr. LILIENTHAL. No; we didn't ask if it would be all right to go ahead with it, but we did report what we were doing, and asked for

funds, and we have been before appropriation committees for several sessions now, and this program has been debated as part of that.

Representative ELSTON. That was after you had embarked on the program?

Mr. LILIENTHAL. No; I think it was before. Obviously it was before the funds were expended.

Representative ELSTON. Why did you first start to have loyalty checks, and then stop them?

Mr. LILIENTHAL. Well, the policy in respect to investigations was a subject of considerable discussion. While this discussion and indecision was going on, and while we were trying to find a suitable answer to the problem, the investigation by our Security Division may well have proceeded on the assumption that all individuals in this program would be investigated. It is also true that, in case of a good many of these people, they were working on secret work and so, of course, were thoroughly investigated. I think this is how that circumstance arose. There was nothing extraordinary about that, Mr. Elston. While we were considering what the proper policy should be, and whether we could accept the recommendations of the National Research Council, a certain amount of investigative work was carried forward.

I am advised, as to the legality of the expenditure of funds for this program and for these purposes, that the legal position was fully discussed with the General Accounting Office, whose function it is to examine into these things.

Representative ELSTON. Did you get an opinion from the General Accounting Office?

Mr. LILIENTHAL. We certainly were not advised that it was an illegal expenditure. Just exactly what the GAO said, I don't know, but I will get it for the record.

Representative ELSTON. If they rendered any opinion, I think it ought to be in the record.

(The information referred to will be found on p. 17)

Representative ELSTON. Just one other question I wanted to ask you about.

You set up the program in January, but it was not until in the fall that you asked for an opinion from your counsel on whether or not these loyalty checks had to be made. Why did you wait that long?

Mr. LILIENTHAL. I will have to examine the chronology. A great many things have happened since that time, of which this is only one. My recollection of it is that the program was not ready for operation until then, but I will have to check that.

Representative ELSTON. Did your preliminary loyalty checks, the ones you started out to make, indicate that there were some Communists who had applied for these fellowships?

Mr. LILIENTHAL. I did not look at these files, and I do not know whether Dr. Warren knows.

Dr. WARREN. I have not reviewed them recently but, to the best of my memory, in these some 48 preliminary checks there were not any Communists found.

Representative ELSTON. When did you become aware of the fact that Freistadt had a communistic background?

Dr. WARREN. I became aware of it when word was sent from the FBI office after the award of the fellowship had been made.

Representative ELSTON. When was that?

Dr. WARREN. That was approximately 3 weeks ago. I can get the exact date for you.

Representative ELSTON. Three weeks ago you learned through the FBI that he was a Communist?

Dr. WARREN. That he was alleged to be a Communist.

Representative ELSTON. What did you do about it?

Dr. WARREN. We at once had a number of discussions. We talked with representatives of the National Research Council. We attempted to review in detail his record, which was discussed with Dr. Bronk, the Chairman of the National Research Council.

Representative ELSTON. Did you advise the Commission?

Dr. WARREN. I believe the Commission had already been advised on that.

Am I correct on that, Mr. Wilson?

Mr. WILSON (Carroll Wilson, General Manager, AEC). Yes.

Dr. WARREN. The Commission was advised at the same time that I got the information.

Representative ELSTON. So 3 weeks ago the Commission knew he was a Communist.

Dr. WARREN. If my memory is correct, it was about 3 weeks.

Representative ELSTON. Did you do anything about it, Mr. Lilienthal?

Mr. LILIENTHAL. No.

Representative ELSTON. Were you going to do anything about it?

Mr. LILIENTHAL. I think I have answered that before, Mr. Elston. I am myself persuaded that leaving these questions to the National Research Council is the safest course for the country. And that satisfied me. I think that is the way it ought to be.

Representative ELSTON. It does not make any difference, then, whether they admit Communists into this program or not, does it, as far as you are concerned?

Mr. LILIENTHAL. Yes; it does to me personally. I have a very strong feeling of distaste about it, as strong as that of anyone here. But I also realize that there are some deeper and broader issues involved, and it is those that persuaded me that we should depend on private, nongovernmental, and nonpolitically dominated organizations to select these fellows. We should keep the fingers of the Federal Government out of it.

Representative ELSTON. If that is the way you feel about it, you should never have embarked upon the fellowship program, because you are putting your fingers in when you do that. You are putting them in very deeply.

Mr. LILIENTHAL. Not the way it is administered, Mr. Elston, I don't think.

Representative ELSTON. That is all.

The CHAIRMAN. Mr. Price.

Representative PRICE. In arriving at its decision in awarding fellowships, was this document from which portions have been read the final basis for action by the three persons referred to?

Dr. RICHARDS. The committees which were assigned to the different sciences—biology, agriculture, and so on—meet twice a year. The documents such as you have in front of you are assembled. And they

will spend many hours in debating who is good enough and who is not good enough to receive one of these fellowships.

Representative PRICE. But is this the only document that they read?

Dr. RICHARDS. I am not intimately enough familiar with those committee meetings to answer that question. Dr. Bronk will be here in Washington tomorrow and will be ready to appear.

Representative PRICE. How many fellowships were awarded in the last year?

Dr. RICHARDS. The record that I saw says that 540 applications were processed, and 216 were said to be suitable, and a few less than that were accepted. Some of the men have made other arrangements.

Representative PRICE. I am not a scientist; I am a layman. But on the basis of the references on the application of Freistadt, the ratings given him by the people supplying the references, his qualifications do not appear to be too high. In other words, he does not appear to be in that "potential genius" class that we have talked about. Mr. Rosen, for instance, gave him 3 ratings in the best 10 percent, 2 in the best 25 percent, and had no opportunity to observe him in 2 of your other classifications, and he lists him as among the first 35 students. We have no rating in there at all of "best 2 percent."

Mr. Wright made about the same classification, and Mr. Bowers made about the same classification. So I was just wondering what procedure they did follow in making the awards of these fellowships.

Dr. RICHARDS. I have never sat in a meeting of those committees, so what I am saying is not a particularly informed statement. I can only tell you that the people who form the committees are chosen with a great deal of care, and I know that they take their duties with extreme seriousness.

Representative PRICE. Each one of these references in Mr. Freistadt's case stated that they had no opportunity to observe him as to his ability to prosecute or process a research program effectively. I am wondering how you could pass on him on that point.

Dr. RICHARDS. May I say this, in that connection: The ability to organize a research program implied the ability to direct other people as a team. Now, the most important discoveries in science that I can think of have not been done by teams. They have been done by individuals, thoughtful individuals, working alone. Faraday didn't have any assistance when he discovered the principles which have led to the electrical industry.

Representative PRICE. But I was just wondering whether this was a final paper that this committee studied in making their selection. If it is, it does not appear to ask very much of the applicant.

Dr. RICHARDS. I have told you of my relative incompetence to answer your question. I am sorry that that should be so.

Representative PRICE. That is all I have, Mr. Chairman.

The CHAIRMAN. Mr. Kilday?

Representative KILDAY. Mr. Lilienthal, the number of fellowships available in a year depends upon the amount of money made available by appropriation, does it not?

Mr. LILIENTHAL. That is correct, sir.

Representative KILDAY. Now, this past year, I understand from Dr. Richards, there were 216 chosen, and some lesser number were actually awarded. Is that correct?

Dr. RICHARDS. That is right.

Representative KILDAY. In other words, there were some people chosen by the National Research Council to whom you did not award fellowships.

Dr. RICHARDS. Of the people who had the awards, three or four declined to accept, having made other arrangements.

Representative KILDAY. Were those positions filled?

Mr. LILIENTHAL. Dr. Warren knows the details of this; I don't.

What is the answer to that, Dr. Warren?

Dr. WARREN. We still have available fellowship positions open. There is in this initial screening, an attempt to get as much relevant data as can be readily assembled. Then there is careful study given to the relative merits of the different individuals, and the offer of an award is made to the prospective fellows.

I believe in almost every instance there have been one or more of the prospective fellows who have turned down the fellowships offered to them. And we have at present some unfilled vacancies in the fellowship program. I can't give you the exact number at this present time.

Representative KILDAY. Did you ever fail to make an award in an instance in which a person had been chosen for a fellowship?

Dr. WARREN. So far, we have followed the recommendations of the National Research Council.

Representative KILDAY. Has the National Research Council served notice on you that unless their recommendations are accepted they will not serve?

Dr. WARREN. No; it has not.

Representative KILDAY. Has that decision ever been made by the National Research Council?

Dr. RICHARDS. No.

Representative KILDAY. It has not?

Mr. LILIENTHAL, why do you assume that if you should not continue the fellowships in this instance, or if you should not award the fellowships in accordance with the recommendations of the National Research Council, you would lose their services?

Mr. LILIENTHAL. I didn't, Mr. Kilday. I was asked a hypothetical question, and I indicated that if they regarded the issue that strongly, then it seemed to me that in that kind of a——

Representative KILDAY. You had no indication that they would do so?

Mr. LILIENTHAL. No. And I think it is an important ingredient in this situation that this matter is now being studied by them. And I assume that there will be consultation with us. I think there ought to be clarification.

Representative KILDAY. Doctor, is your organization that temperamental?

Dr. RICHARDS. It is not.

Representative KILDAY. So that there is no reason for us to assume that you would withdraw from the program? Or is there?

Dr. RICHARDS. Let me call your attention to the statement in the act of incorporation of the National Academy of Sciences, dated 1863. [Reading:]

The Academy shall, whenever called upon by any department of the Government, investigate, examine, experiment, and report upon any subject of science

or art, the actual expense of such investigations, examinations, experiments, and reports, to be paid from appropriations which may be paid for the purpose; but the Academy shall receive no compensation whatever for any services to the Government of the United States.

Now, that constitutes an obligation which extends to the National Research Council.

Representative KILDAY. So, then, you would not withdraw.

Dr. RICHARDS. When asked by the Government to perform a task which we believe we can do, which is within our competence, we are bound to do it.

Representative KILDAY. And you have already made that determination in this instance, that it is within your competence?

Dr. RICHARDS. By implication, certainly.

Representative KILDAY. So we cannot assume that you would withdraw?

Dr. RICHARDS. No.

Representative KILDAY. Then what are you going to do with Freistadt if it develops that he is a Communist, Mr. Lilienthal?

Mr. LILIENTHAL. I think what ought to be done with this case and other cases is to ask the National Research Council to study the procedures they have been following, the kind of questions they have been asking, in the light of this case, and see whether they themselves would not come up with suggestions which would produce a much more satisfactory result.

What I am trying to avoid, Mr. Kilday, and what I think would be serious, would be for us to be forced to begin to interfere with the Council in their selection of particular cases. If that can be avoided, it would be much better for the whole program.

Representative KILDAY. Then just one other question to Dr. Richards:

Does the Council regard its functions as determining the scientific qualifications of a person to receive the scholarship? Is that your primary function?

Dr. RICHARDS. Yes, sir.

Representative KILDAY. Would there be any objection on the part of the Council if it made the determination from a scientific standpoint, leaving aside the other qualifications, such as the political, if it is possible to describe them in that way, using the broader sense of the word? Would there be any objection on the part of the Council?

Dr. RICHARDS. I am afraid I haven't got the nub of your question.

Representative KILDAY. What I mean is: Would you be willing to pass upon the man's technical qualifications and submit them to the Atomic Energy Commission for its final determination as to whether other factors might make him unacceptable for the Government program?

Dr. RICHARDS. If the Atomic Energy Commission asked us to do that, certainly we would?

Representative KILDAY. You would do it?

I assume, Mr. Chairman, it is back with Mr. Lilienthal. I do not have anything further.

The CHAIRMAN. May I interject? I think that perhaps Mr. Lilienthal has been asked some purely hypothetical questions. Now, Dr. Richards says in this Freistadt case, which has more or less precipitated the discussion of this issue, in his personal opinion, and not

speaking for the Council, they made a mistake. I think you have a right to assume that is the generally held opinion. If that is their opinion, then it seems to me that a good deal of your difficulty is obviated. As I understand it, you are now in the process of conversations with these gentlemen, to find out whether or not that is the situation.

Mr. LILIENTHAL. That is correct, Senator. I think, however, there is a danger in missing the question, which is not concerned with this individual case, but as to the methods of selection. Is there some way of avoiding becoming involved in the process of making selections in the cases of men doing nonsecret work with the same considerations that we go into in the case of men doing secret work? That would include opinions and affiliations, including affiliations with or membership in the Communist Party. The reason I say that I think it is the method of selection that is the trouble, rather than this particular case is that I do not think that it would be any time at all until we will be faced with the fact that it is not these avowed Communists who are a problem. It is these more devious fellows who do not profess communism, but are actually affiliated secretly. That is the real trouble.

To uncover that requires a whole investigative process.

While it is easy enough to decide it this way, I am afraid it does not decide very much.

Senator KNOWLAND. I merely want to say this: When you say, which is perfectly true, that of these one or two or three Communists who might receive these funds, there might be one who would discover some important scientific fact in medicine, or something else, I also say that the calculated risk is that one of them also might hit upon a "superduper" atom bomb, and be off to Russia, as Mr. Eisler was, on a boat, trying to get out of the jurisdiction of this country. And from the calculated risk point of view, he might be just the missing link to furnish information to an international conspiracy which has as its avowed purpose the destruction of the Republic and all that it represents.

So I think that it is a considerable responsibility for you to take upon yourself.

Mr. LILIENTHAL. Senator, it is a responsibility; but these men have no access to restricted data. They are not at work on problems of that kind. If they are, and the moment they are, they get into a completely different category.

That is why I say the line we have in the law is a line that can be defined. It is clear. And I think we ought to be very reluctant to cross it. None of these boys are working on bombs, or anything connected with bombs.

Senator KNOWLAND. I do not want to go into it today, but had we not had some examples of people who did have access to information which was of a security classification, who apparently also had affiliations, I would feel more secure in my own mind on this subject than I do today.

Mr. LILIENTHAL. What troubles me is that the Congress of the United States has thus far not drawn the kind of line that would make this an easy case. The Congress of the United States, for reasons that seemed to it wise, has decided not to outlaw the Communist Party, not to say that a Communist is not like a Republican or a

Democrat, as you have said; not to say by law, "The membership in or affiliation with this organization is in effect illegal and a crime against the country." That would be an objective approach, but it has not been done. It would assist the drawing of this line.

Senator HICKENLOOPER. Yes; but if the Senator would yield, I would like to suggest that the United States Government has said that Communists will not be carried on the public pay rolls, will not be supported by public funds.

Mr. LILIENTHAL. That is right.

Senator HICKENLOOPER. So we have at least gone that far in the declaration of our disbelief in the subversive activities of Communists and communism, whether we have outlawed them as such and made it a crime to belong to the Communist Party, or not. We have taken the step of providing economic restrictions against them, insofar as the use of public funds to employ them and keep them on the public pay roll are concerned.

Mr. LILIENTHAL. Senator, this does suggest this possibility, that the membership, the known membership, as in the case apparently of this North Carolina fellow, would give you a line, because you have the precedent of the provision in the law about the employment of Communists, who are employees of the Government.

Senator HICKENLOOPER. I would like to get into that at a later time. There are a number of questions that I wanted to discuss, but I do not think we have time tonight.

Mr. LILIENTHAL. I was only going to suggest it as a question. If that were the really difficult kind of case, that would seem to indicate some progress. The trouble is that you have got to investigate leanings, sympathies, associations, these other more subtle things, to really get the bad eggs, and that throws you into the whole business of investigation of all of these people. It seems to me that we would lose a good deal on that.

Representative DURHAM. Just one question: Mr. Lilienthal, I believe Dr. Richards has suggested, in connection with future examinations, the use of the loyalty oath.

Dr. RICHARDS. That is right.

Representative DURHAM. Would you accept a loyalty oath?

Mr. LILIENTHAL. I would accept not only a loyalty oath, but any other improvement in the procedure of the National Research Council, which they believe would be in the interest of the purposes discussed here, and would not discourage scientific development.

I think this is an important point of principle: To try to encourage them to come in with certain suggestions as this and others, and come in on that basis, rather than to have the Federal Government impose limitations.

Representative ELSTON. Do you think for one moment that a Communist is going to pay attention to a loyalty oath?

Mr. LILIENTHAL. Well, I didn't recommend this procedure. I just was asked whether I would accept that.

My whole point is that this business of professed Communists, and violations of oath, means nothing to that kind of devious individual who is our real danger.

Representative ELSTON. Freistadt must have taken two loyalty oaths. He must have taken one when he went into the Army. He must have taken another one when he was naturalized. And inci-

dently, I notice in his application he was naturalized in 1944, which was after, of course, Germany had invaded Russia.

Mr. LILIENTHAL. It is precisely because of this point that it seems to me it is a problem that cannot be solved except by facing the whole question. Should we extend the full investigative process here? That is what I think we are faced with. On that, I would like to see the National Research Council giving their opinion before we start imposing.

Senator KNOWLAND. I hope they will not be too long in giving it to us, because the Congress has this matter under consideration forthwith.

Mr. LILIENTHAL. They are studying it now, I understand, Senator.

Senator HICKENLOOPER. I want to clear the record for a moment, because we did not pursue the point, and I expect to pursue it later.

I stated a while ago that I had originally been, or have been continually, in favor of the philosophy of the fellowship program. I want to clarify that.

My conception of the fellowship program originally, and really, up until today, was a fellowship program designed to develop special talents in the nuclear field for the benefit of the atomic energy program generally. I did not have the conception of the fellowship program that it was to be education in the broad fields of science, rather usurping some other fields of national education that we had talked about. I do not care to pursue it now, but I had the idea that the fellowship program was in a restricted field of nuclear science for the benefit of the atomic energy program, and I probably will have some observations on whether I believe the Atomic Energy Commission should go into the educational field.

Now, just this one question, I would like to ask, Dr. Richards: Would you see any harm or any objection from the standpoint of the foundation, if the Atomic Energy Commission, in setting up this program, would say to your group "We want to educate a certain number of brilliant young people, scientists, but we have certain qualifications that we would like to lay down in advance. No. 1, they must, within your judgment, be able and capable of doing a job. No. 2, they must be of good moral character—we want no immoral people, if we can help it—in the program. No. 3, they must not be people who are subversive or reasonably potentially subversive people, so far as the Government of the United States is concerned. We would like for your group to operate within that program. Do you think you could do it?" If they came to you and asked you something like that, would you see any great restrictions in trying to operate within a program of that kind: First, ability, second, good morals, and third, "We do not want people who are subversive in their beliefs or reasonably potentially subversive?" Would there be any harm in such?

Dr. RICHARDS. There wouldn't be any harm on the part of the Atomic Energy Commission making that request, but the National Research Council Committee might well say "We are not equipped to discover potential communistic tendencies."

Senator HICKENLOOPER. Granted, Doctor. And I should have gone a little further and said that in outlining that program the Commission would be, in effect, saying to you, "Now, gentlemen, we respect your judgment. You are able, capable, and zealous people, and we want

you to help us, but please don't be offended if we discover in some of these recommendees some people that fall within the last two categories, either unacceptable as to morals, or subversive people. We just do not want you to be offended if we find some of those people and do not accept them, because we know you are not equipped to do that kind of a job."

Dr. RICHARDS. That would be O. K.

The CHAIRMAN. I do not think there is any question but what the Congress has evidenced, on two or three different occasions, and that recently, its intent that no part of any appropriation shall be used to employ any person who has membership in any political party or organization which advocates the overthrow of our constitutional form of government in the United States.

Now, that is section 9 (a) of the Hatch Act (18 U. S. C. 61, Fed. Note 4). Then, in the Appropriation Act, supplementary section 102 of 1949, which contains the Commission's appropriation, among other appropriations, it is again reiterated that no part of the funds shall be so used.

I wish that you would, before our next meeting, if it is possible, examine again whether or not these young men are employees of the Commission. On examining the opinion issued by the associate general counsel, I find the statement is made that they are not employees. That may well be true from a legal standpoint, but the reasoning upon which that conclusion is reached, is not set out in any detail. Of course, if that opinion is in error, if these men are legally employees, then we have no option in this matter at all.

So I wish you would reexamine the opinion of the counsel for the Commission on that point. I do not say that it is right or that it is wrong, except that I think that is a matter we should examine further.

Now, it is obvious that we have opened up a question here, which, as Mr. Lilienthal, the Chairman, has stated, is of tremendous significance. I do think that we ought to hear further testimony on it.

Mr. Bronk, as I understand it, the Chairman of the National Research Council, is to be in town tonight. Will you see him, Doctor?

Dr. RICHARDS. I will make every effort to do that.

The CHAIRMAN. Maybe some employee of the Commission could see him, too, and we could meet him here at 10 o'clock tomorrow morning, if that is agreeable. At that time we will have had a chance to consider the matter further.

Senator KNOWLAND. Mr. Chairman, just before we adjourn, because I would like these gentlemen, and others who may discuss it, to give some further thought to this:

I quite agree that all of these people who are trained under this program will not ultimately be engaged in either classified work or in the weapon phase of it. But it seems to me the Commission should constantly have in mind that out of the reservoir which the Federal Government is helping to finance, of these people, any single one of them might be drawn into our classified or weapon work. Therefore, if that fact could be kept in mind, you might get over this hurdle of a known and obvious Communist taking advantage of the program. Because, obviously he could not take the next step.

I think that certainly, anyone helping in this program should be available to us in the interests of the security of the Nation. If he

is not willing to make himself available for that purpose, I think he has no call on the Federal Government for funds.

The CHAIRMAN. Gentlemen, the only room that we can secure for tomorrow is 48-G, which is our room over in the Capitol, as you know.

We will meet tomorrow morning at 10 o'clock.

Mr. LILIENTHAL. Senator, we have been asked to appear, on our appropriation, before the Senate Committee on Appropriations, the Independent Offices Subcommittee. I am not just sure how one divides this up, whether laterally or horizontally, but we certainly, I suppose, ought to be there.

The CHAIRMAN. Well, this is a matter of tremendous importance. We have two nominees of the President awaiting the confirmation hearing. We will want to get to that as quickly as we can.

Mr. LILIENTHAL. We have some bombs to make, too, and would like to get back to work.

The CHAIRMAN. Yes. Well, I am in favor of that, too. Who is the chairman? Senator O'Mahoney?

Mr. LILIENTHAL. Yes.

The CHAIRMAN. He is the chairman of the subcommittee?

Mr. LILIENTHAL. Yes. The notice came to us 2 or 3 days ago, Senator.

The CHAIRMAN. I will talk to Senator O'Mahoney and see what arrangements we can work out, and advise you before 7 o'clock, or advise Mr. Volpe.

It might be that at least for tomorrow morning, I could prevail upon them to take the management people, with Mr. Shugg, who will start out on the budget, and we could continue this tomorrow.

Mr. LILIENTHAL. You will let us know?

The CHAIRMAN. I will let you know.

(Whereupon, at 5:55 p. m. the committee recessed, to reconvene at 10 a. m. Tuesday, May 17, 1949, in room 48-G, the Capitol.)

## ATOMIC ENERGY COMMISSION FELLOWSHIP PROGRAM

**TUESDAY, MAY 17, 1949**

CONGRESS OF THE UNITED STATES,  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The committee met at 10 a. m., pursuant to adjournment, in room 48-G, the Capitol, Senator Brien McMahon, chairman, presiding.

Present: Senator McMahon; Representative Durham (vice chairman); Senators Knowland and Hickenlooper; Representatives Holi-field, Price, Kilday, Cole, Elston, and Hinshaw.

Also present: William L. Borden, executive director, and Harold Bergman, deputy director, Joint Committee on Atomic Energy.

The CHAIRMAN. The meeting will come to order. Last night after the hearing, I announced an opportunity was being offered to Mr. Hans Freistadt, now at the University of North Carolina, to appear here and testify. Since his case has been so prominent in this hearing, and since his name has been mentioned, and comments have been made upon his situation, it seemed to me and to the committee that it was only proper and right that we should give him an opportunity to have a chance to appear to testify. We did this because we did not want to be placed in the position, and will not be placed in the position, of trying anybody in absentia. If there are going to be any names mentioned in this committee in connection with this matter, we will certainly give those whose names are mentioned an opportunity to appear publicly, at a time when it will do them some good, if they have a case to make.

I have an answer from Freistadt, in which he says he wants to come up here and testify, and to notify him of the date. We will fix the date, which is tomorrow morning. He will be here, I assume, tomorrow morning.

Now, Dr. Bronk, will you step over here, please?

I might say that we had scheduled for this morning confirmation hearings on the appointments of Dr. Smyth and Mr. Gordon Dean. In view of the fact that this other issue has arisen, the confirmation hearings will be held at 2:30 this afternoon.

Doctor, I know you know why you are here, and I am going to ask you to go right ahead in your own way and tell us who you are, in what capacity you are appearing, and make any comments you wish to make relevant to this hearing.

### **STATEMENT OF DR. DETLEV W. BRONK, CHAIRMAN, NATIONAL RESEARCH COUNCIL, WASHINGTON, D. C.**

Dr. BRONK. Mr. Chairman, my name is Detlev W. Bronk. I am chairman of the National Research Council, which, of course, as you

know, has been administering this fellowship program under contract with the Atomic Energy Commission.

The National Research Council also, as was described to you yesterday has, since the directive establishing the Council issued by President Wilson, sought to advise the governmental agencies on scientific matters. It is, I would say, a democratic agency of the scientists of the country. It represents a large number of scientific societies which have representatives on the Council, and also serves to provide an agency through which scientific bodies and individual scientists can make their greatest contribution to the national welfare.

The CHAIRMAN. Now, Doctor, the National Academy of Sciences was incorporated in 1863 or 1864, during the Civil War, for the purpose of advising the Government on scientific matters. It has had a long and distinguished history.

Dr. BRONK. That is right, sir.

The CHAIRMAN. The Council came into existence around the First World War?

Dr. BRONK. During the First World War, sir.

The CHAIRMAN. And its purpose was to assist the Government in experimentation and research that would be helpful in national defense?

(The Executive order perpetuating the National Research Council is as follows:)

#### EXECUTIVE ORDER No. 2859

The National Research Council was organized in 1916 at the request of the President by the National Academy of Sciences, under its congressional charter, as a measure of national preparedness. The work accomplished by the Council in organizing research and in securing cooperation of military and civilian agencies in the solution of military problems demonstrates its capacity for larger service. The National Academy of Sciences is therefore requested to perpetuate the National Research Council, the duties of which shall be as follows:

1. In general, to stimulate research in the mathematical, physical and biological sciences, and in the application of these sciences to engineering, agriculture, medicine and other useful arts, with the object of increasing knowledge, of strengthening the national defense, and of contributing in other ways to the public welfare.

2. To survey the larger possibilities of science, to formulate comprehensive projects of research, and to develop effective means of utilizing the scientific and technical resources of the country for dealing with these projects.

3. To promote cooperation in research, at home and abroad, in order to secure concentration of effort, minimize duplication, and stimulate progress; but in all cooperative undertakings to give encouragement to individual initiative, as fundamentally important to the advancement of science.

4. To serve as a means of bringing American and foreign investigators into active cooperation with the scientific and technical services of the War and Navy Departments and with those of the civil branches of the Government.

5. To direct the attention of scientific and technical investigators to the present importance of military and industrial problems in connection with the war, and to aid in the solution of these problems by organizing specific researches.

6. To gather and collate scientific and technical information, at home and abroad, in cooperation with governmental and other agencies, and to render such information available to duly accredited persons.

Effective prosecution of the Council's work requires the cordial collaboration of the scientific and technical branches of the Government, both military and civil. To this end representatives of the Government, upon the nomination of the National Academy of Sciences, will be designated by the President as members of the Council, as heretofore, and the heads of the departments immediately concerned will continue to cooperate in every way that may be required.

WOODROW WILSON.

THE WHITE HOUSE,  
May 11, 1918

Dr. BRONK. And to give general scientific advisory services whenever the Government desired them.

The Council is an agency of the National Academy of Sciences. It was created by the Academy at the request of the Government in order to provide a large base of scientific advice. It was a means whereby a larger number of scientists could be brought into Governmental advisory service under the general aegis of the National Academy of Sciences, which acts as the trustee, if you will, of the National Research Council. The National Research Council has no corporate structure itself.

The CHAIRMAN. The National Academy of Sciences is something of a holding company for the National Research Council?

Dr. BRONK. That is correct, sir.

The CHAIRMAN. How do you get into the National Academy of Sciences?

Dr. BRONK. That is by election, after very careful consideration by members of the Academy.

The CHAIRMAN. How big is the membership?

Dr. BRONK. The membership is somewhat under 500.

The CHAIRMAN. You elect every year?

Dr. BRONK. Every year there is an election.

The CHAIRMAN. And membership for life?

Dr. BRONK. That is correct, sir.

The CHAIRMAN. The elections are made by the Board of Trustees, or by the membership generally?

Dr. BRONK. By the membership generally.

The CHAIRMAN. And the qualifications for admittance?

Dr. BRONK. They are very carefully considered by the individual members and by the several sections which are concerned with the field of science of which the individual candidate is a representative.

The CHAIRMAN. Is there any limitation of the scientific qualifications? I mean by that, in the fields of science.

Dr. BRONK. All fields of the natural sciences; yes, sir.

The CHAIRMAN. How many are on the National Research Council?

Dr. BRONK. That is a little difficult to say, although approximately 220 are on the Council officially. But the Council actually includes all those who work through the Council on its many committees, and that would run into some thousands. I would say approximately 3,000 are working in the Council. That would include, for instance, those who are now on the Building Research Advisory Board, which is advising the Government on building problems; and those who serve the Highway Research Board, which has been the leading agency for the coordination of research and the giving of advisory services to the highway departments of the various States of the Union and the Federal Government.

The CHAIRMAN. How does one become a member of the National Research Council, Doctor?

Dr. BRONK. The individual members are appointed by the chairmen of the several divisions of the Council, the Division of Mathematics and Physics, the Division of Chemistry, the Division of Biology and Agriculture, the Division of Geology and Geography, the Division of Anthropology and Psychology, the Division of Medical Sciences, the Division of Engineering. The chairman of these several divisions appoint the members of the constituent committees, usually on advice of individuals in that particular field of activity.

The CHAIRMAN. And how are the chairmen selected?

Dr. BRONK. The chairmen of the different divisions are selected by the chairman of the Council, on recommendation of individuals in that field.

The CHAIRMAN. And you are the chairman of the Council?

Dr. BRONK. I am the chairman of the Council, and I recommend the appointment of a chairman of a division to the president of the National Academy of Sciences, who makes the final appointment.

The CHAIRMAN. So you are chairman of the Council. You appoint the chairmen of the various divisions, on recommendation of people in that field.

Dr. BRONK. I recommend to the president of the National Academy of Sciences that he appoint the chairmen of the divisions.

The CHAIRMAN. It is these subsidiary boards under the chairmanship of the various divisions which have actually made the recommendations for the fellowships?

Dr. BRONK. Yes. We have 10 fellowship boards. There is one which administers the medical fellowship program, the funds being provided by the Rockefeller Foundation. There is another fellowship board which administers the fellowships in the natural sciences. The funds for that are also provided by the Rockefeller Foundation.

There is a fellowship board which is known as the Merck Fellowship Board, which administers a grant made by Merck & Co., Inc., for the training of people in the borderland between chemistry and biology. There is one which administers funds provided by the Radio Corporation of America for training in the field of electronics. And when this program began, it seemed desirable to appoint five additional boards in order to get as wide representation, as wide judgment, as possible, on the selection of these individuals, rather than to overburden already existing fellowship boards.

I might say that I also felt it was highly desirable, in view of the fact that we are a national research council, to have wide national geographical representation. And accordingly, I think it is significant to state that the chairman of the Predoctoral Fellowship Board in the Biological Sciences is Dr. Whitaker, vice president of Stanford University, and the chairman of the Postdoctoral Fellowship Board in Biology and Agriculture is Reuben Gustavson, chancellor of the University of Nebraska.

The CHAIRMAN. He used to be at Chicago?

Dr. BRONK. He used to be at Chicago. The chairman of the Postdoctoral Fellowship Board in the Physical Sciences is Roger Adams, professor of chemistry at the University of Illinois. The chairman of the Postdoctoral Fellowship Board in the Medical Sciences is Homer Smith, professor of physiology at New York University. And the chairman of the Predoctoral Fellowship Board in the Physical Sciences is Henry Barton, director of the American Institute of Physics, which is a national organization.

So you can see that we have done our best to get a wide geographic representation, and to put the activity of the Council on a truly national basis in this respect.

The CHAIRMAN. I forgot to mention it, Doctor; but you are chancellor, or president, of Johns Hopkins University?

Dr. BRONK. Yes, sir.

The CHAIRMAN. You succeeded Dr. Bowman?

Dr. BRONK. Yes, sir.

The CHAIRMAN. And before that?

Dr. BRONK. I was professor of biophysics at the University of Pennsylvania, and director of the Johnson Research Foundation there.

Representative DURHAM. What is the total number of scholarship awards you have acted upon up to the present time? What is the total number?

Dr. BRONK. The total number in current operation at the present time, sir, is in the neighborhood of, I would say, approximately 575.

I recently scrutinized figures made available to me—

Representative DURHAM. I am not talking about this particular thing, but the Government awards made by the whole organization.

Dr. BRONK. I was including those, sir. I was adding the number in these several other programs, to those under the Atomic Energy Commission program. It would be in the neighborhood of 550 to 600.

The CHAIRMAN. What was the total?

Dr. WARREN. There is a total of 497 at the present time, and this year, the number made, I believe, was 216.

Dr. BRONK. The number was 216?

Dr. WARREN. There were a total of 216 made this year.

Representative DURHAM. I am not interested in the total awards on individual cases. The question I asked was how many awards of fellowships you made to groups like the Atomic Energy Commission. What is that number?

The CHAIRMAN. The so-called private ones.

Dr. BRONK. The private ones? That would be in the neighborhood of approximately 55 or 60.

The CHAIRMAN. So the majority of your business is the distribution of the Atomic Energy Fellowships.

Dr. BRONK. That is by far the larger part of our fellowship activity.

The CHAIRMAN. How long have you been in the fellowship business, Doctor?

Dr. BRONK. About 30 years.

The CHAIRMAN. And how many would you say had been granted in that time? Would you hazard an estimate?

Dr. BRONK. Yes, approximately 1,500.

The CHAIRMAN. Have they averaged about \$1,000 or \$1,500? What have they been worth?

Dr. BRONK. They have varied, of course, as the cost of living has gone up. They began at a lower figure, but recently they have been in the neighborhood of \$2,500, and this past year they have increased to \$3,000, as a basic stipend for a postdoctoral fellow who is unmarried. That is increased in terms of a wife and children.

The CHAIRMAN. And predoctoral?

Dr. BRONK. Predoctoral has been in the neighborhood of \$1,600, as the basic stipend.

The CHAIRMAN. That is the classification that Mr. Freistadt is in?

Dr. BRONK. Yes.

Representative DURHAM. Do you use over-all standard requirements in the application of these awards?

Dr. BRONK. The award is made, sir, on the basis of the judgment of the Board, which tries to take into consideration the scientific ability of the individual in view of all of the various considerations which are deemed to be pertinent. So that it is on the basis of the

judgment of the Board, and there is a rotation of membership on that Board, so that there would, of course, be somewhat different criteria and standards as the personnel of the Board changes from year to year.

Representative DURHAM. But are you using practically the same standard that you have been using over the past 30 years for these atomic energy fellowships?

Dr. BRONK. We are using exactly the same methods of procedure; although, as I say, the standards change.

I would also like to say this, which I think is pertinent: We feel that the selection of individuals is an experimental procedure. We must keep ourselves alert to changing conditions and changing requirements for people going into scientific work.

Because of that we review from time to time our bases of selection and our criteria. Last autumn we had a meeting of representatives of all of our fellowship boards, not only those dealing with the Atomic Energy Commission program, but the others too, in order to go over many of the detailed problems concerning these fellowship programs: What should be the stipend, what should be done with regard to increasing the stipend in the case of the birth of a child, what should be done about fellowships for foreign study, what sort of compensation should be given for travel, details of that sort, as well as broad general issues, and there was general agreement by representatives of all of these boards on what should be the policy.

Because of the fact that we have, during this past year, had a much larger fellowship responsibility than ever before, I had some months ago decided to have a meeting early this summer of the members of all the fellowship boards, together with a committee on the selection and training of scientific personnel, which is under the chairmanship of Dr. Rulon of Harvard, to consider whether or not we are using the right methods for the selection of individuals. We like to feel that we are continually studying the method of selection, to improve it, in order to make it more effective.

Representative DURHAM. Has your Board turned down any requests by any group or individual or organization or corporation or whoever makes the award, to administer and select these awards?

Dr. BRONK. There has been so such proposal made to us during the 3 years I have been chairman, sir. And before that time I am not aware of there having been such a negotiation entered into.

Representative DURHAM. To your knowledge, then, there have never been any awards turned down by the Board because of the fact that certain stringent regulations were requested by the donor?

Dr. BRONK. No, sir. We like to operate on a basis of partnership and cooperation with the agency with which we are working. As I say, in the field of the fellowship programs, there has been only the relationship with the Rockefeller Foundation, up until these last few years.

I might add, in addition to the agencies I have already referred to, that we do administer fellowships under funds provided by the American Cancer Society, the National Foundation for Infantile Paralysis, and certain other agencies in the field of medicine.

The CHAIRMAN. Do you distribute fellowships, or distribute funds?

Dr. BRONK. We distribute fellowships for those agencies.

The CHAIRMAN. Does that include all of these classifications, that amount to about 55 or 60, the Rockefeller, the Cancer Society, Merck, all of them?

Dr. BRONK. I think it comes in the neighborhood of 60 to 70; yes, sir.

The CHAIRMAN. How many organizations do you represent, other than the AEC?

Dr. BRONK. Six.

The CHAIRMAN. Let us see. We might as well get them for the record.

The Rockefeller Foundation, Merck, and the Institute for Cancer Research?

Dr. BRONK. The American Cancer Society, the National Foundation for Infantile Paralysis, the Radio Corporation of America, and the Carnegie Corporation of New York. There may be some others in the field of medicine that I am not aware of, but those are the ones that come to my mind.

The CHAIRMAN. That would be seven, adding the Atomic Energy Commission.

Representative DURHAM. The Atomic Energy Commission award was the only one with Government funds, then? Is that correct?

Dr. BRONK. That is correct.

The CHAIRMAN. Where was this meeting held, that got all the people in?

Dr. BRONK. That was in the offices of the American Institute of Physics, in New York.

The CHAIRMAN. When?

Dr. BRONK. Last November.

The CHAIRMAN. Previous to that time you had had some discussion with the Atomic Energy Commission about investigating, making a check on the applicants for fellowships?

Dr. BRONK. That was discussed; yes, sir.

The CHAIRMAN. Was that discussed at the November meeting?

Dr. BRONK. I am not aware of the fact that that was gone into at that time, because we were concerned then with the operation of the program as it was proceeding for that particular year, which was already in process. The fellowships had been announced, and we were trying to decide on the details of operation for the spring selections.

The CHAIRMAN. I think we now understand, Doctor, the type of an organization it is and how it proceeds in its business.

Of course, we are now aware that a certain young gentleman in North Carolina who has been awarded one of these fellowships, is one who is very much dedicated to communism. He is the head of a study club, the Karl Marx Study Club, as he calls it, and he is going to appear. He will appear tomorrow. I gather from the newspaper clippings there will be no doubt as to his holding to his convictions as a Communist.

Doctor, it was a rather unfortunate thing that he got into this program; was it not?

Dr. BRONK. It certainly has made a lot of complications in an otherwise pretty straight-line organization.

The CHAIRMAN. I think you will agree that it was unfortunate that he landed in on us.

Dr. BRONK. I would agree.

The CHAIRMAN. How are we going to prevent that from happening again?

Dr. BRONK. Well, I was cognizant of that sort of difficulty when I said that I thought that the Fellowship Board should continually consider this method of selection and identification of individuals. I think that there is one type of information which we may not have had as adequately at the disposal of the Boards as would be desirable, and that is partly because of the fact that in the past we have operated primarily in the field on postdoctoral fellowships. Fellowships have been awarded to individuals who have already received their doctorate. Because of that, they have been in close association with the individual professor under whom they have been doing their research, so that we have had a very good source of information concerning their general qualifications, character, personality, physical stamina, and all of the other elements which contribute to their effectiveness as well as their mental capacity.

When, during the latter part of the war, we began a program of fellowships designed to replenish the pool of scientifically trained men in the country under a grant from the Rockefeller Foundation, these fellowships to be awarded to young men who had been in some sort of war service and had had their scientific training interrupted, therefore involving the appointment of men who had not received their doctoral degree, we became cognizant—I say “we,” because I was a member of that committee—we became cognizant of the fact that it was much more difficult to identify the people who were to be awarded fellowships. In that particular program we had some 2,300 applicants, and we were able to make approximately 190 awards.

So, as I say, it was apparent to us that we were facing new problems in the selection of people; that is one of the reasons why there has been appointed this committee on the identification of scientific personnel, under the chairmanship of Dr. Rulon at Harvard.

That leads me to say that I think we should have a means whereby we can find more information, more pertinent information, regarding the general characteristics of an individual.

The CHAIRMAN. Which would include what?

Dr. BRONK. If you can believe my sincerity, I would say that I made this suggestion long before this case arose; that it would be desirable if we had, in addition to the statements from three scientists who know the candidate, a statement by, I would say, the dean of men, who would have a different sort of basis of appraisal of the character of the individual. Or if the dean of men felt unable to give us a statement concerning the personality and character of the individual, it could be suggested that he designate someone who could give to our board such information.

Now, that will be my personal recommendation to fellowship boards. It may be that we will feel that this information will not be helpful, but I would strongly recommend that that be done, and I would believe that it would be accepted by the fellowship board. That sort of appraisal would, I believe, have given us in this particular case information which was not available to the board.

But I would also like to say, sir, that we believe that our best chance of securing a fair appraisal, a good appraisal, of an individual's qualifications, is to be gained from individuals who know him in the

local institution in which he works. We are a national organization which deals with institutions throughout the country, and we like to place as much responsibility as possible for assistance upon the individuals in the institutions who we assume are best qualified to give us that advice. If in this case we find that we have not been given the information we should, upon turning to three competent scientists, I think it indicates that we should secure information from others, and I believe that my thought of securing information from the dean of men of the institution in which the man has taken his training would satisfy that particular need.

The CHAIRMAN. Well, Doctor, as I get it, you state that greater investigation, or more detailed investigation, is necessary. You thereupon place, it seems to me, a rather sharp restriction on where you go to get that information. Is that not true?

Dr. BRONK. No, I would not put any restriction on it at all. In fact, I am sure that the Boards generally not only welcome, but seek as much advice from as many sources as they possibly can. But if one is going to define a certain individual from whom we should always receive information, I would think that the dean of men would be as good as any one individual.

But, if I were to find that any of our Boards were not heeding any advice they could get, any information available to them from any source, I would be greatly disappointed and very much surprised.

The CHAIRMAN. Let us take Freistadt, for instance. This might be helpful. Now, would you trace for us how he came into the situation and what the steps were that were taken, and what steps you would now add, on consideration of the problem, as new steps?

Dr. BRONK. In answering that question, I must say that I had never heard of Mr. Freistadt until last week. He was a completely unknown individual to me, so I can only answer the question in general terms, as the process would normally be carried out.

He would have received information concerning these fellowships from the announcements which were circulated widely among the universities and colleges of the country. He would then, I presume, have written, and in fact I know he must have written, to our Office of Scientific Personnel, Fellowship Division, for further information concerning the fellowships.

The CHAIRMAN. Where is that office?

Dr. BRONK. In the National Research Council.

The CHAIRMAN. In New York?

Dr. BRONK. In Washington.

He would have received application blanks, on which he would have made application for a fellowship.

The CHAIRMAN. Have you one of those forms with you?

Dr. BRONK. I do not have one with me.

The CHAIRMAN. Could we get one?

Dr. BRONK. I think perhaps there may be one here that Dr. Richards has.

The CHAIRMAN. Is that a blank form?

Dr. BRONK. No; this is the one on Freistadt.

The CHAIRMAN. Doctor, is there any question there, that is designed to elicit this man's, or the applicant's membership in organizations?

Dr. BRONK. That is not on here, to my knowledge. I would be very much surprised if it were. In fact, I am sure it is not.

The CHAIRMAN. Is there any oath of allegiance required?

Dr. BRONK. No.

The CHAIRMAN. There is no question on there designed to indicate his political beliefs? I do not mean as to whether he is a Democrat or a Republican.

Dr. BRONK. Nothing to indicate that explicitly, sir. When I say that, I have in mind a question posed to each of the individuals whom we questioned concerning the applicants: "Is the candidate the kind of person with whom you would like to be closely associated as a professional colleague?" And "Give your judgment of the candidate's character and personality, including a statement of any physical, personality, or character handicap."

The CHAIRMAN. As to these three gentlemen, the professors who answered as they did to those questions, what comment have you to make on that, Doctor?

Dr. BRONK. I can only comment that I would not have answered in the same way myself.

The CHAIRMAN. Pardon me, sir?

Dr. BRONK. I say I would not have answered in the same way myself.

The CHAIRMAN. That is, you see, the problem we are up against. How are we going to keep that from happening? The AEC and its vast appropriations depend, as you and I know, of course, on a Government supported by the people, who must be convinced of the soundness of the program. That does not mean every administrative step has to be taken in accordance with the vagaries or the passing fancy of Johnny Jones at Third and E Streets in Minneapolis; but generally speaking, a decent regard, shall I say, for the opinions of citizens as a whole, has to be had by any democratic government.

Dr. BRONK. I was on the point of saying that I firmly believe—and my faith in American democracy has not yet been shaken so much, although I think we all have it shaken at some times—my faith in American democracy is still so great that I believe that, except in rare instances, when we take into our confidence our fellow citizens, we will get good advice. Sometimes we may be let down, but in this particular situation, for instance, we have over 300 fellowship appointments, now close to 500 fellowship appointments, as you have heard. And there may be other individuals than Freistadt; I couldn't be sure that there are not others that we have been badly advised on, with regard to their candidacy, but I think that in the great majority of cases, our fellow citizens, on whom we lean for advice, are going to play fair and square with us, and are going to give us intelligent and accurate and open advice and assistance.

The CHAIRMAN. How can we avoid having more Freistadts? And certainly I do not want to place a policeman at the elbow of every research student. I think I have some appreciation of what security by achievement means in this field, as opposed to strictly security by concealment. With all that those two ideas connote, and with all the sympathy in the world, I want to know from you how we can practically proceed in such a way as to avoid a man like Freistadt, who is a scandal to the people of North Carolina, and to the people of the country, and a scandal to his fellow students, who, as Congressman Dur-

ham showed me yesterday, wrote in their official paper denouncing him, and I thought very logically, too. There were some more vigorous attacks on him, which were perhaps too much so, but by and large it was a pretty sensible thing. We cannot have scandal in this program.

Dr. BRONK. I don't believe, sir, and I am sure you would agree, that we can be absolutely certain that we can avoid every single instance. I do not believe there is any method of scrutiny which can be absolutely perfect.

The CHAIRMAN. No human institution is that.

Dr. BRONK. No human institution is; yes, sir. I think the individuals who are most dangerous, as I would say, based on my long association with military agencies, are the ones who are best able to hide the sort of thing that Freistadt did not hide. An individual such as he should easily be identified. But the people that I would be more concerned about, and more alarmed concerning, are those who seem to be absolutely clean. They are so shrewd and so able to cover up what they are doing that they cannot be identified, and those are the ones I would be alarmed about. How one is going to find those, I do not know. I think we have to take some calculated risks. I believe we could hedge ourselves around so completely by defenses against individuals who might be dangerous that we could not make any progress at all, and would be unable to move.

So I think, as I say, that we have got to take some calculated risks. That is not to say that we shouldn't do what we can to improve our system of finding those individuals who are most able to make important contributions.

The CHAIRMAN. That risk would be minimized, Doctor, by a most careful examination of the applicant's character; and certainly his belief in the overthrow of the United States Government is definitely a characteristic.

Dr. BRONK. And yet he must have said that he did not believe in that, because I find that he must have taken the oath of allegiance when he became a citizen of the United States. He must have taken the oath of allegiance when he went into the United States Army.

The CHAIRMAN. But, Doctor, would not the most cursory examination at the University of Chicago, where he spent some 2 years, and where he was very actively engaged in promoting the Communist cause, have turned it up?

Dr. BRONK. It certainly would have.

The CHAIRMAN. Yes. You say more care should be taken. At least I certainly agree more care should be taken and more investigation should be made. Now the question comes of "Who should make the investigation," I presume. But at least we are agreed on the fact that we should not be required to educate a fellow like this Freistadt.

Dr. BRONK. But I am confused on that, sir, because I find that the GI bill of rights was providing him money for education, and I personally can't see any difference between providing money under this fellowship program and under the GI bill of rights.

Representative KILDAY. That is a static thing, Doctor. The very idea of service gave him that right.

Dr. BRONK. Yes.

Representative KILDAY. Excuse me, Mr. Chairman.

The CHAIRMAN. That is all right.

Dr. BRONK. And yet insofar as his contribution to science is concerned, I don't know that I see the difference. Because if he was to receive any sort of classified information, he obviously would have to be cleared. But insofar as his eligibility for the education is concerned, it seems to me that he is as dangerous under one category of support as under another.

Senator HICKENLOOPER. Mr Chairman, may I suggest this to Dr. Bronk?

Under the theory of the GI bill of rights, educational opportunities are considered to be an earned matter of right, which has already been earned and paid for. The consideration has been given for that. Under the fellowship program it is a matter of governmental grace. It is extending a gratuity that is not considered to be an earned award, except as such gratuities may develop some potentials. I think there is a fundamental difference. The law recognizes that there are matters of right and matters of grace, and this would, I think, fall under the category of a matter of grace rather than a matter of right. I would consider the GI bill as a matter of right.

Dr. BRONK. I see the distinction. I said I was confused about it, and I think that has clarified that point in my mind.

The CHAIRMAN. That would be like investigating a farmer who is the recipient of an AAA benefit to find out if he was loyal or not. That has nothing to do with it. He refrains, under that program, from planting so much cotton, for example. It is a contract.

Representative DURHAM. Doctor, speaking about the methods of trying to get information on these students, I am going to read from an article which appeared in the Durham Morning Herald. It appears that Freistadt was interviewed, and he wrote this letter to the Tarheel.

Suppose you had had this kind of information, which would have been easy, I think, to have obtained:

He says [reading]:

I criticize our present administration as an economic organization. I have argued that our foreign policy is suicide. I have urged that under socialism the American people could enjoy a standard of living the like of which we dare not dream of now. The right to so argue is a privilege that every citizen enjoys, and it requires a highly distorted reasoning to make disloyalty out of that. I consider myself a loyal citizen of this country. I am bound by my oath of citizenship—

which he said he took while in the Army in 1944 and 1946—

to defend it against any aggressor, and will do so if necessary. I see no contradiction between my loyalty and my membership in the Communist Party. I consider allegations that the Communist Party is under foreign control lies, and until such time as these allegations are proved in court I will judge the Communist Party by its published platform and constitution, to which I subscribe.

If you had known that, certainly you would not have selected him for a scholarship, would you? Do you believe you would, if you had had that kind of information?

Dr. BRONK. If I had been on the Board of Selection, I would say it indicates a person who doesn't think very clearly, and is not likely to be a very good scientist.

The CHAIRMAN. Exactly. He says he is in the pursuit of truth. And what more palatable and obvious factor is there, Doctor, to you and to me, than that the Communist Party in this country is part of

an international Communist Party and an international conspiracy? After all, we need only look at what happened in 1939 and 1940, and the change in party line here, when they changed overnight and the Daily Worker was so embarrassed, as we remember. Then you remember Duclos making the speech in France and Browder immediately getting kicked out.

So if this fellow is so dense as not to see that he must be a boob, and he is not worth anything.

Dr. BRONK. Of course, there is one factor that I find it very difficult to appraise adequately. In fact, I am afraid I would have to say, If I were going to be absolutely frank, that I am not a very good witness in such a hearing as this, because I have certain prejudices, very deep and strong and almost violent prejudices in regard to this whole matter; which does not make me a very good scientist, when I come to talk about them. So I have to try to push those into the background. But, having pushed them as far into the background as I can, I do wonder whether we don't encounter some young chaps who do have a great capacity to make an important contribution to our national welfare, who are experimenting with new ideas, not only in the field of science, but also in the field of social philosophy.

And if they have the capacity to become really able scientists, I would have the faith—or I would have the hope, let me say; perhaps it is a little stronger—that as they develop a little more maturity, they would recognize the fallacy of their point of view and would soon cast it overboard.

I think we have all seen in biographical histories, accounts of individuals who have been radical in early age and conservative later. They develop in that way.

So I think we have to take into consideration what the calculated risk is that we can take in letting an occasional person of this sort come into the program—who I would doubt could do very much harm, or could do any harm at all, except to sound off with a lot of nonsense—in the hope that he will become wiser as he develops, also greater scientific competence. I don't mean to say that he will become wiser politically because he develops more scientific competence, but as he develops scientific competence he is also going to develop the maturity in his social outlook which is going to make him not only a useful scientist but a respectable citizen of the country.

The CHAIRMAN. May I correct one thing I said, or rather, not correct it, but amend it?

I realize that a great artist, for instance, might have unusual political views. My comment on Friestadt is that he finds as objective truth something that is so palpably wrong, as you pointed out, that you did not think he would be a very good scientist.

I do not mean that a great scientist has to be a conformist in his political views, and must think just exactly as I think. I certainly do not mean that. And I want to clear that up: that this instance that Congressman Durham raised, this statement about communism not being a national conspiracy, seems to me to be such a statement as to indicate that he is not very bright.

Dr. BRONK. I agree with you a hundred percent, and I think that our Fellowship Board in this instance scored just about zero. But may I please also say that we cannot hope, even with a distinguished Fellowship Board, to have them bat 1,000. I am afraid they are

going to occasionally strike out, and if they do a good job on the high average, I would feel well pleased.

These are individuals who certainly are devoted to the national welfare. They give their services completely freely, and they will do the very best they can. They will try to improve their methods of selection, and I am sure that you will find that when they come together this summer they will take such considerations into account. I am sure that they will be desirous of improving, in every way possible, and I can assure you gentlemen that they will respect your advice and the thought that you have given to this matter.

Senator HICKENLOOPER. Dr. Bronk, in connection with your discussion of just a moment ago about selecting people of ability for training, I would like to suggest that in this particular matter I think there is a very fine, but clearly defined line of differentiation between what the meat of this particular inquiry is, and the theory of fellowship education generally.

This involves the expenditure of Government money to educate subversives, or other undesirable people.

I do not approach this from the standpoint of discussing what you may do for the National Broadcasting Co., or whatever the other organizations are that you represent, as private ventures. I am not allowing that to creep into my mind in connection with this thing at all. I do think that this involves only the desirability or the propriety of spending public money to educate subversives or potential subversives or other undesirables.

Now, do you draw a distinction between those two approaches to a general fellowship program?

Dr. BRONK. I do. Because I think that where a private agency asks us for advice concerning the identification of individuals to whom they should make available their money, or where they give that money to us to give to certain individuals, as we think best, it is necessary that we discuss with them their standards.

For instance, in the case of Merck & Co., we wish to do those things that Merck & Co. are interested in having done, insofar as we can go along with them.

In the case of the Government, we likewise wish to work in cooperation with Government.

Senator HICKENLOOPER. That leads me to one question that I think is quite important. The National Research Council is, without argument, composed of able and eminent people. So I do not speak so much in criticism of the National Research Council, because I believe it to be true that the members of the National Research Council are interested in educational advancement. Very often, I think, many of those people are not concerned with the social and political views of people; they are interested in their capacity to learn a specialized field and to develop their abilities in that field. Therefore, the National Research Council may well have described this job fully when it said, in effect—

We recommend certain individuals because their record has been good in their particular field of endeavor, in their particular science.

Would it be unworkable in any way, in your judgment, if the Atomic Energy Commission would come to you, as the National Research Council, and say to you, "We would like to use the benefit of your general knowledge in this field to recommend young men or young

women for special training as fellows. But we have certain standards that we would like to suggest to you. First, we do not want people who are immoral, that is, there are certain moral standards we would like to preserve. Secondly, we do not want people who are subversive in their views, or reasonably potentially subversive in their views. Those are two standards we would like to maintain."

Would there be any difficulty on the part of your National Research Council in recommending people, and then having them subjected to those other two tests by the Commission or its agencies?

Dr. BRONK. I can't see any difficulty with that. I think our technique would have to be modified, because the appraisal would have to be done in a fragmented way, perhaps. But any criteria which was set, we would certainly consider, and I can't conceive of any possible difficulty with the procedure you have suggested.

Senator HICKENLOOPER. May I go just one step further, in this discussion here?

Would you think that the National Research Council would be offended if the Atomic Energy Commission said to it: "We do not want immoral people and we do not want subversives in this program, but we will assume responsibility for the examination into those phases. What we would like your help on is the recommendation of capable people, and we hope you will not be offended if somebody you recommend is found by us to be not the type of individual morally, or from the standpoint of loyalty or otherwise, that we would like in this program?"

Do you believe your group would be offended by that?

Dr. BRONK. I certainly don't think they would be offended. They might find it difficult to operate if the procedure were going to be carried out in a certain way.

Because I want to be entirely fair to the Atomic Energy Commission, in saying that after hearing the debates and discussions of the five fellowship boards last spring, I took the time to sit with each of the Boards and heard their discussion of the general problem that they are now facing, as a new type of responsibility. And on the basis of those discussions, I wrote to the Atomic Energy Commission and said that I believed that I had interpreted accurately the general opinion, if not the unanimous opinion—because there may have been several individuals who did not feel so strongly—as being that it would be very difficult to operate the program if each applicant were to be investigated by the Federal Bureau of Investigation before the Fellowship Board was to go into action. I also had very strongly the impression that the members of the Boards felt that that would be an unwise thing to do. Because, if I can interpret their feeling correctly, it was that if they did not take that stand they would be encouraging a line of procedure which might have very far-reaching implications in the whole field of education. They were thinking in terms of the proposed National Science Foundation.

And one of the reasons why, I may say, I was able to get as many top-flight scientists in the country to take on this very heavy responsibility and a lot of hard work was because they recognized that they were taking a first step; that they were having a part in helping to determine policies which might be very much more widespread than just this program; that they might be laying the foundation of philosophy, so to speak, with regard to the operation of a broad national

fellowship program under the National Science Foundation. I believe I interpret their opinion correctly when I say that they felt that they did not want to be party to any recommendation which would imply that no individual should be supported without FBI clearance. I now exclude the GI bill of rights, because I have been corrected on that and see the case quite clearly. But they did not want to be a party to endorsing any procedure which would involve Federal Bureau of Investigation clearance of any persons who in the future was to receive Federal benefit for scientific education. But that is past history.

Now, what they would feel about the situation at the present time, I don't know. I am sure that they would be glad to discuss this whole matter with the representatives of your committee and of the Atomic Energy Commission, and I am sure you would find them desirous of working as seemed to be satisfactory to the majority of those concerned.

Senator HICKENLOOPER. Well, I may suggest, Dr. Bronk, that with regard to the matter of investigation of these people, or the inquiry that was mentioned a moment ago, it appeared yesterday in connection with Freistadt in the hearings, that a simple telephone call to the Federal Bureau of Investigation would have developed this information. The fact of the matter was that eventually the Federal Bureau of Investigation telephoned the Commission and said "We have this information on this man."

That, in that case, would not have entailed any additional extensive investigation. But this is an isolated case, and there were probably peculiar circumstances surrounding it.

But it occurs to me that there could be no reason why the National Research Council should not be perfectly able to exercise the function for which it is peculiarly adapted, which is the gaging of the ability of an individual as a potential doctor or as a potential specialist in some field. That is the field in which the National Research Council is well qualified. The National Research Council, of course, is not well qualified to conduct an investigation into other matters; but I fail to see why, in the case of an expenditure of public funds, the National Research Council cannot do the job it is qualified to do, which is to evaluate the mental potentials of these people in their specialized lines, and why that would be interfered with if two other very important categories, morals, and subversive attitudes, could be looked into reasonably, as a matter of assurance. I do not know just what the answer to that would be, but it would seem to me that some very adequate inquiries into the two categories of morals and subversive attitudes could well be worked out, which would be reasonably satisfactory.

Dr. BRONK. I like that remark particularly, because it seems to me that we are all interested in doing the same sort of thing. And certainly the National Research Council has very deep in its heart the national welfare, and I am certain that we can discuss this matter with representatives of the Atomic Energy Commission. I am certain that we can work out a method of procedure that would be entirely satisfactory to those who have the interests of the nation at heart. There may be differences of opinion as to how the thing should be done from the standpoint of details, but I can't believe that there is any fundamentally insoluble problem here.

Senator HICKENLOOPER. Then let me delimit the problems involved here, Dr. Bronk. This is my personal view; I cannot announce it as the view of everybody. I think we must consider that in private foundations the money that is used by the private group is the responsibility of that private group. They are spending their own money.

In the case of public activities, not only is the Congress the trustee for the manner in which public funds are used, but the Atomic Energy Commission, as an administrative branch, is a trustee for the public, who can only speak through the Congress, and must have their affairs administered through an administrative agency.

So we are dealing with that responsibility as to the use of public funds here, and, we are not dealing with the field of education generally, nor are we dealing with the freedom of education. I do not think anyone has tried to raise the question here of the limitation of the general freedom of education or the ability of the young man or young woman to get an education, or of colleges to teach all comers who come to learn. It is only the question of the use and the appropriation of public funds by the trustees of the public.

I am fully aware that it presents problems, but I am also fully aware that it presents areas of great concern to the people for whom we are those trustees.

Dr. BRONK. Do you think that the people who are particularly critical of this particular case adequately realize—if they don't, I think we have done an inadequate job in telling the whole story—that these individuals are in nowise going to have any information concerning the area of the Atomic Energy Commission that any other person could not get out of textbooks, and also that they are not being trained for specific subsequent employment by the Commission?

Senator HICKENLOOPER. Yes; I think many people do realize that. I think many people have not had that full understanding, but I do not think that is the question, Doctor. I think you can say it just in a nutshell: I do not believe the American public will stand for the education of a Communist with public money.

Dr. BRONK. So the same thing would be true of the National Science Foundation?

Representative KILDAY. That would be making more efficient the activities directed toward overthrow of the Government.

Senator HICKENLOOPER. I believe that really is the issue. It is not a question of freedom of education here. It is not a question of curtailing the curriculum of your university or anybody else's university. It is not a question of shutting the doors of public institutions to those who come in under our whole system and come to learn. It is not that at all. It is the question of whether or not we are going to let down the bars, and say that we will use public money to educate people who believe in communism.

The CHAIRMAN. Senator, would you allow me to ask you this question?

I think perhaps you will want to develop it. How do you differentiate between your statement just made—and I know there is a differentiation that can be made—how do you distinguish between what you have just said, and participation of the high schools of the country in the \$300,000,000 Federal-aid-to-education program? Do you not think that should be developed for the record?

Senator HICKENLOOPER. Well, there you are supporting an institution, the institution of education, of which the citizen, the resident, can partake. In the aid to education you are not specifically subsidizing an individual, supporting him and encouraging him; you are subsidizing and supporting the whole institution and the area of education.

The CHAIRMAN. In which there is compulsory attendance.

Senator HICKENLOOPER. Yes. But it is not a specific subsidy to the individual.

I may say this, just so that I may not be misunderstood, Dr. Bronk. We have all, on this committee, had a tremendous interest in the whole operation of this program. Loyalty matters have come before us, and so on. I want to say again, as I have said repeatedly before, that I think the record of patriotism, loyalty and undeviating devotion to duty of the rank and file of the people who have engaged in this program is remarkably high. I am sure no other group of people in the United States could exceed it; perhaps very few groups could equal its record. It is not the question that there is any mass distrust in this thing, but by the same token, it happens to be a very vital field, where emotions are high and apprehensions are high.

Dr. BRONK. And we want to protect the opportunity of these people to give the service of which you just spoke. So I quite agree with you.

Senator HICKENLOOPER. I think we have gone a long way. It just comes right down to this point: The affirmative subsidization with knowledge, and with Government funds, of a subversive, whose basic principles are directed toward overthrow of the existing Governmental forms of the United States. The comparison is small indeed, of course, but the very, very small number involved, certainly would suggest that such individuals could well be eliminated without affecting the overwhelming number against whom no serious objection could be raised at all, and to whom encouragement should be given.

Dr. BRONK. What I would like to see done is the working out of a means for selection which would meet the needs of the situation without having to go all the way down the road in the investigation of every person to whom we are going to give Federal support for education, as possibly under the National Science Foundation or some other agency; and when we do not know where the road is going to lead us. It may take us into difficulties which are so much greater than we can possibly conceive of that we ought to be very sure we are not taking a step which is finally going to put us too much under a type of control that we would all regret. That is why I would like to cooperate with you gentlemen in seeing if we can't work out something which meets the needs of this situation. I don't mean the particular instance of Freistadt, but I mean the program we are dealing with.

I understand that Dr. Richards made this suggestion yesterday. I wonder whether the requirements that they take an oath of loyalty would satisfy the needs of the situation, coupled with this much greater scrutiny which I will strongly recommend, irrespective of what the outcome of this issue is, with regard to getting from individuals other than those merely qualified to judge their intellectual competence, some appraisal of the character and personality of the individuals concerned.

Senator HICKENLOOPER. In the question of the oath of loyalty, Dr. Bronk, I am merely repeating what I believe has been reliably stated by various responsible groups in our country; that a part of the Communist philosophy is to swear great allegiance to certain forms when their secret intent is to destroy them. Would you go so far as to say this: Would you think that it would be ruinous or offensive to require that a questionnaire be responded to by the individual as to whether or not he belongs to any one of a certain number of organizations, and containing other information touching upon his background and associations, such a document to be under oath, so that he would be subject to punishment if he perjured himself?

Dr. BRONK. Personally, I would see no objection, but I think there are implications there that would require that this would have to be considered by the members of the boards and the Council as a whole, in order to see what it would do to the value of the program.

Senator HICKENLOOPER. I am merely trying to draw a distinction between what I believe would be the province of the Council, in a field where the Council is a specialist, and another province which is separate and apart from that. The Council is a specialist in attempting to evaluate the mental capacity of the student. The Council is not equipped and is not trained to investigate into the social and political views of an individual, with the possible exception of investigations in economics, scientific matters, things of that kind. But in the province of science, the Council is interested in the capacity of that particular individual to do a job along that particular specified line, and the Council may be out of its element when it undertakes to investigate and evaluate political connotations.

I am wondering if there is an area where the Council can do a job that it is equipped to do; and if the agencies representing the people may be able to do another job on another phase of that which they are equipped to do; with the result of in some way arriving at a satisfactory medium.

Representative KILDAY. Doctor, basically, what you fear is an infringement on academic freedom; is it not?

Dr. BRONK. Yes. I am not quite sure that I know what academic freedom means, but I think we have a vague feeling about it. That is certainly part of it. And as we all do, I like to see personal freedom, personal liberty generally, maintained, just as far as possible, without infringing on the security of our country.

Representative KILDAY. Of course, it is a very well established principle in the field of education that there shall be academic freedom on the part of the professor. But do you not think there is a distinction here, when a man applies for and receives public money? Do you not think there is a distinction between that individual and the person who goes to school on his own or receives whatever family assistance he might get? All of us, as holders of public office, are precluded from lots of things. There are many things that we cannot do that we could do if we were private individuals. And when a person accepts public money, he assumes a different status, and it is not an infringement of academic freedom to affirm that. I agree with the Senator completely that your field is not to determine the loyalty of people, or things of that kind. You are to evaluate the academic and scientific potential of the individual. But it would not

at all infringe upon academic freedom for you to say "Well, now, here is an individual who has an outstanding potential in his field" and then leave it someone else to say whether he should receive the fellowship.

In other words, there were 216, as I understand, selected this year. Your organization would not object to saying: "The Commission says we have 216 vacancies. Give us the names of 300 men. From that number we will select." You would not object to that, would you?

Dr. BRONK. I think it would depend on what it would do to the value of the program as a whole. And what I have in mind is that if the type of added criteria to be placed on these individuals was such as to reduce the contribution to the scientific advancement of the future which the National Research Council desires to achieve, or such as seriously to impair it, then it might be that the members of the board would feel that they would not be making a sufficient contribution to be worth the serious difficulties which they brought into the program, but I am merely trying to interpret the remarks that I heard around the table last spring.

Representative KILDAY. If they are all as practical as you are, I do not think that would take place. Over 500 applied. You selected 216. Would not the same thing be true there? There were a number of men who felt that they were qualified, whom people recommended, and who were not held to be qualified.

Senator HICKENLOOPER. I want to ask one question, and then I hope I will be through.

The National Research Council has been operating for about 30 years, I think. And the total fellowship awards in those 30 years have been about 1,500, as I wrote it down here.

Now, does that include the AEC fellowships?

Dr. BRONK. No, sir.

Senator HICKENLOOPER. So that that is in addition to the AEC fellowships?

Dr. BRONK. That is in addition; yes, sir.

Senator HICKENLOOPER. Do you have about five or six private agencies or foundations that ask you to serve them in that capacity?

Dr. BRONK. That is correct.

Senator HICKENLOOPER. And they each put a definite limitation on the number of fellows that they will take?

Dr. BRONK. In terms of the money that they make available for the fellowships.

I might say in that connection, and I think you would be interested to know, that in our relationships to the Rockefeller Foundation in the 3 years I have been chairman of the council, I have made it a point to discuss with the officers of the foundation such matters as the amount of stipend we will pay and the number of fellows we will take, and what would be the influence of raising the stipend, because I feel that we are working with them. We are cooperating with them in this operation. We are told that the money is ours to spend as we will, but nevertheless we welcome their advice as to how to do it.

Senator HICKENLOOPER. This is the point I would like to get a little better developed here, in the operation of the private foundations.

Do they say to you, each of them, "Now, we have just so much money" or do you go to them and say, "We have some likely people, and we need some more money?"

Do they accede to those requests?

Dr. BRONK. In some cases, yes. The money is given to us in a certain amount, arrived at by mutual discussion. In several instances we have had so many good applicants, that we have gone to the agency and said, "We have more than we are able to give fellowships to, whom we think deserve fellowships. Do you think you could increase the grant slightly?" That has been done.

Senator HICKENLOOPER. Have they done that so that you could take care of those, as a rule?

Dr. BRONK. That is correct.

Senator HICKENLOOPER. The point I wanted to get at is this: In 30 years there has been a total of 1,500 young people that have been considered capable and worthy of fellowships, under that kind of an arrangement. But here, certainly, within less than a year's time, we find a third as many, that are suddenly discovered to be brilliant and potential trainees in the atomic energy program, a third as many as the private foundations have considered to be worthy of fellowships in 30 years. It seems to me, in other words, that this program of the AEC is certainly jumping out as a full-grown child in less than a year. And I am wondering why the sudden expansion of the number of urgently desirable trainees would have developed here.

I may just go further, so that I can get my entire thinking on this before you here. I sometimes wonder whether the ready availability of public funds may not have had some influence in the discovery or the putting on the rolls of a tremendous number of newly uncovered ability.

Dr. BRONK. Well, I think I can give some answer to that.

Senator HICKENLOOPER. In other words, I do not see why there has been this change, if 50 a year has been the average in the past. It seems to me that 10 times that many in 1 year would bear some inquiry as to the reasons why the potential had jumped up 10 times in 1 year, when public money has become easily available.

Dr. BRONK. The factors involved there, sir, are these: The 1,500, approximately, that I referred to were all for postdoctoral fellowships. They did not include predoctoral fellowships, the training of people who are in their graduate training.

Representative KILDAY. What is a predoctoral fellowship?

Dr. BRONK. A predoctoral fellowship is a fellowship given to an individual for advanced instruction and research leading to the award of a doctor's degree. A postdoctoral fellowship, to which I have referred, in the case of these 1,500 to whom I have alluded—

Representative KILDAY. Let us take the case of a second-year medical student. Would he be included?

Dr. BRONK. It does not include professional students in medicine.

Representative KILDAY. Who are these people, then?

Dr. BRONK. These are people who are prepared to do research or to do advanced teaching in the field of agriculture or biology, or in the preclinical sciences, such as biochemistry, anatomy, chemistry.

Representative KILDAY. Would you say those people would be those who would impart their knowledge to others as professors?

Dr. BRONK. Those who are going to go out to engage in research to such an installation as the medical laboratory at Wright Field—research people or teachers.

So these 1,500 to whom I have alluded were fellowships given to people who had already taken their graduate training, had already

been given their Ph. D., and were being given specialized training for advanced work.

It is because of that type of training, we like to believe, that we have had the great advance of science which has taken place in this country. Our former fellows, I might say, include such men as Dr. Arthur Compton, chancellor of Washington University, and Nobel Prize winner, Dr. Robert Oppenheimer, director of the Institute for Advanced Study at Princeton, Dr. Lee DuBridge, president of the California Institute of Technology, and many other distinguished scientists.

Representative KILDAY. Of course, on that point, Doctor, I do not think you will find any disagreement among the committee, as to the advisability, the propriety, of the fellowship program. I think that that is definite. I do not know of anyone here on the committee who would question it at all.

Dr. BRONK. We appreciate that very much, sir.

Senator HICKENLOOPER. Personally, I have repeatedly stated that I think the fellowship program is utterly sustainable and justifiable. I have some views as to its limitations, phases as to which I have been disillusioned.

Dr. BRONK. I do too, sir.

Senator HICKENLOOPER. But as to the philosophy of the program it is utterly sound, and I have been in support of it at all times, and I expect to continue supporting it.

Dr. BRONK. Coming back, may I go into this question as to the number, somewhat further?

The figures for the Atomic Energy Commission-supported fellowships, include, you see, in addition to those that fall in this category of which I have spoken, the postdoctoral fellows, also predoctoral fellows, young men who are being given their basic advanced training for research and are doing research preparatory to their doctorates. Why we need to provide such fellowships at the present time is a problem that is complicated. I know that there is great difficulty in maintaining our training in graduate schools and universities throughout the country unless we are prepared to support the men for that training.

Representative KILDAY. Right now your men are older, though. They lost a year or 2 or 3 years in the Army.

Dr. BRONK. That is certainly part of it, sir; and a very important part. I think also there is the matter of the higher cost of living; and partly because it has become a custom, a man comes to a graduate school nowadays expecting to be supported, in order to get this training.

Representative ELSTON. Doctor, I would like to ask you this question: You indicate some apprehension, I believe, that a loyalty check of these students might interfere with the program and might not make it operate well. I am wondering what you think about the attitude of the 100-percent-loyal American boy that has tried to get one of these fellowships and has been turned down as a Communist. What do you think of his attitude, and what do you think about the possible interference with the program by reason of the attitude he may assume as a result?

Dr. BRONK. Well, I think he would feel very much the way I do, sir.

I have a young man taking his doctorate with me, who graduated at Hamilton College, and was reported to be one of the three best men that they had graduated from their department of physics in the memory of the head of the department, and he was turned down.

Representative PRICE. For this same fellowship?

Dr. BRONK. For this same fellowship; in a different field, by a different board. But I am afraid I had to take it in as good a spirit as I could, because I recognized that no board could do a better job. And I think they made a bad mistake on this fellow, Greengard, in my department.

The CHAIRMAN. What university?

Dr. BRONK. He was from Hamilton. He is now at Johns Hopkins.

They made a mistake, I think, but I am sure they are going to make mistakes. I will find the money for him somewhere else.

Representative ELSTON. I do not see any particular reason for shedding crocodile tears about how the boys in the fellowship program might feel if their loyalty is checked, because it is my opinion that if you took in all the boys who want scientific training, the vast majority of them, very close to 100 percent, would not object to a loyalty check. Do you know any boy who is 100 percent loyal to America who would object to that kind of a check of his record?

Dr. BRONK. I don't think so, sir.

Representative ELSTON. If you do not think so, then what objection is there to it?

Dr. BRONK. Well, I am trying to recall the objections I have heard in the past, because I am not here to speak as an individual, but as a representative of an organization.

Representative ELSTON. I would like to get your views as an individual, too. I think that you could enlighten us a great deal.

Dr. BRONK. There is no point in getting into the practical aspects of the situation, but the fellowship applications come in along about the first of the year. The awards have to be made by the 15th of March, if the people are going to be able to make their plans for the subsequent year and be admitted to the graduate schools to which they go. In that period of time, the fellowship boards have to study the case and how to have a thousand people—we anticipated even more applicants than that—in that period of time, I would think would be very difficult from a practical standpoint. But I take it you would rather not deal with the practical issues, but would prefer to let that be handled by those who would be required to administer it.

Representative ELSTON. My idea is not necessarily that your organization conduct the loyalty check. But after you have made your selections of an adequate number to fulfill the requirements of the Atomic Energy Commission, let those boys then be checked, to see whether or not they meet the requirements. Let the FBI do it. The FBI would not take forever to make the check. They could have checked Freistadt in a few minutes. It would not have taken long to do it.

And let me ask you this: How many applications did you receive, all told, for this fellowship program?

Dr. BRONK. I think that this year it was in the neighborhood of between five and six hundred. It was not as high, as I say, as we had anticipated.

Representative ELSTON. And did you go over all of them?

Dr. BRONK. Oh, yes. Every single one of them was very carefully studied by each member of the board, under which his particular field of study fell.

Representative ELSTON. How many members were on that board that makes the selection?

Dr. BRONK. There are five, usually, on each of the boards.

Representative ELSTON. And that means, then, that five persons passed on these applicants?

Dr. BRONK. That is correct.

Representative KILDAY. These boards meet, do they?

Dr. BRONK. Yes. They meet sometimes twice for consideration. The full records, as we have them are circulated previously, so that they can study them, and then they come together for mutual discussion of the qualifications.

Representative ELSTON. Who makes the assignment to the university or college?

Dr. BRONK. You mean who writes to them?

Representative ELSTON. Yes. Who places these boys?

Dr. BRONK. They indicate to which university they wish to go, and we respect their desire.

Representative ELSTON. And you let them go just wherever they want to go?

Dr. BRONK. In some instances, if we feel that the type of work that they wish to do cannot be done there effectively, because of information which is known to us, we advise them of that. But that is a very rare situation.

Representative KILDAY. If the gentlemen will yield.

Mr. Freistadt selected the University of North Carolina and refused to make any second selection.

Dr. BRONK. He chose the University of North Carolina; yes. We have high regard for their scientific competence.

Representative KILDAY. I believe he said he wanted to be with Mr. Rosen.

Representative ELSTON. Do you think now, Doctor, as a citizen, that the Atomic Energy Commission should be spending the taxpayers' money to educate a boy in scientific subjects unless the Commission can use the boy after he gets through with his course of study?

Dr. BRONK. I do, sir; because I do not believe it is possible for a young man to say just what will be the development of his interest and competence. I am sure that there will be some whose line of interest will develop in such a way that it will not be directly related to the Atomic Energy Commission field.

Representative ELSTON. I can understand that, on the matter of subjects. But on a matter of loyalty to his country?

Dr. BRONK. Well, I think that would involve the broader question as to whether we should use people who are not loyal to the country.

Take the case of a man trained under such a fellowship, and who was, as it later developed, and to use a phrase that I used in a letter I wrote to Mr. Wilson last year:

A rare individual who was trained under an Atomic Energy Commission fellowship, but who could not, for some unforeseen reason—

and I would like to stress that word "unforeseen" because I want to emphasize that we didn't want to bring in people of this sort—but who could not for some unforeseen reason be cleared—

such an individual would be available for scientific work under some other agency or private institution or organization, not requiring clearance, and would thus free another man for AEC employment.

In other words, by this fellowship program, we add to the pool of scientifically trained personnel from which the Atomic Energy Commission can take out individuals, but perhaps not the same ones that they put in. We therefore make it possible for the manifold scientific operations of the country to be continued, in private industry, in private universities, in Government laboratories, which are doing work of a nonclassified nature, such as certain fields in the Department of Agriculture, and at the same time be able to have the Atomic Energy Commission's needs satisfied.

Representative ELSTON. You were not referring in your letter to the question of loyalty, were you?

Dr. BRONK. Oh, yes; because I say "but who could not for some unforeseen reason be cleared."

Representative KILDAY. For employment, I believe you implied.

Dr. BRONK. Yes.

Representative KILDAY. You meant as employees of the Atomic Energy Commission?

Dr. BRONK. If they were to be members of some Atomic Energy Commission establishment staff, then obviously they would have to be cleared. If they could not be cleared for that, they would not be lost as a whole to the Nation, because they could be used for some other purpose.

Representative KILDAY. But you regarded the fellowship as employment, did you not, Doctor?

Dr. BRONK. No, sir.

Representative KILDAY. You did not?

Dr. BRONK. We did not.

The CHAIRMAN. Mr. Elston, would you mind my making a suggestion?

That is a short letter. It is dated in July 1948. It is about three paragraphs long, addressed to Mr. Wilson, the General Manager of the Commission, and signed by the doctor. In it he reports on his conversations with these boards. It might be a good idea, if you do not mind, to have him read it into the record right now.

Representative ELSTON. I think that would be a good idea.

The CHAIRMAN. Will you go ahead and read it now, Doctor?

Dr. BRONK (reading):

The fellowship boards of the National Research Council which have assumed a large measure of responsibility for the Atomic Energy Commission-National Research Council fellowship programs, have completed their initial selections of candidates. On the basis of this experience, one important problem has emerged concerning which we would be glad to have your advice and ruling: the policy of the Atomic Energy Commission regarding security clearance of fellows:

On the basis of my attendance at the meetings of the five fellowship boards, I would say that it is the general, and probably the unanimous, hope of the members of the boards that a man should not be barred from participation in the fellowship program because he cannot be cleared. It is recognized that access to certain information which might be desired during the course of some fellows' work would require clearance, but it is felt that serious obstacles would be encountered with unfortunate consequences, which the mere participation in academic study and research under these fellowships were made conditional upon security clearances.

The members of the boards realize that inability to be cleared might disqualify a fellow for subsequent employment by the Atomic Energy Commission. How-

ever, they have expressed the thought that the training of such an individual would add to our pool of scientific personnel from which the Atomic Energy Commission will draw, that is to say, a rare individual who was trained under an Atomic Energy Commission fellowship but who could not for some unforeseen reason be cleared—

meaning subsequently—

would be available for scientific work under some other agency or private institutions or organizations not requiring clearance and would thus free another man for AEC employment.

Representative ELSTON. Do you know what persons cannot be cleared by the Atomic Energy Commission? You knew, when that letter was written, what was meant by "clearance"?

Dr. BRONK. Well, I assumed that it involved many different criteria. I assume that there were different degrees of clearance; as we had during the war, for instance. I had men on my staff in the work with the Air Forces who could be cleared for certain things but could not be cleared for others.

For instance, I remember one man in a program with which I was associated who could not be cleared for overseas duty. But he had a commission, a relatively high commission, and carried out important work. But he could not be cleared for overseas duty, because of certain involvements.

Representative ELSTON. Of course, that might mean physical reasons, or otherwise. But being cleared by the Atomic Energy Commission would be a matter of their loyalty to this country, their 100 percent loyalty to this country. If they were not loyal, they could not be cleared. I take it from your letter, then, that when you are talking about persons who cannot be cleared by the Commission, you are referring to people who are not 100 percent loyal to this country?

Dr. BRONK. Who are not judged to be; yes, sir.

Representative ELSTON. And yet it is suggested that they participate in the program?

Dr. BRONK. As far as the training is concerned.

Representative ELSTON. Well, what kind of an answer did you get from the Atomic Energy Commission to that letter?

Dr. BRONK. I am sorry. I don't have the further correspondence.

The CHAIRMAN. It is being looked for right now, Doctor.

Representative ELSTON. You did get an answer?

Dr. BRONK. I presume I must have, sir.

Representative ELSTON. Can we insert the answer in the record, Mr. Chairman?

The CHAIRMAN. Yes. I am having it looked for right now.  
(The letter referred to is as follows:)

OCTOBER 8, 1948.

Dr. DETLEV W. BRONK,  
*Chairman, National Research Council,*  
*Washington, D. C.*

DEAR DETLEV: This is in reply to your letter dated July 27, 1948, in which you request information concerning the policy of the Atomic Energy Commission in regard to security clearance in the fellowship program administered by the National Research Council.

After careful consideration of this matter, the Commission has determined that, in accordance with your recommendation, security clearance should not be required unless the fellow will have access to restricted data or will work in a Commission installation where security clearance is normally required. In cases where the

candidate's application indicates that clearance will be required, it is suggested that no award be made until the outcome of the security investigation is known. The Commission will, of course, continue to look to the National Research Council to make appropriate inquiry, in accordance with your regular practice, into the character of the persons who apply for the AEC fellowships.

In addition, it is our view that in the event there is a prospective fellow who has a questionable record, we should consider together with you the most appropriate action to be taken in the light of all the circumstances of the case.

We hope that this statement as to our policy may be helpful to you in assuring the success of the fellowship programs which are so important to the continued progress of atomic energy work.

Sincerely yours,

[S] Carroll L. Wilson,  
CARROLL L. WILSON,  
*General Manager.*

Senator HICKENLOOPER. Mr. Elston, if I might suggest: Clearance under the act goes to three things, loyalty, character, and associations. I mean, those are the three categories in which examination is made as to clearance, and as far as Dr. Bronk's statement of a moment ago is concerned, under the Commission there are no degrees of clearance. That is, what they call a "q" clearance is clearance stating that a person is eligible, if necessary, to all classified information.

Representative KILDAY. What are those three conditions, Senator?

Senator HICKENLOOPER. Loyalty, character, and associations.

Representative ELSTON. Associations with whom?

Senator HICKENLOOPER. That is what the act says, you see.

Representative ELSTON. It means associations with disloyal persons. In other words, a person may not be a Communist himself, but he may associate with Communists.

Senator HICKENLOOPER. It may go to a certain category of morals.

Representative ELSTON. Or it might be as to members of subversive organizations.

Dr. BRONK. Of course, I would like to say that it is my wish to stress as strongly as I can—again I must interpret—that I don't think that these fellowship boards had the slightest desire to encourage, and in fact I would take oath that they didn't have any desire to encourage, anything of a subversive nature.

As for the things that they would have been concerned about, take for instance this matter of association.

If I were responsible for a highly classified project, I would not want to have certain people associated with that project who, on the other hand, I might be quite happy to have participate in the teaching functions of the university. The reason why he might not be satisfactory for work on this highly classified project could be because of lack of discretion, associated with people who might have inadvertently succeeded in getting from him certain types of information which he had not intended to disclose. We all know that there are such people who are not sufficiently judicious in their associations, to be known as highly reliable individuals. But that same person might be extremely loyal by every criterion except his judgment as to whom he associated with. And I would think that the boards would feel very hesitant about saying that such an individual should not be trained scientifically, because as he got older he would develop more judgment as to whom he should associate with and what he said under circumstances where he might be surrounded by people who are not entirely competent.

You see, it was not a black and white thing with regard to this clearance matter that they had in mind.

Representative ELSTON. You are not dealing with high-school students here, you are dealing with boys in college, and Freistadt was 24 years of age. I do not think that you can go along on the assumption that they will change their spots after a time.

If they are Communists, the probabilities are that they are going to remain Communists, and they are going to remain loyal to Russia and not to the United States.

The CHAIRMAN. Of course, Louis Budenz did not.

Representative ELSTON. Well, there are exceptions, of course. But we should not spend the taxpayers' money to develop the exceptions, and that is what this program would do and what this policy would do.

I do not believe it is in the record yet, Doctor, who the five persons are who passed on these applications.

Dr. BRONK. Would you care to have them, in all of the five boards?

Representative ELSTON. The five who pass on these fellowships.

Dr. BRONK. Well, there are five different boards. There is one for postdoctoral research in the medical sciences. Do you want the members of that committee?

Representative ELSTON. Let us take the field of physics. That is the field in which Freistadt was assigned.

Dr. BRONK. The members of that committee comprise the Fellowship Board for a Predoctoral Research in Physical Sciences, and they are Dr. Henry A. Barton, director of the American Institute of Physics; Dr. John C. Bailar, Jr., professor of chemistry, at the University of Illinois; Dr. Tom W. Bonner, professor of physics at Rice Institute, Houston, Tex.; Dr. J. William Buchta, professor of physics and chairman of the department of physics at the University of Minnesota; Dr. G. A. Hedlund, professor of mathematics of Yale University; and Dr. Charles C. Price, professor of chemistry and head of the department of chemistry at the University of Notre Dame.

Representative ELSTON. Well, Doctor, how did these men get together and pass on these applicants? They are widely separated.

Dr. BRONK. They are.

Representative ELSTON. Did they meet at times in Washington, or some other place, and pass on these applications?

Dr. BRONK. Usually in Washington; yes, sir.

Representative ELSTON. How many meetings did they have, to your knowledge, to pass on these applications?

Dr. BRONK. This committee has met quite frequently for long periods of time. This spring they have met twice, and I know on one occasion they met for 2 days.

The CHAIRMAN. They do not personally look at the applicant?

Dr. BRONK. They do not see the applicant, personally, but they use, for instance, the individuals to whom they write for advice, as their agents. And the agents are in practically every instance known personally to one or more members of the Board.

Representative ELSTON. Did they write to these persons who have signed these references? Or are these references given by the applicant in his application?

Dr. BRONK. These individuals are written to by the fellowship office, not by the candidate. The candidate in most instances sug-

gests individuals who know him, but unless the members of the board also know the reference, they choose someone else. In other words, they have a direct contact through the individuals to whom they write.

For instance, one of the references in this case is a man who took his degree at Cornell University. He would certainly, also because he was a physicist, as was the head of the department, Nathan Rosen, be known to Dr. Barton, who is director of the American Institute of Physics and has very wide contacts with physicists throughout the country.

Representative DURHAM. It would look like it would have been wise for them to get a recommendation from the University of Chicago, because of the fact that he has only been at the University of North Carolina 6 months. He came down there in October.

The CHAIRMAN. Did he start his activities right away, Mr. Durham, do you know?

Representative DURHAM. Oh, yes; he began writing for the Tarheel and set up the Karl Marx Club and proceeded.

Representative KILDAY. Mr. Chairman, I hope this will not devolve into a question as to just Freistadt.

Representative ELSTON. Was there any letter written to the institution itself, the university president, or any person who has access to university records, asking for an opinion as to the character and qualifications of the student?

Dr. BRONK. Yes, sir. In this case the Fellowship Office wrote to the professor of physics, who would certainly have had all of the records concerning this man available to him, and also to the associate professor of physics; and questions concerning his character were very specifically put to these individuals, and, as I say, it has been my intention, in the process of continually servicing and, we hope, improving the method of identifying and evaluating candidates, to secure advice from a member of the university staff, who would be more immediately concerned about the personality and character of the individual, rather than with his mere intellectual attainments. That is why I suggested the dean of men or some other individual of that category whom he would suggest.

Representative ELSTON. Since you do not yourself see the applicant, then the selection of the applicant is largely made by the persons whom you contact?

Dr. BRONK. That is correct, sir. In the case of the predoctoral fellows. In the case of the postdoctoral fellows, where the number is much smaller, the process is very much more direct.

Representative ELSTON. And in this particular case it was three persons?

Dr. BRONK. That is correct, sir.

Representative KILDAY. There were three persons who sponsored him?

Representative ELSTON. Yes.

Senator HICKENLOOPER. It seems inconceivable to me that anybody at the university there would not have known of his Communist leanings. I do not know how any professor could have reported this without feeling at least some responsibility in his own conscience to call attention to the fact that this fellow had been vigorously active along that line.

Representative ELSTON. Actually, the students knew it, Senator. If the professors did not know it, the students, at least, did.

Senator HICKENLOOPER. The men who recommended him did not know it.

Representative ELSTON. And he wrote articles in the school publication. Perhaps the professors do not read the school publications.

The CHAIRMAN. Mr. Price?

Representative PRICE. No questions.

The CHAIRMAN. Mr. Cole?

Representative COLE. Mr. Chairman, first I would like to inquire whether what I have in mind appears already in the record. If so, I will not press it.

Does the record indicate what standards the Commission has established in its directive to the Research Council with respect to this assignment?

Dr. BRONK. We have had very frequent and intimate conversations with representatives of the Commission, so that the development of the program has been done on a cooperative basis.

Representative COLE. Apparently, then, it has been quite informal; by oral discussion. There has been no formalizing of the directive by the Commission to the Research Council?

Dr. BRONK. There has also been, in addition to these many discussions, which have laid the foundation for the evolution of the program, an exchange of correspondence, such as the one letter which I read. There is, of course, the formal contract between the Atomic Energy Commission and the National Academy of Sciences, which states certain definite things.

Representative COLE. Does any of this correspondence which was exchanged between the Commission and the Council set up the standards by which the Council is to make the selection?

Dr. BRONK. I would say, "Yes." I hesitated a bit, because I was trying to interpret what "standards" would mean.

Representative COLE. Has the Council set up any standards of criteria for the selection of these fellows, other than what is contained in the communications to which you have referred, between the Council and the Commission?

Dr. BRONK. Not except in the sense that, through the long years of operation of the program, standards have been established by almost an unwritten law, or a tradition, if you will.

In addition to that, each Board necessarily established certain standards in determining whether they will take this individual or that individual, or whether these are the top 10 or another group are the top 10. So there necessarily have had to be standards, but not on a hard and fast basis.

Representative COLE. From that, I take it, then, that the Council, in the selection of these Atomic Energy fellows, is following the same traditional standards which the Council has used in the selection of fellows for other purposes?

Dr. BRONK. That is correct.

Representative COLE. Then apparently the Council does not recognize any distinction between the nuclear-processes fellows and the other types of scientific students?

Dr. BRONK. The general standard being that of getting individuals of as high a degree of intellectual competence as can be found, and

choosing from the total number of applicants those who are adjudged to be the most capable and most promising.

Representative COLE. At any place along the line, either in the correspondence with the Commission, or in the traditional standards which the Council follows, is it required with respect to fellows for this program, that they must be citizens of this country?

Dr. BRONK. That is correct, sir. I believe that is specifically stated in the announcements, and that is adhered to in the determination of the awards.

Representative KILDAY. Freistadt was naturalized in 1944, I think.

Representative COLE. Was that requirement that they be citizens imposed by the Commission? Or is that one of the traditional requirements of the Council?

Dr. BRONK. It is not a traditional requirement for all fellowships, no. It was a requirement that was agreed upon by the Atomic Energy Commission and the National Research Council in conference.

Representative COLE. Apparently that is the only prerequisite established as a standard in the selection of these fellows, that can be used as a guide as to the fellows' loyalty?

Dr. BRONK. Except the additional ones of choosing individuals that the Boards feel are going to be effective contributors to national welfare through their scientific ability and training.

Representative COLE. Who places the fellows after they are selected?

Dr. BRONK. They choose their own institutions. They, themselves, choose the institution to which they wish to go. And it would be only in a rare case that we would advise them to go elsewhere; because, in the first instance, we would feel that we were interfering with the prerogatives of the universities of the country, if we were to advise a man not to go to Yale, but rather to go to Harvard, because we think Harvard is a better institution than Yale. There are members of the council who think that, but there are others who disagree with them.

Representative COLE. Who determines the type of studies that the council pursues? The Council, or the Commission?

Dr. BRONK. The candidate indicates the type of program he would like to follow, the courses he would wish to take, and the type of research he wishes to engage in. If this seems to the Board to be adequate, it is endorsed. If they feel that he could more profitably to himself, and more profitably to the advancement of the field into which he wishes to go, do otherwise, he is so advised, and he may accept that advice or reject it, as he wishes. If he rejects it, he might be rejecting the opportunity for a fellowship, because it would rest with the Board to determine whether or not what he proposes to do is a good type of training, and is in a good field of research in which to engage.

Representative COLE. You are familiar with the provisions of the Atomic Energy Act with respect to research assistance, are you not, doctor?

Dr. BRONK. Not in detail, sir, but in general.

Representative COLE. Well, I hate to read them, but it would seem to me that I should inquire if the purposes spelled out in section III (a) of the Atomic Energy Act, under which this program is justified, which sets forth the types of research in which assistance can be given, are

used by the Council in the criteria for determining the type of studies which these fellows shall pursue?

Dr. BRONK. Definitely.

Representative COLE. And is the selection of fellows limited to types which are spelled out in III (a)?

Dr. BRONK. That is certainly the intention, although, as I read this again, I recall now the section to which you refer, and I would say it was very broad indeed.

For instance, section III (a) (3) covers "utilization of fissionable and radioactive materials for medical, biological, health, or military purposes"; which, of course, opens up broad areas of medicine and biology.

Representative COLE. But they are all related to fission, to nuclear processes, are they not?

Dr. BRONK. Yes.

Representative COLE. Yesterday Mr. Lilienthal referred to some fellowship engaged in study of the cosmic rays, which according to Mr. Lilienthal, has no relationship to the Atomic Energy program.

The CHAIRMAN. I do not think he said that.

Representative COLE. At least that was the impression I got.

Dr. BRONK. In fact, I was just at the University of Colorado, sir, where I was told of a program of research that they are doing under support of the State of Colorado in the field of cosmic rays, and I remember being much impressed by a discussion of how this related to the Atomic Energy Commission's program.

Representative COLE. Is a study of the cosmic rays one of the activities that can be cataloged under section III (a)?

Dr. BRONK. It is a long time since I have been a physicist, but I would have thought so.

Representative COLE. It has been much longer since I have been.

Dr. BRONK. As I say, I would think it is. I speak as a layman.

Representative COLE. Of course, it is the purpose of the Council to limit the selection of its fellows to those types of studies which are authorized by the law.

Dr. BRONK. Perhaps I could give you a specific instance to show the sort of judgment which is applied to such applicants.

A young man at Harvard had a graduate student who was beginning his research with a study of the auditory mechanism. He proposed to use certain radioactive materials, incidentally, in this investigation.

I was asked what I thought about it. I said, "I don't know; I am merely the chairman. If I were on the Board, I would say that it did not fall in the category which is properly supported under this program, but the surest way for you to find out the opinion of others who are better qualified to judge than I is to have him apply."

He did apply, and was declined on the grounds that this was merely an incidental relationship; it was not a basic relationship with the Atomic Energy Commission program. He was an excellent young man, and it was a good field of research, and one that certainly should be supported, but under other auspices than this.

I think that insofar as I know, the Boards have been very careful, have leaned over backward in trying to be sure that the scope of the Atomic Energy Commission responsibility—let's take the field of mathematics. There was a person who was going to devote himself

to the theory and the design of highspeed calculators. It is a broad field. It isn't only related to the Atomic Energy Commission, but it is highly important for the Atomic Energy Commission work. It was therefore decided that it was proper to train a number of individuals and have them do research in this field, so that they could help solve the problems that the Atomic Energy Commission needs to have solved.

Representative KILDAY. The point is that the program is so new that you do not know what might affect it.

Dr. BRONK. That is true, sir. That is another thing that we want to appraise in our meeting each year. We want to determine whether or not we are choosing wisely as regards individuals and whether we are emphasizing wisely these fields.

Representative KILDAY. And that would justify the broad interpretation of the cold letters of the statute as it has been read. I agree with you.

Representative COLE. What is the total aggregate expenditure for this program.

Dr. WARREN. The aggregate expenditure is, for the years 1948 and 1949, which were left together because we were just getting it together, in the spring of 1948, \$1,430,000 for the biological sciences, and in 1950 there has been requested \$2,560,000.

In the physical sciences, it is approximately in the same order, I believe about \$1,300,000.

(See Reconciliation of Obligations for Special Training Activities to Program Basis, appendix, p. 159.)

Representative COLE. That would be a total, then, annually, of five to six million dollars?

Dr. WARREN. A total when the program gets rolling of approximately \$5,000,000.

Representative COLE. Is there any commitment required of the fellows to whom a scholarship is given that his services will be available to the Government, to the Commission, either directly or by assignment, after the study has been completed?

Dr. BRONK. That is not stipulated.

The CHAIRMAN. Senator Knowland?

Senator KNOWLAND. Doctor, I regret that I was delayed over at the White House at the presentation to General Clay. Mr. Cole was delayed at the same place.

Maybe the ground has been covered, but laying aside either the desirability or the lack of it from the point of view of your group of having an FBI investigation, can you see any basic reason why a question should not be asked in the questionnaire that is presented to the people who want to take advantage of the fellowship: "Are you now or have you ever been a member of the Communist Party?"

Dr. BRONK. I can certainly see no objection to asking a person what it is desired to learn from him.

Senator KNOWLAND. Taking a situation which may be somewhat hypothetical, suppose that question were asked on a questionnaire, and then there were five or six people who came up for consideration. Their academic standing, we will say, was approximately the same. One of them answered that he definitely was. Obviously, he would not be available for the Commission if ultimately they wanted to draw on this reservoir.

Can you see any objection, under those circumstances, and with the limited amount of funds available, to the Commission saying: "Well, in our judgment, due to the fact that we want to draw from this reservoir, and since their academic standing is presumably the same, we would prefer to have people who are useful to the Commission, inasmuch as these are Commission funds that are to be used, rather than someone who obviously could not be useful to the Commission"?

Is there any objection from your point of view to that?

Dr. BRONK. I can't see any objection, because, although it is stated, and I think it is desirable, that there be no commitment on the part of the individual that he will accept Atomic Energy Commission employment, it seems to me to be entirely reasonable, other things being equal, to choose people from those who would be available for employment.

Senator KNOWLAND. Of course these are atomic energy funds that are provided by Congress to the Commission. The program was to create a larger reservoir of people in this field. We understand, of course, that there are many related fields, and we cannot always tell just who may be useful to the program. But since we are trying to develop a larger reservoir, it is a little difficult for me to see why someone would be selected who obviously could not be used, when there must be many young men in the country of equal or greater capabilities, who could perhaps be more useful to the Commission in the long run.

Dr. BRONK. I think that in a general consideration of the fellows, as they appear for award of various fellowships, if we found, let us say, an individual in the field of biology who was a brilliant individual, but was one of these people that I would describe as a screw-ball, and worse, but so brilliant that he should certainly be trained, in the hope that he would see the light, in the hope that he could make a contribution that would be of national benefit despite his warped judgment in certain directions, and if he had applied for an Atomic Energy Commission fellowship, we would, I would say, and I am speaking from personal impression, refer his case for consideration to another board, if he properly fell in the area of that board, in view of the fact that this board would not ever be concerned about his subsequent employment under conditions where he might have the desirable characteristics of being clearable.

For instance, we could refer him to another board, which might be glad to consider his case and might be able to award him a fellowship under their board, in order to save any possible embarrassment such as has arisen.

Senator KNOWLAND. That is the point I am getting to now. I think pretty generally all of us have been favorably disposed to this fellowship program in the atomic energy field here. But it seems to me that great harm may be done to the program by many such cases as the one that was before the committee yesterday.

Now, could not the Commission, in laying down a general directive to you, say, as they have said in the case of citizenship, apparently: "We want to be sure that the people who are trained under this fellowship program will be available to us in case we want them and would like them to come with us, and they would like to come with us."?

Now, that would be a relatively simple reckoning, but it seems to me it would almost automatically take care of the case such as the one we were discussing yesterday.

Dr. BRONK. Of course, what the implication of all this is, with regard to the wider aspects of the control of people who are to be educated is the thing that I find very difficult to think through as we are sitting here talking. That is why, as I have said several times before, if we can, in the light of this experience, in the light of these discussions, with you gentlemen, which I have found extraordinarily helpful, and in consultation with the Atomic Energy Commission, improve the criteria, and if we can work out a basis of selection which will leave the maximum degree of freedom of the individuals for future operation in the country to the advantage of the country, and still achieve the general purposes which we have in mind, I think that is highly desirable; and I am sure it can be done, by consideration and exchange of views, and working out the details.

Senator KNOWLAND. The only thing that confused me a little, yesterday: Had this particular case, to be specific, been a case where the young man was in the top 2 percent, where he was so outstanding in his field that there was no one who was in the same category, I could have understood the selection, though I might still not have agreed with the final determination made. But from the statements that were read off the record the other day, he was not in that very top bracket; which means that a lot of other people must have been passed over who otherwise could have had this opportunity, and it just seems to me, since there were many other people of unquestioned loyalty who could have had the opportunity and might have developed into far better scientists than the one that was selected, that it is not an unreasonable question to be put on the questionnaire in this particular field of atomic energy.

Dr. BRONK. As I have said before, I think that this was a poor selection. I frankly don't feel embarrassed about it, because I think that one or two or maybe 5 or 10 cases that might appear out of 500 is a darned good job.

Having been concerned with the selection of people for military duty, I could be embarrassed at some of the selections I have made, some of the commissions I have recommended. But we had a job to do, and I think we did a pretty good job, and we were continually improving our selection procedures there, as we are here.

The CHAIRMAN. Doctor, we have a practical situation to face.

The Senate Appropriations Committee started this morning to consider the appropriations for the Commission. One of the items in the appropriation is money for this program. Your expressed intention to confer with your people and again with the Commission to see what can be done is, of course, very welcome and highly commendable. We are faced, however, with the situation that the Appropriations Committee will have to pass upon this, and do it almost immediately, within the next few days.

I am wondering if, pursuant to your intention, such a conference could be held in the very near future. What do you think about that? Mechanically is it possible?

Dr. BRONK. I would like to say it was. But when I think of my past experience of trying to get five or six people together at a mutually possible date and extrapolate that to getting together some 50 people—well, I will certainly do the best I can, without jeopardizing any possible success that we hope to have come out of such a consideration.

As I say, the conference I was proposing had nothing to do with this, per se. It was just a natural, normal, periodic review of where

we are going and what we are doing. This would properly be one consideration.

The CHAIRMAN. Might I fairly summarize your testimony by saying you are of the opinion, in this particular case now under consideration, where a poor choice is made, that some technique should be worked out to avoid a repetition of this unfortunate situation?

You, however, do shy away from the customary FBI investigation of these people, and you would prefer, if you had your own preference, to conduct a more detailed and more careful scrutiny of the applicants yourself. Is that your attitude?

Dr. BRONK. That is correct, sir, with one amendment. I would hesitate to say that this is a poor selection until I had had a chance to discuss the matter with the board and let them present any evidence which I do not have available, which would support their choice.

The CHAIRMAN. But you do have the statement that the young man made, in which he stated he believed in the principles of the Communist Party, that he was an active worker in the vineyard, that he did not believe it was part of an international combine that is hostile to our way of life and our institutions?

Dr. BRONK. On the basis of what I heard from that published report, I would say he was not a clear thinker; and because he was not capable of a rational analysis of a pretty obvious situation, I would not have thought that he had demonstrated any high degree of scientific judgment.

Senator HICKENLOOPER. Dr. Bronk, just one more question, to wind this thing up.

I do not recall, not having taken a note at the moment, how many had applied for these fellowships, altogether?

Dr. BRONK. My recollection, off the cuff, is that there were approximately between two and two and a half times as many applicants as there were those awarded fellowships. Is that your recollection, Doctor?

Dr. WARREN. My memory is 535, but I am not sure of it.

Senator HICKENLOOPER. That number applied. And how many were awarded?

Dr. WARREN. The number was 216 or 215.

Senator HICKENLOOPER. They are on now, on the fellowship program?

Dr. WARREN. This year. There are 497 in the total program.

Dr. BRONK. Last year and this.

Senator HICKENLOOPER. And do you recall roughly how many applied for fellowships?

Dr. BRONK. It would be, for those 2 years, I would say, approximately 1,200.

Senator HICKENLOOPER. Have any of those who have applied for fellowships and who have received recommendations been turned down?

Dr. BRONK. Oh, yes, indeed. You mean any that have applied for fellowships and were supported by people to whom we wrote, and who were turned down?

Senator HICKENLOOPER. Yes.

Dr. BRONK. They certainly have been; yes, sir.

Senator HICKENLOOPER. Could you give me some idea as to the reasons for turning them down? I mean, some categories of reasons

for turning down those people who had been recommended for fellowships?

Dr. BRONK. I know of one case, an individual who looked promising; but the individuals to whom we wrote for advice, said that they did not feel that he had as yet demonstrated originality, and they were not sure that he would have an adequate degree of imagination to do significant research. That is the type of information which would be considered as not supporting him, despite the fact that the academic record was very good in this particular case.

Senator HICKENLOOPER. And do you have other categories of refusal? I mean, just as they occur to you at the moment?

Dr. BRONK. Yes, sometimes a referee says that a man is pretty good, in fact, quite good; but does not have the ability.

If the man was outstanding, we would ignore his inability to get along with other people; but if he is only pretty good, and is difficult from that standpoint, that might be a basis for rejection, as compared with another.

Of course, it is always a question of this fellow or that; so that it is necessarily a shifting basis of acceptance.

Senator HICKENLOOPER. Can you recall any other categories? I know you are probably not prepared to go into detail on this, but can you recall other categories besides those two that occur to you as being reasons for refusal of scholarships?

Dr. BRONK. I am really completely unprepared. I happen to remember these two because they are specific cases that I was aware of. But not having worked as a member of any one of the boards, I would be very glad to secure that information, but—

Senator HICKENLOOPER. Of course, the thing that interests me is this: You have some 497 that have been accepted and 700 that have been refused. Yet we have heard repeatedly that the test and refusal of maybe one or two out of a hundred on the basis of their communistic or subversive ideas, may wreck the whole program. I am wondering about the seven or eight hundred other young men, who have applied and have failed to meet mental qualifications and all those things. I am wondering what that will do to the program, and what the psychology running through the whole thing will be, if they are pinned down for some such reason as that they cannot get along with somebody, or because they may not have evidenced enough stick-to-itiveness, when they see, as they already have, and as they probably will in the near future, that people of a subversive turn of mind are accepted in the program. I have heard, not in connection with this, necessarily, but in connection with other activities, in the case of certain selections in other places, that people have facetiously or laughingly said, "Well, I guess I had better join the Communist Party, so that I can get a job, or hold it, here in this agency." Or "In this group."

It would seem to me that there would be quite a field for speculation in this matter of turning down seven or eight hundred for other reasons, and then having people with subversive views selected in the program.

Dr. BRONK. Well, the reason for rejection in every case that I would know of is because the man did not have as high intellectual quality, did not demonstrate as great a degree of ability to do good research, as did another. Now, when it comes to two people who have about the same degree of scientific competence, then other factors must

necessarily come into consideration; and the ability, for instance, to direct scientific work, the ability to interpret work adequately, the ability to work hard, are matters which must be considered; and I would certainly say that information with regard to character would be taken into consideration in that connection and weighted.

Senator HICKENLOOPER. Doctor, please do not misunderstand me. I am not saying that every person who applies is entitled automatically to be taken into the fellowship program. Manifestly you are going to have to turn down a great many, and manifestly you want the better ones. But I am confused in my own mind as to the reasoning that is behind the contention that the turning down of a very few because of subversive views would tend to honeycomb and wreck this whole program, and I think the record shows throughout all this project that there have been very few, almost an infinitesimally small number, who have been found to have subversive views. And it would seem to me that the turning down of the seven or eight hundred young men for various shades of reasons would completely throw the program out of the window, if there is any real support to the idea of the program being shaken because we eliminate a few with subversive views. I mean, the two philosophies do not quite square.

Now, there may be good and sufficient reasons for it. I do not say that there are not. I know that you must turn down people, because the people who apply may not be able to do the job; but to use the argument on the one side, which you may not necessarily have used, that we should not question too closely into the subversive ideas of these people and should not dare bottle them up too much because it would foul up the whole program, and then to turn hundreds of them down because of other reasons, with which reasonable people might disagree on occasions, would seem to me to be not quite compatible as an argument.

Dr. BRONK. I would certainly not say that an investigation into a person's political beliefs would wreck this program, not for a moment. But what would be the implication of deciding whether a person should receive Federal support for education on the basis of whether or not he held a certain political belief or not is a question which seems to me to be of such far-reaching significance with regard to our whole national future that I would not wish the National Research Council to take a stand which would lead in that direction. Nor would I wish it to oppose it, if that were, in the view of others more intelligent and capable than we, the thing that should be done. I just do not think we are competent, along that line.

Senator HICKENLOOPER. When I agree with you on the matter of competency, I do with the utmost respect, on the theory that it is not your field. Your field is education, the evaluation of the abilities of men and women to learn.

Then we get back to the suggestion I made a while ago that certainly it should not be offensive if the National Research Council stuck to its forte, to its strong field, which is the evaluation of capacity and potential, leaving to some other group the responsibility of saying whether, in other very vital areas, this student measures up to a desirable goal or a desirable standard.

Dr. BRONK. I think you would find, sir, that the scientists of the country generally would feel that they also had something to contribute in the matter of advice, as to the effect of political philosophies as to

whether or not a person can do useful scientific work. I think they would feel that they would have some competence to appraise the matter of how far such beliefs would affect their scientific ability generally. I think that perhaps they would have some competence to assess what are going to be the ultimate implications of this type of scrutiny. But they would be only one of many groups who could contribute to that sort of evaluation. They would have a type of background and attitude which should certainly be supplemented by other attitudes.

Senator HICKENLOOPER. Oh, I agree that there are many factors which the evaluation group could take into consideration. But when I talk about other fields being left to other groups that are more competent or practiced in that field, I am talking about the mechanics of acquiring the truth about the information which goes into the evaluation. In other words, the question of the facts upon which subversive charges may be made can be developed by groups that are equipped to do that; and after that information has been developed, I grant you that probably the National Research Council group would certainly be well equipped to take into account those facts, if they have all the facts. But they cannot evaluate that field of subversiveness if they do not have the facts upon which to go and are in many cases not equipped to gather those facts. If the facts are gathered, then certainly I think they would be entitled to take into consideration that phase as well as some others, even though their special field is the capacity of the individual. But it is on the mechanics of the fact gathering that I say the National Research Council is undoubtedly not equipped to perform. They are not set up to investigate people, with the exception of the laboratory or the school where they see them work. In that field they are uniquely equipped.

I think that is all, Mr. Chairman.

Senator KNOWLAND. Just one other question:

Of course, from the purely scientific point of view, I would suppose that Dr. Curie in France may be the equal or superior of any person who could be selected to set up the atomic energy program of that country. There may be others who are equally capable, I do not know. But there is a matter of national policy involved as to whether a known Communist should head a country's atomic energy program; and I think on that question of public policy there are other factors, including the defense of the nation and the effect upon the country of possible leakages of information, as to which others have a responsibility. But, from a merely scientific point of view, perhaps half a dozen active Communists might possibly do just as good a job in this atomic energy field as those who were not Communists. Yet I do not think your board would suggest that in furtherance of the pure scientific point of view we should ignore this other factor.

Dr. BRONK. Of course, in that situation, there is available a large amount of information which we would not and could not under the law make available to a person of such political beliefs as those of Curie. But as to the matter of whether or not, if Curie were a young man just about to begin on a scientific career, it would be wise, under the French Government, to bring him into the program you see, it is stretching the case; but in France, if he were going to be educated, he would have to be educated at Government expense, I take it, under the present situation, because they do not have private universities.

Should he, therefore, be denied the education which would make him the sort of scientist that he is today, well, that is a broad question, but it is a question which will increasingly face us, I think, in this country. I wouldn't be wise enough to have the answer myself.

Senator HICKENLOOPER. Of course, under our system, Doctor, he is not denied an education.

Dr. BRONK. Curie is not; that is right.

Senator HICKENLOOPER. This is only the question of using Government funds to support a subversive in an educational endeavor. If the Government does not support him, he has countless universities and colleges and special places where he can go and get his education. Education is not denied to a Communist in this country. It is the question of the use of Government funds to support that education.

Dr. BRONK. Well, I think there is a broad issue there, and you have stated it very well.

The CHAIRMAN. Doctor, I want to present to you the committee's thanks. I think I can speak for the committee in thanking you for your appearance and your very helpful testimony.

We had hoped to be able to have a confirmation hearing on Dr. Smyth and Mr. Dean this afternoon at 2:30, but I am advised that Dr. Alan Gregg, who is Chairman of the Advisory Committee on Biology and Medicine for the Commission, and was connected with the Rockefeller Foundation, is here. He cannot be here tomorrow.

Dr. Gregg wishes to talk to us about this matter. So I will ask Dr. Smyth and Mr. Dean to be present this afternoon, and we hope that perhaps we can get on with it after we have heard Dr. Gregg.

So at 2:30, Doctor, if you could be here, we will continue. And, until 2:30, we will declare the meeting in recess.

(Whereupon, at 12:50 p. m. the committee recessed, to reconvene at 2:30 p. m. this day.)

#### AFTERNOON SESSION

The committee reconvened at 2:30 p. m., upon the expiration of the recess.

The CHAIRMAN. The meeting will come to order.

A very distinguished American, Dr. Robert Oppenheimer, has addressed a letter to me bearing upon the subject which we are discussing which I think it would be well to have read for the record. Will you read it, Mr. Borden?

Mr. BORDEN. The letter, dated May 14, 1949, reads as follows:

#### DR. J. R. OPPENHEIMER'S LETTER ON FELLOWSHIP PROGRAM

DEAR SENATOR McMAHON: From the press, and directly from the Atomic Energy Commission, I have learned of the recent discussions about the Commission's fellowship program, which raise the question of whether candidates for fellowships supported by funds from the Commission should or should not be subject to investigation and clearance procedures. It seems to me that this question, and the implications of the decisions here taken with regard to the Federal support of science and education generally, are closely related to many of the great issues on which you have taken so constructive and farseeing a position. I am writing to you in the hope that in one way or another it may prove helpful to you to have an expression of my views. The question at issue clearly does not present some of the grave and often tragic aspects that the maintenance of security on secret, technical work has brought so prominently to the forefront.

For this reason, I have come to believe that we can and should deal with it unequivocally.

(1) The present situation, as I understand it, is this: The Atomic Energy Commission has advanced funds to the National Research Council, and has asked the National Research Council to use these for the granting of fellowships. In making this request, the Commission has asked the Council to pursue its traditional methods of selecting fellows. In this selection, considerations of scientific and intellectual competence play a decisive part. Considerations of character are not excluded, but, in the past, no effort has been made by the National Research Council to determine the political views, sympathies, or associations of candidates. My understanding is that the Commission has accepted this procedure and has endorsed it. With the basic wisdom of this decision, I fully agree.

(2) In considering the issue, we need first to ask ourselves what effects we can anticipate if from time to time young men and women who are Communists, or who have communistic sympathies or associations, are in fact granted fellowships. The fellowships are, of course, in fields where no access to restricted data will be needed or granted, and there can be no question of any jeopardy to security. What is more, there is no direct commitment, and no implication, that recipients of the fellowships will later be engaged in secret work. The Commission does not require this, nor do the research fellows. As a matter of fact, only a small fraction of the scientists of the country can or should be engaged in such secret work. The Scientific Panel of the Secretary of War's Interim Committee at one time estimated that even in the fields of the greatest relevance not more than 15 percent of our scientists would be associated with the atomic energy programs; and of these, of course, many will be concerned with their nonclassified aspects. The actual practices of the Commission bear out these predictions. Thus, one must ask the question of whether it is a proper charge upon the Federal Government, and upon the Atomic Energy Commission in particular, to support the training and research of men who will not be directly involved in the work of the Commission. It is the Commission's opinion, and this is an opinion fully shared by the General Advisory Committee, that the answer to this question is in the affirmative. For basic work in science, in aspects which are not and may not be under the direct control of any one Federal agency, is nevertheless a major source of our scientific progress, of invention, discovery, and technical leadership.

There are many examples of discoveries basic to the present work of the Atomic Energy Commission which were in fact made by Communists or Communist sympathizers. Of these many examples, we may cite a famous one: The major—one might almost say the only—present peaceful application of atomic energy rests on the preparation and use of artificial radioactive materials, which were discovered by Joliot, who is a Communist, and by his wife, who is a Communist sympathizer. It would be folly to suppose that the United States would be the stronger, or our science and industry the more vigorous, if this discovery had not been made. It would be contrary to all experience to suppose that only those who throughout their lives have held conformist political views would make the great discoveries in the future. The people and the Government of the United States have a stake in scientific discovery and invention; and it is for this stake, rather than as an act of benevolence toward the recipients of the grants-in-aid, that one must look for justification for having a fellowship program at all.

(3) The argument given above would seem to me a cogent ground for maintaining the Commission's policy, even if the determination of loyalty and reliability could be made by the most straightforward and satisfactory methods. As you well know, the actual procedures which have been employed, and which perhaps must be employed, in order to establish the loyalty of an applicant, are far from simple and far from satisfactory. They involve secret, investigative programs which make difficult the evaluation and criticism of evidence; they take into consideration questions of opinion, sympathy, and association in a way which is profoundly repugnant to the American tradition of freedom; they determine at best whether at a given time an individual does have sympathy with the Communist program and association with Communists, and throw little light on the more relevant question of whether the man will in later life be a loyal American. It would be foolish to suppose that a man against whom no derogatory information can be found at the age of 20 was by virtue of this guaranteed loyalty at the age of 30. It would be foolish to suppose that a young man sympathetic to and associated with Communists in his student days would by that fact alone become disloyal, and a potential traitor. It is basic to science and to democracy alike that men can learn by error.

(4) My colleagues and I attach a special importance to restricting to the utmost the domain in which special secret investigations must be conducted. For they inevitably bring with them a morbid preoccupation with conformity, and a widespread fear of ruin, that is a more pervasive threat precisely because it arises from secret sources. Thus, even if it were determined, and I do not believe that it should be, that on the whole the granting of fellowships, or, more generally, of Federal support, to Communist sympathizers, were unwise, one would have to balance against this argument the high cost in freedom that is entailed by the investigative mechanisms necessary to discover and to characterize such Communist sympathizers. This is what we all have in mind in asking that these intrinsically repugnant security measures be confined to situations where real issues of security do in fact exist and where, because of this, the measures, though repugnant, may at least be intelligible.

You and I have had occasion to discuss in the past how central a place the control of atomic energy occupies in the preservation of the basic freedoms of inquiry, freedoms essential at once for scientific progress and for the preservation of our democratic institutions. It is because I believe that the issue which has been raised here bears directly on the maintenance of freedom of inquiry that I hold it so important that it be wisely resolved.

With every warm good wish,

ROBERT OPPENHEIMER.

(See also telegram from Dr. James B. Conant, president, Harvard University, Cambridge, Mass., appendix, p. 159.)

Senator HICKENLOOPER. Mr. Chairman.

The CHAIRMAN. Senator Hickenlooper.

Senator HICKENLOOPER. I would like to make a comment or two at this point following Dr. Oppenheimer's letter.

It would be much more satisfactory if Dr. Oppenheimer, since he has seen fit to write a letter on this subject, were here so that some of his views could be examined and perhaps enlarged in the light of various ideas. He is not here, however, and I shall not undertake to answer his letter nor to comment on his letter detail by detail.

In the first place, I will say that there is no one that I know in public scientific life for whom I have a greater regard than Dr. Oppenheimer, because he is truly a great scientist and a great man. He does have, and I hope to call the attention of the committee at a later date, some erroneous assumption in his letter. Among other things, and I will say this to preface this a little bit more, that we are spending \$5,000,000,000 last year on European recovery; we are spending \$5,500,000,000 this year on European recovery, and we have spent money on Greek-Turkish aid and have poured money into China, all to implement one thing in the language of the President of the United States; to contain communism.

We are spending billions of dollars each year, in the language of the administration, to contain communism. This matter at issue before this committee I envisage as being an issue directly on either the containing of communism or the prevention of the use of a small amount of money to advance the education of subversive people.

Now I merely put that in to show that we are spending billions on the one hand to contain it and perhaps missing the point in a smaller amount of money on the other hand. But, as I recall it, Dr. Oppenheimer said in his letter that the Commission turns over money to the National Foundation, or Council, and that they are to pick fellows. That may be in effect what happens, but the basic responsibility is that the Commission is the only one that has a right to support or designate these fellows, and the National Council is only invited to aid the Commission, and it cannot be said that the Commission is legally or otherwise turning over money.

The Commission is merely enlisting the advice and counsel of this very eminently qualified group in this field.

I believe he mentioned something about a Communist, Dr. Curie and his wife discovering something. As far as I can see at the moment, that is not particularly applicable unless one wants to go further and say that because a Communist discovered something, therefore, we should turn the world program over to Communists. I want to make a careful reading of the letter, and I may be in error about that.

I have in mind a number of instances also where young people who gave practically no promise, who would not be considered for a moment as recipients of more specialized education, have nevertheless gone on to confound their superiors in later years and do some of the greatest things that have ever been done, but those things would be denied access to, on fellowships or things of that kind, because they had certain deficiencies, let us say, at the time of their selection which could be the deficiencies of education, application, or anything of that kind which made them undesirable for the program, and yet they have confounded their critics of the early days by going ahead and making some truly great contributions to the public good.

Therefore, the chance elimination of some individual who might by some activities in the future contribute something, it seems to me, is not a particularly strong argument.

I shall not ask for his presence here because I know Dr. Oppenheimer's views. As I say, my admiration for him is of the highest; I think he is thoroughly zealous in his interests, but I do feel that I would feel much more satisfied in my own mind were we to canvass some of these situations with him rather than have an ex parte letter here. I do not insist that he come at all, because it would probably reach no good purpose or final conclusions if he did.

The CHAIRMAN. It was not my purpose to have an ex parte statement in the record without any opportunity given before the committee, if they so desire to examine him. However, I thought that his eminence is so great—his reputation is so great—in this field that the record would not be complete nor would I be justified in withholding a letter of this kind from the record.

Senator HICKENLOOPER. Very proper.

The CHAIRMAN. If you feel that it would be well to have him here, I feel certain he will be willing to come. Mr. Borden, if you will communicate with Dr. Oppenheimer this afternoon and see when he can come, so that we could arrange to hear him, I would appreciate it.

Senator HICKENLOOPER. As far as I am concerned, Mr. Chairman, I have talked with Dr. Oppenheimer on several occasions. I think I know about what his views are and I have no particular desire to cause him inconvenience or to take his time. He has many other things to do. If he would like to come and amplify his letter further, certainly I would be one, as a member of the committee, who would make him most welcome. But if he does not feel that it would add anything to what the letter has to say, I would not be critical of his decision.

The CHAIRMAN. All right; we will put it up to him.

Dr. Gregg?

**STATEMENT OF DR. ALAN GREGG, DIRECTOR FOR MEDICAL SCIENCES, ATOMIC ENERGY COMMISSION**

The CHAIRMAN. Dr. Gregg, gentlemen, is the head of the Advisory Committee on Biology and Medicine to the Atomic Energy Commission. He is an official of the Rockefeller Foundation.

Dr. GREGG. That is right.

The CHAIRMAN. What is your title, Doctor?

Dr. GREGG. Director for Medical Sciences.

The CHAIRMAN. He is a very well-known educator, scientist, and he has asked to be heard on this matter and we are very glad to have him with us.

Doctor, you know what we are discussing and we would be interested in your observations.

Dr. GREGG. Thank you, sir.

I think I might begin by saying that my comments are going to be given from the standpoint of an individual and do not involve the foundation. They do, however, rest on the certain measure of experience that I have had in the foundation. I have been in the Rockefeller Foundation since 1919 and have been in touch with the Fellowship work of the foundation since 1922.

The first meeting of the National Research Council Fellowship Committee in Chemistry and Physics I attended in 1922. I have had 3 years of service in Brazil and then I was in Europe for the foundation running the fellowship program in medicine from 1924 to 1931. In that European assignment I visited all of the countries of Europe, including Russia once during that period and later once again.

I have been pretty familiar with the program of fellowships which the foundation has administered, some local, that is, for use in the place where the man was found, so to speak, of where he took his fellowship and continued there.

But, the majority are traveling fellowships where they went to another country for a period of 1, 2, and sometimes 3 years.

Now in a good deal of the discussions that I hear in various places, and I have not heard anything here to the contrary, or seen in the papers anything to the contrary, I think that it is a very inadequate statement of what happens when a man is given a fellowship to say that he is given a fellowship. I think it is inaccurate because the real job of any organization that runs fellowships is to find ability and they are darned lucky if they can find it.

I remember once a young Hungarian who had had a foundation fellowship with the Rockefeller Foundation and was returning to Hungary. He came in to see me in the Paris office and he gave me a little sentence or two, a very formal and polished "Thanks for the opportunity," that he had had in America to study physiology for a couple of years. I noticed something queer about him when he said it. The words were perfectly formal and the expression was truculent and unhappy. I thought I understood what was happening so I said to him, "Say, do you know what betting is?" He was a little bit puzzled; that was a word which he had not learned and I then explained to him in French. He said, "I think I understand."

I said, "How do you think I earn my living?"

He said, "I don't know unless it is directing this foundation." I said, "No, I earn my living by betting on young men. What do you

think would happen if I made a lot of bad bets?" He said, "I don't know." I told him I would get fired. He did not know what that meant so I told him and explained that. I told him, "You expressed some gratitude to me and I would like to tell you that 2½ years ago I decided to place a bet that you would do well on your fellowship and I have had a letter saying that you have made good on my bet and if you have any expression of gratitude it should go to the foundation because you have redeemed the bet I made on you."

Now I tell that story simply to bring out the fact that when any agency, private or public, gives a fellowship, they are giving it for a purpose and when they find the right kind of brains and character where does the gratitude flow? It must flow in both directions or it is not a satisfactory arrangement. They are lucky to find persons of ability and character and it is not any condescending matter of allowing yourself to be proselytized by one person or not and call it a fellowship. It is a genuine business of going into the market to find ability and talent and character and when you can find it you can be jolly grateful that you can find it because if there are not any people like that you cannot do any business at all.

I want to point out in addition, and I think it is well to repeat the axiom, that this condescension on the part of the Government to give these young men an opportunity is seriously inaccurate and almost to the point of being quite a false view of the situation. We are looking for brains and we are looking for character and when we can find them, it is as good as a good business deal with both sides profiting. Now why do I bring that out? I bring that out because if you are looking for something and it is not a buyer's market but it is a seller's market; in other words, if you are looking for exceptionally good brains and they do not grow on every bush, you have to consider the circumstances that influence the hunt and if you throw out certain conditions that diminish the likelihood of finding able young men for any reason whatsoever, you have narrowed your market; you have reduced your chances and you have failed in your special obligation to find men of ability.

Now, I would not care to open a fellowship program under circumstances that would dissuade a seriously large number of applicants from applying. I would not open with a note of distrust for the simple reason that young men who have their careers to make are pretty concerned about it and if they suspect something that they do not like and can go elsewhere, and thereby avoid it, you will not have them nibbling at it and you will not have a chance to get them.

Senator HICKENLOOPER. Would you amplify that, Doctor, "go elsewhere." Where?

Dr. GREGG. They would go to university positions that do not lay down peculiar requirements or they would go into some other calling that does not call for something that is radically distasteful.

Now I have had some contact with advertising people in connection with the Advertising Council and I have learned a lesson that I think is a good one from them. There is an amusing contrast between the ordinary academic mind and the advertising man's mind. The academic fellow cares about whether he said something exactly and if he can quote you exactly what he said and it is complete and accurate he is happy. The advertising man does not care about what he says, he cares about what he is understood to have said. Sometimes you

can say that in the nice sense and sometimes you can say it in a not-so-nice sense. He does not care about what he says but what he is understood to have said. It reminds me of the old definition of rhetoric. Rhetoric is the art of conveying conviction without resort to logic.

If that is not a description of advertising I am a plumber. They do care about what they are understood to have said.

I think anybody in a public relationship should care about what they are understood to have said. When you put down an FBI investigation or special security investigation at the beginning of a fellowship as a *sine qua non*, I am convinced that you will cut yourselves off from a good many candidates who will say, "Thank you very much. Don't want to go into that atmosphere anyhow."

You can say, let us forget about them. I am not so sure that you can forget about them and for this reason: I have heard the phrase today "potentially subversive." The great characteristic about youth is that it is potentially everything and I think that to try and guess who is potentially subversive is substantially saying, "Let us try now and guess those people who will not change their views regardless of what happens to them." That is a pretty forlorn hope and it is an unlucky thing to find.

I think the American colonists, in, say, 1770 would not have enjoyed the title of being called potential revolutionaries but thanks to some stupid conduct on the part of King George and his ministers that is just what they were turned into because they were potential revolutionaries and the change came between a loyal colonist and a loyal patriot and it took just about 15 years to make it, but most of it was made by the English attitude above the colonists and not by the colonists themselves. I use that as an illustration. And you can say it is false to argue using that as an analogy, but if you are going to use the phrase "potentially subversive" you have to realize that the Government's attitude in giving scholarships and fellowships is one of the things that is involved in changing that potentiality into a reality because there are plenty of people, young ones particularly, who will revolt at that kind of interference.

There again it does not matter what you say you said, but what you are understood to have said. If this goes out as the attitude that the Government educational dollar, the Federal educational dollar, is going to put that kind of a means test in advance, exactly what you say will not make half as much difference as what you are understood to have said.

Senator HICKENLOOPER. Do you mind my interrupting?

Dr. GREGG. No.

Senator HICKENLOOPER. In the fellowship program you are dealing entirely with potentialities in every phase, are you not? In other words, they are potentially educable?

Dr. GREGG. That is right.

Senator HICKENLOOPER. You are not certain that they will prove to have the ability that you would hope to have so you are dealing with potentialities in the very objectives that you are attempting to reach?

Dr. GREGG. Just as a prospector is.

Senator HICKENLOOPER. So, is there any difference as far as dealing with potentialities on the other end of the scale?

Dr. GREGG. You are dealing with potentialities. What are you going to do with the potentialities, follow a procedure that will turn those potentialities into what you do not want them to turn to?

Senator HICKENLOOPER. It is a matter of betting.

Dr. GREGG. But you do not throw in another factor which is their own understanding of your attitude because it influences the performance. You know, sir, as well as I do, that young men are somewhat restive about authority; that is a characteristic of the young men, as soon as authority steps in first and tells them what to do. On my last visit to Europe this time a year ago, I was not impressed by the number of Communists in Europe; but what puzzled me and interested me was what are factors that convert a man who is on the fence to going over to the Communist side? What are some of the factors? Those factors are disillusionment, cynicism, their dispossession, lack of hope, and their youth because youth has not engaged itself in the long-term undertakings that require stability and you always have your potentialities in youth.

Senator HICKENLOOPER. Just in passing I would like to refer to your reference of a moment ago about your business being one where you bet on results. With regard to a Communist whose principles, so far as we know are the overthrow and the destruction of the type of government that we have, when you bet on him is it not like betting on the horse when you know the jockey has been bought and you know is going to throw that race? Would you bet on that horse?

Dr. GREGG. I would bet on him intellectually.

Senator HICKENLOOPER. Would you bet on the horse where you know the jockey was fixed?

Dr. GREGG. But I do not know that with the same certainty about the young Communist.

Representative DURHAM. Doctor, you may proceed. The Senator has been delayed.

Dr. GREGG. I think that it might be useful for me to go a little more into the details of the kind of effect that comes to a group of young men who may consider themselves for or be asked to consider themselves as candidates for fellowships, the type of fellowship accorded by the National Research Council acting as agent in a certain sense for the Atomic Energy Commission, when among the requirements there comes, and you imagine yourselves in the position of a young man in that circumstance, a request for the information to your political beliefs.

Almost inescapably I think the reaction is, "Oh, this is a political job. What I think about government is apparently going to have something to do with how good I am as a physicist. Well, if that is the kind of general flavor, that kind of fellowship, I know where I would rather go for the fellowship or what I would rather do. They haven't any business asking me about that and whether I am a member of the Communist Party. If that is what is injected in here, that is a foretaste of what the conditions of work will be. I would rather lead a band or do something else, thank you."

That is my estimate of what a man thinks when the first lead-off is, What are your political beliefs? There are those who will say that that is not what we thought America stood for and they will become by that mere maneuver pretty impassionate or dissident against that

particular qualification in regard to a fellowship for scientific work. I do not believe that all these young men who will be taken in will be allowed access to the inner secrets of atomic energy; that is out; that is taken care of in another way.

So, in order to study, we will say, the effect of radiation on plant cells you first have to start off by saying what your political convictions are and what may have been your earlier affiliations. Well; we all know that human beings are somewhat governed by emotions at times and this is a sort of tentative thing for the man and he says, "This is a foretaste and now what are the other strings attached to it?" And there are other alternatives and he does not go on with it.

I had an amusing illustration even at my age. I would suppose that my potentialities are now rather limited but I served for five meetings on the United States Public Health Service Advisory Committee on Mental Hygiene for nothing. I gave up Saturdays and Sundays and I did not take any honorarium and after that I put "record of distinguished service," discommoding myself to that extent when I could have had some per diems.

Then I got a rather curious letter from the Public Health Service saying to please have my fingerprints made and send them back promptly. Also, please tell them under what other names than my own name I had ever been known by. As a matter of fact, when I was in college, I had such a red face that I was known as Pinky, so that is obviously one thing against me. Then my wife refers to me as "the boy traveler." So, I have two strikes there, and what do I think of an organization that does that? I think it is ludicrous.

I have been used by the FBI to give my opinion of the trustworthiness of some of my own colleagues. I do not mind being put through the FBI for my job in the Atomic Energy Commission, because there is a possibility—and I only regard it as a possibility—of my understanding some of the machines that I have seen in the institutions. I think the best guaranty is my ignorance.

But why should the United States Public Health Service in connection with mental disease want to know what my convictions are? I think I have voted for every political party except the Communist Party. But I do not think that my political convictions have much to do with the price of eggs. I went through a sufficient revulsion on that to say, "Oh, maybe they are sending the letter to me because I decline to take pay." Of course, that is a suspicious thing; and that may mean that I am buying my way into the mental hospitals of the United States, so I guess I had better get my pay with all of the rest of them.

I think that is a very serious situation to adopt measures so suspicious and implying so much distrust that a fellow with the best will in the world has that thrown in his face as a starter, and I assure you that young men, when we try to determine that, if they get the very idea that first, last, and all the time it is an appointment in which their political convictions are involved will say, "Thank you very much, we are going somewhere else."

You cannot go into very great detail as to what the subsequent steps are except that an investigation of this kind is going to feed that flame; it is going to pour gasoline on it instead of water on the fire. They are going to say, "Oh, yes; this was a matter of actual investigation. They follow up on these things."

Senator Hickenlooper's analogy to betting on the jockey who had doped his horse, betting on the horse that had been doped, I think, is a false one because the horse's only job is to win the race, and the physicist's job is to contribute to physics. Now the analogy would have been better if he had asked me: Would you bet on a jockey who was divorced or who was a member of some religious faith that has relatively little credence in the United States? Sure, I would bet on the jockey who was a good jockey and I would want a physicist that was a good physicist, provided that he was in a position that had nothing which he could divulge to a foreign power.

Representative DURHAM. You might repeat that for Senator Hickenlooper when he comes back.

Dr. GREGG. What is really at stake of the most serious moment is this: Here is a move where the Federal Government undertakes to contribute to the education of young men, possibly some young women but young men certainly, and there is a great deal of reserve and fear to put it in its more extreme term, of what this Federal contribution to education is going to amount to and there are those who are on the side lines saying, "Huh, don't you get into any scheme like that. That will eventually be controlled politically. Ability, scientific ability, integrity, is not the thing. What do they ask you first? Why they ask you first to tell all of the names that you have been known under and what affiliations you have ever had and whether you ever belonged to the Communist Party or anything of that kind and even your associations." God knows we cannot always control those, and they also come into the picture.

Now the Federal Government sets up a move of this kind, if you do this, sets up a remarkable state of affairs for all those who believe that the Federal Government should never touch education. I do not see, if the Federal Government takes the position that they have to have an oath of this kind or investigation of this kind on federally supported fellowships, where that particular move stops. How about the State universities? Are you going to give any money to State universities that do not follow this because you will have this slipping in, too? How about your high schools? How about your teachers? Are you going to run a general witch hunt in this direction? I do not see what the limit may be to it.

Of course, this involves a supposition which is a very interesting one to think about. What do you think these fellowships do? Do they indoctrinate people? Do they give an opportunity for indoctrination or are they the examination of scientific evidence? If they are indoctrination, and if we are talking about classes in sociology or classes in governmental theory, it would be one thing. This is a matter of science and physics, and yet this thing jumps in and is pushed in. Where do we stop?

One can only give estimates, and I am quite clear that my estimate is that you will be understood by the educators and by most of the parents who think this thing over, to be putting, for the first time, a sort of political means test into education, and that is going to cause a great big storm. The storm will come slowly; but, like most big things, they come slowly at first and then they develop speed as they come along.

Representative HINSHAW. Doctor, do you mind being questioned?

Dr. GREGG. No.

Representative HINSHAW. Have you read section 3 (a) lately?

Dr. GREGG. No.

Representative HINSHAW. I would like to read it, Mr. Chairman.

Representative DURHAM. Yes.

Representative HINSHAW. The section reads as follows:

Research Assistance. The Commission is directed to exercise its powers in such manner as to insure the continued conduct of research and development activities in the fields specified below by private or public institutions or persons and to assist in the acquisition of an ever-expanding fund of theoretical and practical knowledge in such fields. To this end the Commission is authorized and directed to make arrangement (including contracts, agreements, and loans) for the conduct of research and development activities relating to—

- (1) nuclear processes;
- (2) the theory and production of atomic energy, including processes, materials, and devices related to such production;
- (3) utilization of fissionable and radioactive materials for medical, biological, health, or military purposes;
- (4) utilization of fissionable and radioactive materials and processes entailed in the production of such materials for all other purposes, including industrial uses; and
- (5) the protection of health during research and production activities.

Then it goes on with another paragraph that has to do with how the arrangement shall be made in protection of life and health.

Now, over in section 10 of the act, we find 10 (b), which is the restriction section, and the term "restricted data" and the definition of restricted data. Then section 10 (b) (5) (B) (i), and it reads as follows:

No arrangement shall be made under Section 3—

That is the section we just read and they also refer to section 4—unless the person with whom such an arrangement is made, the contractor or prospective contractor, or the prospective licensee agrees in writing not to permit any individual to have access to restricted data until the investigation and report to the Commission on the character, associations, and loyalty of such individual and the Commission shall have determined that permitting such person to have access to restricted data will not endanger the common defense or security.

There is a good deal of additional language that is connected with what I have read, nevertheless, that indicates what the law passed some years ago in relation to atomic energy intends.

Obviously, it intends to promote research and development and does not mention anything about education. It is research and development, and then it provides for the control of restricted information.

Now, as one who has been associated with these things, do you think that anyone who goes into this program of research and development, of which we now find in part to be fellowships, can engage in these five undertakings or activities under Section 3—namely, research and development in nuclear processes; the theory and production, and so forth and so forth—without running into the business of restricted data?

Dr. GREGG. I should think that that was the responsibility of persons who have him under their supervision and he would very possible run into items, isolated items, but the point is who puts these things together.

He is in no position to put them together.

Representative HINSHAW. Let us take this research fellow that we are talking about and assume that he is engaged in research and let us assume that he has picked one of these items. Pick anyone you like

and then ask yourself the question whether or not that person is going to run into the question of the right to use restricted data in the course of his research. Do you think that he can?

Dr. GREGG. If it is restricted data, it is not his responsibility what is given to him.

Representative HINSHAW. I am not saying that. Do you think he can conduct research in this field without running into the question of whether or not he has the right to use restricted data?

Dr. GREGG. I think he can do quite a lot of work in research.

Representative HINSHAW. What fields?

Dr. GREGG. Principles of radiation to biology, to plants, to genetics, to health physics; there are a great number of things.

Representative HINSHAW. Certain aspects of health physics and certain aspects of biology; obviously he would not run into that?

Dr. GREGG. That is right.

Representative HINSHAW. Practically speaking, then, he is a research fellow who is not to be cleared for the use of restricted data and would have to confine himself to those few items; would he not?

Dr. GREGG. Yes.

Representative HINSHAW. Hence, anybody who wanted to engage in that research would have to pick a specific, small line that would come within that area within which no restricted data would be made available to him?

Dr. GREGG. Even then it is quite possible that he could make a significant contribution.

Representative HINSHAW. I agree with you on that only his field is very limited; is it not?

Dr. GREGG. Yes.

Representative HINSHAW. Unless he should specify that he intends to engage exclusively in those fields, then of course the fellowship would have to require that he be cleared for the use of restricted data?

Dr. GREGG. He would have to be cleared for the use of restricted data.

Representative HINSHAW. So, actually what we are talking about here is a very small field?

Dr. GREGG. On the contrary, you are talking about a very big field for which you are going to pick individuals.

Representative HINSHAW. That is right; you are talking about a very small field of researches, relatively, in comparison to the whole?

Dr. GREGG. No; I would say the unrestricted applications were a very large field.

Representative HINSHAW. Mr. Chairman, in a public meeting by this committee, I do not like to go into a discussion of what biological research is restricted and not restricted; but, obviously in certain work in reactors and so forth, biology does come into it very heavily, and it is quite possible that the Commission would feel, and its advisory committee might feel, that certain data even in relation to radioactive work in biology should be restricted information.

Dr. GREGG. That is quite possible.

Representative HINSHAW. Would not then the controlling group find themselves in the position of worrying all the time as to whether or not a particular student or particular research fellow in this case is entitled to certain of the information?

Dr. GREGG. Yes, but that is their explicit responsibility. You do not head this off by saying, "Let's never take anybody into the employment of General Motors unless he can be president." Gosh, you have to run this thing with a great deal more talent than that would allow you.

Representative HINSHAW. With all due respect to the gentleman, I do not think this relates to the question.

Dr. GREGG. It does because you are saying that we ought to put the smallest grating first, whereas I am saying that you put the narrow grating later, and you use below that grating for purposes not involved in security.

Representative HOLIFIELD. Will the gentleman yield?

Representative HINSHAW. Certainly.

Representative HOLIFIELD. I think we have to consider that the main purpose of the research of the Atomic Energy Commission is for the purpose of developing scientists in this particular line of nuclear science. We are not interested in general science. I am inclined to think that some of your ideas along the line of general science are probably correct, but here we are operating in a restricted field, and are we justified in going out and taking people into this field and spending the Government's money under this act, taking a chance that the money that is spent to produce scientists in this area will later on be nullified because we will have to screen them out?

I am looking at it from a practical standpoint. I am not talking about the National Research Foundation that makes fellowships on all lines of science but the money that is in this particular act and in this section 3 (a), is particularly specified and it says that the research shall be in a particular field for a particular purpose and it would seem to me as though your thought of screening them later for restricted data would come later than it should come.

Now I think on the whole field of scientific research your observations are probably correct but I cannot see why any individual who benefits from Federal funds, and they would consider it a benefit or they would not take up one of these fellowships, should hesitate to take an oath of loyalty to this Government. Each one of the Members of the Congress have to take that oath of loyalty to the Government and we think nothing of it; it is no insult to us. We are rather proud of the fact that we go down into the well of the House every 2 years. We go to a lot of trouble, I might say, and raise our hands and take that oath of loyalty. Most Federal jobs require an oath of loyalty to the Government. Here we are taking the money of all of the people, the tax money, and we are giving it to these young men for a specific purpose and that is to develop them in the science of nuclear experimentation for the purpose of developing this field which is related so closely to the national defense.

Now, why are we imposing upon them any great degree of harm in asking them to answer certain questions which would bring out the fact that they are loyal to the United States?

Dr. GREGG. How significant is the answer to the question providing you happen to be dealing with a real Communist?

Representative HOLIFIELD. A good argument there. Anyhow, I concede that if this person were a Communist, he would probably perjure himself at that point. I will concede that point but he of course subjects himself to the penalties of perjury when he does so.

Dr. GREGG. The answer does not mean very much, his answer.

Representative HOLIFIELD. Neither does my oath of office mean a great deal if I take it in the wrong way when I go down into the well of the House and swear to defend the best interests of this country against foes within and without. I can go down there with duplicity in my heart but yet we have found it to be thought necessary and we all agree it is not degrading in any way.

Dr. GREGG. I think your analogy falls down in one way in that you are taking the oath as a legislator and as a representative of the people and this person is obliged to take an oath of political alinement because he is going to be a physicist.

Representative HINSHAW. I would like to interrupt at this point to say that he is not taking an oath of political alinement except that he is proving to the Government which is about to give him some money for the purpose of developing not only his own ability but ability for the benefit of the Government and stating that he will not in anywise aline himself with any foreign power. I think that the Congress has pretty well demonstrated and the Attorney General is pretty well satisfied that anyone who is a member of the Communist Party is not loyal to the United States but to another government. Do you think that we should proceed to educate people who are loyal to some other government which, as has been stated before, the United States feels, the President feels, and the United States generally, that we should insulate ourselves against?

Dr. GREGG. I think it would be probably the long-headed policy to do that which is not the answer you expected. You have your controls so far as any real danger. You have your controls well above and beyond that.

Representative HINSHAW. I would like to know your reasons for that statement.

Dr. GREGG. For saying that?

Representative HINSHAW. Yes.

Dr. GREGG. You may not like the analogy, but supposing you give a dinner party or dance and down at the bottom you put "R. S. V. P." which means, please tell me whether you are coming or not, and you also add "Please accompany this with a Wassermann test." You are in a nice position to say that you do not want to say that you do not want people at your house that might contaminate your guests. What is the general flavor of that invitation? We would probably have a considerable reduction in tragedies of various kinds if people always accompanied their invitations with things like that but in the long run, it is not the right way to get guests to the party, and if it comes to a question of actually marrying your niece that does come in quite sensibly but you do not screen them the way in the beginning and I think it is foolish to screen them this way in the beginning because the connotation of the screen puts first of all is one that handicaps your choice of persons to serve.

Representative HINSHAW. We require an oath on the part of anyone who is commissioned in the service of the Government, the Army, Navy, and Air Force, and they have no objection to taking that oath of office and declaring their loyalty to this country.

Dr. GREGG. That is right, and there are a lot of people that stay out of those forces.

Representative HINSHAW. Any person that comes here and seeks naturalization for this United States forswears allegiance to any power. The trouble with the United States is that they assume that merely by virtue of birth in this country a person is per se loyal; is that not true?

Dr. GREGG. Yes.

Representative HINSHAW. Anybody else is required to take an oath which, if he violates that oath, subjects him to penalty.

Dr. GREGG. My point is that it is not the number of existing Communists that makes that much difference. It is what you do that turns these young people either in favor of the Government or against the Government, and on that basis I do not believe that it is smart to push as a qualification for a job which has nothing to do with political life a political issue.

Representative HINSHAW. This is not a political issue; it is a loyalty issue.

Dr. GREGG. Call it a loyalty issue.

Representative HINSHAW. You do not care, as I understand it, whether a man be a Socialist, Republican, Democrat, or anything else in the United States except a member of the Communist Party, and be perfectly loyal to the United States; is that not true?

Dr. GREGG. I do not know how true it is. It might be true. I do not think that membership in and of itself in either the Democratic or Republican Party is a guaranty of loyalty to the United States.

Representative HINSHAW. That is very true.

Dr. GREGG. That is just what I mean.

Representative HINSHAW. But you do know that a person who is a member of the Communist Party is not loyal to the United States?

Dr. GREGG. Presumably so. That is presumably correct.

Representative HINSHAW. So that one thing you pretty well know.

Dr. GREGG. As I said, the number of people who are Communists is not the important thing. The important thing is, How many more are they going to get and what do you do to get more converts?

Representative HINSHAW. Do you think to inquire and make inquiry into or require confirmation of loyalty on the part of persons who would receive Government funds for their own education, let us say, and for the conduct of research and development in the atomic energy field is going to make Communists out of people?

Dr. GREGG. Who is going to receive?

Representative HINSHAW. Or who is going to receive.

Dr. GREGG. Yes.

Representative HINSHAW. Do you think that would make Communists out of them?

Dr. GREGG. Yes.

Representative HINSHAW. Why?

Dr. GREGG. Because they immediately see that their political belief is apparently the sine qua non for a political job.

Representative HINSHAW. It is not a political belief, their political belief is the prohibition for a job.

Dr. GREGG. You can have anything you want in this world, only do not forget to pay for it. It is the price tag of this that troubles me. You can work out a perfectly consistent scheme. What will be the price tag? The price tag will be the feeling that the Federal money for education is politically controlled.

Representative HINSHAW. Pardon me. This is for research and development in the field of atomic energy.

Dr. GREGG. If you do not call this education, you and I have already separated.

Representative HINSHAW. I do not think the purpose of the act is to provide education for the people; it is to provide information on the subject of atomic energy that will benefit the United States, and the Atomic Energy Commission is the agency involved.

Dr. GREGG. Research is teaching ourselves without a teacher, and it is a form of teaching and an important form.

Representative HINSHAW. It is also a form which provides information to others engaged in the same undertaking.

Dr. GREGG. It may very well be.

Representative HINSHAW. That is what I get was intended by the act.

Representative HOLIFIELD. We extend an appointment to these boys that go to Annapolis and West Point, which I am told costs the Government about \$30,000 per graduate, and those boys go in with an obligation to the Government to spend at least 5 years in the service of their country. Do you think it is degrading that they should have to comply with a qualification, both of loyalty to their country, oath of loyalty, and of service, minimum service of 5 years, in payment, you might say, or in gratitude, or whatever term you wish to use?

Dr. GREGG. Not in the least.

Representative HOLIFIELD. The Federal money that is spent on their welfare?

Dr. GREGG. They know exactly what they are getting into, but that does not mean that you have the choice of all of the bright young men in the United States to go to West Point and Annapolis.

The CHAIRMAN. Sometimes it seems to us as though we do.

Dr. GREGG. That is fine. In the medical schools at the present time I venture to say that they have more applicants than they do for West Point and Annapolis. Yale has 1,465 applications for 65 openings this next year. If you can match that at either Annapolis or West Point, I will be surprised.

I say you have a duty to get your hands on the best brains that you can find, and not to handicap yourselves by an initial screening which has nothing to do with really serious information that might be imparted and that is restricted information.

I beg you not to do it, but, gosh, you can do it. There is nothing to stand in your way of doing it except that you have a price tag on it. You have a price tag that I think will have some bounces that will not be agreeable to you.

Representative DURHAM. Doctor, on that point, what do you base your opinion on? Have you made a survey?

Dr. GREGG. What do I base my opinion on?

Representative DURHAM. Is it just a personal experience?

Dr. GREGG. I base my opinion on the sensitive frame of mind that a young man is in when he tries to go forward with the only capital he has, which is his mind. If he finds circumstances where he is given a great deal of freedom it appeals to him and frankly we, in the foundation, find that the fellows prefer freedom in the foundation fellowships, over some opportunities, because we give

them freedom. We say that "It is up to you to choose the person you are going to work with; that you can take counsel with your teacher, you can take counsel with us, but the thing is for you to do, not us." That element of freedom appeals tremendously to young men. We do not put any foolish screen at the beginning of looking for candidates. You have to cast a net very far and very free to pick up real ability and you have to give them circumstances that appeal to them. You gentlemen may or may not know it, but the actual restrictions on research work in this field are such as to constitute a handicap in and of itself to a scientific man because he has been brought up all his life to believe that what he can find can be shared and, by gosh, here is a service where you just cannot do that and I want you to realize that you are in a difficult position in terms of reaching ability.

Representative DURHAM. I am kind of basing my opinion on my own family, and it is not from a desire to talk about them that I refer to them.

I have raised five children and three of them are in the field of science, and I never have heard them discuss anything like this, that they would mind having a few restrictions like this placed around them if they had some stipend in gaining further education.

I just cannot imagine one of my children taking such a position, and that is why I wonder whether you have analyzed this field of applicants in a scientific way or whether you have just assumed that this thing might be.

I am one of those who wants to keep education as free as possible. God knows that I want instruction to be perfectly free, and I do not want to do anything to hamstring that.

Here we are faced with a situation where we have a Communist that has been granted a scholarship by the Commission, and it is damaging; it is damaging to the whole program, and I do not care what analysis you make of it. We are facing that situation and we have to solve it.

The country is just not going with us and we have to go to the people and tax them to get appropriations. We have a form of government that we love, and how we can solve it is what I would like to know.

Dr. GREGG. The real safety of the United States in the whole business of atomic energy is going to lie in the number of good minds that are available and well-trained men.

Representative DURHAM. I agree with you.

Dr. GREGG. I would not like to see you put yourself in a position of limiting your recruitment for the future in that direction, the so-called secret end of it; I am not in sympathy with it because I do not think it is the atmosphere in which you get the best science done.

Granted that it is a realistic limitation, I think you have to make every effort to find able young fellows to do scientific work and not handicap yourselves and throw the whole question of Federal support to education into this kind of an atmosphere.

I should say that the supervision of what is restricted and what is not restricted is carefully allocated to people who are responsible.

Representative DURHAM. What has actually thrown it in the atmosphere, Doctor? It is an ideology that takes an oath that they are not going to be loyal to our form of government.

Dr. GREGG. I think a considerable measure of what has thrown it into this atmosphere is a perfectly irrational amount of fear.

I have talked with Communists, gosh, I have argued with them for hours, but I have not yet been infected by their ideas.

Representative DURHAM. Well, we have certainly wasted a lot of money in the last few years on your opinion, then, to try to fight it in Europe.

Dr. GREGG. Not at all. What you are doing in Europe is very sensible.

Representative DURHAM. I hope so.

Dr. GREGG. I am perfectly confident that it is. But it is not being done by the system of giving for the sake of controlling behavior, and when the United States makes any requirement of that kind, independent people anywhere will say "Thank you very much, we don't need your money. You can't buy our opinion."

The biggest factor in Europe has been the CARE boxes; it has not gone through Governments, it has gone from individuals to individuals.

Representative DURHAM. Did we not offer them international control of atomic energy, and do you not think that was fair?

Dr. GREGG. Perfectly fair.

Representative DURHAM. They did not accept it.

Dr. GREGG. It was not taken.

Representative DURHAM. What are you going to do?

Dr. GREGG. Stay as you are on it, but I would not make the confession, would not make a move that to all intents and purposes would indicate that you are so scared that you cannot afford a dilution of one to a thousand of these people.

Gosh, I have seen so many young men turn from radicals to conservatives and so few turn from conservatives to radicals that I do not worry about the passage of time if they are busy with physics in the meantime. I know there will be examples that will be shocking, and terrifying and all that, but, darn it, they do not amount to as big a price as you pay if you go into this fear-stricken attitude of letting nobody even be looked at.

Representative DURHAM. This young man has probably done as much damage as thousands.

Dr. GREGG. We can do a lot more if your reaction is to make some more feel that it is all a political uproar.

As I say, I think you do have a price tag. This is in line with what an old man told a friend of mine:

"Remember, young man, you can have anything in this world, only don't forget to pay for it."

What is the price tag of going into this thing?

Representative DURHAM. It has two price tags on it, Doctor. It has a price tag on the other side, too. It is a two-way price tag, by virtue of the fact that the United States can be attacked by atomic energy as well as defended by it. The safety of the people themselves is involved in this proceeding.

The CHAIRMAN. Are there any further questions?

Representative HINSHAW. No.

The CHAIRMAN. Doctor, I want to apologize for leaving, but we thought that the vote would come at any time and we were delayed.

However, I want to assure you that I am going to read the record of what transpired.

Thank you very much for making yourself available.

Dr. GREGG. Thank you.

The CHAIRMAN. Now, it is 4:30 and I believe that we will have to recess until 10 o'clock tomorrow morning.

I want to extend my apologies to Dr. Smyth and Mr. Dean. I am sure you can see that it was unavoidable. We have scheduled this young man, extended him the invitation, and he is going to be here. Will you be available in the morning, Dr. Smyth?

Dr. SMYTH. Yes.

The CHAIRMAN. And you, Mr. Dean?

Mr. DEAN. Yes.

The CHAIRMAN. We will resume at 10 o'clock tomorrow morning. (Whereupon, at 4:30 p. m. the committee recessed, to reconvene at 10 a. m., Wednesday, May 18, 1949.)

# ATOMIC ENERGY COMMISSION FELLOWSHIP PROGRAM

---

WEDNESDAY, MAY 18, 1949

CONGRESS OF THE UNITED STATES,  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The committee met at 10:30 a. m., pursuant to adjournment, in room 48-G, the Capitol, Senator Brien McMahon, chairman, presiding.

Present: Senator McMahon (chairman), Representative Durham (vice chairman), Senator Hickenlooper, Representatives Holifield, Price, Jackson, Cole, Elston, and Van Zandt.

Also present: William L. Borden, executive director, and Harold Bergman, deputy director, Joint Committee on Atomic Energy.

The CHAIRMAN. The meeting will come to order.

Mr. Freistadt, will you take that chair?

Will you hold up your right hand, please?

Do you solemnly swear that the evidence that you will give this committee of the Congress is the truth, the whole truth, and nothing but the truth, so help you God?

Mr. FREISTADT. Yes, I do.

The CHAIRMAN. Mr. Freistadt, after consideration by the joint committee, and after action by the joint committee, I dispatched to you a telegram which you received?

## TESTIMONY OF HANS FREISTADT, GRADUATE STUDENT IN PHYSICS, UNIVERSITY OF NORTH CAROLINA, CHAPEL HILL, N. C.

Mr. FREISTADT. Yes, sir; I did.

The CHAIRMAN. I am going to read that into the record.

Since your name was mentioned at an open hearing of the Joint Congressional Committee on Atomic Energy this afternoon, I consider it only fair that you be given an opportunity to testify before the committee at your earliest convenience should you so desire. Please notify me if you wish to testify before the committee and a date will be arranged.

You received that telegram?

Mr. FREISTADT. Yes, sir; I did.

The CHAIRMAN. And you answered it and stated that you wished to come here?

Mr. FREISTADT. Yes, sir; I did.

The CHAIRMAN. I wanted to very carefully and clearly tell you that you are not on trial before this committee for anything. Do you understand that?

Mr. FREISTADT. I understand that, sir.

The CHAIRMAN. This is no persecution session at all. Our idea was that since your record had come into question in connection with the

fellowship program, it was the desire of the committee that you be given an opportunity to explain your connection with that program, and how you came to be connected with it, if you desire to do that.

Mr. FREISTADT. Yes, sir.

The CHAIRMAN. Therefore, the invitation was given to you. And we want it most clearly understood that you were not subpoenaed; that your appearance was not demanded by this committee, but that you were given an opportunity to come, which you have accepted.

Mr. FREISTADT. I understand that, sir.

The CHAIRMAN. Now, Mr. Freistadt, have you some comments you wish to make in connection with your part in the program, or your prospective part in the program?

Mr. FREISTADT. Yes, Mr. Chairman; I have. I have given copies of the statement that I would like to make to the committee secretary. May I proceed with the statement, Mr. Chairman?

The CHAIRMAN. Just a second. Before you start, I note that you state, here:

I'm happy to have the opportunity to appear here at the invitation of Senator McMahon \* \* \*.

It was not quite an invitation. It was an opportunity offered to you to appear. We agree on that, do we not?

Mr. FREISTADT. Yes, sir; we do.

The CHAIRMAN. All right. With that amendment, will you go ahead and make what comments you wish?

Mr. FREISTADT. Yes, sir.

Mr. Chairman, gentlemen of the committee:

My name is Hans Freistadt. I am a graduate student in physics at the University of North Carolina.

For the record, may I state that I was graduated from the University of Chicago with the degree of bachelor of science in June 1946, and with the degree of master of science in August 1948. I am a veteran of World War II, having served for 2 years. I was honorably discharged with the rank of sergeant.

I am happy to have the opportunity to appear here, to state my point of view on the controversy that has arisen over the award of an Atomic Energy Commission award fellowship to me.

Since my views were developed in detail in a letter to Senator Hoey, I should like at this point to read that letter into the record.

DEPARTMENT OF PHYSICS,  
UNIVERSITY OF NORTH CAROLINA,  
Chapel Hill, N. C., May 15, 1949.

HON. CLYDE R. HOEY,  
*United States Senate, Washington, D. C.*

DEAR SENATOR HOEY: It appears that the award of an Atomic Energy Commission fellowship to me by the National Research Council, effective July 1, 1949, has given rise to some discussion and criticism, in view of the fact that I am a professed Communist. I hope that this letter may clarify a few points, and respectfully request that you insert it into the Congressional Record.

The criticism seems to have centered around two points—one, that secrets vital to national defense are being entrusted to a person who has not been cleared; two, that the award of a fellowship to a Communist, alleged to be disloyal and opposed to the American form of government, is a waste of taxpayers' money, especially since such a person would not be hired for secret work with the Atomic Energy Commission.

Such a fellowship award is not a waste of taxpayers' money. The purpose of these fellowships is not exclusively to train scientists for secret work with the Atomic Energy Commission. The fellowships are general academic awards. Their purpose, as I understand it, is to provide a pool of trained scientists to further scientific studies in this country. My personal plans are, upon graduation, to teach physics and carry on nonmilitary research; and inasmuch as I hope to be of some service to this country in that capacity, the money, far from being wasted, will have accomplished its purpose.

It is to the credit of the Atomic Energy Commission that they saw fit to award fellowships in the general interest of scientific research. This contrasts sharply with the position of some who consider waste every penny spent on anything other than perfecting weapons of destruction. Had the fellowships meant that I would have to work on aggressive weapons, I would have declined the fellowship, as such work is contrary to my conscience.

I pay taxes on the same basis as other Americans, and can see no reason why I should not be allowed to compete for such a general academic award on the same basis as other physics students. The fellowships are awarded on the basis of a competitive examination, the student's record, and recommendations by faculty members. Those who suggest that academic awards be given on the basis of political orthodoxy rather than on the basis of scholarship are engaging precisely in the operation of mixing science and politics of which Communists have been accused.

On the question of access to restricted data, may I point out that under the award I will be pursuing work for my doctorate under the same conditions as other graduate students; and that the fellowship specifically provides that it does not entitle the holder to access to restricted data. Neither is it understood that the recipients of such fellowships will later do secret work for the Atomic Energy Commission. My thesis is in the field of general relativity, and has no military or commercial applications of any sort.

I resent the insinuation that I am disloyal to this country, and therefore not entitled to the fellowship. I have never attacked the American form of government, and support the principles of the Constitution of the United States. It is true that I have criticized our present administration and economic organization. I have argued that our foreign policy is suicidal. I have argued that, under Socialism, the American people could enjoy a standard of living the like of which we dare only dream of now. The right so to argue is a privilege that every citizen enjoys. If I were a foreign agent trying to work my way into a position of confidence, certainly the best way to proceed would not be openly proclaiming my beliefs, as I have done.

I consider myself a loyal citizen of this country. I am not a foreign agent; and if at some later time I would be granted access to restricted data, I would not disclose such data to unauthorized persons. The Constitution of the Communist Party provides for expulsion of any member engaging in espionage. I am bound by my oath of citizenship to defend this country against any aggressor; have done so in the last war, and am prepared to do so again, if necessary. I am a citizen by choice, because I prefer this country to all others. I see no contradiction between my loyalty to the United States of America and my membership in the Communist Party. Allegations that the Communist Party is under foreign control are false; they have not, and cannot be, proved in court. If I thought for a minute that these allegations were true, I would resign from the Communist Party. On the basis of the program of the Communist Party and its activities, in which I have participated, I am convinced that the Communist Party is dedicated to the service of this country. I am confident that if my loyalty, or that of the American Communist Party, were examined objectively, rather than prejudged on the basis of misconception, we would be found loyal and devoted Americans.

I regret the commotion and time expenditure that this incident has caused the Congress, the Atomic Energy Commission, and the University of North Carolina; but am compelled to point out that this was a result of the current anti-Communist hysteria rather than due to any fault of mine. I hope that this letter will contribute to clarify matters and bring the incident to a close. I am anxious again to devote all my working hours to my work as a physicist, and some of my free time attempting to convince my friends and fellow students of the correctness of my political views.

Respectfully yours,

HANS FREISTADT.

I would like to add to the issues raised in the letter that my appointment as a fellow and my acceptance of this appointment in the correspondence with the National Research Council is in the form of a contract, and that by canceling the fellowship, it appears to me the Government would be going back on its word.

Mr. Chairman, gentlemen of the committee, I believe the issue is very clear. Should a fellowship award, granted in compliance with all regulations, be canceled because the recipient happens to hold unpopular political views?

I submit that much more than my personal future is at stake here. If a fellowship is to be withdrawn from me because I happen to be a Communist, similar reprisals may be taken tomorrow against a man who is, say, a militant New Dealer, a Progressive, or even a Republican.

Once scientists and science students are discriminated against because of their political views or lawful political activities the whole concept of academic freedom as we have known it is in danger.

I am ready for your questions, Mr. Chairman.

The CHAIRMAN. Senator Hickenlooper?

Senator HICKENLOOPER. Mr. Chairman, I do not care to discuss or interrogate upon any matter of social or political philosophy. I would merely say, as a sequel to that statement that the Communist Party has been declared to be a subversive party by the Attorney General, and I will let that end of it go, there.

I would like to ask Mr. Freistadt a question or two, however, bearing on himself personally.

Where were you born, Mr. Freistadt?

Mr. FREISTADT. I was born in Vienna, Austria.

Senator HICKENLOOPER. And how long did you live in Vienna?

Mr. FREISTADT. About 5 years.

Senator HICKENLOOPER. Then where did you move?

Mr. FREISTADT. I then moved to Berlin.

Senator HICKENLOOPER. How long did you live in Berlin?

Mr. FREISTADT. About 2 or 3 years.

Senator HICKENLOOPER. From Berlin, where did you go?

Mr. FREISTADT. Back to Vienna.

Senator HICKENLOOPER. How long did you live there?

Mr. FREIDSTADT. Just a very short time, perhaps 6 months.

Senator HICKENLOOPER. From Vienna, the second time, where did you move?

Mr. FREISTADT. To France; Paris.

Senator HICKENLOOPER. To Paris. How long did you live in Paris?

Mr. FREIDSTADT. About 8 years.

Senator HICKENLOOPER. Then where did you go from Paris?

Mr. FREISTADT. To Marseilles in the south of France, where I just stayed a short time.

Senator HICKENLOOPER. A matter of months, or weeks?

Mr. FREISTADT. Weeks, probably. And then I came to this country.

Senator HICKENLOOPER. Where did you land in this country? Where was your port of debarkation?

Mr. FREISTADT. In New York, sir.

Senator HICKENLOOPER. What year was that?

Mr. FREISTADT. In 1941, sir.

Senator HICKENLOOPER. After you landed in New York, where did you live? Will you just trace your places of residence?

Mr. FREISTADT. Yes, sir. I lived in Evanston, Ill., for about 6 months; and then in Chicago until my induction into the Army in 1944.

Senator HICKENLOOPER. Did you live with friends, acquaintances, or relatives in this country?

Mr. FREISTADT. I lived with a friend in Evanston and in Chicago. I was under the supervision of the Jewish Children's Agency.

Senator HICKENLOOPER. With whom did you live in Chicago?

Mr. FREISTADT. I had a room. Well, first I lived in an orphan home of the Jewish Children's Agency, and then I had a room for which the Jewish Children's Agency paid.

Senator HICKENLOOPER. Which orphan home was this?

Mr. FREISTADT. Woodlawn Hall, sir.

Senator HICKENLOOPER. You did not live in the home of an individual family, then? Is that correct?

Mr. FREISTADT. My room was in the home of an individual family.

Senator HICKENLOOPER. What was the name of the family?

Mr. FREISTADT. Albert.

Senator HICKENLOOPER. A-l-b-e-r-t?

Mr. FREISTADT. Yes, sir.

Senator HICKENLOOPER. And what was the address?

Mr. FREISTADT. 5221 Woodlawn Avenue in Chicago.

Senator HICKENLOOPER. Was it a Chicago address, or an Evanston address?

Mr. FREISTADT. That was the Chicago address.

Senator HICKENLOOPER. Did you go to any secondary school?

Mr. FREISTADT. Yes, sir. I went for about one semester to Evanston Township High School, and for about one semester to Hyde Park High School in Chicago.

Senator HICKENLOOPER. And did you graduate from either of these high schools?

Mr. FREISTADT. No, sir. I was admitted to the University of Chicago without graduation from high school.

Senator HICKENLOOPER. How were you admitted? On the basis of past record?

Mr. FREISTADT. On the basis of my senior studies in high school; and the high school would not recognize my French records, but the University of Chicago would.

Senator HICKENLOOPER. They recognized your French records and admitted you to study in the University of Chicago based on the French records?

Mr. FREISTADT. And also on the basis that I was doing fairly well in senior subjects at Hyde Park High School.

Senator HICKENLOOPER. Were you given any specific examination, mental examination, for entrance to Chicago University?

Mr. FREISTADT. After admission, to make my admission permanent.

Senator HICKENLOOPER. Did you enter as a freshman at the University of Chicago?

Mr. FREISTADT. As a freshman, sir.

Senator HICKENLOOPER. What year was that?

Mr. FREISTADT. 1942, sir.

Senator HICKENLOOPER. 1942. And you went to the University of Chicago from then until 1946, when you graduated with a bachelor of science degree. Is that correct?

Mr. FREISTADT. No, sir. I was inducted into the Army in 1944.

Senator HICKENLOOPER. What date?

Mr. FREISTADT. June 17, I believe.

Senator HICKENLOOPER. 1944. And how long were you in the Army?

Mr. FREISTADT. Until April 8, 1946.

Senator HICKENLOOPER. During that time, where did you serve? I mean, what was the geographic location?

Mr. FREISTADT. The United States, sir.

Senator HICKENLOOPER. And where? What camps, or what installations?

Mr. FREISTADT. Fort McClellan, Blacksburg, Va., Fort Monmouth, Camp Crowder, Aberdeen Proving Grounds, Fort Eustis, and Fort Sheridan.

Senator HICKENLOOPER. What branch of service were you in or what were your duties in the Army during that period of time?

Mr. FREISTADT. I was first given basic training. Then I was trained in electrical engineering. Then I was trained in communications work. But then it turned out that that specialty was not needed. Then I was assigned to participate in the training program for German prisoners of war.

Senator HICKENLOOPER. Then, after your discharge from the Army, you went back to the University of Chicago, and completed your bachelor of science work? Is that correct?

Mr. FREISTADT. Yes, sir; I did.

Senator HICKENLOOPER. Then did you continue on, after that, for your master of science degree?

Mr. FREISTADT. Yes, sir; I did.

Senator HICKENLOOPER. Was that period uninterrupted? I mean, was it a continuous period of attendance at the university?

Mr. FREISTADT. Yes, sir; it was.

Senator HICKENLOOPER. From the time you came to this country, up to the time you entered the Army, what was your source of income?

Mr. FREISTADT. The Jewish Children's Bureau of Chicago paid for my books and my room and that portion of my tuition which was not covered by the scholarship I had from the University of Chicago. I worked part time to feed myself and clothe myself and for my general expense.

Senator HICKENLOOPER. And other than those sources of income which you have just recited, did you have any other source of income of any kind whatsoever?

Mr. FREISTADT. I believe I once received \$10, or \$50, a small amount, from a friend of my family. I think that is the only thing I recall at this time.

Senator HICKENLOOPER. A friend of your family where?

Mr. FREISTADT. In New York, Sir.

Senator HICKENLOOPER. Did you receive any income or revenue of any kind for any journalistic work, writing, articles, that you might have contributed during that period?

Mr. FREISTADT. No, I don't recall any.

Senator HICKENLOOPER. Sir?

Mr. FREISTADT. I don't recall any.

Senator HICKENLOOPER. After your discharge from the Army, you continued on in college. And what was your source of income during that time, until you got your master of science degree?

Mr. FREISTADT. GI bill, sir, and I also worked part time.

Senator HICKENLOOPER. Was that your sole source of income during that period?

Mr. FREISTADT. Yes, that was my sole source of income. Well, let me add this: I was living in a cooperative in which I received an additional income in a trivial amount, I think \$1 a month, for performing a house function. But that was my only additional source of income.

Senator HICKENLOOPER. What was the cooperative in which you lived during that time?

Mr. FREISTADT. Fellowship Housing Cooperative.

Senator HICKENLOOPER. At the University of Chicago?

Mr. FREISTADT. It was not strictly a student cooperative, but I was going to the University of Chicago.

Senator HICKENLOOPER. What is the address of that organization?

Mr. FREISTADT. 6314 Ellis Avenue. That is still my legal address.

Senator HICKENLOOPER. In Chicago?

Mr. FREISTADT. Yes, sir.

Senator HICKENLOOPER. Then where did you go, after you received your master of science degree?

Mr. FREISTADT. I came to the University of North Carolina.

Senator HICKENLOOPER. Have you been there ever since?

Mr. FREISTADT. Yes, sir; I have.

Senator HICKENLOOPER. What has been your source of income at the University of North Carolina?

Mr. FREISTADT. I am a part-time instructor.

Senator HICKENLOOPER. Have the benefits under the GI bill of rights been totally exhausted now?

Mr. FREISTADT. They have not been exhausted. I discontinued them after I left the University of Chicago. I have about 5 months left.

Senator HICKENLOOPER. So that your sole income at the University of North Carolina is from your earnings as a part-time instructor.

Mr. FREISTADT. Yes, sir.

Senator HICKENLOOPER. And you have and have had no other source of income since you have been at the University of North Carolina. Is that correct?

Mr. FREISTADT. That is correct, sir.

Senator HICKENLOOPER. Now, Mr. Freistadt, you were born in Vienna and lived there 5 years, approximately the first 5 years of your life, you say?

Mr. FREISTADT. Yes, sir.

Senator HICKENLOOPER. Did you live with your father and your mother, or with your family, there?

Mr. FREISTADT. With my father and mother.

Senator HICKENLOOPER. In the family?

Mr. FREISTADT. Yes, sir.

Senator HICKENLOOPER. What was your father's name?

Mr. FREISTADT. Dr. Benedict Freistadt.

Senator HICKENLOOPER. And what was his occupation?

Mr. FREISTADT. He is a journalist, sir.

Senator HICKENLOOPER. Was he a journalist in Vienna?

Mr. FREISTADT. Yes, sir. He was a Berlin correspondent.

Senator HICKENLOOPER. For what paper?

Mr. FREISTADT. For a Vienna newspaper.

Senator HICKENLOOPER. What is the name of the newspaper?

Mr. FREISTADT. I believe it was the Abend; but I am not sure, sir.

Senator HICKENLOOPER. You were quite young at that time, I take it.

Mr. FREISTADT. Yes, sir.

Senator HICKENLOOPER. Then you moved to Berlin. Did your father move there?

Mr. FREISTADT. Yes, sir.

Senator HICKENLOOPER. What was his occupation in Berlin?

Mr. FREISTADT. He was editor of a Berlin newspaper.

Senator HICKENLOOPER. What was the name of that newspaper?

Mr. FREISTADT. Berlin 'Am Morgen.

Senator HICKENLOOPER. Do you know the political complexion or views of the Abend during the time when he was a correspondent for that newspaper during the first 5 years of your life?

Mr. FREISTADT. I believe it was a Socialist newspaper, sir.

Senator HICKENLOOPER. And the newspaper in Berlin: do you recall the political complexion of that newspaper? Will you just name it again? I have forgotten.

Mr. FREISTADT. Berlin 'Am Morgen.

Senator HICKENLOOPER. That means "morning paper"?

Mr. FREISTADT. It means "Berlin in the Morning." It was a strongly leftist paper. I don't know if it represented any party.

Senator HICKENLOOPER. Would you call it a Communist newspaper?

Mr. FREISTADT. I would say that one might say that its general political orientation was Communist. I believe it supported the Communist candidate for President, but again I would like to point out that these recollections are rather vague.

Senator HICKENLOOPER. I understand. You were young at that time.

Then, after 3 years in Berlin, you went back to Vienna. Did your father move back to Vienna at that time?

Mr. FREISTADT. I don't recall whether he moved to Vienna with us, or whether he went directly to Paris.

Senator HICKENLOOPER. But did he go back to Vienna as a journalist, if he did go? Or was that just an interim between the movement from Berlin to Paris?

Mr. FREISTADT. It was just an interim period. It was the time that Hitler had come to power in Germany. And I believe that my father's life was threatened, and he just moved out as fast as he could.

Senator HICKENLOOPER. But eventually, after approximately 6 months' time, you did move to Paris?

Mr. FREISTADT. Yes, sir.

Senator HICKENLOOPER. Your father and your family moved to Paris also; is that correct?

Mr. FREISTADT. Yes, sir.

Senator HICKENLOOPER. What was your father's occupation in Paris during the 8 years I believe you said you lived there?

Mr. FREISTADT. He edited an anti-Nazi news letter in Paris.

Senator HICKENLOOPER. Do you recall the name of that publication?

Mr. FREISTADT. I believe it was Deutsche Nachrichten.

Senator HICKENLOOPER. It was anti-Nazi?

Mr. FREISTADT. Yes, sir.

Senator HICKENLOOPER. Did it support the Communist policies and philosophies, or argue for them; do you know?

Mr. FREISTADT. I do not know, sir. I was very young. I have not read the paper. I was just impressed by its masthead, as to the fact that it was anti-Nazi.

Senator HICKENLOOPER. By the time you left Paris, you would have been about 16 years old?

Mr. FREIDSTADT. About 15.

Senator HICKENLOOPER. I was adding the 5 years in Vienna, the 8 years in Paris, and the 3 years in Berlin. You were approximately 15 years of age when you left Paris?

Mr. FRIEDSTADT. Yes, sir.

Senator HICKENLOOPER. What was the occasion for your family leaving Paris?

Mr. FREISTADT. My family did not leave Paris all together. My father had been in a concentration camp in southern France. My mother had been killed at the bombing of Paris.

Senator HICKENLOOPER. Had he been put there by the Vichy French or by what group of French?

Mr. FREISTADT. He had been put there by the French Government as soon as the war broke out.

Senator HICKENLOOPER. I see. Was he opposed to the Government or was it a political situation?

Mr. FREISTADT. I would guess that it was political. However, the circumstances have never been made clear. There was never a hearing or a trial or any type of charge that explained why he was put there.

Senator HICKENLOOPER. He had been vigorous in his opposition to naziism and the German aggressive policies; is that correct?

Mr. FREISTADT. Yes, he had been.

Senator HICKENLOOPER. Then you came to this country, to New York, in 1941. Is that correct?

Mr. FREISTADT. Yes, sir.

Senator HICKENLOOPER. How long did your father stay in the concentration camp in southern France?

Mr. FREISTADT. He stayed from September 1939 until the time we left on the boat, which was, I believe, April of 1941.

Senator HICKENLOOPER. So he came to this country with you, or you came with him; is that correct?

Mr. FREISTADT. Yes, sir.

Senator HICKENLOOPER. And you both landed in New York on the same boat?

Mr. FREISTADT. Yes, sir.

Senator HICKENLOOPER. Did the remainder of your family come with you?

Mr. FREISTADT. My sister and my father were on the same boat.

Senator HICKENLOOPER. So they landed here at the same time?

Mr. FREISTADT. Yes, sir.

Senator HICKENLOOPER. And did the other members of your family stay in Europe?

Mr. FREISTADT. I just had a few aunts and uncles, and they stayed in Europe.

Senator HICKENLOOPER. Your mother is deceased?

Mr. FREISTADT. Yes, sir; she is.

Senator HICKENLOOPER. On landing in New York, where did your father go?

Mr. FREISTADT. He stayed a few weeks in New York and then proceeded to Mexico.

Senator HICKENLOOPER. Mexico City?

Mr. FREISTADT. Yes, sir.

Senator HICKENLOOPER. Under what sort of passport or permit was he traveling and were you traveling?

Mr. FREISTADT. I was traveling under an affidavit in lieu of passport issued by the United States consul in Marseilles, and I am not sure about my father; but I think he was traveling under a French exit permit.

Senator HICKENLOOPER. And your citizenship at that time was what? What did you claim to be?

Mr. FREISTADT. Austrian.

Senator HICKENLOOPER. You claimed Austrian citizenship.

Mr. FREISTADT. Yes.

Senator HICKENLOOPER. Your father went to Mexico, you say. Where did he go? What city or location in Mexico?

Mr. FREISTADT. Mexico City, sir.

Senator HICKENLOOPER. Mexico City. And how long did he stay in Mexico City?

Mr. FREISTADT. I believe he left last year or the year before last. I don't remember exactly.

Senator HICKENLOOPER. While he was in Mexico City, what was his occupation?

Mr. FREISTADT. He was working on some books. Then he worked as a manager in a silver export and import concern.

Senator HICKENLOOPER. Was that a Mexican concern?

Mr. FREISTADT. It was a Mexican concern, but I think it was owned by a German refugee. And I think he also edited a German anti-Nazi—either quarterly or monthly, as long as there still was a Nazi government.

Senator HICKENLOOPER. What was the name of that publication?

Mr. FREISTADT. I think it was Freies Deutschland.

Senator HICKENLOOPER. Did you visit him in Mexico City during his time there?

Mr. FREISTADT. Yes, sir. I visited him on my first furlough from the Army in December 1944.

Senator HICKENLOOPER. How long did you spend with him at that time?

Mr. FREISTADT. We met in Monterrey. We spent about 3 days together.

Senator HICKENLOOPER. Then you returned at the expiration of your furlough?

Mr. FREISTADT. Yes, sir.

Senator HICKENLOOPER. You said your father left Mexico City. Does that mean the country of Mexico?

Mr. FREISTADT. Yes; he left the country of Mexico.

Senator HICKENLOOPER. In 1947 or 1948?

Mr. FREISTADT. Yes, sir; he did.

Senator HICKENLOOPER. You do not recall with any more certainty the year he left, now?

Mr. FREISTADT. I can try to figure it out. I believe it was the beginning of 1948.

Senator HICKENLOOPER. Do you recall where you were at the time he left Mexico City?

Mr. FREISTADT. Yes, sir. I was in Chicago. I had come back from the Army to Chicago.

Senator HICKENLOOPER. And you were discharged from the Army on what date, did you say?

Mr. FREISTADT. April 8, 1946.

Senator HICKENLOOPER. April 8, 1946. And so it was between that time and the time you left Chicago, in August 1948, that he left Mexico.

Mr. FREISTADT. Yes, sir. He had left.

Senator HICKENLOOPER. And you believe that he left sometime early in 1948.

Mr. FREISTADT. Yes, sir; I do.

Senator HICKENLOOPER. Did you maintain regular correspondence with him?

Mr. FREISTADT. Yes, sir; I write to him.

Senator HICKENLOOPER. Where did your father go from Mexico?

Mr. FREISTADT. He went back to Vienna.

Senator HICKENLOOPER. Does he live in Vienna now?

Mr. FREISTADT. Yes, sir; he does.

Senator HICKENLOOPER. Did your sister accompany him to Mexico?

Mr. FREISTADT. Yes, sir; she did.

I beg your pardon, sir. My sister first stayed with me in this country, and then she went to join him in Mexico at a later time.

Senator HICKENLOOPER. Do you recall about the length of time she stayed in this country?

Mr. FREISTADT. Yes, sir. She left this country to join him in December 1943.

Senator HICKENLOOPER. In December 1943?

Mr. FREISTADT. No, sir; I think it was December 1942.

Senator HICKENLOOPER. And she lived there with your father until he left for Vienna, until he left to return to Vienna, a year or so ago?

Mr. FREISTADT. Yes, sir; she went with him.

Senator HICKENLOOPER. She went back to Vienna with him; is that correct?

Mr. FREISTADT. Yes, sir.

Senator HICKENLOOPER. What is your father's occupation in Vienna? What has it been since he has returned this last time?

Mr. FREISTADT. He is an editor.

Senator HICKENLOOPER. And of what publication?

Mr. FREISTADT. Oesterreichisches Tagebuch and Der Abend.

Senator HICKENLOOPER. Is that two newspapers, or it is a combined name?

Mr. FREISTADT. One is a magazine; the other is a newspaper, for which he had formerly been a correspondent.

Senator HICKENLOOPER. And as an editor in Vienna now, does he support the Communist philosophy, and the Communist policies in Austria?

Mr. FREISTADT. I would say that he tends in that direction. He tends in the direction of supporting the policies of the Austrian Communist Party; in at least as much of the newspaper as I have read.

Senator HICKENLOOPER. Is it not a fair statement to say that those two publications are in fact Communist publications?

Mr. FREISTADT. I don't know, sir, if that is a fair statement. The policies tend in that direction.

Senator HICKENLOOPER. Do you believe them to be?

Mr. FREISTADT. I wouldn't venture a guess. I would say that his thinking very strongly tends in that direction. I have never asked him about his political affiliation.

Senator HICKENLOOPER. Did your father ever go under the name of Bruno Frei?

Mr. FREISTADT. Yes, sir. That is his pen name.

Senator HICKENLOOPER. That is his pen name?

Mr. FREISTADT. Yes, sir.

Senator HICKENLOOPER. But his name actually is Freistadt, the same as yours?

Mr. FREISTADT. Yes, sir.

Senator HICKENLOOPER. Has he gone under the name of Bruno Frei consistently over the years? As a writer?

Mr. FREISTADT. Yes, sir. The story in the family is that when he had his first printed article, the typist made a mistake; and the first article was successful, so he went under that pen name ever since.

Senator HICKENLOOPER. And would you give us the correct spelling of that name, Bruno Frei?

Mr. FREISTADT. Yes, sir. B-r-u-n-o F-r-e-i.

Senator HICKENLOOPER. F-r-e-i is the last name?

Mr. FREISTADT. Yes, sir.

Senator HICKENLOOPER. Did you ever at any time discuss with your father in Mexico, or in correspondence, Communist underground activities in Mexico?

Mr. FREISTADT. No, sir; I did not.

Senator HICKENLOOPER. Do you have any knowledge of whether or not your father engaged in communistic underground, or other communistic activities while he was in Mexico?

Mr. FREISTADT. No, sir; I have no knowledge.

Senator HICKENLOOPER. I believe that is all, Mr. Chairman.

The CHAIRMAN. Mr. Durham?

Representative DURHAM. Mr. Freistadt, you say you were working under a scholarship at Chicago University while you were there?

Mr. FREISTADT. No, sir. At the University of Chicago, I was under the GI bill of rights.

Oh, you mean as an undergraduate?

Representative DURHAM. I understood you to say that you had a scholarship.

Mr. FREISTADT. Yes, as an undergraduate I had a scholarship at the University of Chicago.

Representative DURHAM. Was that a university scholarship, or was it by some private corporation?

Mr. FREISTADT. I had a joint scholarship by the University of Chicago and by the Jewish Children's Bureau of Chicago.

Representative DURHAM. Had you ever made application for citizenship before you went into the Army?

Mr. FREISTADT. No, sir; I had not. I had made application for first papers, though.

Representative DURHAM. What were you when you went into the Army?

Mr. FREISTADT. I was a noncitizen. I had filed a declaration of intention to become a citizen.

Representative DURHAM. When did you file that?

Mr. FREISTADT. I do not remember, sir. I believe it was very shortly after my eighteenth birthday, which was the earliest I could have done it.

Representative DURHAM. Did you file that before going into the Army?

Mr. FREISTADT. Yes, sir; I did.

Representative DURHAM. When did you join the Communist Party?

Mr. FREISTADT. I joined it in 1946.

Representative DURHAM. Where?

Mr. FREISTADT. In Chicago.

Representative DURHAM. And at the present time you are a member of the Communist Party?

Mr. FREISTADT. Yes, sir. I answer the question "yes, I am," without discussing the constitutional issues involved in that question.

Representative DURHAM. What section of the Communist Party do you belong to? Or what unit do you belong to in the Communist Party?

Mr. FREISTADT. You mean what club?

Representative DURHAM. Yes.

Mr. FREISTADT. The Chapel Hill Club.

Senator HICKENLOOPER. Is that at North Carolina or Chicago?

Mr. FREISTADT. At North Carolina.

Senator HICKENLOOPER. What club did you join, or what unit did you join, in Chicago?

Mr. FREISTADT. I joined the University of Chicago Club of the Communist Party.

Representative DURHAM. And you were active while you were there?

Mr. FREISTADT. At the University of Chicago?

Representative DURHAM. At the University of Chicago.

Mr. FREISTADT. Yes, sir; I was.

The CHAIRMAN. Mr. Cole?

Representative COLE. I have no questions, Mr. Chairman. The last two questions asked by Mr. Durham were the only two in which I was interested.

Representative DURHAM. I would like to ask just one other question, Mr. Chairman, before I get away from the matter of scholarships.

How did you approach this? How did you know about the scholarship? Did someone suggest it to you, or did you make application personally, yourself, for the scholarship?

Mr. FREISTADT. I made application, sir, when the announcement was posted at the University of North Carolina.

Representative DURHAM. That was the first time you had any knowledge of it, then? When it was posted?

Mr. FREISTADT. I had known that there were such fellowships in the past, but I had not known how to apply until it was announced.

The CHAIRMAN. Mr. Holifield?

Representative HOLIFIELD. Mr. Chairman, I have no questions, but I would like to compliment the witness on the frankness and candor with which he has answered the questions which other witnesses belonging to the Communist Party have refused to answer.

Of course, that does not mean that I concur with your views, Mr. Freistadt. But I appreciate the candor with which you have answered.

The CHAIRMAN. Mr. Jackson?

Representative JACKSON. You joined the Communist Party in the University of Chicago in 1946?

Mr. FREISTADT. Yes, sir; I did.

Representative JACKSON. What was the date?

Mr. FREISTADT. I don't remember, sir. It was shortly before the summer.

Representative JACKSON. Just after you were discharged from the Army?

Mr. FREISTADT. I would say perhaps 2 or 3 months after I was discharged.

Representative JACKSON. When did you become a citizen of the United States?

Mr. FREISTADT. I became a citizen on August 19, 1944.

Representative JACKSON. You became a citizen in 1944.

Mr. FREISTADT. Yes, sir.

Representative JACKSON. Shortly after you were inducted into the Army?

Mr. FREISTADT. Yes, sir.

Representative JACKSON. You received your citizenship on the basis of your 3 months' service in the Army?

Mr. FREISTADT. Yes, sir.

Representative JACKSON. Up to that point, I mean?

Mr. FREISTADT. Yes, sir.

Representative JACKSON. Did you attend Communist Party meetings prior to your becoming a member?

Mr. FREISTADT. No, sir; I did not.

Representative JACKSON. Never had any connection with the Communist Party?

Mr. FREISTADT. I never had any connection with the Communist Party until I joined.

Representative JACKSON. How long from the time you attended a meeting was it until you joined the Communist Party?

Mr. FREISTADT. It was after I joined that I went to the first meeting of the Communist Party.

Representative JACKSON. Well, I mean, did you just go to the first meeting and then join?

Mr. FREISTADT. No; I first joined and then went to a meeting.

Representative JACKSON. Oh, you joined, and then went to the meeting?

Mr. FREISTADT. Yes, sir. The meetings of the Communist Party of that club were restricted to members.

Representative JACKSON. It was a closed cell or section of the Communist Party?

Mr. FREISTADT. The meetings of that club were restricted to members only.

Representative JACKSON. But when did you first get interested in the Communist Party?

Mr. FREISTADT. Well, I got interested in the philosophy a long time ago.

Representative JACKSON. How long?

Mr. FREISTADT. Oh, I would say ever since I started knowing Communists.

Representative JACKSON. How long ago was that? How old were you?

Mr. FREISTADT. Perhaps 12 or 13. I did not really become convinced of the correctness of the Communist beliefs until fairly late in my Army career.

Representative JACKSON. Not until fairly late in your Army career.

Mr. FREISTADT. When I started reading somewhat more seriously.

Representative JACKSON. Was that prior to your becoming a citizen?

Mr. FREISTADT. No, sir; that was about a year after I had become a citizen that I started reading somewhat more seriously Communist literature.

Representative JACKSON. But prior to your becoming a citizen, you felt that there were some favorable things about the Communist philosophy?

Mr. FREISTADT. I would say I had doubts. I was in the balance. I was listening, but not very seriously, up until late in 1945. I felt there was still plenty of time for me to make up my mind on these things.

Representative JACKSON. Did you know at the time you became a citizen that if you were a member of the Communist Party, you would be subject to possible denaturalization?

Mr. FREISTADT. No; I don't believe I knew that. And I don't believe it is correct, at least under present legislation.

Representative JACKSON. Did you make sure of that before you became a citizen?

Mr. FREISTADT. Could you read your previous question? I am not sure that I followed.

Representative JACKSON. Well, I will restate it. At the time that you became a citizen, did you know that if you were a member of the party at the time that you became a citizen, you might subsequently be subject to denaturalization proceedings?

Mr. FREISTADT. No; I did not know it at the time. But I believe that is correct, contrary to what I said.

Representative JACKSON. Did you know it at the time you became a citizen?

Mr. FREISTADT. No; I did not know it.

Representative JACKSON. Did anyone advise you concerning that fact?

Mr. FREISTADT. No, sir. I was in the Army. I became a citizen without counsel.

Representative JACKSON. No; but I mean prior to the time that you became a citizen, had anyone advised you of the fact that if you were a member of the Communist Party when you applied for citizenship, you might subsequently be subject to denaturalization proceedings under existing Federal law.

Mr. FREISTADT. No, sir. I don't believe anybody advised me of that.

Representative JACKSON. Did you discuss it with anyone?

Mr. FREISTADT. No, sir.

Representative JACKSON. That is all.

The CHAIRMAN. Mr. Van Zandt?

Representative VAN ZANDT. May I ask the witness: How often does the unit at Chapel Hill of the Communist Party meet?

Mr. FREISTADT. About every week, or every other week.

Representative VAN ZANDT. How many members generally attend the meeting?

Mr. FREISTADT. It varies a great deal.

Representative VAN ZANDT. Well, how many members does the unit have?

Mr. FREISTADT. I don't actually know myself the exact number. I would be willing to give you the grapevine report that was passed on to me by the editor of the school paper, who claims to know.

Representative VAN ZANDT. Can you give us that grapevine report?

Mr. FREISTADT. The grapevine report is 38.

Representative VAN ZANDT. Now, when you attend these meetings, do you see 10 there, or 15, or 20, or 5? What is an average number?

Mr. FREISTADT. It is difficult to say. I would say about seven or eight.

Representative VAN ZANDT. Seven or eight?

Mr. FREISTADT. Yes, sir.

Representative VAN ZANDT. I notice in your letter, here, to Senator Hoey of North Carolina, you say:

Had the fellowships meant that I would have to work on aggressive weapons, I would have declined the fellowship, as such work is contrary to my conscience.

Suppose that your country was in need of your ability in this particular field to develop a special weapon in defense of our security?

Mr. FREISTADT. In defense of our security? I would do that.

Representative VAN ZANDT. You would do it?

Mr. FREISTADT. Yes; in defense of our security, I would.

Representative VAN ZANDT. That is all, Mr. Chairman.

The CHAIRMAN. Mr. Elston?

Representative ELSTON. What would be your position if this Nation went to war against Russia?

Mr. FREISTADT. What type of a war, sir? If Russia attacked us? Or if we attacked Russia?

Representative ELSTON. Well, if Congress declared war in any event. If the Congress of the United States, pursuant to its constitutional authority, declared war against Russia, what would be your position?

Mr. FREISTADT. Sir, that depends a great deal on what type of war. If, contrary to what I believe, and contrary to even what Mr. John Foster Dulles believes, the very improbable case should occur that the Soviet Union would attack us, and Congress would declare war under such circumstances, I would with all my strength defend this country. If, however, we go out of our way to attack Russia, in that case, I would not support such a war. I don't believe it will happen. I believe that there are some people who would like it to happen. But I believe that the American people have enough common sense not to attack anybody else.

Representative ELSTON. In other words, you yourself would decide whether or not you would serve this Nation against Communist Russia, depending upon the type of war that was being conducted.

Mr. FREISTADT. I think the events would decide that for me, and I think it would even for the majority of Americans.

Representative ELSTON. You said that you first joined a Communist organization at the University of Chicago?

Mr. FREISTADT. Yes, sir.

Representative ELSTON. What was the name of that organization?  
Mr. FREISTADT. It was the University of Chicago Club of the Communist Party.

Representative ELSTON. What is the membership of that club?

Mr. FREISTADT. I don't know, sir.

Representative ELSTON. Can you approximate it?

Mr. FREISTADT. I would rather not venture a false guess.

Representative ELSTON. Where did they conduct their meetings?

Mr. FREISTADT. Usually at the Book Shop.

Representative ELSTON. On the campus?

Mr. FREISTADT. No, sir; a little off the campus.

Representative ELSTON. Now, to get down to your fellowship application, how did the matter first come to your attention that you might be eligible for a fellowship?

Mr. FREISTADT. The announcements of the National Research Council, acting on behalf of the Atomic Energy Commission, were posted on bulletin boards in the physics department.

Representative ELSTON. And did you write to anybody about it?

Mr. FREISTADT. I asked the departmental secretary if she had any application blanks; which she had. And I filled one out.

Representative ELSTON. You said you had some correspondence with the National Resources Council?

Mr. FREISTADT. No; the National Research Council.

Representative ELSTON. I meant to say "Research Council."

Mr. FREISTADT. That was after the application was granted. It was first in the nature of a telegram informing me that I had been given the fellowship. May I introduce that telegram into the record?

Representative ELSTON. What is the date of that telegram?

Mr. FREISTADT. The telegram is dated March 24.

Representative ELSTON. Would you read it, please?

Mr. FREISTADT. Yes, sir (reading):

H. FREISTADT,

*Department of Physics, University of North Carolina,  
Chapel Hill, N. C.:*

It gives me pleasure to inform you that you have been awarded an Atomic Energy Commission predoctoral fellowship for the academic year 1949-50. Letter follows.

C. J. LAPP,  
NRC—

standing for National Research Council—

Fellowship Office.

Representative ELSTON. What is that name?

Mr. FREISTADT. C. J. Lapp.

Representative ELSTON. How do you spell it?

Mr. FREISTADT. C. J. L-a-p-p.

Representative ELSTON. Do you know what his position was with the Council?

Mr. FREISTADT. No; I have another letter from him, and I believe he just signs it "NRC Fellowship Office."

Representative ELSTON. Now, to repeat, what is the date of that telegram?

Mr. FREISTADT. March 24, 1949.

Representative ELSTON. What was the date of your application?

Mr. FREISTADT. I don't remember, sir. It is in the files of the National Research Council.

Representative ELSTON. Can you give us the approximate time?

Mr. FREISTADT. I would guess it was about a month or two earlier.

Representative ELSTON. A month or two. Did you have any correspondence in that period between the making of your application and the receipt of that telegram?

Mr. FREISTADT. No, sir; I had no correspondence with the National Research Council.

Representative ELSTON. You got a letter from the Council?

Mr. FREISTADT. Yes, sir.

Representative ELSTON. Do you have that letter?

Mr. FREISTADT. Yes, sir. Shall I introduce it into the record? It is rather long.

Representative ELSTON. Suppose you read the letter.

Mr. FREISTADT. Yes, sir.

Mr. HANS FREISTADT,

*Department of Physics, University of North Carolina, Chapel Hill, N. C.*

The letter is dated March 30, 1949. It is written on stationery of the National Research Council.

DEAR MR. FREISTADT:—

Representative ELSTON. Speak a little louder, please. I do not know that all the members can hear you.

Mr. FREISTADT. Yes, sir; I will. [Reading:]

It gives me pleasure to inform you that the AEC Predoctoral Fellowship Board in the Physical Sciences of the National Research Council has awarded you a fellowship for one year to begin at your convenience, between July 1, 1949, and October 15, 1949. This award is made to enable you to pursue study and research in theoretical physics under the guidance of Professor Nathan Rosen at the University of North Carolina.

The award is made subject to the terms of appointment on the back of the enclosed acceptance form. Please study the terms carefully to be fully informed as to the nature of the fellowship contract. If you accept this fellowship under these conditions, please sign and return the form within ten days. An extra copy is enclosed for your files.

The stipend will be paid at the rate of \$1,600 per year, assuming it has been correctly computed from the stipend scale. This amount will be automatically adjusted, with changes in academic status for dependents as indicated in the scale. The members of the Board and the officers of the National Research Council will follow the progress of your work with interest. We trust the fellowship will be of significant assistance to you in preparing for your scholastic career.

Sincerely yours,

HENRY A. BARTON,

*Chairman, AEC Predoctoral Fellowship Board in the Physical Sciences.*

Representative ELSTON. Now, that form that you refer to; do you have it there?

Mr. FREISTADT. Yes, sir; I do.

Representative ELSTON. May we see it, please?

Mr. FREISTADT. Yes, sir [handing].

Representative ELSTON. Mr. Chairman, I assume that form should become a part of the record.

Suppose you read the acceptance, your acceptance.

Mr. FREISTADT. Yes, sir. [Reading:]

FELLOWSHIP OFFICE, NATIONAL RESEARCH COUNCIL,

*Washington, D. C.*

It is sent by registered mail, April 6, 1949, and I mention on the form that I enclose my naturalization certificate with the request that it be returned. [Reading:]

GENTLEMEN: I accept appointment to an Atomic Energy Commission pre-doctoral fellowship in the physical sciences and agree to the conditions set forth in your letter of March 30, 1949, and the terms of appointment printed on the reverse side of this form. I recognize that this fellowship has been awarded for the purpose of enabling me to pursue studies and research on theoretical physics at the University of North Carolina under the sponsorship of Professor Nathan Rosen, as described in my application, except as may be modified by this letter of appointment. Professor Rosen has agreed to receive me in his laboratory, where the necessary equipment and accommodations will be furnished for my work. I understand the appointment is for a period of 12 months and that it carries a stipend of \$1,600 per annum (assuming it has been correctly computed from the stipend scale) to be paid in monthly installments. The first installment is to be sent in care of my scientific adviser, Professor Nathan Rosen, department of physics, University of North Carolina, Chapel Hill, N. C. Subsequent installments will be sent to me at the following address, after the fellowship office has received certification from my adviser that the work has been started: Department of Physics, University of North Carolina, Chapel Hill, N. C.

My present plan is to begin my fellowship work on July 1, 1949. If any change is made in this plan, I will inform you immediately.

HANS FREISTADT,  
*Department of Physics, University of North Carolina,  
Chapel Hill., N. C.*

Representative ELSTON. Now, Dr. Rosen was one of your sponsors; was he not?

Mr. FREISTADT. Yes, sir; he was.

Representative ELSTON. Did you ask him to sponsor you, or was he contacted by the Council?

Mr. FREISTADT. Professor Rosen had agreed to sponsor my thesis before I came to Chapel Hill, and before I ever heard about this Atomic Energy Commission fellowship.

Representative ELSTON. Would you explain that a little more fully? I do not know just what you mean by that.

Mr. FREISTADT. I was at the University of Chicago in 1948 and had heard of Professor Rosen's reputation as a very competent man in general relativity, and had become interested in the matter. So I wrote Professor Rosen from Chicago, asking him if he would be willing to sponsor a doctorate thesis on general relativity at the University of North Carolina. Professor Rosen replied that he would be willing to do so if I would apply for admission to the University of North Carolina, and sent me a form to so apply. I applied for admission, and for a part-time instructorship. Admission was granted. The part-time instructorship was granted. And in September I went to Chapel Hill.

Representative ELSTON. When you became a part-time instructor, were you interrogated with respect to your affiliations with the Communist Party?

Mr. FREISTADT. I was not.

Representative ELSTON. When did you go to the University of North Carolina?

Mr. FREISTADT. In September 1948.

Representative ELSTON. During the time that you were there, you wrote articles for the school publication; did you not?

Mr. FREISTADT. I wrote letters to the editor.

(Laughter.)

Representative ELSTON. And when did you begin to write those letters?

Mr. FREISTADT. Shortly after I got there, I think in October and November.

Representative ELSTON. And in those articles you did not hesitate to indicate that you were a member of the Communist Party; did you?

Mr. FREISTADT. I don't know if I ever said it specifically in any letter, but I took a position that clearly indicated my views; and, at public meetings where I debated, members of the audience asked me if I was a member of the Communist Party, and I replied that I was.

Representative ELSTON. Where were those debates conducted?

Mr. FREISTADT. They were conducted in rooms where student organizations habitually meet at the University of North Carolina.

Representative ELSTON. How many of those debates did you participate in?

Mr. FREISTADT. I would venture a guess of four or five. But it's a very rough guess.

Representative ELSTON. And you did not at any time hesitate to expound your communistic beliefs?

Mr. FREISTADT. I did not.

Representative ELSTON. It was generally known on the campus among the students and the faculty that you were a Communist?

Mr. FREISTADT. Yes. But to anybody who went to meetings and read the school paper, I think that would be known.

Representative ELSTON. Well, publicity was given to the meetings; was it not?

Mr. FREISTADT. Yes, sir; but only at one was it specifically announced that I would be there at the debate.

Representative ELSTON. Did Dr. Rosen know that you were a Communist?

Mr. FREISTADT. I think it can be reasonably presumed that he knew.

Representative ELSTON. Did your other sponsors know it?

Mr. FREISTADT. I don't know if the sponsor who recommended me from Virginia Polytechnic Institute knew about it, but I believe the other sponsor at the University of North Carolina, assuming that he reads the school paper, should have known about it.

Representative ELSTON. Who was he?

Mr. FREISTADT. Professor Bowers.

Representative ELSTON. You, of course, in none of your correspondence with the Council, indicated that you were a Communist.

Mr. FREISTADT. No question as to political belief was asked, and I believe quite correctly, because it has no bearing on the question of the fellowship.

Representative ELSTON. Do you believe in all the doctrines of the Communist Party?

Mr. FREISTADT. I don't know if I believe in all. I believe in all that I am familiar with.

Representative ELSTON. Do you agree with the Attorney General of the United States that one of the doctrines of the Communist Party is to destroy our form of government by force and violence?

Mr. FREISTADT. I know, from being a member of the Communist Party, that that is not the aim of the Communist Party.

Representative ELSTON. You disagree with that?

Mr. FREISTADT. I disagree. If I thought that the aim of the Communist Party was to destroy our form of government, I would not be a member of it.

Representative ELSTON. Do you believe in the capitalist system?

Mr. FREISTADT. I do not. But I don't believe that is part of our form of Government.

Representative ELSTON. Do you believe in the system of private enterprise?

Mr. FREISTADT. On a very small scale. I believe that local grocery stores can be run fairly efficiently privately. But I believe that of enterprises like steel and auto and aircraft and the railroads—if all these were owned nationally by the people, then the standard of living of the American people would be raised even higher than it is now.

Representative ELSTON. I think that is all I wanted to ask, Mr. Chairman.

The CHAIRMAN. Senator Hickenlooper has another question.

Senator HICKENLOOPER. Mr. Elston developed the point that I wanted to cover in my question, but I merely wanted to pursue it one step further.

You have had a lot of association with Dr. Rosen, have you not, at the university, Mr. Freistadt?

Mr. FREISTADT. Yes, sir. I talk to him every week about my work.

Senator HICKENLOOPER. And have you visited with Professor Rosen, speaking about your political views and membership in the Communist Party?

Mr. FREISTADT. Have I talked to him?

Senator HICKENLOOPER. Yes.

Mr. FREISTADT. No; I have not talked to him about the political views. Professor Rosen has urged me to limit my activities to a certain maximum beyond which I would not go, so as not to interfere with my studies, and I fully concurred with Professor Rosen, and have complied.

Senator HICKENLOOPER. Well, now, what activities do you mean? Your social and political activities? I mean, in the broadest sense?

Mr. FREISTADT. In the sense that I should not go to too many meetings, or not spend too much time writing letters to the editor—[laughter], because that might interfere with my academic work. And I have complied with Professor Rosen's suggestions, since I am primarily interested in studying physics.

Senator HICKENLOOPER. But I assume that Dr. Rosen knew of your affirmation that you were a Communist?

Mr. FREISTADT. I believe that is a reasonable presumption.

Senator HICKENLOOPER. Well, can you not be a little more specific? As a matter of fact, without doubt that came into your discussion with Dr. Rosen; did it not?

Mr. FREISTADT. Yes; I think that is quite reasonable.

Senator HICKENLOOPER. All right. That is all.

Representative COLE. Mr. Chairman?

The CHAIRMAN. Mr. Cole?

Representative COLE. Do you know of any other Communists who are members of the fellowship program sponsored by the AEC?

Mr. FREISTADT. No, sir; I do not.

Representative COLE. That is all.

Representative HOLIFIELD. Mr. Chairman?

The CHAIRMAN. Mr. Holifield.

Representative HOLIFIELD. This is a rare opportunity for me to question a man who is admittedly a Communist as to the beliefs of the

Communist Party in America. I have never had this opportunity before, and I wanted to ask you a few questions as to the beliefs of the Communist Party.

Mr. FREISTADT. Before you start, may I point out that I can speak only for myself, and that I cannot presume to speak for the national leadership of the Communist Party.

Representative HOLIFIELD. That will be satisfactory. I want to know your personal experience.

Mr. FREISTADT. Yes, sir.

Representative HOLIFIELD. At any of the meetings of the Communist Party which you have attended, has there ever been any advocacy of force or violence to overthrow the Government of the United States?

Mr. FREISTADT. No, sir; there has not. If any member made such a move at a meeting of the Communist Party, I would move that he be expelled. Because there is a clause in the constitution of the Communist Party—a copy of which I have here, if you would like to see it—which states that advocacy of force and violence is sufficient grounds for expulsion from the Communist Party.

Representative HOLIFIELD. Is there any secret or open advocacy of the theory that a Communist should, if necessary, perjure himself in the furtherance of communistic ideas?

Mr. FREISTADT. No, sir. I have never heard a Communist advocate perjury.

Representative HOLIFIELD. Your testimony before this committee, then, is without any mental reservation as to your position as to principles which would destroy the Government of the United States; is it not?

Mr. FREISTADT. It is without mental reservations, sir; yes.

Representative HOLIFIELD. You believe in Marxism only to the extent of advocacy of the principles which pertain to the economic and political changing of the form of government under which we live.

Mr. FREISTADT. That is Marxism, as I understand it, sir.

Representative HOLIFIELD. Well, you do not subscribe to that part of Marxism and the edicts of the leaders in the Communist Party of Russia which in the past have advocated the overthrow of capitalist governments by force and violence?

Mr. FREISTADT. Sir, whenever a Communist leader has advocated force and violence to overthrow a government, it has been a government in which there are no peaceful and democratic channels for progress. For instance, I think the Nazi government in Germany should have been overthrown by force and violence, because there were no peaceful channels for progress. However, a government such as ours, where there are peaceful channels for progress—well, I see no reason why one should not use peaceful channels for progress, and I think Marx concurs in that view.

Representative HOLIFIELD. In other words, you think that in the United States you have a freedom of expression and assembly guaranteed by the Constitution which makes it unnecessary to advocate the overthrow of the Government by force and violence.

Mr. FREISTADT. Yes, sir.

Representative HOLIFIELD. And therefore you believe that such change in our form of government can be made by peaceful advocacy of a different type of economic and political philosophy.

Mr. FREISTADT. Yes, sir. I believe that as long as the basic principles of our Constitution are respected, we can bring about social and political change by peaceful and democratic means.

Representative HOLIFIELD. I was interested in your theory of determination as to whether you should support this country in the case of war. That theory is also subscribed to, I understand, by the Society of Friends, commonly known as the Quakers, the Mennonites, and other pacifist organizations.

Mr. FREISTADT. I think that we differ with the Quakers on the point of support of a defensive war. The Quakers do not believe in fighting even in a defensive war, while Communists believe in fighting a defensive war. We believe that if our country is attacked, we should defend it. The Quakers believe that not even under such circumstances should one go to arms.

Representative HOLIFIELD. I am glad to have that clarification.

Thank you, Mr. Chairman.

Representative ELSTON. Mr. Chairman, may I ask one more question?

The CHAIRMAN. Before you do, Mr. Price has come in, and I will ask him if he has any questions.

Representative PRICE. Mr. Chairman, unfortunately I was not present at the early part of the session. I happened to be at a meeting of the Armed Services Committee. And I hesitate to ask many questions for fear of repetition, but I would like to ask one or two.

Mr. Freistadt, what was the extent of your military service?

Mr. FREISTADT. I was in the Army from June 17, 1944, to April 8, 1946.

Representative PRICE. What did you do in your military career?

Mr. FREISTADT. I was given basic training. I was trained in electrical engineering and communication work. And I participated in the training program for German prisoners of war.

Representative PRICE. Did you go to any university during the course of that?

Mr. FREISTADT. Yes, sir; my electrical engineering training was given at Virginia Polytechnic Institute.

Representative PRICE. You were in the ASTP program?

Mr. FREISTADT. Yes, sir; I was.

Representative PRICE. And you had considerable educational advantages during that period, in the training that was given to you?

Mr. FREISTADT. For 9 months; yes, sir.

Representative PRICE. When you left military service, what did you do?

Mr. FREISTADT. I went back to the University of Chicago.

Representative PRICE. Did you take up your studies there?

Mr. FREISTADT. Yes, sir; I did.

Representative PRICE. Did you participate in the GI educational program?

Mr. FREISTADT. The GI bill of rights; yes, sir.

Representative PRICE. Have you received benefits under that program?

Mr. FREISTADT. Yes, sir; I have.

Representative PRICE. The point I would like to bring out is that it is just hard to follow the logic of your reasoning, and how you would

think the system of capitalism, such as we have in this country, could be so bad, when it has afforded you such opportunities.

Mr. FREISTADT. I think that the capitalistic system has done great things for this country. However, at the present time, I think it is a handicap rather than an aid to further progress. I think the capitalistic system has never solved the problem of boom and bust, for instance. I think that is a problem that only socialism can solve. I also think that under socialism the Negro people in this country would have greater opportunities.

Actually, I am a scientist, and if I should find that I am wrong, and that the capitalistic system can solve the problem of boom and bust, I might change my mind.

Representative PRICE. I would suggest that you go further in the comparison of the capitalistic system as we know it in this country, and the socialistic or communistic system, based on the results to the common people in Russia today.

That is all I have, Mr. Chairman.

The CHAIRMAN. Mr. Elston?

Representative ELSTON. You spoke of the avenues of peaceful self-expression that are available in this country; and you, of course, have taken full advantage of those avenues of expression, as you have a perfect right to do. Do you think that those same avenues of self-expression are available to the people of Soviet Russia?

Mr. FREISTADT. Yes; I believe they are.

Representative ELSTON. You have not been there, have you?

Mr. FREISTADT. No, sir; I have not.

Representative PRICE. Mr. Freistadt, since you have been in this country, you have had almost all of your educational training at the expense of the country?

Mr. FREISTADT. Yes, sir; I have.

Representative PRICE. At the expense of the taxpayers of the United States?

Mr. FREISTADT. And private organizations and universities. And I hope that as a scientist I will be able to return to this country, in the form of scientific contributions, some of the benefits that I have been given.

Representative PRICE. That is all that I have.

Representative ELSTON. Let me pursue my question a little further.

Do you think that if any person in Soviet Russia takes issue with the Government of that nation it would be permitted?

Mr. FREISTADT. Mr. Chairman, before I answer the question, I would like to point out that I am not an expert on Russia; that I am a member of the Communist Party because of the constructive activities of the Communist Party in this country. All my testimony on Russia would be hearsay, on the basis of what I have read, what I have heard, the conclusions to which I have arrived as a result of analyzing articles.

If I were to answer your question, I believe on that basis that a citizen in the Soviet Union is permitted to take issue with governmental policy.

Representative ELSTON. Openly?

Mr. FREISTADT. Yes; I believe openly.

The CHAIRMAN. Mr. Jackson?

Representative JACKSON. You have indicated the conditions, I believe, in response to a previous question, under which you would

fight in the event of a war on behalf of the United States, and you have limited that to the situation when the United States was attacked. Is that correct?

Mr. FREISTADT. That is correct, sir.

Representative JACKSON. How long have you had those views?

Mr. FREISTADT. I arrived at these views after doing some thinking, when people kept asking me, What would you do in case of war? I came to think: I had better think this thing through at once.

Representative JACKSON. How long ago was that?

Mr. FREISTADT. I think it was after my discharge from the Army, and in fact, even after I joined the Communist Party.

Representative JACKSON. Have you, as a member of the Communist Party, had any question in mind in connection with the statements made by various Communist leaders in countries throughout the world that they would never fight against the Soviet Union?

Mr. FREISTADT. I have read the statements carefully, and what they mean to me is that they will defend their country in case of an attack, but they do not believe that the Soviet Union will attack their country.

Representative JACKSON. Did you read Mr. Paul Robeson's statement?

Mr. FREISTADT. Yes, I read Mr. Paul Robeson's statement.

Representative JACKSON. Do you agree with his statement?

Mr. FREISTADT. I agree with his statement as I understand it.

Representative JACKSON. Well, did you read his statement?

Mr. FREISTADT. Yes; I read his statement.

Representative JACKSON. Do you agree with his statement?

Mr. FREISTADT. I believe that the statement means the same position that I have given here, and as such I agree with it.

Representative JACKSON. You agree with his statement.

Mr. FREISTADT. As I interpret it.

Representative VAN ZANDT. One more question.

The CHAIRMAN. Mr. Van Zandt?

Representative VAN ZANDT. A moment ago I called to the attention of the witness a statement contained in his letter to the Senator from North Carolina, where he says:

Had the fellowships meant that I would have to work on aggressive weapons I would have declined the fellowship, as such work is contrary to my conscience.

You replied, Mr. Freistadt, that you would work on weapons if security demanded it. Now, would you tell us just what type of security?

Mr. FREISTADT. I believe that if my services were needed to defend this country against aggression, I would put my services at the disposal of this country.

Representative VAN ZANDT. Suppose that the Congress of the United States had advance information that we were to be attacked in the next week or so by Russia, and you were called upon to apply your knowledge and ability to a special weapon that was needed immediately. Would you apply it?

Mr. FREISTADT. If the Congress had such information, I would. I am fairly sure, however, that the Congress will not have such information, because on the basis of my convictions about the functioning—

Representative VAN ZANDT. Can you assure us now that Russia has no intentions whatsoever of ever attacking the United States?

Mr. FREISTADT. I cannot assure you, because I am not a member of the Soviet Government. I can say that on the basis of my study of Soviet policy, I am convinced that unless that policy is suddenly reversed, the Soviet Union will not attack us.

Representative VAN ZANDT. One more question, Mr. Chairman.

I notice throughout your letter to the Senator from North Carolina that you made reference to "this country" several times.

Mr. FREISTADT. Yes, sir.

Representative VAN ZANDT. Do you ever use the expression "my country"?

Mr. FREISTADT. Yes, sir. Wherever I have said "this country," one can substitute "my country."

Representative VAN ZANDT. This country has been mighty good to you, has it not?

Mr. FREISTADT. It has been very good, sir, and I hope to be able to serve it as a physicist.

Representative ELSTON. Mr. Chairman, may I ask one more question?

The CHAIRMAN. Yes, Mr. Elston.

Representative ELSTON. I would like to have your interpretation of the difference between an offensive and a defensive weapon.

Mr. FREISTADT. That is a very touchy question, and I have to confess that I have not given this particular matter sufficient thought.

Representative ELSTON. Well, you stated in your letter something about an offensive weapon. "Aggressive weapon" was the term that you used.

Mr. FREISTADT. Yes, sir. Let us put it this way. I think that weapons the primary use of which is destruction of civilian population—those I would term aggressive. Weapons the primary purpose of which is defense of this country, such as radar screens, I would term defensive.

Representative ELSTON. In other words, by "aggressive weapons" you mean any weapon capable of taking life.

Mr. FREISTADT. Not just taking life, but of such a nature that its primary application would be destruction of civilian populations.

Representative ELSTON. Would that include airplanes?

Mr. FREISTADT. No; it would not include airplanes.

Representative ELSTON. Military airplanes?

Mr. FREISTADT. No; I don't think so. Because those could be used to repel an invasion.

Representative ELSTON. Just one other question, and I am through.

Do you consider that there is any connection between the Communist Party of this country and the Communist Party of Russia?

Mr. FREISTADT. I am sure there is not. If I thought for a minute that there were, I would leave the Communist Party.

Representative ELSTON. Did you read any further evidence of it in the fact that recently when the leadership of the Communist Party in America was disapproved by Communist Russia, the leader was removed and another one installed?

Mr. FREISTADT. I have followed the policies of the Communist Party in this country for the last 4 years, and no such thing has occurred, to my knowledge. You may be referring to the removal of Earl Browder.

Representative ELSTON. Yes.

Mr. FREISTADT. He was removed upon discussion and criticism by a convention of the American Communist Party by majority vote.

Representative ELSTON. And you do not think that the Communist Party of Russia had anything to do with his removal?

Mr. FREISTADT. I don't believe it had.

Representative ELSTON. That is all.

Representative PRICE. Mr. Freistadt, getting back to the line of questioning of the gentlemen from Pennsylvania, Mr. Van Zandt, when he asked for the distinction between "this country" and "my country," you perhaps have not gone deep enough into the study of American history to know of some of the statements of our great patriots, but there are some that are carried on the mastheads of some of the American newspapers, and one in particular, the most outstanding, is to be found on the masthead of the St. Louis Post-Dispatch, which reads:

My country! In her intercourse with foreign nations may she always be in the right; but my country, right or wrong.

I assume that you do not hold with that spirit of patriotism.

Mr. FREISTADT. My attitude toward that statement is the same as that of President John Quincy Adams: "I disclaim any patriotism incompatible with justice."

Representative VAN ZANDT. Mr. Chairman, may I make one statement?

I think it is a downright shame that a young man of his ability is indoctrinated with the philosophy that he tells us about today.

Your ability should be applied to your country, so as to make it a better country, rather than to tear it down through the philosophy that you are indoctrinated with.

Mr. FREISTADT. I hope to make it a better country, sir.

The CHAIRMAN. Are there any further questions?

Dr. Richards has spoken to me about a letter which he wished to have placed in the record. It will be inserted in the record at this point.

(The letter referred to is as follows:)

NATIONAL RESEARCH COUNCIL,  
OFFICE OF SCIENTIFIC PERSONNEL,  
*Washington, D. C., May 18, 1949.*

#### MEMORANDUM

To: Dr. Alfred N. Richards, president, National Academy of Sciences.

From: M. H. Trytten.

Subject: National Research Council Fellowship Office.

The evidence presented to the fellowship committee, on which the selection of Mr. Hans Freistadt as an Atomic Energy Commission fellow was based, was not complete. It represented the usual type of evidence on which universities base their selection of graduate students and on which former National Research Council programs have depended.

It was realized, when the Atomic Energy Commission program was undertaken by the National Research Council, that it would be desirable to have additional bases of judgment. Accordingly, for candidates considered this year, a series of tests were administered to all candidates by the Educational Testing Service of Princeton, N. J. This organization is recognized as being a leading testing organization in the field of education.

The test consisted of three parts. The first part was a general aptitude test for the studies at the graduate level and consisted largely of quantitative material designed to measure the individual's competence in such fields as mathematics

and allied quantitative fields. Mr. Freistadt's score, in this examination, was high placing him in the upper 6 percent of all candidates examined.

The second part of the test was designed to measure the academic aptitude of the individual in handling verbal matters. Mr. Freistadt's score on this was high although not as high as on the quantitative test. He ranked in the upper 27 percent of all candidates on this test. It should be remembered that Mr. Freistadt's native language is not English; this is generally considered a handicap.

The third part of the test was that part of the graduate records examination corresponding to his major and minor field. The graduate records examination is administered widely to college graduates throughout the United States. In the field of physics, Mr. Freistadt's score placed him in the upper third of all Atomic Energy Commission fellowship candidates who took this examination in physics. However, the candidates were in general a superior group. Compared with all college graduates who have taken this examination, Mr. Freistadt ranked in the upper 2 percent.

In his minor field of mathematics, he ranked among the upper 8 percent of college graduates, who have taken the graduate records examination in this field.

The CHAIRMAN. This meeting is now adjourned, and the committee will go into executive session.

(Whereupon, at 12 m., the hearing was recessed, subject to the call of the Chair.)

## ATOMIC ENERGY COMMISSION FELLOWSHIP PROGRAM

---

MONDAY, MAY 23, 1949

CONGRESS OF THE UNITED STATES,  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The committee met at 2:30 p. m., pursuant to call, in room 318, Senate Office Building, Senator Brien McMahon, chairman, presiding.

Present: Senator McMahon, Representative Durham (vice chairman); Senators Knowland and Hickenlooper; Representatives Holi-field, Price, Cole, Elston, and Van Zandt.

Also present: Senator Ferguson; William L. Borden, Executive Director, Joint Committee on Atomic Energy.

The CHAIRMAN. The committee will come to order.

Is Dr. Edelman with us?

Dr. EDELMAN. Yes, sir.

The CHAIRMAN. Doctor, would you mind coming up and sitting in this chair, here?

Dr. EDELMAN. Might I have permission to have my brother sit with me?

The CHAIRMAN. Of course. Is your brother an attorney?

Dr. EDELMAN. Yes, sir. But he is here just in friendly support; not as a legal representative.

The CHAIRMAN. Doctor, we have been following the policy in these hearings of swearing the witnesses. Would you mind holding up your right hand? I will swear you. Do you solemnly swear that the evidence that you will give in this hearing shall be the truth, the whole truth and nothing but the truth, so help you God?

Dr. EDELMAN. I do.

The CHAIRMAN. Doctor, you have been referred to over the radio and in the public press and in a subcommittee hearing in the Committee on Appropriations as being one of those persons who has received a fellowship from the Atomic Energy Commission through the National Research Council on their recommendation. It has also been stated that in the opinion of some Senators, you should not have been awarded that scholarship because of your alleged membership in the Communist Party.

I noted that you expressed not only a desire, but a willingness to come before this committee; and it is our policy to permit any person who feels himself aggrieved in this respect to have the opportunity and the courtesy of presenting publicly his particular story and his explanation of the pertinent facts.

Now, Doctor, you are an intelligent man. You know what "pertinent facts" means. Without anything further, unless some other member of the committee has something further to say to you, I would like to have you go ahead and state to us your background, your

educational background, how you happened to come in contact with this, your previous education, and anything else pertinent to the issue that you wish to state.

You may proceed.

**TESTIMONY OF DR. ISIDORE S. EDELMAN, ATOMIC ENERGY COMMISSION POSTDOCTORAL RESEARCH FELLOW IN THE MEDICAL SCIENCES, RESEARCH FELLOW IN SURGERY, HARVARD MEDICAL SCHOOL, BOSTON, MASS.**

Dr. EDELMAN. Yes, sir.

Mr. Chairman, I wonder if it is permissible—I don't know exactly what the procedure is in these cases—for me to submit letters from friends that were given to me, who have known me over a number of years, as part of the record.

The CHAIRMAN. Of course.

Dr. EDELMAN. I have some of these letters here.

I heard that some of my colleagues from Montefiore Hospital in New York had wired you, and I had hoped that the wires could be entered into the record with these letters.

The CHAIRMAN. We will be glad to enter into the record any commendatory communications that you wish to have entered into the record.

Dr. EDELMAN. Thank you, sir.

(The material referred to will be found in the appendix at p. 161:.)

Dr. EDELMAN. It is rather difficult for me to do anything other than to tell my life's history, since I have never received any official notification that I was either under suspicion or that I had not been cleared, or that there was any security question involved in my case.

There were quite a number of inaccuracies, misstatements of fact, in the original news story that appeared.

The CHAIRMAN. That is why you are getting an opportunity, if that is so, to come here and correct them.

Dr. EDELMAN. I would like first to tell my own life's history and whatever seems pertinent, and then perhaps go on to the material that was published, if the committee is interested in that phase. I guess that would be about it.

Well, I was born and raised in New York City. I attended high school there, at Boys High, which is in Brooklyn. I graduated in 1937, in June. I entered Brooklyn College in September of 1937; attended classes there from September 1937 to September 1939. At that time I was a premedical student. I had no interest in political affairs especially, and about the only outside activities I engaged in was to participate in the freshman football team.

I transferred to Indiana University at Bloomington, Ind., in September 1939. I received my bachelor of arts there in approximately June of 1941. I started my medical career in September of 1941 at the Indiana University Medical School.

About this time, I became aware that there were many things going on in the world which seemed to me quite chaotic. War was imminent and already brewing in some areas, and I tried to find out something about political questions in that period.

In 1943, very early in 1943, I was at Indianapolis studying in medical school, and I became interested in what the Communist

Party had to say, what their policies were. I had no formal information to give me any complete story on this matter. I attended—well, I received the Daily Worker for a while. I think it was about 3 or 4 months during this period. And at the same time I attended, to the best of my recollection, two meetings.

The CHAIRMAN. Doctor, I do not want to interrupt you, but I should have gotten your date of birth.

Dr. EDELMAN. July 23, 1920.

The CHAIRMAN. Go right ahead.

Dr. EDELMAN. It was not my understanding then, and it is not my understanding now that I was at any time a member of the Communist Party. I was curious. And I did not engage in any activities or attempt to further the efforts of the party in any way. I listened to what they had to say. I thought about it. And it took me a matter of a few weeks, as I remember it, to come to a decisive decision that I could never be an adherent to the Communist philosophy or agree with their theories or practices.

Senator KNOWLAND. Doctor, might I interrupt you at that point? Did you ever file an application for membership in the Communist Party?

Dr. EDELMAN. I believe I did. At the time that I was interested in attending the meetings, I remember something about the application. I believe I filed it. It was not my intention that this was a definitive means of joining. I may even have signed it. I don't remember it clearly. But if I saw the application, I could identify my signature without any difficulty.

Senator KNOWLAND. Were you ever issued a membership card in the party?

Dr. EDELMAN. I don't believe I have ever seen a membership card. I don't believe I know what it looks like.

Senator KNOWLAND. Well, you would know if you had been issued a card, would you not?

Dr. EDELMAN. Well, I am sure I would. I have no knowledge of what it even looks like or what its form is.

Senator KNOWLAND. So at this time, so far as your recollection goes, you do not recall having been issued a card, but you did file an application for membership in the party.

Dr. EDELMAN. Well, I believe that it was filed. I may have signed it. I can't be absolutely certain. I remember now, this is some six or more years ago, that something was said about it, in order to attend the meetings. And I would be quite willing to state definitely whether it was my signature or my application if I saw the card.

Senator KNOWLAND. Were these meetings you attended fraction meetings? Or what type of meeting was it?

Dr. EDELMAN. I don't know what types there are, but what happened was that they had some periodicals and pamphlets and discussed the material in it, and interpreted it, and that was the sum and substance of the meetings. This was part of the reason why I discontinued attendance. Because my entire experience in life has been that you evaluate things for yourself; no one tells you what to believe.

Senator KNOWLAND. Normally, would you not have evaluated prior to signing an application blank to become a member of the party?

Dr. EDELMAN. Well, I just didn't think anything of it at the time. In 1943 there was a lot of sympathy for Russia and the war effort,

and it didn't occur to me that this would in any way be taken as an act on my part that I was doing anything that was wrong.

Senator KNOWLAND. What were the dates of the meetings that you attended?

Dr. EDELMAN. Oh, I don't know precisely. I would say sometime around April of 1943.

Senator KNOWLAND. And how many meetings precisely did you attend, to the best of your recollection?

Dr. EDELMAN. I remember fairly clearly two meetings, and I am pretty sure that there weren't any more than that.

Senator KNOWLAND. Were there any others attending those meetings who were not members of the Communist Party?

Dr. EDELMAN. I would have no way of knowing that. I didn't know any of the others.

Senator KNOWLAND. How many attended each of the meetings?

Dr. EDELMAN. Oh, there were about six people. My wife was with me at the time, I might say, and she was in the same situation that I was in.

Senator KNOWLAND. Had she filled out an application blank also?

Dr. EDELMAN. Well, she believes that we both had application blanks made out, and she isn't any more certain than I am that we signed it, but both of us agree that it is quite possible that we did. We didn't think very much of it at the time.

Well, as I say, since this short interval in which I attended the meetings, I have had absolutely no relations with the Communist Party, and I suppose that I have independently reached my conclusions regarding the Communist philosophy and theory, and what they were talking about, and that was the end of it. As far as my present status is concerned, in April of 1944 I was graduated from Indiana University Medical School. I interned in New York City at the Greenpoint Hospital. Immediately following this, early in 1945, I think around March 1 of 1945, I was placed on active duty with the Medical Corps, and I served for about 10 months in the United States, and about 13 or 14 months in the Panama Canal Zone. I believe that my entire military record was certainly nothing to be ashamed of. I was promoted from a first lieutenant to a captain in a matter of 9 or 10 months, on the recommendation of Col. George G. Hesner.

I went on terminal leave in December 1946; and while on terminal leave I started working as an extern on the cancer division at Montefiore Hospital in New York City.

Six months after I started as an unpaid member of the staff, I was appointed as chief resident of the division and served in this capacity for 6 months. This covered the year 1947.

In approximately October or November of 1947, I had arranged to do a year's research, for the year 1948, with the support of the Dazian Medical Research Foundation, and I wanted to look forward to the continuation of the research during the year 1949.

The CHAIRMAN. What research foundation was that?

Dr. EDELMAN. The Dazian Medical Research Foundation.

The CHAIRMAN. Will you spell it, please?

Dr. EDELMAN. D-a-z-i-a-n.

The CHAIRMAN. Is that a New York organization?

Dr. EDELMAN. That is a private philanthropic foundation which supports people doing research in various projects.

The work that I was interested in doing at the time, and which I did during the year 1948, had to do with kidney function, minerals, and salt metabolism, and the effects of hormones on these phenomena. These particular aspects of medical research, salt and water metabolism and metabolic phenomena in general, are really particularly amenable to the use of tracers; and realizing that, I applied to John H. Lawrence, M. D., of the Donner Laboratory at the University of California. This was around November of 1947, and before the AEC fellowships were announced.

The CHAIRMAN. That is at Berkeley?

Dr. EDELMAN. Yes, sir; that is at Berkeley. That to my knowledge has no relation to Dr. E. O. Lawrence's laboratory, which is a physical laboratory, in which the cyclotron evidently plays a large role. This was a biological laboratory on the same campus.

I at no time applied to do secret research, because I am not competent to do the sort of work that would be of importance to nuclear physics, or atomic energy for any purpose that would be secret. There is no military application in my work, and I never applied to do any secret work. I applied to Dr. Lawrence to do problems in the metabolism of electrolytes and the effect of endocrines on this metabolic phenomenon. And he agreed to have me come to his laboratory. At the same time, he sent me a security questionnaire which I did not hesitate to fill out. If I had wanted to avoid any chance of being discovered because of hidden associations, I could very easily have informed Dr. Lawrence that I had already been asked to take another job at Washington University in St. Louis, and avoided the entire affair. But it never occurred to me that there would be any suspicion in my case. I didn't feel that there was anything particular to hide in my background. And I filled out the questionnaire.

It was at the end of 1947 and early in 1948 that I was sort of keeping my eye out for agencies that would support me during the period of research at Dr. Lawrence's laboratory, and I first applied to the Life Insurance Medical Research Foundation for a grant. It was in March of 1948, I believe, that the Atomic Energy Commission postdoctoral fellowship program was announced. It seemed to myself and to the people at the life-insurance fund that this was an ideal group to ask for funds to support this work, since it would be the application of isotopes to biological problems.

The CHAIRMAN. Doctor, do you mind going back? You said you filled out a security form. You sent it to Dr. Lawrence.

Dr. EDELMAN. Yes.

The CHAIRMAN. Was there a question on there about your past affiliation if any with the Communist Party?

Dr. EDELMAN. I don't remember a specific question of that kind. I believe that they asked me to list my membership in organizations, and I listed those organizations in which I was a member. I didn't list the Communist Party, because I don't believe I am a member or ever have been a member. It just played no role in the matter.

I might say that I believe it was about February or March of 1944 that I heard some gossip around the Indiana University Medical School that I was being investigated. But no one ever approached me; no one ever questioned me. That was the only thing that I heard about it, and I just dismissed it as something that was part of the fact that I had attended these meetings, and that was all.

Senator KNOWLAND. Doctor, at this point in your remarks, could you give us a list of the other organizations you are a member of, or have been a member of?

Dr. EDELMAN. I will try to do so within the limits of my memory.

I believe that when I was in high school—well, at the beginning of high school I belonged to what was called the Buccaneers Athletic Club, which was a neighborhood club. We played baseball and basketball. I believe I belonged to the premedical society in high school, and no other organization.

In college the only organization that I belonged to was the Hillel Foundation, and I was an officer in that foundation. It is a subsidiary of the B'nai B'rith. I was elected to Phi Beta Kappa in college, and I was elected to Alpha Omega Alpha in medical school, which is the national honorary medical fraternity.

In 1947, I was a member of the National Academy of Sciences, but am now inactive in this group, and in 1946 I belonged to the Isthmian Medical Society, which is a branch of the American Medical Society here in the United States. I don't believe that I am a member of any other organizations.

Senator KNOWLAND. Were you ever affiliated with any committees, like the Friends of the Soviet Union?

Dr. EDELMAN. No, sir.

Senator KNOWLAND. Or any others where you might not hold a membership but served on a committee?

Dr. EDELMAN. No, sir. I cannot remember ever engaging in, taking any part in, political problems. As long as I can remember, my main concern in life has been my studies and my work in science. I just had very little to do with politics, outside of this one contact; and I never engaged in any activities at all.

Representative HOLIFIELD. Mr. Edelman, would you mind telling us if you have belonged to any religious groups?

Dr. EDELMAN. Well, the Hillel Foundation is not a religious group, but it is sponsored by the B'nai B'rith, with no religious segments. And my parents and I have always been members of the neighborhood congregation.

Representative HOLIFIELD. Have you participated in any political campaigns?

Dr. EDELMAN. No, sir.

The CHAIRMAN. Have you anything to add, Doctor?

Dr. EDELMAN. Well, did you want me to continue the remainder of this story?

The CHAIRMAN. Yes.

Representative ELSTON. Mr. Chairman, may I ask a question right there?

The CHAIRMAN. Yes, Mr. Elston.

Representative ELSTON. You stated that you never took any part in any political problems?

Dr. EDELMAN. In campaigns, political campaigns. I have listened to, and discussed politics at odd times throughout my life with many friends, and so on.

Representative ELSTON. On the other hand, I believe you said you attended your Communist meetings because you were interested in political problems.

Dr. EDELMAN. Well, I was interested in getting a political education and I am still interested in politics as it affects me as a citizen

of the country, but I have never engaged in any active political affairs. I have never passed out leaflets for anyone or made speeches for anyone or printed articles. Politics is just something that I know about through my daily reading and discussion with friends.

Representative ELSTON. Had you attended any kind of political meetings before you attended the Communist meetings?

Dr. EDELMAN. I had occasionally attended in the past the rallies that were held in the local Democratic Party Club meetings in New York, and I listened to campaign speeches by the local members who were running for various offices.

Representative ELSTON. Was that before or after you attended the Communist meetings?

Dr. EDELMAN. Oh, I would say that that was before, but I have listened to political campaigns and sat in at rallies since then.

Representative ELSTON. You said you received the Daily Worker. How did you happen to receive the Daily Worker?

Dr. EDELMAN. At the time that I was interested in finding out about the Communist Party, I told one of the fellows that I would like to receive it, and he said, "We can arrange it," and it was sent to me. And then, when I finally decided that I had enough, I told them that I didn't want it any more, and it was discontinued.

Representative ELSTON. Who was the party that you asked to send you the Communist Daily Worker? Was it somebody that you knew to be a Communist?

Dr. EDELMAN. Well, I accepted him as such. I believe he was.

Representative ELSTON. Had you associated with him?

Dr. EDELMAN. I met him for the first time at that time.

Representative ELSTON. Where did you meet him?

Dr. EDELMAN. In Indianapolis.

Representative ELSTON. And did you subscribe to the Daily

Worker? Yes; we received the Daily Worker for a matter, I think, six, or something like that, or 4 months. I forget. It was for a very short interval in 1943. I don't know for sure whether it was the Daily Worker or the Sunday Worker, but it was the Daily Worker.

Representative ELSTON. Did you pay for it?

Dr. EDELMAN. Yes, sir; I did.

Representative ELSTON. And had you ever seen any issues of the Daily Worker or any Communist publication before that?

Dr. EDELMAN. Oh, I had seen them about, casually, on newsstands, but I don't remember looking at them seriously until that time.

Representative ELSTON. That was in 1943?

Dr. EDELMAN. Yes, sir.

Representative ELSTON. About the time that you started to go to Communist meetings?

Dr. EDELMAN. Yes, sir.

Representative ELSTON. And as you sit there now, you do not know whether you ever joined the Communist Party or not, do you?

Dr. EDELMAN. I know in my own mind that I never joined the Communist Party. I never accepted myself as a member, and as far as I know I never was a member of the Communist Party.

Representative ELSTON. You were 23 years of age at that time?

Dr. EDELMAN. Yes, sir.

Representative ELSTON. And had had considerable education.

Dr. EDELMAN. Yes, sir.

Representative ELSTON. You knew that the signing of an application, if it were accepted, meant that you went into the party, did you not?

Dr. EDELMAN. That was not my understanding. I made many applications for schools, et cetera, and have turned down the opportunity to attend. I have made applications for jobs, in which they have been willing to hire me, and I have refused them. And it was my understanding then that becoming a member of the Communist Party meant understanding the principles and accepting them. And at the time I didn't understand and didn't accept them, and I never accepted them, and I have had no association with them since that time.

Representative ELSTON. You know that when you make an application to belong to anything, to join anything, you are asking that you be received into that organization; do you not?

Dr. EDELMAN. That is true. Perhaps I was very naive about it, but I felt, at the time, that it indicated that I might be willing to join if I felt it was a good thing to do. But I didn't.

Representative ELSTON. Why did you not wait until you were satisfied, before making your application?

Dr. EDELMAN. I just never thought about it. I mean, I just didn't think about it that deeply. It just seemed like something that was—

Representative ELSTON. Did you read the application?

Dr. EDELMAN. I don't remember the details.

Representative ELSTON. You are not accustomed to signing without reading them, are you?

Dr. EDELMAN. No, sir; I am not. And as I say, I was not sure much to see it. I believe I could identify it if I saw it. I am certain that I didn't sign anything that had any statement that would be disloyal to the United States.

Representative ELSTON. Did your wife sign at the same time?

Dr. EDELMAN. I don't remember for sure whether we signed cards, or whether they were made out for us, or what. We signed that there was a question of applications in order at the meetings, and we both were attending at the same time.

Representative ELSTON. What was there about the principles or doctrines that made you want to attend the meetings?

Dr. EDELMAN. Well, I wanted to find out what they were about, what they had to say. I was interested in philosophy, I was interested in political theory, and I had never had a clear idea of what their principles involved. They talked very idealistically about the best possible world for all people and about all things devoted into a state where everybody would be happy forever, et cetera. I just wanted to find out what it was all about.

Representative ELSTON. Well, you were not old at that time. Were you interested at that time, and while the war was in progress, in what might happen to you in your old age?

Dr. EDELMAN. I am interested in what would happen to me any time. It was because there was a war on that I wanted to find out what some of the things were that people were fighting for. It was the chaotic conditions at the time that aroused my interest in some of these things.

Representative ELSTON. You did not apply for military duty until March 1, 1945?

Dr. EDELMAN. That is not so.

Representative ELSTON. I thought that is what you said.

Dr. EDELMAN. That is when I went on active duty. Around June of 1943, the Army indicated that they would accept volunteers for their specialized training program, and these men would accept voluntarily a commission immediately upon graduation from medical school. As soon as this was announced, I volunteered for this program; and around July or August of 1943, I was inducted into the Army specialized training program, and immediately upon graduation, in April 1944, I was commissioned as a first lieutenant.

Representative ELSTON. In your ASTP program, you pursued your medical course?

Dr. EDELMAN. Yes, sir. We had some degree of military training. We spent a little time at Fort Benjamin Harrison, and we had some drill.

Representative ELSTON. That is all, Mr. Chairman, for the present.

Senator KNOWLAND. Did you attend any meetings subsequent to the time you went into the ASTP?

Dr. EDELMAN. No, sir. I had discontinued attending meetings sometime before. I think it was a month before, or something like that. But I remember at the time that I volunteered that I had already definitively rejected any aspect of the Communist Party program.

Senator KNOWLAND. You have attended no Communist meetings of any type or character since 1943?

Dr. EDELMAN. No, sir. In about November of 1947, Dr. John Lawrence accepted me to work in his laboratory.

The CHAIRMAN. But you never did go to work there?

Dr. EDELMAN. No, sir. As I said before, I never applied to do secret work, but I was quite willing to fill out the security questionnaire that was presented to me. At the time I had no knowledge that any clearance was involved, but that was immaterial.

In March of 1948, the Atomic Energy Commission announced its postdoctoral fellowship program, and I applied for this fellowship. I applied for the fellowship, and I was awarded the fellowship in about May of 1948. The award of the fellowship read—

to work with Dr. John H. Lawrence at the Donner Laboratory, to do research in electrolyte metabolism as they are affected by the endocrines.

Nothing about this would even suggest to me remotely that there were any secrets involved.

And it was in the middle of June 1948—I would like to check this. It was June 15, 1948—that I received a letter from Dr. John Lawrence stating that due to space limitations it was necessary to ask me to work elsewhere. He never mentioned anything to me that my background was being questioned, that they were asking me to go elsewhere because I was a poor security risk. He never mentioned anything about clearance. And the National Research Council, very shortly thereafter, got in touch with me and asked me if I would be willing to work at the Harvard Medical School if the Harvard Medical School was willing to have me. I said I would be delighted. It is an excellent research institution.

In July of 1948, I was interviewed and accepted to work in the institution.

The CHAIRMAN. Was that on the National Research Council's initiative?

Dr. EDELMAN. Yes, sir. Evidently, that was the case. Because they informed me that they would like to have me apply to this particular laboratory to work.

The CHAIRMAN. At Harvard?

Dr. EDELMAN. Yes, sir.

The CHAIRMAN. So when did you go there?

Dr. EDELMAN. I had my interview in July 1948. I began working January 1, 1949.

The CHAIRMAN. At whose expense?

Dr. EDELMAN. Under the Atomic Energy Commission fellowship program, at the Harvard Medical School, as a research fellow in surgery.

The CHAIRMAN. Now, briefly, describe what you did, what kind of work you did?

Dr. EDELMAN. The sort of work that I did, and am doing now is: First, I worked out something which I have just completed, the quantitative determination of deuterium by means of the mass spectrometer. And this first bit of technical work has led up to our present work, which involves the determination of the total body water by the dilution of deuterium oxide, which is commonly known as heavy water. And we are in that phase of research now. We were hoping to go on and extend this work in total body water to the inclusion of electrolyte metabolism and its association with body water.

The CHAIRMAN. Are you working with any other AEC fellows?

Dr. EDELMAN. I am cooperating with a number of fellows, one of whom is an AEC fellow at the same laboratory.

Well, as I say, I began to work January 1, 1949. I at no time had been informed of any official indication that I was under suspicion, and I knew nothing about this entire business in actuality, except for one thing. About 6 weeks ago, I heard, through gossip, that I was being investigated by the FBI in New York; that the FBI was approaching people that knew me in my neighborhood, et cetera. This rather disturbed me, but I thought it might be part of the general security of the program, and that was that. No one spoke to me or asked me anything about this.

Then, last Monday, a newspaperman approached me and said that he had received confidential information that I was going to be named in a committee meeting as a Communist. He said, "There is definite information that you are a Communist, and I want to get your side of the story, so that when I print the story, at the time the committee meets, I will be able to be sympathetic toward you," or something of that sort. And this same newspaperman, who was Mr. William Bradford Huie, broke this story without my ever being approached in any official manner by any official agency, in fact in any manner by any agency, regarding this entire affair. And this is as much as I know about it.

Representative PRICE. What reply did you give to this newspaperman?

Dr. EDELMAN. I told him that I was not a Communist, I told him that to my knowledge I had never been a Communist. And I told

him that I am a loyal American citizen; that I didn't suspect that my loyalty was being questioned, as a matter of fact. He told me that the week end before a press report had been placed saying that there was somebody in an eastern university that was a Communist, and he said they meant me. And I was darn surprised. I was pretty upset by it, and told him that "it's just not true."

I might also add that this original story carried a number of, well, gross mistakes. One was that I applied to do atomic research; which I had never done. That I had applied to use isotopes in medical research. The other thing it said in this story was that I had applied to Dr. E. O. Lawrence, the physicist, to do research, when I had applied to Dr. John Lawrence at the Donner Laboratory, to do research. And as far as the material that he presented as evidence, which I have never seen, and of which I have no knowledge, there were three things. One was that an application was made out for me to join the Communist Party. And I have told you my reaction to that, and what the conditions were.

No. 2 was, according to his information that I was listed as a member of the Indianapolis section of the Communist Party. I have never seen such a list. I didn't know that it was in existence. I never authorized my name to be used. And if I had known my name was on such a list, I would have demanded its withdrawal immediately.

The third charge was that my wife held a party card in the Dave Durand Communist Party Club in Brooklyn. Neither my wife nor I have ever heard of this club before. We have made inquiry to find out where it is, and we found out that it is in some place in the Williamsburg area of New York.

Now, in relation to this piece of information, we are both willing to swear, and we are swearing, that we have never even heard of this club before, that we have had no relationship to it, and that we know nothing about it. And that is the sum and substance of my story, and those are the factual events as they occurred.

Representative ELSTON. Mr. Chairman, may I ask, right there:

You did know, did you not, that you had been turned down for work in the Atomic Energy Commission because you were considered a poor security risk?

Dr. EDELMAN. No, sir. That is absolutely and completely untrue.

Representative ELSTON. Do you have Dr. Lawrence's letter with you?

Dr. EDELMAN. I have a letter here which was sent to me at the time that Dr. Lawrence wrote to me.

The CHAIRMAN. Read it.

Dr. EDELMAN. This says [reading]:

DR. LEWIS H. REED,  
*Chairman, Division of Medical Sciences,  
National Research Council, Washington 25, D. C.*

DEAR DR. WEED: I am writing to you regarding Dr. Isidore S. Edelman, whom you will remember has been accepted to work in this laboratory on an AEC fellowship, with the provision that space were available for him. We now find that due to severe limitation of space, it will be very difficult for us to take Dr. Edelman.

Due to the fact that there are so many institutions in the country where he could work advantageously, I hope you will be able to place him elsewhere.

With kindest regards,  
Yours sincerely,

JOHN H. LAWRENCE, M. D.

Representative ELSTON. What is the date of that?

Dr. EDELMAN. June 15, 1948.

I would like to enter this into the record.

The CHAIRMAN. It will be in the record.

Representative ELSTON. Did you make any inquiry after the receipt of that letter about why you were not accepted?

Dr. EDELMAN. I had been accepted. I was never refused anything as far as I know.

Representative ELSTON. Did you make any inquiry about why they did not continue you in the program, then?

Dr. Edelman. I was being continued in the program. The only thing was that I was an accepted AEC fellow with an appointment at Dr. John Lawrence's laboratory. Dr. Lawrence wrote to me—and it seemed reasonable—"Would you like to work elsewhere, since I don't have enough laboratory space?" I said, "Sure, it's O. K." And they suggested the Harvard Medical School. I said, "Fine. I would love to work there." And I went there. No one told me anything about this being a security matter.

The CHAIRMAN. When was the first notification you had about its being a security matter?

Dr. EDELMAN. The press report. The first notification was when Mr. Huie approached me and told me that I was.

The CHAIRMAN. Can you fix the date of that?

Dr. EDELMAN. That was, I believe, last Monday, at about 4 or 5 o'clock, either Monday or Tuesday. It was very close to the beginning of the week. I am pretty sure it was Monday.

Senator KNOWLAND. Did you tell Mr. Huie at that time that you had filled in an application for membership in the Communist Party?

Dr. EDELMAN. I think I told him that I may have. I spoke with him for some time about many things, and I was quite upset, and I think I may have. His story has been printed, and he quotes me, and that can be read. I told him that I had attended these meetings.

The CHAIRMAN. How many, did you say?

Dr. EDELMAN. Two, to the best of my recollection.

The CHAIRMAN. How many did your wife attend, Doctor?

Dr. EDELMAN. I believe my wife probably attended about four or five.

The CHAIRMAN. Did you say that she was not a member of the Communist Party?

Dr. EDELMAN. I didn't know whether she was a member or not when Mr. Huie spoke to me, or whether she ever had been. She isn't a member of the Communist Party. She has had no connection with the Communist Party since 1943. I spoke to her about the matter after Mr. Huie spoke to me, and she believes that at the time she accepted membership, during this short interval. But she doesn't remember having a party card. And she very shortly after attending, I believe, two or three more meetings, became just as completely convinced as I was; and she withdrew, and she has had no relationship or association since then.

The CHAIRMAN. Is she about your age?

Dr. EDELMAN. Oh, no; she is much—she is  $2\frac{1}{2}$  years younger than I am. She was about  $19\frac{1}{2}$  or 20 at the time.

Representative DURHAM. Was she born in this country?

Dr. EDELMAN. Yes, sir.

The CHAIRMAN. Where was she born?

Dr. EDELMAN. New York City. I have known her since she was a rather small girl.

The CHAIRMAN. Have you any children?

Dr. EDELMAN. I have a son, 4 years of age.

The CHAIRMAN. Are there any other questions, gentlemen?

Representative VAN ZANDT. Mr. Chairman?

The CHAIRMAN. Mr. Van Zandt?

Representative VAN ZANDT. Are you fully familiar with the principles of the Communist Party?

Dr. EDELMAN. I could hardly say that I am an expert. I think that I know enough to know something—to recognize that it is not right.

Representative VAN ZANDT. You are familiar with the principles of the party?

Dr. EDELMAN. Well, I know something about it. I may not know any specific principle.

Representative VAN ZANDT. Do you realize that when you sign an application card you generally affix your signature to the card stating that you believe in the principles of the party and are making application for membership in that organization?

Dr. EDELMAN. That wasn't my understanding at the time. I may have been very naive about it, but that was not my understanding of the situation at all.

Representative VAN ZANDT. When you attended these meetings of the Communist Party, did you take part in the deliberations?

Dr. EDELMAN. I raised some arguments during the course of the meetings, and I believe they were aware that I was opposed to what was going on.

Representative VAN ZANDT. Were the arguments in favor of the Communist Party, or in opposition?

Dr. EDELMAN. In opposition. That is why I discontinued any association, and that is why I did not take up membership.

Representative VAN ZANDT. Do you believe in our present form of government, without any reservations?

Dr. EDELMAN. Absolutely.

Representative VAN ZANDT. Do you believe in free enterprise?

Dr. EDELMAN. Absolutely.

Representative VAN ZANDT. Would you defend this country against enemies?

Dr. EDELMAN. I certainly would. I served before; I would be most happy to serve again, in the event of any emergency whatsoever.

Representative PRICE. You were in the Army, were you not?

Dr. EDELMAN. Yes, sir. I served for 2 years.

Representative VAN ZANDT. That is all, Mr. Chairman.

Representative HOLIFIELD. If this country should become engaged in a war with Russia, would you be willing to defend this country without any mental reservation?

Dr. EDELMAN. Of course. Without question.

Senator KNOWLAND. So far as you know, were there any people who attended these two or three meetings that you may have attended who were not members of the Communist Party?

Dr. EDELMAN. I couldn't say. I didn't know them. I accepted them as being members. My wife and I sat in on these meetings, and I didn't think whether they were or not. They may not have been, but I accepted them as such. I accepted this as a Communist Party meeting and assumed that they were members.

Senator KNOWLAND. So far as you know, is it customary for non-party members to be allowed to sit in on a cell meeting?

Dr. EDELMAN. I don't know what is customary in the procedure. I don't know what the formalities are of these things. I attended the meetings with my wife, I suppose on the basis that we were willing to make application. But I don't know whether these were restricted meetings or open meetings, or what the formalities are in these affairs.

Senator KNOWLAND. If you filled out this application, which you recall doing, though you say you do not recall whether you signed it or not, and if the application stated, as an application normally would, that you were applying for membership and would support the principles of the organization to which you were applying for membership, is it not perfectly reasonable to assume that if the local unit of the party in Indianapolis determined to accept you, you would go on the membership list at Indianapolis without any further action on your part?

Dr. EDELMAN. As I said, I didn't give it such careful thought. My entire attitude in approaching the thing is that this was something that I wanted to know about. There were arguments pro and con. These people argued strongly and at times very convincingly, and I was interested in it. I did not think of consequences, or in terms of commitments, or anything of that sort. I accepted this as a chance to get some information, and I got the information. I disagreed, and that was the end of it. And I have had no association with them since that time.

Senator KNOWLAND. Now, you are an intelligent man. I can understand that if you did not have information and were of an inquisitive turn of mind, you might go out to a book store and buy some books on the subject. I can understand how you might even subscribe to the Daily Worker, and get such printed matter as you cared to read. But that does not quite square with filling out an application for a membership, when the application says in effect, though I do not have one right here before me at the moment, "I apply for membership in the Communist Party and will be bound by its rules, regulations," and so forth, when it is generally assumed that you come under party discipline when you become a member. You were not a high-school youngster at that time. You were a man 23 or 24 years of age. You certainly knew, if you filled it out, that it was a membership application and not merely a request for printed material; did you not?

Dr. EDELMAN. Yes. It wasn't the request for printed material, because the printed material is all contradictory. And I wanted to see the way these people behaved in action; what they actually meant. It is like getting a brochure on a book. The brochure paints a pretty picture, but the book contents may be completely at variance with the picture painted.

I was interested, and did attend the meetings to find out what their actual program was, the way they behaved, what they meant. I didn't know what the exact form of construction was, how they behaved, and what they wanted, exactly.

Senator KNOWLAND. When you finally decided you wanted to get more information, you went to, let us call him for the moment, Mr. X, who you knew was a member of the Communist Party. Did you ask him whether you could attend some meetings prior to filling out an application blank?

Dr. EDELMAN. No, sir. What happened was that I had met some people, and they discussed the Communist Party, and they suggested that—I discussed it with them. I was obviously interested in what they were saying. I questioned them. I argued with them. And they said, "Why don't you join and see what it is like?" or something of that sort.

Senator KNOWLAND. In filling out an application, normally do you not have sponsors, people who can testify to the party as to your reliability, two or more sponsors?

Dr. EDELMAN. Well, I don't know whether they required sponsors, or what. I don't remember the exact details of this thing, this form, and I am sure that I didn't sign anything that was derogatory to the country. At least, is wasn't worded so to me.

Senator KNOWLAND. That is not the question at the moment.

Dr. EDELMAN. I don't know whether anybody else's name is on this application, et cetera, but I could identify it.

Senator KNOWLAND. You know who took your application?

Dr. EDELMAN. Oh, yes.

Senator KNOWLAND. Who was it?

Dr. EDELMAN. Mr. Joseph Friend.

Senator KNOWLAND. Mr. Friend was the man who more or less sponsored you, or at least secured your application; is that correct?

Dr. EDELMAN. Yes, sir.

Senator KNOWLAND. And he was at the University at Indianapolis at that time, was he?

Dr. EDELMAN. Yes, sir.

Senator KNOWLAND. Did he attend the first cell meeting with you?

Dr. EDELMAN. He was present; yes, sir. He was present at both meetings.

Senator KNOWLAND. At both meetings. Did he also take the application of your wife, this same Mr. Friend?

Dr. EDELMAN. I believe so.

Senator KNOWLAND. That is all.

Representative ELSTON. Mr. Chairman, may I ask: It could not be a fact, could it, that you discontinued your attendance at Communist meetings because you went into the ASTP program shortly after that, and you knew that if you were a Communist you would not be accepted in that program?

Dr. EDELMAN. That had nothing to do with it. If I felt that way, then immediately after leaving the service I would have rejoined, and reestablished connections, and gotten into these activities.

Representative ELSTON. Well, you knew that you could not get into the ASTP program if you let it be known that you were a Communist.

Dr. EDELMAN. I did not attend any more meetings at the time, before I ever volunteered for the ASTP program, as far as I remember.

Representative ELSTON. How much time intervened between the last time you went to a Communist meeting and the time that you applied for admission into the Army specialized training program?

Dr. EDELMAN. I don't remember precisely, but I would say it was a matter of a few weeks.

Representative ELSTON. You have shown today that you remember names and dates and incidents very clearly, everything except the application into the Communist Party. Why, do you feel, on a matter as important as that, your memory fails you, and you cannot give all the details in connection with it?

Dr. EDELMAN. I can't give all the details because I don't remember the details clearly. I am quite willing to positively state whether the application is mine, if it can be shown to me, if either a picture of it or a copy or anything of the sort can be shown to me. I would be able to recognize immediately, I am sure, whether it is mine, whether it is my signature, et cetera. And I am not denying the application, nor am I trying to avoid the fact that an application was probably made. But I am trying to express this as best I can within the limits of my memory of the events that took place 6 years ago.

Representative ELSTON. Now, was the application made? Or was it just probably made?

Dr. EDELMAN. I believe it was made. That is the best of my knowledge of the situation. And I would be glad to positively identify it if it could be shown to me, or if it is available. I am not denying its existence. I am merely stating the events as I remember them.

Representative ELSTON. And you say that your going into the Army specialized training program had nothing to do with your discontinuance of attending Communist meetings.

Dr. EDELMAN. No, sir.

Representative ELSTON. You did know that if you made it known——

Dr. EDELMAN. I——

Representative ELSTON. Now, just a moment. You did know that if you made it known that you were a Communist, you could not pursue that program and get a commission in the Army?

Dr. EDELMAN. I had no such knowledge at the time. I don't know it now.

Representative ELSTON. That is, you could not get a commission if the Army decided the matter.

Dr. EDELMAN. Well, I don't know anything about it. When I joined the ASTP, no one asked me whether I were a Communist. When I accepted my commission, no one asked me whether I were a Communist, and when I was separated from the service, no one asked me whether I were a Communist. And I do not know to this date whether that is a problem in accepting an individual as a member of the United States Army or not. I don't know what the policy on that situation is. I still don't know.

Representative ELSTON. Did you continue to associate with this party by the name of Friend after you ceased to go to Communist meetings?

Dr. EDELMAN. I saw him occasionally around town, and spoke with him. I saw him.

Representative ELSTON. For how long a period of time?

Dr. EDELMAN. Oh, during the period that I was in Indianapolis.

Representative ELSTON. And when did you leave Indianapolis?

Dr. EDELMAN. In 1944, around April or May, about May 1, around then.

Representative ELSTON. You continued to associate with a Communist, a known Communist, then, up until the time you left Indianapolis?

Dr. EDELMAN. Well, I didn't associate with him particularly. I didn't go out of my way to find him, especially. I knew him. I spoke with him. I saw him occasionally. And at that time there was no indication that association or anything of that sort was something that had to be hidden, or that there was anything at all wrong with it. We were at the peak of our cooperation with Russia. And I just came to the conclusion that I didn't believe in what they were talking about. But I didn't have any information to indicate that there was a loyalty question involved.

Representative ELSTON. Did he come to your home?

Dr. EDELMAN. He had occasionally, but not very often.

Representative ELSTON. And did you go to his home?

Dr. EDELMAN. Yes, occasionally.

Representative ELSTON. Did you meet other Communists at his home, or did they come to your home?

Dr. EDELMAN. I don't know whether other people that I knew at the time were Communists or not. I didn't know the other people that attended the meetings, and none of the other people where I attended the meetings came to my home.

Representative ELSTON. You say none of the other people came to your home.

Dr. EDELMAN. That is right, sir.

Representative ELSTON. Did you go to the homes of any of the other people who attended the Communist meetings? How many people attended these Communist meetings?

Dr. EDELMAN. Oh, I would say about five or six.

Representative ELSTON. And where were they held?

Dr. EDELMAN. In Indianapolis.

Representative ELSTON. That is a big city. Whereabouts?

Dr. EDELMAN. I mean, in the home of Mr. Friend.

Representative ELSTON. In his home. All the meetings were held there?

Dr. EDELMAN. The two that I attended. I don't know about the others.

Representative ELSTON. Do you remember what the subjects under discussion were?

Dr. EDELMAN. I think—I can't remember for sure exactly what was being talked about. I remember some of the general events of the time. I don't remember the specific discussions. The general events at that time, I believe—they were discussing a military alliance between the United States and Russia, and I believe that at that time they were talking about the dissolution of the Commin—the International Communist Organization.

Representative PRICE. Did Mr. Friend spend his full time as a Communist organizer, or did he have any other occupation?

Dr. EDELMAN. He was a teacher.

Representative PRICE. Where?

Dr. EDELMAN. At Indiana University, extension division.

Representative PRICE. Is he still teaching there?

Dr. EDELMAN. I don't think so. I think he left to take a publishing job.

Representative PRICE. What was the last contact that you had with him?

Dr. EDELMAN. Well, the last personal contact that I had with him was in 1944.

Senator KNOWLAND. Have you received a letter from him since then?

Dr. EDELMAN. I received a Christmas card from him.

Senator KNOWLAND. When?

Dr. EDELMAN. This year.

Senator KNOWLAND. This year?

Dr. EDELMAN. Yes.

Senator KNOWLAND. What about any other communications?

Dr. EDELMAN. I remember no others.

Senator KNOWLAND. Have you received any other letters from any of the other members of the Communist Party in Indiana?

Dr. EDELMAN. No, sir.

Senator KNOWLAND. Or any other place?

Dr. EDELMAN. No, sir.

Senator KNOWLAND. Has your wife, to the best of your knowledge, received any communications from any members of the Communist Party since that time?

Dr. EDELMAN. No, sir.

Senator KNOWLAND. And the only communication you have had with Mr. Friend since leaving Indianapolis is a single postcard, a Christmas greeting card, which you received this last Christmas?

Dr. EDELMAN. I think we received Christmas cards every year. I think so. I am not sure.

Senator KNOWLAND. Outside of the Christmas cards that you received each year since you left Indianapolis, you have received no other communications? The only communications, written communications, telegrams, or messages, are those Christmas cards received each Christmas since 1944? Is that what we are to understand?

Dr. EDELMAN. I believe so.

Senator KNOWLAND. Would you not know if you had received a telegram?

Dr. EDELMAN. Oh, I have no telegrams or anything of that sort. There may have been an occasional letter without any reference to political questions. I don't remember. I would have to ask my wife. I may not have seen them. I was away from home for 2 years during this interval.

Senator KNOWLAND. Would you not know if he had sent some other kind of a greeting or message, even though it did not deal with political questions? If it was a purely personal letter, would you not know whether you had received that or not?

Dr. EDELMAN. Well, I suppose that I would if I had had it just then. We have had letters from many of the people that we have known. His was the only—he is the only one I know of who at that time was interested in the Communist Party, and I don't have any knowledge of whether he is or is not. He may not be.

Senator KNOWLAND. Leaving aside the question of whether he is still a member or not, I want to make it perfectly clear on the record—you are under oath here—as to whether or not you have received any type of a communication other than the annual Christmas greeting cards from Mr. Joe Friend, in the intervening years since you left Indianapolis.

Dr. EDELMAN. Well, I saw his brother in Massachusetts recently.

Senator KNOWLAND. All right. When did you see his brother?

Dr. EDELMAN. I would say about 2 months ago.

Senator KNOWLAND. Had you ever seen his brother at a cell meeting?

Dr. EDELMAN. No, sir.

Senator KNOWLAND. And tell us about meeting Mr. Friend's brother in Massachusetts.

Dr. EDELMAN. He was in Cambridge, and he is studying there now, and he called us and said he would like to say "hello." He came over to our house and said "hello." He told us about the time that he was studying Japanese in the Army, and then we discussed some things about hypnotism, and then he went home. He told me about his brother, and we said that we would write a letter to his brother and say that we saw him, or something of that sort.

Senator KNOWLAND. Did you write the letter to his brother and report that you had seen his brother in Massachusetts?

Dr. EDELMAN. I don't—I think that my wife sent a letter to his brother. I believe she may have.

Senator KNOWLAND. All right. When was that?

Dr. EDELMAN. Oh, I would say about 2 months ago.

Senator KNOWLAND. So at least to that extent, as you can now recall, you have had contact with Mr. Joe Friend since 1944.

Dr. EDELMAN. It wasn't contact. I am not in association with him in any way. I am not in conspiracy with him. I don't know what his politics are.

Senator KNOWLAND. I have not charged you with being in conspiracy with him. I am merely asking so that we can get the complete story on this situation.

Now, earlier, in testimony before this committee, under oath, I certainly had the impression that you were testifying that when 1943 had come and gone, or early 1944, you had left the University of Indiana and had gone into the ASTP; that you had ceased your contacts and associations with known members of the Communist Party. That was the impression that I, at least, had as a member of this committee. Now, since then, not by voluntary action on the part of the witness, but under cross-examination, it now turns out that each year since 1944, you have received an annual Christmas card from him, and in addition to that you have met his brother in Massachusetts and passed the time of day, and in addition to that your wife has written a letter to Mr. Friend reporting on the contact you had had with his brother. Now, what other communication have you had with him?

Dr. EDELMAN. I have had no other communications. I have no knowledge of what Mr. Friend's political position is today. I have no knowledge of what his brother's political position is today. We didn't discuss politics. His brother did not ask me any questions about it, or whether I wanted to do anything. As far as I know, his brother is not a member of any political organizations. And I just had no contact with the Communist Party. This doesn't represent to my mind a contact with the Communist Party.

Senator KNOWLAND. But this is the same Mr. Friend that apparently was doing organizing work for the party and who took your application for membership.

Dr. EDELMAN. I don't know whether he is an organizer. He was the one that I spoke to at the time.

Senator KNOWLAND. That is all, Mr. Chairman.

The CHAIRMAN. How old is Mr. Friend?

Dr. EDELMAN. I don't know precisely. I would say he is about 30-something.

The CHAIRMAN. You are 29 now?

Dr. EDELMAN. Yes, sir.

The CHAIRMAN. You mean thirty-something then, or thirty-something now?

Dr. EDELMAN. I think he is thirty-something now. I imagine he is about 35 now.

The CHAIRMAN. Senator Knowland asked you about getting Christmas cards. Did you send any, that you remember?

Dr. EDELMAN. No, sir.

The CHAIRMAN. The only communication that you remember is this letter from your wife to Mr. Friend?

Dr. EDELMAN. I believe she wrote to him at that time. She said something about writing to tell him about it, and I believe the letter was written.

Representative HOLIFIELD. As to these Christmas cards that you received, did any one of them have the picture of the Kremlin on it?

Dr. EDELMAN. No, sir.

Representative HOLIFIELD. Thank you.

Representative COLE. Mr. Chairman?

The CHAIRMAN. Mr. Cole.

Representative COLE. I understand that the reason you left the party was because after a comparatively brief interval you learned its true nature and were dissatisfied with it, so you discontinued your association. During that time did you learn enough about the members of the party to raise any doubts in your mind as to the loyalty of the members of that party toward this country?

Dr. EDELMAN. At that time no one ever told me anything that was disloyal. But I believe that you can't have allegiance to a system or way of thinking which is represented as a means of changing the Government, and consider that to be loyalty. So I think from the very nature of the principles, this is something that is certainly not loyal to the United States Government.

Representative COLE. Is there any question in your mind now as to the loyalty of an avowed Communist?

Dr. EDELMAN. No, sir.

Representative COLE. There is no doubt?

Dr. EDELMAN. There is no doubt.

Representative COLE. By that do you mean that an avowed Communist is a disloyal person?

Dr. EDELMAN. Yes, sir.

Representative COLE. That being so, do you have any complaint or criticism toward those who view with some doubt the loyalty of any person, even including yourself, who were at one time associated with a Communist group?

Dr. EDELMAN. No, sir. I have no complaint. I firmly believe that it is the responsibility of this committee and all proper authorities to inquire into the matters that are so important to our country.

Representative COLE. Has anybody sought to learn from you the identity of the Communists with whom you at one time were associated?

Dr. EDELMAN. No, sir.

Representative COLE. If anybody did seek to make that inquiry, would you refuse to disclose the identity of the individual?

Dr. EDELMAN. No, sir.

The CHAIRMAN. Are there any further questions from any member of the committee?

Representative VAN ZANDT. Mr. Chairman?

The CHAIRMAN. Representative Van Zandt.

Representative VAN ZANDT. Are you acquainted with any Communists today?

Dr. EDELMAN. Not to my knowledge. I know many people and they may be members of the Communist Party without admitting it to me, but I don't know anybody that I could say is a member of the Communist Party.

Representative VAN ZANDT. Have you visited recently with any of the associates of yours during that period that you were in Indianapolis?

Dr. EDELMAN. No, sir. I have seen friends of mine who had no relationship to the political things; I mean, men who went to medical school with me. I have seen them, and they are still friends of mine.

Representative VAN ZANDT. Well, do you receive any Communist literature today?

Dr. EDELMAN. No, sir. Not a thing. I have not for the last 6 years.

Representative VAN ZANDT. Do you read their newspaper?

Dr. EDELMAN. No, sir.

Representative VAN ZANDT. What type of reading do you employ? What type of book?

Dr. EDELMAN. I have read during the last year almost exclusively in the field of scientific literature. I try to get the New York Times every morning at a Boston newsstand, and I read the Boston Daily Globe every evening, if I can get it. I have read, I believe, one or two novels in this interval period. And that has been the sum total of my reading. I am also a subscriber to the New Yorker magazine.

Representative VAN ZANDT. That is all, Mr. Chairman.

The CHAIRMAN. I might say, Dr. Edelman, that as an American citizen, of course, you have a right to read whatever is in print in any language in which it may be written that you can understand. I want to make it clear that I reserve that privilege for myself.

Mr. Cole, do you have a question?

Representative COLE. Yes, Mr. Chairman. I have no thought of a personal implication in this question, but I am wondering if, during your association with the Communists, you learned that perjury was no deterrent to a Communist in his efforts to achieve his ends.

Dr. EDELMAN. I don't remember that as being a part of a program, or anything of the sort. I was interested primarily in finding out what things like dialectical materialism meant and what their structure was, the way they acted, how they behaved, how they actually functioned. I do not remember anything about perjury at the time. It does not apply to me. I would not perjure myself. If I did, it would probably be the worst thing I would possibly do. It would wreck my career and my family.

Representative COLE. As I indicated when I raised the question, I did not intend that the question would have any personal implications. But from what you have learned since, as to Communists, have you any doubt about the veracity of a Communist?

Dr. EDELMAN. Yes; I have read that one of the principles, one of the present positions, is that perjury is not a deterrent to avoiding any unpleasantness.

Representative COLE. Well, I admire your frankness.

Representative ELSTON. Mr. Chairman, one other question: How long did you read the Daily Worker before you went to a Communist meeting?

Dr. EDELMAN. Oh, I think that the subscription was started at about the same time that I started attending the meetings. I don't remember; maybe it was a few weeks before or a few weeks after.

Representative ELSTON. Well, if it were a few weeks before—

Dr. EDELMAN. I think it was the Sunday Worker.

Representative ELSTON. All right, either one. If it were a few weeks before, the paper itself would clearly indicate the doctrines and the policies and the principles, if any, of the Communist Party, would they not?

Dr. EDELMAN. I don't remember the exact material that was printed. I believe that at that time most of the material that was printed was an excessive attention to the Soviet military events, and also I think at that time they were asking for increasing military cooperation, or a second front. I don't remember theoretical aspects being printed, and that is to the best of my knowledge.

Representative ELSTON. You have kept up pretty well with current events. Do you know what the position of the Communist Party was before Hitler invaded Russia?

Dr. EDELMAN. You mean the period of the Nazi-Russian agreement?

Representative ELSTON. Yes.

Dr. EDELMAN. Yes; I remember that.

Representative ELSTON. You were not in sympathy with their position at that time; were you?

Dr. EDELMAN. Absolutely not.

Representative ELSTON. Well, what made you think they had changed their position, except in their own self-interest?

Dr. EDELMAN. At the time I was speaking to these people about these problems, I believe that they indicated to me that they didn't represent Russia, and that they couldn't account for this period, but they felt that Russia did it just to gain enough strength to beat Nazi Germany. I think that that was a very sad day in the history of the world.

The CHAIRMAN. What was?

Dr. EDELMAN. When any nation would cooperate with Nazi Germany.

Representative ELSTON. Well, considering the fact that she had cooperated with Nazi Germany against this country, or against the other nations that were at war at that time, was that not sufficient to turn you against that country, rather than to make you want to learn more about their political philosophy?

Dr. EDELMAN. I didn't make the inquiries on the basis that I was interested in finding out about Russia. I made the inquiries on the basis that I was interested in finding out about the American Communist Party, or the Communist Party in America. And at the time, they said that they defended the position of Russia, but they said that they were not representing Russia to me, certainly.

Representative ELSTON. You never had any doubt in your mind, did you, that the Communist Party in this country was dominated and controlled by the Communist Party of Russia?

Dr. EDELMAN. I have no doubt now.

Representative ELSTON. Did you ever have any doubt about it?

Dr. EDELMAN. I did then.

Representative ELSTON. That is all.

The CHAIRMAN. Doctor, it seems as though there are no other questions that occur to any member of the committee, and so your appearance has come to a close.

Dr. EDELMAN. I would like to make two statements, if I may.

The CHAIRMAN. You may.

Dr. EDELMAN. I would like to say that I am a completely loyal American citizen. The entire history of my family has been such that we have been extremely grateful and very happy at being here and being citizens of this country. I at no time entertained any disloyal thoughts, and I will not entertain any disloyal thoughts in the future, knowing myself. And that is the situation.

The CHAIRMAN. Thank you, Doctor.

Dr. EDELMAN. The other thing I would like to do is to make a request for the stenographic notes or the record of the meeting, so that I can read it over, look at it, and think about it.

The CHAIRMAN. That is a reasonable request. You will get a copy of the record.

Dr. EDELMAN. Thank you, sir.

The CHAIRMAN. This session of the committee is now recessed, and the committee will now go into executive session for a further discussion of the matter which we took up this morning.

(Whereupon, at 4:10 p. m., the hearing was recessed, subject to the call of the Chair.)

# APPENDIX

## Reconciliation of obligations for special training activities to program basis

	Obligations			Fellowship program basis			
	Total	Activities other than fellowships <sup>1</sup>	Fellowship program	Fiscal year 1948	Fiscal year 1949	Fiscal year 1950	Subsequent
Physical research:							
Fiscal year 1948.....	\$1, 178, 200	\$478, 200	\$700, 000	\$50, 000	\$419, 350	\$230, 650	0

Total.....	4, 577, 350	1, 575, 000	3, 002, 350	50, 000	419, 350	985, 000	1, 548, 000
Biology and medicine:							
Fiscal year 1948.....	497, 500	20, 300	477, 200	477, 200	0	0	0
Fiscal year 1949.....	2, 564, 850	182, 059	2, 382, 800	0	952, 800	1, 430, 000	0
Fiscal year 1950.....	2, 785, 350	225, 350	2, 560, 000	0	0	1, 130, 000	1, 430, 000
Total.....	5, 847, 700	427, 700	5, 420, 000	477, 200	1, 430, 000	2, 560, 000	1, 430, 000

<sup>1</sup> "Activities other than fellowships" includes operating expenses of Argonne National Laboratory and Oak Ridge Institute of Nuclear Studies chargeable to special training, expenses incident to training at the Marine Biological Laboratory, Woods Hole, Mass., and to initiate special training courses at various Commission installations.

TELEGRAM FROM DR. JAMES B. CONANT, PRESIDENT, HARVARD UNIVERSITY, CAMBRIDGE, MASS., TO THE CHAIRMAN, JOINT COMMITTEE ON ATOMIC ENERGY

CAMBRIDGE, MASS., May 18, 1949.

Senator BRIEN McMAHON,

*Senate Office Building, Washington, D. C.:*

According to the account published in the New York Times this morning Dr. J. R. Oppenheimer and President Bronk, of Johns Hopkins University, have made representations to you as to the undesirability of requiring special inquiries and investigations of the political affiliations and views of those holding Government fellowships in pure science. I should like to associate myself with their position as represented in the New York Times. According to my view a clear distinction between those who have access to classified information and those who do not is essential both for the security of secret and confidential information as well as for the well-being of our scientific community. Fellowships which are to be held by students working in a university should be free from the restrictions which we must impose on all who have classified information. To place all holders of fellowships who are working in pure science in open fields on the same basis as Government employees would be to require a vast amount of checking and personal investigation. The atmosphere thus created among students in scientific departments would cause far more disturbance than any possible gain. If occasionally a member of the Communist Party should accidentally obtain one of these fellowships no great harm would result, as any demand on his part to obtain access to confidential information would automatically involve checking and personal investigation. If such a man continues in the field of pure science he may make important contributions and there is always a good chance that, as in the past, a certain number of young Communists would have a revulsion of feeling and leave the party. I trust Congress will not take any action which will of necessity involve proceedings creating an atmosphere of distrust and suspicion in the scientific world as I feel certain the loss to the country will far outweigh the possible hazards involved in the calculated risk of the method now used.

JAMES BRYANT CONANT,

*Member of the General Advisory Committee to the Atomic Energy Commission.*

160 ATOMIC ENERGY COMMISSION FELLOWSHIP PROGRAM

LETTER TO DR. ISIDORE S. EDELMAN ANNOUNCING AWARD OF FELLOWSHIP

NATIONAL RESEARCH COUNCIL,  
DIVISION OF MEDICAL SCIENCES,  
Washington 25, D. C., May 15, 1948.

Dr. ISIDORE S. EDELMAN,  
*Externe and Research Assistant, Medical Division,  
Montefiore Hospital, New York 67, N. Y.*

DEAR DR. EDELMAN: It gives me pleasure to inform you that the Atomic Energy Commission Postdoctoral Fellowship Board in the Medical Sciences National Research Council, at its meeting on May 5, 1948, voted to award you an AEC postdoctoral research fellowship in the medical sciences. This award is made to enable you to pursue your studies on the distribution and rates of excretion of electrolytes, with particular reference to the role of the endocrines, under the guidance of Dr. John H. Lawrence at the Donner laboratory, University of California. Your proposal to take courses in nuclear physics and to obtain general training in isotope techniques during the period of the fellowship has the approval of the Board. However, will you please report to the Board the details of your proposed academic work when you have outlined it?

This fellowship carries a grant of \$3,750 per annum and will be paid to you in 12 monthly installments. In addition to the regular grant, an allowance is made for travel expenses at the rate of 6 cents a mile from your present location to the place where you are to work as a fellow. It is expected that your fellowship will begin on or about January 1, 1949, but you are requested to notify the Fellowship Board at least 1 month prior to the date finally determined. In order that you may receive your regular monthly allowance without delay, please have the investigator under whose direction you are to work notify the Council's Board promptly of the date when you begin.

It is the understanding of the National Research Council that the work which will be carried on under this program of fellowship training will be largely in fields which are not directly concerned with classified information, known as restricted data. If, however, your program of work leads you initially or subsequently into areas where you desire access to data considered by the Atomic Energy Commission to be of a restricted nature, you will be required to submit to those processes of investigation which will enable the Atomic Energy Commission to determine your eligibility for such information. The results of the investigations and action by the Atomic Energy Commission in this regard will be binding upon you. Also, if in the course of your fellowship work on unclassified material any discoveries are made or any data developed that may be considered restricted, you shall promptly inform the Commission and take steps to safeguard all such discoveries or data. In the event doubt exists as to whether any data should be classified as restricted, you should consult the Atomic Energy Commission prior to the use or release of any such data.

With reference to any inventions resulting from work carried on under this fellowship, the following policy of the Atomic Energy Commission shall govern:

"No claim for pecuniary award or just compensation under the provisions of the Atomic Energy Act of 1946 shall be asserted as to inventions made or conceived during the period of the fellowship and the Commission reserves the right to determine the disposition of title to and rights in and to any such inventions."

Some years ago the Commissioner of Internal Revenue advised that sums paid to national research fellows were gifts or gratuities and not subject to income tax. It is believed that this ruling is still applicable. It is our understanding also that, according to a Veterans' Administration ruling, fellows receiving stipends under this program will not be eligible simultaneously for benefits under Public Law 346 (GI Bill of Rights).

Appointments are made subject to compliance with the requirements of the National Research Council as outlined in the enclosed announcement. Please note the instructions in regard to publications resulting from fellowship work.

The enclosed form of acceptance should be signed and returned at your early convenience to our office in Washington.

The members of the Board and the officers of the National Research Council will follow the progress of your work with much interest and hope that the fellowship will be of significant assistance to you in preparation for your career.

Sincerely yours,

HOMER W. SMITH,  
*Chairman, AEC Postdoctoral Fellowship Board in the Medical Sciences.*

LETTERS AND TELEGRAMS COMMENDATORY OF DR. ISIDORE S. EDELMAN

HARVARD UNIVERSITY NEWS OFFICE, *May 20, 1949.*

BACKGROUND MEMORANDUM FOR THE PRESS

Dr. Isadore S. Edelman has been a research fellow in surgery at Harvard University since January 1, 1949.

He was appointed to the research staff of the Harvard Medical School at the suggestion of the National Research Council and the Postdoctoral Fellowship Board in Medical Sciences of the Atomic Energy Commission. He serves under a fellowship administered by these bodies.

Although the Harvard medical school has several research contracts with the Government, it holds no contracts for classified, restricted, secret, or confidential work. All research at the Harvard Medical School is of a nature which permits the general publication of results without restriction.

Dr. Edelman's major problem has been to work out in detail a method for the determination of deuterium (heavy hydrogen) in a mass spectrometer.

The long-range medical target of this research is to add to man's knowledge of surgical disease (cancer, peritonitis, intestinal obstruction, starvation) and to increase man's understanding of the ebb and flow of body fluids.

In accepting Dr. Edelman as a research fellow, the medical faculty passed judgment solely upon his professional qualifications. He came here with good professional recommendations from researchers with whom he had worked, and, in his short service here, he has proven an able, hard-working, and effective researcher whose special training fitted well into the coordinated research programs of the school.

Dr. Edelman was born in New York in 1920 and was graduated from Indiana University in 1941. He attended medical school at Indiana University under the Army's wartime ASTP program and entered active service with the Army upon graduation in 1944.

After a brief period of training in neuropsychiatry, he served in a hospital at Carlyle Barracks, Fort Mead, Va., and then was transferred to the Canal Zone, where he served as ward officer in a neuropsychiatric hospital from 1945 to January 1947. He was separated from the Army with the rank of captain.

After leaving the Army, Dr. Edelman joined the staff of the Montefiore Hospital in New York, where he served successively as externe, chief resident in the neoplastic division, and Dazian foundation fellow for research. On January 1, 1949, he joined the research staff of the Harvard Medical School.

---

NEW YORK, N. Y., *May 21, 1949.*

I, Mr. Anna Bear, swear that I am in the retail dress business for the last 14 years. I have been connected with the Brooklyn Philanthropic League and Williamsburg Settlement House for the last 10 years doing charity work.

I have known Dr. Isidore Edelman for the last 10 years. In my visits to his house he has always impressed me as a good and loyal American. He has never shown any sympathy by word or action with Soviet Russia or communism in my long association with him. I have always been against everything that communism and Soviet Russia stands for.

ANNA BEAR.

---

BROOKLYN, N. Y., *May 21, 1949.*

*To Whom It May Concern;*

I am a resident of Brooklyn, N. Y., married, father of two children, and am a cousin, through marriage, of Dr. Isidore S. Edelman. I have known Dr. Edelman quite well for the past 12 years and have never heard him express any sentiments against the United States.

I have never known him to be a member of the Communist Party or express any of their ideologies. He is a patriotic citizen whose one consuming desire is to be a good doctor.

Respectfully yours,

JACK LIMITZ.

BRONX, NEW YORK, N. Y., May 21, 1949.

*To Whom This May Concern:*

I, Simon Kinger, residing at 1601 Metropolitan Avenue, Bronx, New York, aged 45, am employed by the city of New York, present borough of the Bronx. I am a civil engineer in the engineering bureau for the past 20 years.

I have known Dr. Isidore S. Edelman for the past 11 years. I am related to him through marriage, my wife being his first cousin. During the years I have known him, the times we have met socially, I never heard him express his thoughts or feelings as being procommunitistic, or pro-Russian. Indeed, he did express himself as being anticommunitistic, and anti-Marxist and anti-Soviet Russia.

I know it was his love of this country, his patriotism for this country, that caused him to enlist in the armed services and to become an officer in our country, to defend this country from totalitarianism.

After this service in the armed forces he became connected with the medical staff at Montefiore Hospital, in the Bronx, studying and doing research work under a Dr. Leuter. There are several other doctors in Montefiore Hospital whom I know personally, who have often said what wonderful work he was capable of performing. It is my humble opinion that Dr. Isidore S. Edelman is first, last, and always an American, and an American we can all be proud of.

SIMON KINGER.

MAY 21, 1949.

I, Bernard Jaffe, being 35 years of age and in the wholesale fruit and vegetable business, swear that I have known Dr. Isidore S. Edelman from early childhood. I am related to Dr. Edelman by marriage, his wife being my sister.

In the numerous times that I have been in contact with him and through actions and conversations, I have been impressed with his firm conviction in the American form of government. He has, in my presence, criticized all forms of totalitarianism, especially that of Soviet Russia. He has been bitter in his criticism of the Soviet attitude toward science and medicine; criticizing the thought control of this dictatorship in all its manifestations. He has mentioned, in my presence, and condemned Communist attempts to regiment science and medicine. He has been unflinching in his condemnation of any attempt to impress such a system upon our free American institutions.

I feel that he is a splendid example of the American way of life and its free institutions.

I have always found him to be a good and loyal American in the fullest sense of the word. He has generally confined himself to nonpolitical discussions and in the few instances that he has discussed Soviet communism he has shown himself to be entirely anti-Communist and anti-Marxist.

BERNARD JAFFE.

BROOKLYN, N. Y., May 21, 1949.

I have known Dr. Isidore S. Edelman very well for the past 2 years. I believe that I have had ample opportunity during our numerous meetings to accurately observe his character, honesty, and sincerity.

With all others who know Dr. Edelman, I share the firm belief that he is an honorable and loyal American citizen, of the highest integrity, incapable of any subversive beliefs or behavior.

Dr. Edelman has never shown any attitude other than repugnance for Communist ideologies. I have repeatedly heard him condemn communism in all its phases. He has often, in my hearing, stated his conviction that there could be no honest or constructive scientific research in any country where scientists are fettered by Communist control.

Dr. Edelman has constantly voiced his devotion to the United States and its democratic institutions.

Such loyal citizens as Dr. Edelman, whose unselfish desire it is to devote his life to medical research, are a credit to our country. We can only show our proper gratitude by helping him to continue his splendid work.

MRS. HELEN L. HALPERIN.

BROOKLYN 3, N. Y., May 21, 1949.

Dr. Isidore S. Edelman has been a frequent visitor to my home since July 1, 1947. During these visits I have had many opportunities to observe, listen, and talk to him and am thus able to evaluate him as to his character, ideals, and political beliefs.

Dr. Edelman has consistently displayed impeccable moral and professional integrity. He has voiced, many times in my presence, his loyalty and devotion to the United States of America and the American way of life. He has expressed himself with great vigor as being opposed to Communist ideologies. He has stated his abhorrence of the curtailment of freedom and liberty in all Communist countries, particularly their stifling of scientific endeavor.

I have no doubt that Dr. Edelman is a loyal American citizen whose brilliant work in medical science will be of great value to our country.

I. G. LICHTMAN, D. D. S.

BROOKLYN, N. Y., May 21, 1949.

My acquaintanceship with Dr. Isidore S. Edelman began 2 years ago.

I have had contact with him on numerous occasions during this time.

Dr. Edelman has never in any way, manner of word or deed displayed any sympathy for any Communist or other subversive ideologies.

On the contrary he has constantly expressed his conviction that this country and its institutions are without peer in this world.

I have been present on numerous occasions when he has expressed vehement contempt of communism, Communists, and Communist sympathizers.

I know Dr. Edelman to be an honorable and loyal American citizen. His desire to devote his life to scientific research in medicine which will contribute to the health and happiness of all Americans is an admirable and laudable one. He must be permitted to continue to do so.

Mrs. IDA B. LICHTMAN.

PATERSON, N. J., May 22, 1949.

HON. BRIAN McMAHON,  
*United States Senate, Washington, D. C.*

DEAR SIR: I have known Isidore S. Edelman, M. D., since 1939 when he first arrived at Indiana University. In fact, he was my roommate during our first year in medical school. During his 4 years in medical school, we were very intimate friends. At no time during our association did he ever in any way show any disloyalty to the United States. His honesty, sincerity, and integrity were known to all. He always believed in fair play, free expression, and true democracy.

I sincerely pray that Dr. Edelman, for the sake of freedom, medicine, and humanity, will be allowed to continue his fellowship.

Respectfully yours,

LOUIS A. ZUCKERMAN, M. D.

NEW YORK, N. Y., May 22, 1949.

HON. BRIEN McMAHON,  
*United States Senate, Washington, D. C.*

DEAR SIR: I have known Dr. Isidore S. Edelman as friend, medical school classmate, and physician since September 1941, when I entered Indiana University as a medical student.

At all times I have known him to be a faithful American, and he has never been guilty of any action or statement which might be considered detrimental or disloyal to our Government.

I am confident that, as a loyal American whose honesty, integrity, and scientific ability are of such high character, he will be permitted to continue his present research.

Respectfully yours,

ARNOLD R. SANDERS, M. D.

BROOKLYN 6, N. Y., May 22, 1949.

*To Whom It May Concern:*

This is written in support of Dr. Isidore Edelman, of Brooklyn, with whom it was my privilege to be associated in 1944 as a member of the house staff of the Greenpoint Hospital of this city.

During the period of our association it was possible to know fully and evaluate Dr. Edelman in many aspects. This man was and is, as far as I am concerned, completely loyal and true to the principles and democratic ideals of the United States of America. Never to my knowledge, by word, or deed, or insinuation, did he show a preference for or leaning toward any foreign or undemocratic ideologies. Most certainly did he not show or voice any leanings toward communism or other undemocratic political belief or teaching.

Dr. Edelman served as a member of the armed forces of the United States of America willingly and without reluctance or reservation of any kind to my knowledge.

In addition, Dr. Edelman is one of the most brilliant and able physicians that it has been my good fortune to work with. He was at all times during our association, willing, skillful, and selfless in the performance of his professional duties. He is the type of individual that I would recommend most highly for a position requiring the utmost in professional ability and moral integrity.

LIONEL KLEIN, M. D.

MAY 22, 1949.

Our names are Irving and Lillian Feldman and we reside at 305 Ocean Parkway, Brooklyn, N. Y. We have been married for 20 years and have two children, 18 and 9. We have known Dr. Isidore Edelman and his wife Florence for the past 6 years. We have met him through Mr. Al Levine, the doctor's brother-in-law. Our relationship has been quite close. We have met Dr. Edelman and his wife socially and have visited him at his home. We have never at any time heard Dr. Edelman or his wife express any remarks or make any statements whatever which could be construed as being procommunist or pro-Soviet Russian.

In our opinion Dr. Edelman is a fine true American and is in every way a loyal American citizen.

LILLIAN FELDMAN.  
IRVING FELDMAN.

MAY 22, 1949.

I, Jerome Rosemarin, residing at 2620 Glenwood Road, Brooklyn, N. Y., have known Dr. Isidore S. Edelman since 1927. I'm married and am employed at the United Jewish Appeal of Greater New York, Inc., 250 West Fifty-seventh Street, New York City.

I was a member of the Army Air Forces and I was overseas for 2½ years.

Dr. Isidore S. Edelman and I were raised in the same house at 612 Marcey Avenue, Brooklyn, N. Y. We attended Public School 54 and Boys High School together.

During all these years I have known Dr. Isidore S. Edelman and his wife Florence to be loyal and patriotic Americans.

I have gone out socially with Dr. Isidore S. Edelman and his wife and I have never heard him or his wife make any statements that were procommunist or express any sympathy toward the Communist Party or Soviet Russia.

I have never heard any of our mutual friends state that he ever made any statements which were against our form of Government.

It is my opinion that Dr. Isidore S. Edelman and his wife are true, loyal Americans.

JEROME ROSEMARIN.

BROOKLYN, N. Y., May 22, 1949.

I, Seymour Deutsch, residing at 297 Lenox Road, Brooklyn, N. Y., being 28 years of age and a public accountant, swear that the following facts are true statements.

I served with the United States Air Force for 39 months in the capacity of navigator with the rank of first lieutenant. Nine months of this time was spent overseas with the Eighth Air Force and I flew 35 combat missions.

I have known Dr. Edelman for about 16 years, grew up with him, went to the same high school, and belonged to the same athletic club.

In all the years of our acquaintance he has never expressed any advocacy for communism and what it stands for. I have always found that he has been against any country whose interests have been or might be detrimental to the interest of the United States.

His primary interest has always been medicine and his medical record attests to the fact that he has succeeded in making a good name for himself in his profession.

SEYMOUR DEUTSCH.

MAY 22, 1949.

*To Whom It May Concern:*

My name is Evelyn Braverman. I live at 125 Lenox Road, Brooklyn, N. Y., and I am married for 12 years and have three children.

I have known Dr. Isidore Edelman and his wife Florence for 4 years, having lived in the same apartment house with them. I have visited them in their home and they in mine.

I have never heard either Dr. Edelman or his wife make any remarks or statements which would in any way indicate that they were procommunist or pro-Soviet Russia. Their reputation in the building was very fine and I never heard anyone say anything bad against them.

I firmly believe them to be true and loyal citizens who are opposed to any principles which are contrary to our form of government.

(Signed) MRS. EVELYN BRAVERMAN.

MAY 22, 1949.

I, Milton Kreps, residing at 2620 Glenwood Road, Brooklyn, N. Y., aged 28, am a traveling salesman in the millinery industry.

I served in the United States Navy as SK(D)1C for 40 months including 20 months overseas in the Pacific.

I have known Dr. Isidore S. Edelman for approximately 18 years. We went to public school together and were very close friends and neighbors.

During all the years that I have known Dr. Edelman he has never in my presence expressed any feeling whatsoever as being procommunist or pro-Russian. Nor have I ever heard anybody who ever heard him say they heard him express any communistic ideologies.

It is my opinion that Dr. Edelman is first, last, and always a fine, upright, and loyal American citizen we can all be proud of.

MILTON KREPS.

BROOKLYN 3, N. Y., May 22, 1949.

HON. BRIEN McMAHON,

*Chairman, Joint Congressional Committee on Atomic Energy,  
United States Senate, Washington, D. C.*

DEAR SENATOR McMAHON: I have known Dr. Isidore S. Edelman intimately since July 1947. I know him to be a good patriotic American citizen and an outstanding scientist. I can wholeheartedly attest to his patriotism, his honesty to himself, his profession, and his country. I know that he is not interested in any party or political ideology adverse to that of the United States. I have personally been present when, in discussion with friends, he made statements that he is opposed to communism, communistic ideology, and Soviet Russia.

I strongly feel that if Dr. Edelman is not allowed to continue with his scientific investigation in his present capacity, it would be of untold detriment to the American way of government, let alone to the advancement of American science.

Very truly yours,

JACOB P. HALPERIN, M. D.

MAY 22, 1949.

I, Aaron J. Landsman, 28, live at 2101 Westbury Court, Brooklyn, 25, N. Y., with my wife and daughter. I work at Kornblau hardware, 2137 Eighth Avenue, New York City.

I have known Dr. Isidore S. Edelman since 1935 when we both went to boys high school together.

In our many discussions I have never heard Dr. Edelman mention anything derogatory about the United States or in any way or by word or deed be sympathetic to the Communists or any procommunist government.

His character is beyond reproach and his medical record speaks for itself.

I've frequented his home and attended social affairs with him. I've never seen him reading or in the possession of any communist periodicals.

I was in the Army for 3½ years and was honorably discharged in 1945. I served overseas in the CBI theater.

AARON J. LANDSMAN.

BROOKLYN 12, N. Y., May 22, 1949.

*To Whom This May Concern:*

I have known Dr. Isidore S. Edelman for the past few years and have worked with him intimately over this period of time.

During my entire professional and social contacts with him I have never had occasion to question his loyalty to America.

I have always been impressed by his intense devotion and interest in science and medicine. I have, on frequent occasions, heard him express an intense distaste for anything remotely related to a Communist ideology.

There is no question in my mind that Dr. Edelman is a loyal American of the highest order.

As a physician, I realize that interruption of his present research problems will be an intense loss to this country and medicine and mankind.

As for myself, I have served more than 2 years of active duty, during the past war, in the United States Army at various stations within the continental limits of the United States and overseas.

I consider Dr. Edelman a fellow American of unimpeachable loyalty.

J. LEONARD BRANDT.

MONTEFIORE HOSPITAL FOR CHRONIC DISEASES,  
New York 67, N. Y., May 22, 1949.

HON. BRIEN McMAHON,  
Senator, Chairman, Joint Congressional Atomic Energy Committee,  
Senate Office Building, Washington, D. C.

MY DEAR SENATOR: On the request of Dr. Isidore S. Edelman, I am sending you the following information from his file in our hospital:

Dr. Edelman applied for an appointment on the house staff of our hospital on December 23, 1946. You are, I believe, familiar with his qualifications and I need only add that his letters of recommendation were of such a high order that we had no hesitation in awarding him an externship on our division of neoplastic diseases for a period of 6 months in the first half of the year 1947. We were informed by one of his sponsors that he "made a distinguished record in college and in medical school." The dean of his medical school told us that he stood eighth in a graduating class of 116 and that he "possesses outstanding ability."

Dr. Edelman was promoted to the rank of resident physician on our division of neoplastic diseases and served in this capacity for the second half of 1947. On his graduation from our house staff he was awarded a Dazian fellowship in the sum of \$1,300 for research work on the medical division of our hospital over a period of 1 year beginning January 1, 1948.

I quote the following from his official record in our hospital:

"Edelman is excellent material. He has curiosity, thoroughness, intelligence, and sound knowledge with a very pleasant personality. I believe that he has a great future."

I owe it to you and to our compatriots to add that Dr. Edelman was highly regarded by all circles in our hospital without exception. My personal impression of him is that of an unusually promising young medical scientist. While we do not know Dr. Edelman's political affiliations, if any, it would surprise and shock everyone on our staff to learn that he had committed himself to communist doctrines. I have been asked by all those who know that I am addressing this letter to you to add that they consider him a strongly patriotic American whose passing interest in foreign ideologies is normal and in no way hurtful to the cause of our country.

Respectfully yours,

E. M. BLUESTONE, M. D., Director.

NEW YORK 67, N. Y., May 22, 1949.

HON. BRIEN McMAHON,  
*Chairman, Joint Congressional Committee,  
United States Senate, Washington, D. C.*

MY DEAR MR. SENATOR: Permit me to bring to your attention and to the attention of your committee a few data which may be of importance in evaluating the case of Dr. I. S. Edelman, now Atomic Energy Commission fellow under investigation:

1. I have known him since January 1947. At that time he came to see me because he wanted to work on the division of neoplastic diseases of the Montefiore Hospital. At that time his record was carefully scrutinized; excellent college record and medical school references, veteran, honorably discharged, having served as an officer and having attained the rank of captain in the United States Army. Upon my recommendation he was appointed as externe on the division of neoplastic diseases. His medical and personal performance were so outstanding that he was promoted after one-half year to the chief residency of the division. In January 1948 he joined the cardiovascular research of our hospital.

2. For 1 year I have had daily contacts with Dr. Edelman and during the second year I had briefer daily contacts with him. My evaluation is based upon these 2 years' experiences. He is an excellent young physician with deep scientific interests and good qualifications. He has shown an unusually kind attitude toward his patients. He worked literally day and night for the sake of the cancer sufferers, neglecting fully his financial and even his personal interests. I beg you to consider that I have seen him fight for the poor cancer patients with unending devotion. I have observed not one utterance which could have been interpreted as disloyal to the Government. I have not heard one comment favoring the Soviet Government or the Communist Party.

3. Your committee as well as I, a private citizen, is intensely interested in human welfare and concerned with the implications of a case like Dr. Edelman. Here is a man who is willing and able to put his talent for the sake of promoting science. As you well know, this means sacrifice for him and his family. Shall we discourage such research talents by exposing such young men to the adverse effects of public suspicion? Unless proven, no compromising statement should jeopardize a man's future. Who is going to risk the harm caused by such publicity? All our attempts have to be directed toward attracting qualified medical scientists to fight human misery.

I am at your disposal, sir; to testify under oath that Dr. I. S. Edelman has proven himself by action and words to be a loyal citizen of America.

I am

Very sincerely yours,

DANIEL LASZLO, M. D.,  
*Attending Physician, in Charge of  
Division of Neoplastic Diseases, Montefiore Hospital.*

MALVERNE, N. Y., May 22, 1949.

HON. SENATOR BRIEN McMAHON,  
*Senate Office Building, Washington, D. C.*

MY DEAR MR. SENATOR: I have known Dr. Isidore S. Edelman ever since January 1947, being closely associated with him during that year, and I wish to underwrite his newspaper statement with regard to his unswerving Americanism.

I first met Dr. Edelman when we were both on the staff of the Montefiore Hospital, New York, where I served subsequent to being graduated from Cornell University Medical College and serving  $2\frac{1}{2}$  years in the Army Medical Corps.

Dr. Edelman and I had several discussions on politics and his open-mindedness and lack of political rigidity left no doubt that Dr. Edelman could not possibly be a Communist. His intellectual integrity is beyond reproach. In addition to being a man of excellent moral fiber, he is also a man of unusual scientific ability. If the fellowship is taken away from Dr. Edelman because of questionable accusations, not only would he suffer but scientific medicine would be deprived of an excellent contributor.

On the above bases, may I urge that Dr. Edelman be given every consideration and that he be allowed to retain his fellowship.

Very truly yours,

ROBERT J. MICTOM, M. D.

NEW YORK 51, N. Y., May 22, 1949.

HON. BRIEN McMAHON,  
*United States Senate, Washington, D. C.*

DEAR SENATOR McMAHON: I have known Dr. Isidore S. Edelman for the full years 1947 and 1948 in almost daily contact when he was a house officer at the Montefiore Hospital in New York City. On no occasion did Dr. Edelman ever indicate in his speech or actions any evidence of disloyalty to the Government of the United States. On the contrary, in many conferences with him I was deeply impressed with his sincerity, high moral character, loyalty, and devotion to duty. As a former commander in the Medical Corps of the United States Naval Reserve I would perhaps have been particularly sensitive to any suggestion of disloyalty on his part. During the period in which I have known him well, however, Dr. Edelman always behaved in an exemplary and loyal manner.

As a young medical scientist he had and continues to show great promise. His originality and ability are of a distinctly superior kind and these, coupled with his hard working habits, give every promise of development of a valuable scientist. It is my firm conviction that disruption of Dr. Edelman's further scientific training and development would be a loss to American medical science.

Very sincerely yours,

H. M. ZIMMERMAN, D. C.,  
*Chief, Laboratory Division, Montefiore Hospital.*

BROOKLYN, N. Y., May 22, 1949.

HON. BRIEN McMAHON,  
*Chairman, Joint Congressional Committee, Washington, D. C.*

DEAR SIR: I am writing this letter on behalf of Dr. Isidore Edelman whom I have known since 1944 at which time he was in interne at the Greenpoint Hospital in Brooklyn.

In all the time I have known him I have never, by word or deed, found Dr. Edelman to be anything but a loyal American. Certainly nothing in my contacts with him would lead me to believe that he has any interest in communism.

Very sincerely yours,

SANFORD KAMINSTER, M. D.,  
*Assistant Professor of Clinical Obstetrics and Gynecology,  
 Long Island College of Medicine,  
 Visiting Obstetrician and Gynecologist,  
 Greenpoint Hospital.*

NEW YORK 23, N. Y., May 22, 1949.

SENATOR BRIEN McMAHON,  
*Senate Office Building, Washington, D. C.*

DEAR SENATOR: Having heard that your committee is investigating the AEC fellowship of Dr. Isidore Edelman, I am anxious to present the following information:

I was associated with Dr. Edelman during the year of 1948, in my capacity as assistant resident in medicine at the Montefiore Hospital, New York. I need not attest to his brilliant scientific capacity, as better qualified persons have already done so.

During that year I remember several (perhaps three or four) lunch-table conversations on political issues in which both Dr. Edelman and I participated. Dr. Edelman always exhibited the lively and informed interest in public affairs which characterize our most useful citizens. He always presented his point of view with two characteristics germane to the present investigation and hearing:

(1) His statements were obviously his own, and they showed a loyal interest in the Government of the United States and in its improvement. Dr. Edelman never presented his opinions in the rigid, stereotyped, and repetitious pattern used by those who are impelled to conform to the Communist stencil. It should be added that because of my own interest in government I am familiar with the usual patterns of Communist thought and speech.

(2) Dr. Edelman always exhibited a temperate interest in the views of others in these discussions, contrary (in my experience) to the inflexible attitude of Communist-minded persons toward dissenters.

Since a letter such as this offers character information, it seems reasonable to indicate something about its author: I am an American-born citizen. My

formal education was at Horace Mann School, New York City; at Harvard College; and at the college of physicians and surgeons, Columbia University. My post-graduate medical training has been at Lenox Hill, Mount Sinai, and Montefiore Hospitals, all in New York City. I served 3 years in the Navy during World War II and hold a Reserve commission. I am not, and have never been, a Communist.

Although this letter is written primarily to support Dr. Edelman, I should like to add my belief that, for the good of the Nation, the criteria for Government support of education and research should permit the inclusion of such men in the program. If we do not encourage and support the cream of our crop, other countries will outstrip us. Second-rate scientists are many; first-rate scientists are few.

Respectfully and sincerely yours,

HOWARD D. ZUCKER, M. D.

BROOKLYN 3, N. Y., May 22, 1949.

HON. BRIEN McMAHON,  
*Chairman, Joint Congressional Commission on Atomic Energy,  
United States Senate, Washington, D. C.*

DEAR SENATOR McMAHON: I have known Dr. Isidore S. Edelman since July 1947. I know him to be a good patriotic American citizen and an outstanding scientist. I can wholeheartedly attest to his patriotism, his honesty to himself, his profession, and his country. I know that he is not interested in any party or political ideology adverse to that of the United States. I have personally been present when, in discussion with friends, he made statements that he is opposed to communism, communistic ideology, and Soviet Russia.

I strongly feel that if Dr. Edelman is not allowed to continue with his scientific investigation in his present capacity, it would be of untold detriment to the American way of government, let alone to the advancement of American science.

Very truly yours,

JACOB P. HALPERIN, M. D.

CEDARHURST, N. Y., May 23, 1949.

Senator BRIEN McMAHON,  
*Chairman, Joint Congressional Committee on Atomic Energy,  
Washington, D. C.*

DEAR SENATOR McMAHON: The recent charges emanating from the Joint Congressional Committee on Atomic Energy questioning the loyalty of Dr. Isidore S. Edelman have shocked me greatly.

I am a colleague of Dr. Edelman's and was closely associated with him professionally and socially from July 1947 to January 1949. During this period we frequently and freely discussed many topics. At no time did he ever give me cause to doubt his loyalty to our country and its Government. It is my conviction that he is a loyal and patriotic American.

I am confident that the accusations impugning the loyalty and integrity of Dr. Edelman will be found false. He should be allowed to continue his important and brilliant work as a research fellow and thus contribute to our Nation's progress.

Respectfully yours,

HAROLD M. GORDON, M. D.

NEW YORK CITY, May 23, 1949.

Senator BRIEN McMAHON,  
*Chairman, Joint Congressional Committee,  
Atomic Energy Control, Washington, D. C.*

DEAR SENATOR McMAHON: As one of those who have had the opportunity of observing the scientific work and personal behavior of Dr. Isidore S. Edelman during the period that he was closely associated with my staff at the Montefiore Hospital, I was deeply shocked by the newspaper and radio reports referring to his alleged connection with a Communist organization and his supposed lack of sufficient loyalty to warrant his clearance for atomic energy research. Having been a willing and enthusiastic sponsor of Dr. Edelman for various positions, including his AEC fellowship, I feel responsible for his performance both as a scientist and as a member of a democratic society.

I do not know the exact criteria employed to determine the degree of loyalty of an American citizen, but I do know that in all my personal association with Dr. Edelman, involving the usual free and open discussions on all sorts of topics with a group of young men who are keenly interested in world affairs as well as in their professional activity, I have never heard him profess any views that might in the remotest degree be considered as subversive or Communist, or whatever other term one may choose to describe disloyal attitudes. As a matter of fact, one of the outstanding characteristics of Dr. Edelman's personality is his sane and measured judgment and his reluctance to take an extreme view on any subject; he always applies the scientific criterion of the validity of the evidence for opinions of others or himself, and carefully avoids drawing conclusions on an irrational or emotional basis. It is inevitable that in a time like this, when various social experiments are being conducted by governments and other groups in various countries, numerous ideas will be discussed among any group of intelligent people. I cannot recall, even during such off-guard conversations as occur over the lunch table, that Dr. Edelman ever manifested any sympathy with authoritarian doctrine or practice, or displayed any more than the normal American's privilege to complain about the status quo. When he did so, it was always in the spirit of examining the situation scientifically, of proceeding to necessary changes and reforms by evolution, and of working within the democratic processes. It would take only a few minutes of conversation with him to realize that he is not easily swayed by hysterical or subtle propaganda and that he has a solidity of character which, of itself, would preclude any possible room for the slightest disloyalty to those American institutions that are worth preserving.

I shall not take up your time with an account of his professional ability, his devotion to the ideals of scientific research for the ultimate benefit of humanity, the universal affection and esteem in which he is held by his colleagues and his teachers, and other attributes of his life and character which I am certain have already been amply elaborated by others. Nor is it necessary for me to emphasize what I am certain has long been apparent to you, namely, that the selection of a man for a scientific research fellowship should be based on merit and aptitude alone and not on his color, creed, race, or legitimate political views. I suppose it is still the privilege of American university students to attend occasional lectures or meetings of various extreme groups, just as it is their right to indulge in the experience of alcoholic intoxication or other activity which every normal youth samples as part of his inborn human curiosity. I would hate to see the day when college students would be hampered in the reasonable expression of their curiosity regarding all human activities by the thought, or the fear, that some day their entire career might be ruined by the public exposure of a long-forgotten experience which has no present relevance.

This happens to be a tough period in American life both as to relations among our own citizens and with those of other countries. The methods of psychological warfare are so highly developed now that it is most important to protect the less experienced or the more gullible of our population against inroads from undemocratic sources. However, to select for this justifiable defense an attack upon an innocent and relatively helpless individual member of the scientific society is to play into the hands of the real enemies of democracy. It's the old story of conviction by smear publicity before a hearing. No public vindication after this publicity will ever completely remove the mud that has been splashed over the character of Dr. Edelman. The only comfort he and his friends may have will be the feeling that in some respects his public investigation will forge one more link in the chain of united resistance of the loyal intellectual community to the onslaught of misguided patriots who, in their zeal to achieve more important ambitions, direct the public's attention to a few scapegoats, and in this way becloud the great issues of the day. As one who has had a great deal of experience in these matters, especially in relation to the control of atomic energy, you will understand exactly what I mean.

Having full faith in the strong sense of justice that motivates the members of your committee, I am certain you will clear Dr. Edelman of any suspicion of subversive activity or interests, and will make every effort to restore him as fully as is possible to his respectable position as a seeker of scientific truth; anything less than this would in the long run be more unfortunate for this country than for him.

Sincerely yours,

LOUIS LEITER, M. D.,  
*Chief, Medical Division.*

NEW YORK, N. Y., May 21, 1949.

Hon. BRIEN McMAHON,  
*Chairman, Joint Congressional Committee on Atomic Energy,  
 United States Senate, Washington, D. C.:*

We have known Dr. Isidore S. Edelman for 10 years and can vouch for his loyalty to the United States Government.

DAVID WEINER, M. D.  
 IRWIN BLEIWEISS, M. D.

NEW YORK, N. Y., May 21, 1949.

Hon. BRIEN McMAHON,  
*Chairman, Joint Congressional Committee on Atomic Energy,  
 United States Senate, Washington, D. C.:*

I have known Dr. Isidore S. Edelman personally and professionally from January 1947 to December 1948 as a member of the house staff of Montefiore Hospital. I can unequivocally state that he has excellent moral character. His material in intellectual honesty is unrepachable. He has during my association with him shown loyalty to the Government of the United States. At no time during this period has he been guilty of subversive activities. He has demonstrated beyond doubt that he has exceptional professional and scientific abilities. I and all persons who have known him strongly believe that he has and will make great contributions to American medicine.

JOSEPH S. KRAKAUER, M. D.

NEW YORK, N. Y., May 21, 1949.

Senator BRIEN McMAHON,  
*Chairman, the Senate Atomic Energy Commission,  
 Washington, D. C.:*

We the undersigned members of the social service department of Montefiore Hospital, New York City, were closely associated with Dr. Isidore S. Edelman, whose appointment to an AEC research fellowship is now being questioned during his residency and research fellowship here. We found him to be not only a man of great integrity and honesty but also a loyal and devoted advocate of American democratic ideals and principals.

MARION THURMAN,  
 BESSIE G. SCHLESS,  
 NANETTE EMANUEL,  
 JUNE DEUTSCH,  
 MOLLIE SKODNIK.

BLOOMINGTON, IND., May 21, 1949.

SENATOR BRIEN McMAHON,  
*Chairman, Joint Congressional Committee on Atomic Energy,  
 United States Senate, Washington, D. C.:*

This message I am sending on behalf of Dr. Isidore Edelman who is currently under investigation by the committee for alleged communistic activity. I knew Dr. Edelman rather well during 1940-42 while he was an undergraduate at Indiana University. He was a brilliant student and of high character during those years. I am confident that he did not have Communist affiliations. Whatever may have been his associations in the intervening years, I have reason to believe that he is not now either a party member or a fellow traveler. I trust that the committee will grant him the consideration due an able scientist and loyal citizen.

HENRY VEATCH,  
*Associate Professor of Philosophy, Indiana University.*

NEW YORK, N. Y., May 22, 1949.

Senator BRIEN McMAHON,  
*United States Senate, Washington, D. C.:*

We the undersigned members and former members of the Montefiore Hospital house staff have been professionally and personally associated with Dr. Isidore S. Edelman during the period from January 1947 to December 1948.

We unequivocally state that by every word and deed he has been consistently loyal to the Government of the United States and that he is of exceptional moral character. His material and intellectual honesty is above reproach. We have never known him to be guilty of any subversive or potentially subversive action. He has always demonstrated to us his profound scientific and professional abilities. He has and will continue to make significant contributions to the advancement of American medical science.

We believe that it would be of untold detriment to our country's progress if loyal individuals such as Dr. Edelman were to be deprived of support in their education and investigation.

Drs. A. Mund, J. Halperin, H. Mark, T. Spaet, S. Mishkin, J. Krakauer, A. Sanders, S. Bernstein, M. Fenichel, A. Kantrowitz, A. Buchberg, H. Gordon, W. Sata, R. Weston, D. Escher, J. Grossman, H. Zucker, S. Eger, W. Ruberman, B. August, R. Mokotoff, M. Fink, H. Blondheim, H. Lichtman, E. Kirsten, J. Parker, E. Cotlove, H. Abrams, E. Polin.

PATERSON, N. J., May 22, 1949.

Senator BRIEN McMAHON,  
*Senate Office Building, Washington, D. C.:*

We the undersigned have known Dr. Isadore S. Edelman as friend and classmate in college and in medical school at Indiana University. We have always known him to be loyal to the Government of the United States in word and deed. His integrity and honesty are beyond reproach. We sincerely feel that as a loyal American he be permitted to continue in his present capacity as research fellow at Harvard University.

ARNOLD R. SANDERS, M. D.  
 JOHN J. NUSSMAN, D. D. S.,  
 LOUIS A. ZUCKERMAN, M. D.

Kew GARDEN HILLS, N. Y., May 22, 1949.

BRIEN McMAHON,  
*Joint Congressional Committee,  
 United States Senate, Washington, D. C.:*

As a former member of the merchant marine I strongly protest your accusing Dr. Isidore Edelman of being a Communist. I have known him for the past 3 years, and he has proven by word and deed to be strongly anti-Communist and a very loyal American citizen. Our country will suffer a great loss if he is deprived of his fellowship.

HAROLD FELDMAN.

NEW YORK, N. Y.  
 May 22, 1949.

Senator BRIEN McMAHON,  
*Chairman, Joint Congressional Committee,  
 United States Senate, Washington, D. C.*

DEAR SENATOR: I wish to inform you that I have known Dr. Isidore M. Edelman intimately for the past 15 years.

I have found him 100 percent loyal to the United States of America and anticommunistic as evidenced by word and deed.

He is a brilliant research student in the field of medicine, and it would be a great loss to the United States to curtail his work because of completely false accusations.

Sincerely,

Dr. BRIER,  
 Bridgeport, Conn.

BROOKLYN, N. Y., May 22, 1949.

HON. BRIEN McMAHON,  
*Chairman, Joint Congressional Committee,  
United States Senate, Washington, D. C.:*

As a personal friend of Dr. Edelman never in the 16 years I have known him has he indicated communistic tendencies. He is a true and loyal American. Please aid him in clearing his name.

SEYMOUR DEUTSCH.

BROOKLYN, N. Y., May 22, 1949.

HON. BRIEN McMAHON,  
*Chairman, Joint Congressional Committee,  
United States Senate, Washington, D. C.:*

I am a childhood friend of Dr. I. S. Edelman. He is not a Communist and has never expressed any feelings toward communism. He is truly a loyal American. Help him so clear his name.

MILTON KREPS.

BROOKLYN, N. Y., May 22, 1949.

HON. BRIEN McMAHON,  
*Chairman, Joint Congressional Committee,  
United States Senate, Washington, D. C.:*

May I urge you to help clear the name of my old friend, Dr. Isidore S. Edelman. He is truly a loyal American and has no communistic tendencies.

AARON J. LANDSMAN.

BROOKLYN, N. Y., May 22, 1949.

HON. BRIEN McMAHON,  
*Chairman, Joint Congressional Committee,  
United States Senate, Washington, D. C.:*

Please help to clear the name of a fine American. I have known Dr. I. Edelman since childhood and have never heard him express sympathy toward the Communist Party.

JEROME ROSEMARIN.

BROOKLYN, N. Y., May 22, 1949.

HON. BRIEN McMAHON,  
*Chairman, Joint Congressional Committee,  
United States Senate, Washington, D. C.:*

During several years association with Dr. Isidore S. Edelman he has repeatedly demonstrated unswervingly loyalty to the United States and contempt of communism and its sympathizers.

DR. ISIDORE G. LIGHTMAN.  
MRS. IDA B. LIGHTMAN.  
MRS. HELEN L. HALPERIN.

BRIDGEPORT, CONN., May 23, 1949.

BRIEN McMAHON,  
*Chairman of the Joint Atomic Congressional Committee,  
Washington, D. C.:*

I have listed Dr. Isidore Edelman amongst my friends for many years and definitely know him to be a true and loyal American.

S. BRIER.

NEW YORK, N. Y., May 23, 1949.

Hon. BRIEN McMAHON,  
*Chairman, Joint Congressional Committee on Atomic Energy,  
 United States Senate, Washington, D. C.:*

We the undersigned members and former members of the Montefiore Hospital house staff wish to have our names added to the following testimonial already sent to you in support of Dr. Isidore S. Edelman. We the undersigned members and former members of the Montefiore Hospital house staff have been professionally and personally associated with Dr. Isidore S. Edelman during the period from January 1947 to December 1948. We unequivocally state that by every word and deed he has consistently been loyal to the Government of the United States and that he is of exceptional moral character. His material and intellectual honesty is above reproach. We have never known him to be guilty of any subversive or potentially subversive action. He has always demonstrated to us his profound scientific and professional ability. He has made and will continue to make significant contributions to the advance of American medical science. We believe it would be of untold detriment to our country's progress if a loyal individual such as Dr. Edelman were to be deprived of support in his education and investigation.

*Chairman of the Joint Atomic Congressional Committee,  
 Washington, D. C.:*

I have known Dr. Isidore Edelman a good many years and have always known him to be a good, loyal American citizen.

PHILIP SPEICHER.

BRIDGEPORT, CONN., May 23, 1949.

Senator BRIEN McMAHON,  
*Chairman of the Joint Atomic Congressional Committee,  
 Washington, D. C.:*

I have known Dr. Isidore Edelman for a good many years and have always known him to be a good and loyal American citizen.

MORRIS SPEICHER.

JACKSON HEIGHTS, N. Y., May 23, 1949.

Hon. BRIEN McMAHON,  
*Chairman, Joint Congressional Committee United States Senate,  
 Washington, D. C.:*

Dr. Isidore Edelman unquestionably patriotic citizen with allegiance only to American Government.

Dr. and Mrs. H. LICHTMAN.

BALTIMORE, Md., May 23, 1949.

Senator BRIEN McMAHON,

*Chairman, Joint Investigating Committee on Atomic Energy,  
Washington, D. C.:*

I have known Dr. I. S. Edelman since 1941. I went to medical school with him and served with him in the Army. Never in our many social and professional conversations did he express disloyal sentiments. I regard him as honest and patriotic.

M. T. EATON, M. D.

BOSTON, MASS., May 24, 1949.

Senator BRIEN McMAHON,

*Chairman Joint Committee on Atomic Energy, Washington, D. C.:*

Regarding case of Atomic Energy Commission fellow, Isadore Edelman, he is outstanding young scientist at present working in my department at Harvard Medical School. I would be glad to come to Washington to testify if this would be helpful to you and the members of your committee. Will await your instructions.

FRANCIS MOORE,  
*Professor of Surgery, Harvard Medical School.*

## ATOMIC ENERGY COMMISSION FELLOWSHIP CONTRACT WITH THE NATIONAL RESEARCH COUNCIL

CONTRACT No. AT-49-1-GEN-150

THIS CONTRACT, entered into this 18th day of August 1948, effective as of January 1, 1948, by the United States of America, represented by the United States Atomic Energy Commission (hereinafter called the Commission) and the National Academy of Sciences (hereinafter called the Contractor), a nonprofit organization organized under an Act of Congress of March 3, 1863 (12 Stat. 806), having its principal office at 2101 Constitution Ave., Washington 25, D. C.

### WITNESSETH THAT:

Whereas, a letter contract effective as of January 1, 1948, which is hereby superseded, was entered into between the Commission and the Contractor, in which it was agreed that negotiations should be undertaken for the execution of a definitive contract; and

Whereas, this contract is entered into under the Atomic Energy Act of 1946 in the interest of the common defense and security.

Now THEREFORE, the parties hereto mutually agree as follows:

### ARTICLE I. SCOPE OF WORK

In accordance with policies and programs from time to time agreed upon by the Commission and the Contractor (including the qualifications and methods of selection of Fellows, the general fields of work to be performed by the Fellows, the amount of fellowship stipends, and other conditions of fellowship awards), the Contractor shall:

- (a) Establish and administer a Research Fellowship Program in the physical sciences related to atomic energy;
- (b) Establish and administer a Research and Training Fellowship Program in the medical and biological sciences related to atomic energy.

### ARTICLE II. TERM OF WORK

(a) The term of this contract shall begin on January 1, 1948, and continue through June 30, 1950, and may thereafter be extended as agreed upon by the Commission and the Contractor. The Commission, by written notice, may terminate the contract in whole or in part at any time.

## ARTICLE III. REIMBURSEMENT FOR COSTS

(a) The Government shall reimburse the Contractor for all direct and indirect costs, determined in accordance with generally accepted accounting principles consistently applied, which are actually incurred by the Contractor in performing the work under this contract. These costs shall include the following:

(1) stipends to Fellows and expenses of Fellows reimbursed by the Contractor;  
 (2) overhead and expenditures for salaries, wages, subsistence or per diem in lieu thereof, services, supplies, taxes, premiums for such bonds or insurance as the Commission may require or approve, transportation and communication, equipment and apparatus, and any other cost which the Commission may approve or ratify;

(3) In the event that this contract is terminated by the Commission, the costs resulting from or attributable to the termination;

(4) any other costs and expenses not otherwise reimbursed, which are actually incurred by the Contractor in good faith arising out of or connected with the work under this contract. Any cost or expense actually incurred and claimed by the Contractor under this paragraph (a) (4) of Article III shall be reimbursed by the Government unless the Commission shall establish that such cost or expense resulted from wilful misconduct or bad faith on the part of some corporate officer or officers of the Contractor, or on the part of a person having general supervision over the work carried on under this contract. Any dispute as to whether such an item is reimbursable shall be determined pursuant to Article VII, Disputes, which determination shall be binding on the Contractor and the Government. The total amount of expenditures under this contract for which the Contractor shall be entitled to reimbursement shall not exceed \$1,177,200, to be a charge such obligatory authority as the Commission may designate.

(b) Reimbursement under the foregoing provisions shall be without duplication of any items.

(c) Any revenues received by the Contractor in connection with work under this contract shall be accounted for by the Contractor and applied by the Contractor in reduction of the cost of work under the contract.

## ARTICLE IV. PARTIAL AND ADVANCE PAYMENTS

(a) Partial and advance payments on account of costs including overhead may be made by the Commission upon application of the Contractor. Advances shall be deposited only with banks which are members of the Federal Reserve System or other banks which are approved by the Commission.

(b) At such intervals as shall be mutually agreed upon, but not less often than once a year, the Commission, in consultation with the Contractor, shall review in accordance with generally accepted accounting principles consistently applied the amount of costs including overhead actually incurred by the Contractor in the performance of the work during the preceding interval. Any excess of payments on account of costs above actual costs including overhead for the same period shall be applied by the Contractor in reduction of the cost of work under this contract or, if the Commission so directs, refunded promptly to the Government. Any deficit in payments to the Contractor shall be paid promptly to the Contractor by the Government.

## ARTICLE V. TITLE TO AND DISPOSITION OF PROPERTY

(a) Except as otherwise directed by the Commission, title to all property acquired by the Contractor, for which the Contractor shall be reimbursed or entitled to reimbursement under this contract, which is not expended in the course of performing the contract, shall vest in the Government when title passes from the vendor.

(b) The Contractor shall not be liable for the loss or destruction of or damage to such property unless the Commission shall establish that such loss, destruction, or damage resulted from the wilful misconduct or bad faith of a corporate officer or officers of the Contractor, or of a person having general supervision over the work carried on under this contract.

(c) Within a reasonable time after the termination of this contract, the Contractor shall render, in accordance with procedures agreed upon by the parties, an accounting of all property not theretofore expended in performance of the contract.

(d) Unless otherwise directed by the Commission, the Contractor may sell or retain any such property upon application of the proceeds of sale or the fair value thereof (to be determined according to procedures agreed upon between the Commission and the Contractor) in reduction of the costs under the contract.

#### ARTICLE VI. RECORDS, INSPECTIONS, AND REPORTS

(a) The Contractor shall maintain such accounting and other records as the Commission may require or approve.

(b) The Commission may inspect such records, and may also inspect all activities and facilities of the Contractor relating to work under this contract and to the activities of Fellows.

(c) The Contractor shall make such reports concerning its activities and progress under this contract and require such reports from Fellows concerning their activities during the period of their fellowships, as the Commission may from time to time require.

#### ARTICLE VII. DISPUTES

All disputes which may arise under this contract, and which are not disposed of by mutual agreement, shall be decided by a representative of the Commission duly authorized to supervise and administer performance of the work under this contract, who shall reduce his decision to writing and mail a copy thereof to the Contractor at its address shown herein. Within thirty days from receipt of such notice, the Contractor may appeal in writing to the Commission, whose written decision or that of its other designated representative or representatives or board thereon shall be final and conclusive. Pending decision of a dispute the Contractor shall diligently proceed with the performance of this contract.

#### ARTICLE VIII. PATENTS

(a) The Contractor agrees to award fellowships subject to the following conditions:

(1) That no claim for a pecuniary award or just compensation under any provisions of the Atomic Energy Act of 1946 shall be asserted by the Fellow as to any inventions or discoveries made or conceived during the period of a fellowship; and

(2) That the Commission reserves the right to determine the disposition of title to and rights in and to any inventions or discoveries made or conceived by the Fellow during the period of the fellowship.

(b) The Contractor agrees to assist the Commission in securing from Fellows necessary technical information concerning such inventions or discoveries.

#### ARTICLE IX. DISCLOSURE OF INFORMATION

(a) It is understood that disclosure of classified information relating to the work under this contract to any person not entitled to receive it, or failure to safeguard all top secret, secret, confidential and restricted matter that may come to the Contractor or any person under its control in connection with the work under this contract, may subject the contractor, its agents, employees, and subcontractors to criminal liability under the laws of the United States. See the Atomic Energy Act of 1946 (Public Law 585, 79th Congress). See also Title I of an Act approved June 15, 1917 (40 Stat. 217; 50 U. S. C. 31-42), as amended by an Act approved March 28, 1940 (54 Stat. 79); and the provisions of an Act approved January 12, 1938 (52 Stat. 3; 50 U. S. C. 45-45d), as supplemented by Executive Order No. 8381, dated March 22, 1940 (5 F. R. 1147).

(b) The Contractor agrees to conform to all security regulations and requirements of the Commission. Except as the Commission may authorize, in accordance with the provisions of the Atomic Energy Act of 1946, the Contractor agrees

not to permit any individual to have access to restricted data until the Federal Bureau of Investigation shall have made an investigation and report to the Commission on the character, associations, and loyalty of such individual and the Commission shall have determined that permitting such person to have access to restricted data will not endanger the common defense or security. The term "restricted data" as used in this paragraph means all data concerning the manufacture or utilization of atomic weapons, the production of fissionable material, or the use of fissionable material in the production of power, but shall not include any data which the Commission from time to time determines may be published without adversely affecting the common defense and security.

(c) It is expected that the work of the Contractor under this contract generally will not involve "restricted data." In the event doubt exists as to whether any data received by the Contractor in the course of performing this contract constitutes "restricted data," the Contractor, prior to releasing any such data, shall consult the Commission about measures which should be taken to safeguard such data.

#### ARTICLE X. ASSIGNMENT OR TRANSFER

Neither this contract, nor any interest or claim relating to this contract, shall be assigned or transferred, except with the prior approval of the Commission in writing.

#### ARTICLE XI. ANTIDISCRIMINATION

(a) The Contractor, in performing the work required hereunder shall not discriminate against any applicant for a fellowship because of race, creed, color, or national origin.

(b) This Article shall be applicable to the extent provided by law.

#### ARTICLE XII. OFFICIALS NOT TO BENEFIT

No member of or delegate to Congress or resident commissioner shall be admitted to any share or part of this contract or to any benefit that may arise therefrom.

#### ARTICLE XIII. DEFINITIONS

The term "Commission" as used in this contract means the United States Atomic Energy Commission or its duly authorized representative or representatives.

The term "Fellow" as used in this contract means any person awarded a fellowship by the Contractor in accordance with the provisions of this contract.

UNITED STATES OF AMERICA

By Carroll L. Wilson

CARROLL L. WILSON

NATIONAL ACADEMY OF SCIENCES

By ALFRED N. RICHARDS, *President.*

CONTRACT No. AT-49-1-GEN-150, MODIFICATION No. 1

MARCH 22, 1949.

NATIONAL RESEARCH COUNCIL,  
National Academy of Sciences, Washington, D. C.

GENTLEMEN: The above-numbered contract is amended by substituting for the last sentence of article III (a) (4) the following sentence: "The total amount of expenditures under this contract for which the Contractor shall be entitled to reimbursement shall not exceed \$2,850,000, to be a charge upon such obligational authority as the Commission may designate"; and by substituting in line 2 of article II (a) the date "June 30, 1952" for the date "June 30, 1950."

UNITED STATES OF AMERICA,  
By CARROLL L. WILSON,  
General Manager, U. S. Atomic Energy Commission.

Accepted.

NATIONAL ACADEMY OF SCIENCES IN BEHALF OF NATIONAL RESEARCH COUNCIL.

By \_\_\_\_\_  
Title \_\_\_\_\_

## COST OF FELLOWSHIPS

The basic stipend schedule was determined by the National Research Council in accordance with criteria specified by the Atomic Energy Commission. A number of points were considered in establishing the schedule:

- Consistency with stipends paid by comparable fellowship programs.
- Cost of living and economic conditions.
- Provision of subsistence for dependents, etc.

The schedule now in effect provides:

	Predoctoral	Postdoctoral
Basic stipend.....	\$1,600	\$3,000
Subsistence for wife.....	500	500
Subsistence for first child.....	250	250
Subsistence for second child.....	250	250
Maximum allowed.....	2,600	4,000

<sup>1</sup> Assumes fellow is in at least the second year of graduate work. In the case of predoctoral fellowships in biology and medicine, there are some first year graduate fellowships at \$1,500 basic stipend.

In general, it is expected that the average duration of the predoctoral fellowship will be 2 years. Some will be for 1 year or less and in a few unusual cases the fellowship may continue for 3 years. In the case of postdoctoral fellowships, the maximum period will be 2 years.

The total cost of a fellowship includes: Stipend, university fees, including tuition and other fees required by the university of all students with similar university status, and in a few cases research equipment, travel to the institution (but not return) for the fellows only (not dependents), in many cases the fellow will already be in residence, and administrative costs of the National Research Council. Expenses to date (less than one full year's experience), indicate that the average total annual cost per fellow will be:

Predoctoral, 1 year..... \$3,200  
Postdoctoral, 1 year..... 4,800

**FELLOWSHIPS AWARDED**  
*Recapitulation of fellowship awards*

	Awards made to date		Total fellowship level (includes new awards and renewals)		
	1948 <sup>1</sup>	1949	Fiscal year 1949	Fiscal year 1950	Fiscal year 1951
<b>Physical science:</b>					
Predoctoral.....	147	120	146	300	300
Postdoctoral.....	11	23	11	40	50
Subtotal.....	158	143	157	340	350
<b>Biology and medical sciences:</b>					
Medical postdoctorals.....	25	24	100	173	200
Biology postdoctorals.....	7	13	50	89	100
Biology predoctorals.....	55	45	175	312	350
Technical (health physics).....	17	0	25	50	50
Subtotal.....	104	82	350	624	700
Grand total, all fellowships.....	261	225	507	964	1,050

<sup>1</sup> Fellowships granted during 1948 become active in fiscal year 1949.

*Atomic Energy Commission postdoctoral fellowships in the physical sciences, National Research Council*

FELLOWS APPOINTED IN 1949 (APR. 6, 1949 MEETING)

Name	Location and supervisor	Field of specialization	Term	Stipend
Bender, Myron L.	Harvard University: P. D. Bartlett.	Organic chemistry, reaction mechanisms.	Sept. 1, 1949-Aug. 31, 1950	\$3,000
Burr, Frank P.	California Institute of Technology: J. G. Kirkwood.	Statistical mechanics of liquids both equilibrium and nonequilibrium.	Aug. 1, 1949-July 31, 1950	3,000
Castellan, Gilbert W.	Carnegie Institute of Technology: F. Seitz.	Reaction kinetics, theoretical physics.	Oct. 15, 1949-Oct. 14, 1950	3,000
Clapp, Roger E.	Massachusetts Institute of Technology: H. Feshbach.	Theoretical nuclear physics.	July 1, 1949-June 30, 1950	3,000
Cooke, William D.	Princeton University: N. Howell Furman.	Development of electrical methods of analysis.	Sept. 1, 1949-Aug. 31, 1950	3,750
Glauber, Roy J.	Institute for Advanced Study: W. Pauli, Jr.	Theories of elementary particles and atomic nuclei.	Sept. 28, 1949-Sept. 25, 1950	3,000
Goldstein, Herbert.	Massachusetts Institute of Technology: V. Weisskopf.	Relativistically invariant meson theories to the explanation of nuclear forces.	Sept. 15, 1949-Sept. 14, 1950	3,000
Gomer, Robert.	Harvard University: G. B. Kistiakowsky.	Reaction kinetics photochemistry, solid state, spectroscopy.	do.	3,000
Gordon, Maxwell.	University of California: Melvin Calvin.	Organic chemistry, reaction mechanisms, and isotopic tracers in biology.	July 1, 1949-June 30, 1950	3,000
Griffith, Wayland C.	Princeton University: W. Gleason.	Study of shock waves.	Oct. 1, 1949-Sept. 30, 1950	3,000
Jungerman, John A.	Cornell University: H. A. Bethe.	Mechanism of fission produced by high-energy projectiles.	Sept. 15, 1949-Sept. 14, 1950	3,500
Kasha, Michael.	University of Chicago: R. S. Milliken.	Molecular optical phenomena.	do.	3,500
Keplin, George R., Jr.	University of California: E. Segre.	Nuclear physics, measurement of neutro distributions.	Oct. 15, 1949-Oct. 14, 1950	3,750
Koshland, Daniel.	Harvard University: P. D. Bartlett.	Mechanisms of organic reactions.	Oct. 1, 1949-Sept. 30, 1950	3,750
Peaslee, David C.	E. T. H. Zurich, Switzerland: P. Scherrer.	Nuclear structure and reactions.	Sept. 1, 1949-Aug. 31, 1950	3,500
Shuler, Kurt E.	Johns Hopkins University: F. I. McClure.	Quantum mechanics and statistical mechanisms to rate processes.	July 1, 1949-June 30, 1950	3,500
Shulman, Robert G.	Cambridge University (England): G. B. B. M. Sutherland.	Microwave spectroscopy.	Sept. 1, 1949-Aug. 31, 1950	3,000
Skinner, Miriam.	University of California: E. O. Lawrence.	Nuclear physics.	Oct. 15, 1949-Oct. 14, 1950	3,000
Stonick, Murray.	Institute for Advanced Study.	Reaction kinetics and mechanisms.	July 1, 1949-June 30, 1950	3,000
Stevenson, Peter C.	University of California: G. Seaborg.	Natural kinetics and mechanisms.	Oct. 1, 1949-Sept. 30, 1950	3,500
Welsborn, Frank L.	Harvard University: R. B. Woodward.	Natural products, isolation, proof of structure, synthesis.	Oct. 10, 1949-Oct. 9, 1950	4,000
Whaling, Ward.	California Institute of Technology: C. C. Lauritsen.	Nuclear reactions in the light elements.	Sept. 1, 1949-Aug. 31, 1950	3,000
Wright, Arianna.	Stanford University: F. Bloch.	Nuclear resonance phenomena.	Sept. 15, 1949-Sept. 14, 1950	3,000

*Atomic Energy Commission postdoctoral fellowships in the physical sciences, National Research Council—Continued*

FELLOWS APPOINTED IN 1948

Name	Location and supervisor	Field of specialization	Term	Stipend
Akutowicz, Edwin J.	Institute for Advanced Study: J. von Neuman.	Mathematics, operator theory, functional analysis.	Aug. 1, 1948–July 31, 1949	\$2,000
Eyres, Leonard	University of Adgbaston (England): K. E. P. P. P.	Distribution of scattered electrons in cosmic-ray extension showers.	Sept. 1, 1948–Aug. 31, 1949	3,400
Feldman, David	Institute for Advanced Study: J. R. Oppenheimer.	Higher order approximations in the meson theory of nuclear theory	Jan. 31, 1949–Feb. 1, 1950	3,400
Fireman, Edward L.	Princeton University: M. G. White.	Double beta decay	Nov. 17, 1948–Nov. 16, 1949	3,700
Guckstein, Robert L.	University of California: R. Serber.	Problems in electromagnetic theory arising in high energy nuclear acceleration of bound fraction in polycyclic systems	Aug. 10, 1948–Aug. 13, 1949	3,400
Hunsberger, I. Moyer	University of Illinois: C. S. Marvel	Determination of bond fraction in polycyclic systems	Oct. 1, 1948–Sept. 30, 1949	4,000
Kierstead, Henry A.	Institute for Advanced Study: W. F. Libby.	Use of radioactive tracers to investigate chemical problems.	July 1, 1948–June 30, 1949	3,000
Lepore, Joseph V.	Institute for Advanced Study: J. R. Oppenheimer.	Theory of nuclear forces.	Sept. 1, 1948–Aug. 31, 1949	3,400
Rosenberg, Jerome L.	University of Chicago: J. Moyer.	Second order effects in the diffusion of polymer solutions.	Sept. 27, 1948–Sept. 26, 1949	3,400
Spruch, Lawrence	Massachusetts Institute of Technology: H. Feshbach.	Theory of light nuclei with emphasis on B-decay.	Sept. 28, 1948–Sept. 28, 1949	3,000
Wilson, Earl A.	University of Chicago: W. F. Libby.	Dielectric properties of alkali-halide crystals.	July 1, 1948–June 30, 1949	4,000

*Atomic Energy Commission predoctoral fellowships in the physical sciences, National Research Council*

FELLOWS APPOINTED IN 1949 (MAR. 19 AND 20 MEETING)

Name	Location and supervisor	Field of study	Term	Stipend
Adair, Robert K.	University of Wisconsin: H. H. Barsehall.	Interactions of neutrons with nuclei and the study of nuclear isomeric levels.	Sept. 15, 1949–Sept. 14, 1950	\$1,600
Albenusius, Edward L.	University of North Carolina: Arthur Roe.	Tracer work with carbon-14.	do.	1,600
Aronson, Raphael.	Harvard University: J. Swinger.	Theoretical physics, quantum mechanics.	July 1, 1949–June 30, 1950	1,600
Aurora, Silvio.	Columbia University: E. R. Lorch.	Normed abelian rings and their applications.	do.	1,600
Austern, Norman	University of Wisconsin: R. G. Sachs.	Theoretical nuclear physics.	do.	1,600
Bannister, Robert G.	University of Illinois: R. C. Fuson.	Organic chemistry.	Sept. 1, 1949–Aug. 13, 1950	1,600
Bengelsdorf, Irving S.	University of Illinois: M. S. Kharasch.	Reactions of free radicals in solution.	July 1, 1949–June 30, 1950	1,600
Biles, John A.	University of Colorado.	Determination of optical and crystallographic properties and gonometric measurements of metabolites and antibiotics and similar compounds containing tracer elements.	April 1, 1949–Mar. 31, 1950	2,600

Bloom, Stewart D.	University of Chicago: Dr. Fermi or Dr. Si Simpson.	Nuclear and atomic physics	Aug. 15, 1949-Aug. 14, 1950	1,600
Bratman, Fred.	University of Michigan: E. D. Rainville	Mathematics	Sept. 15, 1949-Sept. 14, 1950	1,600
Brown, Richard H.	Columbia University: B. O. Koopman	Linear partial differential-difference equations as applied to the theory of combat.	Aug. 15, 1949-Aug. 14, 1950.	1,600
Bruner, Joseph A.	Indiana University: L. M. Langer.	Nuclear physics	Sept. 1, 1949-Aug. 31, 1950.	1,600
Canac, Morton	Cornell University: R. R. Wilson.	Nuclear physics	(C)	1,600
Cerwonka, Edward	Fordham University: Ellis Brown.	Study of organic reaction mechanisms	July 1, 1949-June 30, 1950.	1,600
Chupka, William A.	University of Chicago: J. E. Mayer	Atomic and molecular structure	do.	1,600
Cleland, Marshall R.	Washington University: S. DeBenedetti.	Crystal counters for the detection of nuclear radiations.	Sept. 1, 1949-Aug. 31, 1950.	2,100
Conroy, Harold	Harvard University: Gilbert Stork	Organic chemistry (proof of structure and synthesis of natural products)	do.	2,100
Crawford, Jean V. (Miss)	University of Illinois: R. L. Frank	Reactions of peroxides derived from pyridine carboxylic acids	July 1, 1949-June 30, 1950.	1,600
Crowell, Albert D.	Brown University: H. E. Farnsworth	Chemical physics—surface phenomena, in particular, adsorption of gases by solids.	do.	2,100
Dalton, Richard L.	University of Illinois: J. C. Ballar, Jr.	Inorganic complex compounds.	do.	2,350
Davis, Stanley G.	University of Chicago: J. E. Mayer	Heats of sublimation of ionic crystals by effusion using radioactive tracers.	do.	1,600
Davis, Horace C.	Harvard University: Lynn Loomis	Mathematics	do.	2,100
Diven, Benjamin C.	University of Illinois: G. M. Almy	Experimental nuclear physics	Aug. 1, 1949-Sept. 30, 1950	1,600
Dressel, Ralph	University of Illinois: G. D. Adams	High energy X-rays or electrons from the betatron	July 1, 1949-June 30, 1950	2,100
Duncan, Donald B.	California Institute of Technology: C. C. Lauritsen	Nuclear physics	do.	2,350
Dye, Henry A.	University of Chicago: I. E. Segal.	Mathematics—locally convex algebras	do.	1,600
Ellman, J. B.	Princeton University: E. P. Wigner.	Theoretical nuclear physics	Oct. 15, 1949-Oct. 14, 1950	1,600
Ellis, James W.	Tulane University: B. F. Pettis	Pure mathematics	July 1, 1949-June 30, 1950	1,600
Englund, Bruce	University of Illinois: Roger Adams	Addition reactions and properties of alpha-acetamidoacrylic acid.	July 1, 1949-June 30, 1950	2,350
Fennell, Joseph B.	Princeton University: S. J. Schetz	Mathematics—analysis in the large	Sept. 1, 1949-Aug. 31, 1950	2,350
Ferrell, Richard A.	Princeton University: E. Wigner	Theoretical nuclear research and quantum mechanics	Sept. 19, 1949-Sept. 18, 1950	1,600
Ford, Gilbert C.	Harvard University: K. T. Bainbridge	Nuclear physics—mass spectroscopy	July 1, 1949-June 30, 1950	2,100
Freilich, Gerald	Brown University: H. Federer.	Mathematics	do.	1,600
Freistadt, Hans	University of North Carolina: Nathan Rosen	Theoretical physics	do.	1,600
Frye, G. M., Jr.	University of Michigan: M. L. Wiedenbeck	Determination of nuclear energy levels by inelastic scattering	do.	2,100
Geller, Leonard	Massachusetts Institute of Technology: Norbert Wiener	Various asymptotic formulae for arithmetical functions.	June 13, 1949-June 12, 1950	2,350
Gell-Mann, Murray	Massachusetts Institute of Technology: V. F. Weisskopf	Nuclear physics and elementary particle physics.	Aug. 1, 1949-Sept. 30, 1950	1,600
Gier, Thurman E.	Researcher Polytechnic Institute: J. Hoesler	Solvent extraction efficiency	Sept. 20, 1949-Sept. 19, 1950	2,600
Goad, Walter B., Jr.	Duke University: L. W. Nordheim	Theory of the extensive showers of cosmic radiation.	Sept. 15, 1949-Sept. 14, 1950	1,600
Golden, Harold R.	Warner University: W. J. Bailey	Dimethylene-cyclohexane and cyclohexane derivatives	July 1, 1949-June 30, 1950	2,600
Goldring, Lionel S.	Massachusetts Institute of Technology: C. C. Corvall	The ionization constants of some electrolytes	do.	1,600
Gray, Sidney	Rutgers University: H. G. Torrey	Nuclear magnetic moments	July 1, 1949-June 30, 1950	1,600
Green, Leon W.	Yale University: Einar Hille	Mathematics—analysis	Sept. 20, 1949-Sept. 19, 1950	1,600
Griffin, Ernest L.	University of Chicago: I. E. Segal	Functional analysis and topological algebras	Sept. 26, 1949-Sept. 25, 1950	1,600
Harrison, William B.	University of Tennessee: R. M. Boaris	Chemical engineering—heat transfer and fluid mechanics.	Sept. 15, 1949-Sept. 14, 1950	2,100
Haffner, Hubert	Stanford University: L. M. Field	Electrical engineering, electromagnetic theory	July 1, 1949-June 30, 1950	2,100
Heller, William R.	Washington University: H. Primakoff	Theoretical physics of matter	Aug. 1, 1950-Sept. 30, 1950	2,100

<sup>1</sup> Starting date uncertain due to injury—possibly summer.

## Atomic Energy Commission predoctoral fellowships in the physical sciences, National Research Council—Continued

FELLOWS APPOINTED IN 1949 (MAR. 19 AND 20 MEETING)—Continued

Name	Location and supervisor	Field of study	Term	Stipend
Jaffe, Bernard M.	New York University: G. Goertzel	Nuclear physics and nuclear forces	Sept. 15, 1949–Sept. 14, 1950	\$1,600
Jones, Lewellyn, H.	California Institute of Technology: R. M. Bader	Investigation of molecular structure of nitrous acid, nitric acid, etc. with use of infra-red spectroscopy.	July 1, 1949–June 30, 1950	2,100
Kalkstein, Marvin	University of Chicago: W. F. Libby	Physical chemistry—radiochemistry	do.	1,600
Keck, James C.	Cornell University: K. G. Reisel	Experimental physics—nuclear physics	Sept. 20, 1949–Sept. 19, 1950	2,100
Kelson, Julian	Harvard University: J. Schwinger	Theoretical nuclear physics	July 1, 1949–June 30, 1950	1,600
Kelber, Charles	University of Minnesota: E. L. Hill	Theoretical physics—electrodynamics	Sept. 15, 1949–Sept. 14, 1950	1,600
Keyes, John J., Jr.	University of Delaware: A. P. Colburn	Heat and mass transfer phenomena	Sept. 22, 1949–Sept. 21, 1950	2,100
Kirk, Paul F.	University of Notre Dame: C. C. Price	Organic chemistry—physico-chemical studies or organic reactions mechanisms	July 1, 1949–June 20, 1950	1,600
Landauer, Rolf W.	Harvard University: Leon Brillouin	Theoretical physics—quantum mechanics solid state	do.	1,600
Leighton, Morris W.	University of Chicago: Hans Ramberg	Geochemistry igneous petrology—contact metasomatic effect of basic igneous rocks on sediments	do.	2,100
Livesey, George R.	University of Illinois: D. G. Bourgin	Mathematics—topology	Sept. 1, 1949–Aug. 31, 1950	1,600
Lloyd, Stuart P.	University of Illinois: S. M. Dancoff	Theoretical physics	do.	2,600
Malm, Robert E.	Massachusetts Institute of Technology: W. W. Buechner	Nuclear physics	July 1, 1949–June 30, 1950	1,600
Marshall, John H.	Massachusetts Institute of Technology: R. D. Evans	Shape of the beta spectrum of $K^0$ by the use of a liquid argon ionization chamber.	do.	1,600
Matsuda, Ken	University of Maryland: E. F. Pratt	Physical organic chemistry	do.	2,100
McClelland, Alan L.	University of Illinois: J. C. Bailar, Jr.	Stability of coordination compounds of silver	July 1, 1949–June 30, 1950	2,350
McGoy, Robert E.	Cornell University: S. H. Bauer	Inorganic chemistry—formation and dissolution of the chemical bond	Sept. 16, 1949–Sept. 15, 1950	1,600
McNeer, Richard M.	University of Chicago: W. H. Urry	Organic chemistry	July 1, 1949–June 30, 1950	2,350
Michel, Rudolph H.	Notre Dame University: C. C. Price	Influence of substituents in the naphthalene rings on the reactivity of naphtholic acid esters	do.	2,100
Miller, Clair E.	University of Chicago: Edwin Spanier	Mathematics—topology	Oct. 1, 1949–Sept. 30, 1950	2,100
Montet, George L.	University of Chicago: J. E. Mayer	Physical chemistry—quantum mechanics	July 1, 1949–June 30, 1950	2,100
Moore, Edward F.	Brown University: H. Federer	Mathematics, measure theory and the theory of area	do.	1,600
Moy, Shu-Teh Chen	University of Illinois: J. L. Doob	Mathematics—analysis	Sept. 1, 1949–Aug. 31, 1950	1,600
Nash, John F., Jr.	Princeton University: N. E. Steenrod	Mathematics—topology	July 1, 1949–June 30, 1950	1,600
Nelson, Bruce K.	University of Iowa: Arthur Roberts	Microwave spectroscopy	July 19, 1949–July 18, 1950	2,350
Newell, Gordon F.	University of Illinois: A. Nordieck	Theoretical physics	July 1, 1949–June 30, 1950	2,100
Newlander, August	University of Chicago: E. Spanier	Mathematics in the field of algebraic topology	Sept. 26, 1949–Sept. 25, 1950	1,600
Noyes, John O.	Notre Dame: W. C. Miller	Photo disintegration threshold of the deuteron and the mass of the neutron	July 1, 1949–June 30, 1950	2,600
O'Neill, Barrett	Massachusetts Institute of Technology: Warren Ambrose	Mathematics—topology	Sept. 27, 1949–Sept. 26, 1950	1,600
Ordway, Girard L.	Harvard University: E. B. Wilson, Jr.	Physical chemistry—Infrared spectroscopy	Sept. 1, 1949–Aug. 31, 1950	1,600
Osterbrock, Donald E.	University of Chicago: S. Chandrasekhar	Astronomy—astrophysics	Sept. 25, 1949–Sept. 24, 1950	1,600
Pearlsin, Edgar A.	Carnegie Institute of Technology: R. B. Sutton	Theory of solids—quantum mechanics	Sept. 20, 1949–Sept. 19, 1950	1,600
Pease, Robert L.	Massachusetts Institute of Technology: H. Feshbach	Theory of light nuclei, specifically the alpha particle	July 1, 1949–June 30, 1950	2,100
Perry, Alfred M., Jr.	University of Rochester: S. W. Barnes	Nuclear physics	Sept. 1, 1949–Aug. 31, 1950	2,100

Plank, Harold F.	Massachusetts Institute of Technology: C. D. Coryell.	Complexes of tellurium and polonium.	Apr. 15, 1949-Apr. 14, 1950	2,100
Pond, Thomas A.	Princeton University: R. H. Dicke.	Nuclear physics.	Sept. 1, 1949-Aug. 31, 1950	1,600
Poss, George I.	University of Illinois: H. R. Snyder.	Organic chemistry on the chemistry of 1-cyano-1, 3 butadiene.	July 1, 1949-June 30, 1950	2,350
Price, Charles M.	University of Chicago: A. A. Albert.	Structure of algebras, particularly Jordan division algebras and their arithmetics.	do.	1,600
Ratner, Hymen.	University of Chicago: M. S. Kharasch.	Reactions of free radicals in solution.	do.	1,600
Reed, George W.	University of Chicago: A. Turkevitch.	Absolute fission yields from photo and fast neutron fission of thorium.	June 27, 1949-June 26, 1950	2,100
Reynolds, John L.	University of Rochester: G. B. Collins.	Nuclear physics.	Sept. 20, 1949-Sept. 19, 1950	1,600
Richardson, Harry M.	Harvard University: R. B. Holt.	Atomic physics.	Sept. 15, 1949-Sept. 14, 1950	2,350
Rorschach, Robert L.	Massachusetts Institute of Technology: W. G. Whitman.	Chemical engineering.	Aug. 1, 1949-July 31, 1950	2,350
Rosenberg, Robert M.	Northwestern University: I. M. Klatz.	Physical chemistry of proteins interaction of protein with small ions.	Sept. 23, 1949-Sept. 22, 1950	1,600
Sagalyn, Paul.	Massachusetts Institute of Technology: C. Goodman.	Nuclear physics—inelastic scattering of fast neutrons.	July 1, 1949-June 30, 1950	1,600
Sanford, Janet K.	Massachusetts Institute of Technology: J. D. Roberts.	Physical organic chemistry.	Sept. 15, 1949-Sept. 14, 1950	1,600
Sangster, Raymond.	Massachusetts Institute of Technology: J. W. Irvine, Jr.	Physical inorganic chemistry.	do.	1,600
Saur, Albert J.	University of Illinois: M. Goldhaber.	Nuclear isomers.	Sept. 1, 1949-Aug. 31, 1950	1,600
Schapp, Ward.	University of Illinois: J. C. Baller, Jr.	Inorganic chemistry.	do.	2,350
Schamp, Homer W., Jr.	University of Michigan: E. Katz.	Physics of solids.	July 1, 1949-June 30, 1950	2,100
Schwarz, Harold A.	Notre Dame: W. H. Hamill.	Kinetics: physical chemistry.	do.	1,600
Secret, Everett L.	Massachusetts Institute of Technology: C. Goodman.	Nuclear physics—theoretical interpretation of experimental results.	Sept. 15, 1949-Sept. 14, 1950	2,100
Segall, Benjamin.	University of Chicago: F. W. Loomis.	Theoretical and mathematical physics.	do.	1,600
Shapiro, Arnold S.	University of Chicago: A. Weil.	Algebraic topology.	July 1, 1949-June 30, 1950	1,600
Sheriff, Robert E.	Ohio State University: D. Williams.	Nuclear magnetic moments and other topics in physics.	Oct. 1, 1949-Sept. 30, 1950	2,100
Smith, Alan W.	Princeton University: J. Turkevitch.	Phosphorescence of solids at low temperatures.	Sept. 19, 1949-Sept. 18, 1950	1,600
Steinberger, Rudolph.	University of Chicago: F. H. Westheimer.	Organic chemistry.	July 1, 1949-June 30, 1950	1,600
Steuber, Walter.	University of Illinois: M. Goldhaber.	Decay schemes of radioactive isotopes.	Aug. 1, 1949-Sept. 30, 1950	2,350
Storer, James E.	Harvard University: L. Brillouin.	Electromagnetic theory, particularly radiation and diffraction problems.	Sept. 1, 1949-Aug. 31, 1950	1,600
Stump, Robert.	University of Illinois: F. W. Loomis.	Nuclear physics.	July 1, 1949-June 30, 1950	2,350
Sworski, T. J.	Notre Dame: M. Burron.	Radiation chemistry.	Sept. 1, 1949-Aug. 31, 1950	2,100
Tamor, Stephen.	University of Rochester: R. E. Marshak.	Theoretical physics—nuclear physics.	May 1, 1949-Apr. 30, 1950	2,100
Tellerbaum, Charles L.	Purdue University: N. Kornblum.	The Victor Meyer reaction.	July 1, 1949-June 30, 1950	2,350
Thomas, R. G.	California Institute of Technology: C. C. Lauritsen.	Physics.	do.	1,600
Tyner, David A.	University of Michigan: W. E. Bachmann.	Organic chemistry—synthesis of natural products.	do.	1,600
Uhlir, Arthur, Jr.	University of Chicago: A. W. Lawson.	Physics: theory of liquids.	do.	1,600
Van Yamen, E.	Harvard University: G. Stork.	The synthesis of carbanthrin.	Sept. 26, 1949-Sept. 25, 1950	1,600
Wahr, John-C.	University of Michigan: H. R. Crane.	Problems arising from the operation of the 300 Mev synchrotron.	do.	1,600
Weiser, David W.	University of Chicago: Henry Faub.	Reaction kinetics of aqueous ions.	July 1, 1949-June 30, 1950	2,100
Weneser, Joseph.	Columbia University: I. I. Rabi.	Quantum electrodynamics with applications to meson theory.	do.	1,600
Wlets, Lawrence.	Princeton University: A. G. Shenstone.	Atomic spectrum (measurements of Gull vacuum ultra-violet standard).	Sept. 15, 1949-Sept. 14, 1950	2,100
Willeford, B. R., Jr.	University of Wisconsin: N. F. Hall.	Physical analysis of elements in the first and/or second long period.	Sept. 1, 1949-Aug. 31, 1950	1,600

Wolicki, Eligius J.	University of Notre Dame: B. Waldman	X-ray and electron excitation of the separated isotopes of silver	do.	1,600
Worth, Donald C.	Yale University: E. Pollard	Coincidence technique improvements and study of neutron groups	July 1, 1948–June 30, 1949	2,400
Wright, Arianna	Harvard University: J. H. Van Vleck	Paramagnetic relaxation	Sept. 27, 1948–Sept. 26, 1949	1,600
Zimmerman, Edward J.	University of Illinois: P. G. Kruger	Scattering of charged particles at the high energies given by the University of Illinois cyclotron	Sept. 15, 1948–Sept. 14, 1949	1,900

FELLOWS APPOINTED IN 1949 (APR. 2, MEETING)

Name	Location and supervisor	Field of specialization	Term	Stipend
Barton, Donald W.	University of Missouri: L. J. Stadler.	Genetics.	July 1, 1949-June 30, 1950	\$3, 750
Benzer, Seymour.	California Institute of Technology: M. Delbruck.	Radiation microbiology	Sept. 1, 1948-Aug. 31, 1950	3, 750
Clark, Eugenie.	American Museum of Natural History: L. Aronson.	Genetics and ecology	Oct. 15, 1949-Oct. 14, 1950	3, 000
Coleman, Nathaniel T.	University of California: Hans Jenny	Reactions between phosphate ions and soil minerals.	July 1, 1949-June 30, 1950	3, 750
Hirshfield, Henry I.	University of Missouri: D. Mazia	Effects of enucleation and radiation on protozoa.	July 1, 1949-June 30, 1950	3, 500
Holt, Margaret W.	New England Deaconess Hospital: S. Warren.	Physiology, biochemical and biophysical studies of nucleoproteins.	Aug. 1, 1949-July 31, 1950	3, 000
Levedahl, Blaine H.	Princeton University: W. Kauzmann	Biochemistry	Sept. 1, 1949-Aug. 31, 1950	4, 000
Morris, David M.	Argonne National Laboratory: A. M. Bruce.	Effect of thioracil on the thyroplastic activity of antitumor T in hypoplasticized chicks.	Sept. 1, 1949-Aug. 31, 1950	3, 700
Neess, John C.	Yale University: G. E. Hutchinson	Limnology	Feb. 1, 1950-Jan. 31, 1951	3, 000
Stadtman, Earl R.	Massachusetts General Hospital: F. Lipmann.	Role of co-enzyme A in the synthesis of fatty acids.	Sept. 1, 1949-Aug. 31, 1950	3, 800
Wilcox, Philip E.	Harvard Medical School: J. T. Edsall	Structure of proteins as elucidated by their modification with organic reagents and interactions with organic molecules.	July 1, 1949-June 30, 1950	3, 000
Wolken, Jerome	University of Pittsburgh: M. A. Lauffer.	Biophysics—growth mechanisms.	Aug. 1, 1949-Sept. 30, 1950	3, 750
Yost, William L.	California Institution of Technology: C. Niemann.	Biochemistry serum reactions and immunology biophysics, protein, gene and enzyme structure and function.	Sept. 19, 1949-Sept. 18, 1950	3, 000

FELLOWS APPOINTED IN 1948

Finkle, Bernard J.	University of Cambridge: D. Keilin	Metabolism of porphyrin compounds.	Aug. 1, 1949-July 31, 1950	\$2, 500
Holt, Margaret W. (Mrs.)	New England Deaconess Hospital: Shields Warren.	Metabolism of tumor tissue, utilizing radioactive tracer techniques.	Aug. 1, 1948-July 31, 1949	3, 000
McBee, Richard H.	University of California: H. A. Barker.	Cellulose fermentations	Sept. 8, 1948-Sept. 7, 1949	4, 000
Potter, Richard L.	University of Wisconsin: D. E. Green.	Mechanism of synthesis of peptides or phospholipids by the cyclophosphase system.	Feb. 1, 1949-Jan. 31, 1950	4, 000
Rodin, Norman S.	University of California: H. A. Barker.	Intermediate metabolism of microorganisms with the aid of isotopes.	Feb. 2, 1949-Feb. 1, 1950	3, 400
Rosenfeld, Irene	University of California: C. A. Tobias.	Function of trace elements in malignant tissue.	Sept. 10, 1948-Sept. 9, 1949	3, 000
Stern, Malvin D.	Harvard University: Paul M. Doty	Antigen-antibody thermodynamics and kinetics and the effects of radiation thereon.	Oct. 1, 1948-Sept. 30, 1949	3, 400

## Atomic Energy Commission predocloral fellowships in the biological sciences, National Research Council

FELLOWS APPOINTED IN 1949 (MAR. 25 AND 26)

Name	Location and supervisor	Field of specialization	Term	Grant per annum
Anderson, Norman G.	Duke University: Karl M. Wilbur	Permeability of isolated nuclei to organic and inorganic substances	Apr. 4, 1949-Apr. 3, 1950	\$2,100
Aschman, Leonard	Yale University: J. S. Fruton	Enzymology	July 1, 1949-June 30, 1950	2,100
Berglund, Jeanne-Marie	Stanford University: H. S. Loring	Biochemistry	Sept. 28, 1949-Sept. 27, 1950	2,000
Bowen, George H., Jr.	California Institute of Technology: M. Tishler	Photoreactivation	Sept. 28, 1949-Sept. 25, 1950	2,000
Breakenridge, Bruce	University of Rochester: W. O. Fenn	Oxidation of carbon monoxide by vertebrate tissues	July 1, 1949-June 30, 1950	2,100
Brocher, Henry J.	St. Louis University: E. A. Dolsy	Metabolism—hydrolysis of conjugated steroids	do.	2,600
Cartwright, Thomas E., Jr.	University of Pittsburgh: M. A. Lauffer	Effects of irradiations on viruses	do.	2,600
Christensen, Eleanor	Stanford University: A. C. Giesse	Effects of radiation on biological materials	Sept. 28, 1949-Sept. 25, 1950	1,500
Conn, Eric E.	University of Chicago: E. A. Evans, Jr.	Nucleotide synthesis and degradation and the relationship to intermediary metabolism of carbohydrates	Apr. 1, 1949-Mar. 31, 1950	1,600
Copenhaver, John H., Jr.	University of Wisconsin: R. K. Meyer	Endocrinology and enzymology	July 1, 1949-June 30, 1950	2,600
Doernmont, Patricia	Yale University: J. S. Fruton	Biological oxidation reduction, protein chemistry and enzymes	July 1, 1949-June 30, 1950	1,600
Ekstein, Daniel M.	Polytechnic Institute of Brooklyn: K. G. Stern	Nucleic acids and nucleoproteins in normal and cancer tissue	Apr. 1, 1949-Mar. 31, 1950	1,600
Farnsworth, Marjorie W.	University of Missouri: M. J. Guthrie	Developmental genetics	Sept. 1, 1949-Aug. 31, 1950	1,600
Feldman, Louis J.	Indiana University: I. C. Gunsalus	Intermediate metabolism in the field of bacteriology	July 1, 1949-June 30, 1950	2,100
Fitch, Richard	John Hopkins University: H. K. Hartline	Biophysics, nervous system	Sept. 1, 1949-Aug. 31, 1950	1,600
Funkhouser, John W.	Stanford University: G. S. Myers	Ecology and systematics	Oct. 1, 1949-Sept. 30, 1950	1,600
Gauz, Aaron	University of Chicago: E. M. K. Gelling	Pharmacology—drug metabolism and mechanism of action studies; emphasis on use of radioactive isotopes	July 1, 1949-June 30, 1950	1,600
Garner, Harold R.	Purdue University: H. Koffler	Carbohydrate metabolism of actinomycetes	do.	2,600
Goodall, Sol H.	Johns Hopkins University: Carl Swanson	Cytogenetics, radiation biology	do.	2,350
Haskins, Francis A.	California Institute of Technology: H. K. Mitchell	Biochemical genetics of neurospora	Aug. 1, 1949-Sept. 30, 1950	1,600
Hill, Ruth F.	Columbia University: G. Falla	Effects of radiation on living tissues	Sept. 23, 1949-Sept. 21, 1950	1,600
Kautner, Harold H.	University of Chicago: R. E. Zirkle	Fundamental physical aspects of structure and function of cells and tissues	Sept. 28, 1949-Sept. 25, 1950	2,000
Kanwisher, John W.	University of Rochester: W. F. Bale	Biophysics—physical nature of proteins	July 1, 1949-June 30, 1950	2,100
Krebs, John S.	Not determined	Pharmacology and biophysics	do.	1,500
Kurtz, Edwin B., Jr.	California Institute of Technology: J. Bonner	Plant physiology and plant-fat metabolism	Sept. 28, 1949-Sept. 25, 1950	1,600
Lindley, Dan L., Jr.	California Institute of Technology: A. H. Sturtevant	Genetics of drosophila	Oct. 1, 1949-Sept. 30, 1950	2,100
McCormick, Mack H.	University of Illinois: H. E. Carter	Inositol containing lipids and the metabolism of inositol in animals	Sept. 1, 1949-Aug. 31, 1950	2,350
McMaster, Rachel D.	Columbia University: A. W. Pollister	Cytology—mitosis	do.	1,600
Mills, Edgar W., Jr.	University of Chicago: R. E. Zirkle	Physiology of living systems, as interpreted through physics	Sept. 20, 1949-Sept. 19, 1950	1,600
Morowitz, Harold J.	Yale University: E. Pollard	Biophysics	July 1, 1949-June 30, 1950	2,100

O'Meara, John C.	Massachusetts Institute of Technology: B. E. Proctor	Food technology, inactivation of enzymes in foods by supervoltage cathode rays.	Sept. 15, 1949–Sept. 14, 1950	2,350
Pieczur, Elizabeth A.	University of Michigan: C. D. LaRue	Experimental morphology and tissue culture.	July 1, 1949–June 30, 1950	1,600
Rediste, John H.	State College of Washington: Orin Bidduch	Absorption and metabolism of radio-iron in plants.	do.	2,100
Richards, Frederic M.	Harvard Medical School: J. T. Edsall	Physical chemistry of proteins as applied to determination of protein structure.	Sept. 1, 1949–Aug. 31, 1950	2,100
Schneidman, Howard A.	Harvard University: C. M. Williams	General physiology and developmental metabolism.	July 27, 1949–July 26, 1950	1,600
Share, Leonard	Yale University: J. F. Fulton	Interrelationships between the kidney and the circulatory system.	Sept. 12, 1949–Sept. 11, 1950	1,600
Sliva, Herman	Michigan State College: G. W. Prescott	Botany, taxonomy, and ecology of the fresh-water algae.	July 1, 1949–June 30, 1950	1,600
Smith, Thomas O.	Harvard University: F. L. Hisaw	Mammalian endocrinology and physiology.	Oct. 1, 1949–Sept. 30, 1950	2,100
Spencer, William F.	University of Illinois: J. E. Gieseking	Physico-chemical reactions of clay minerals.	Sept. 20, 1949–Sept. 19, 1950	1,600
Thompson, Alan M.	University of Minnesota: M. B. Visecher	Cellular physiology, possibly including cancerous.	Sept. 27, 1949–Sept. 26, 1950	1,600
Travis, Dorothy F.	Harvard Biological Laboratory: J. H. Welch	Comparative physiology and endocrinology.	Sept. 1, 1949–Aug. 31, 1950	1,600
Van Norman, Richard W.	University of Minnesota: A. H. Brown	Botany, plant physiology, photosynthesis.	July 1, 1949–June 30, 1950	2,100
Vincent, Walter S.	University of Pennsylvania: C. W. Metz	Cytology and cytochemistry, physiological role of nucleic acids.	do.	2,600
Wadon, James D.	Indiana University: S. E. Luria	Genetics.	do.	1,600
Yocum, Conrad S.	Hopkins Marine Station: L. R. Blinks	Plant physiology-photosynthesis.	Oct. 1, 1949–Sept. 30, 1950	2,350

## FELLOWS APPOINTED IN 1948

Altenburg, Luolin S. (Mrs.).	Rice Institute: Edgar Altenburg	The detection and quantitative determination of viruses by means of radioactive phosphorus.	Sept. 20, 1948–Sept. 19, 1949	\$2,300
Bachmann, Barbara J.	Stanford University: C. B. Van Niel	Physiology and biochemistry of microorganisms.	Sept. 27, 1948–Sept. 26, 1949	1,600
Beer, Beatrice S. (Mrs.).	California University: Roger Y. Stanier	Enzymes and adaptation in microorganisms.	Sept. 15, 1948–Sept. 14, 1949	2,400
Bryant, Shirley H.	Chicago University: Kenneth S. Cole	Biophysics.	Sept. 25, 1948–Sept. 24, 1949	1,800
Burdick, Allan R.	California University: R. E. Clausen	Polygenic inheritance in tomatoes.	Sept. 11, 1948–Sept. 10, 1949	2,400
Oslin, Shelby H.	North Carolina State College of Agriculture: W. E. Colwell	Plant breeding, physiology, and biometry.	Sept. 17, 1948–Sept. 16, 1949	2,400
Olajyton, Roderick K.	California Institute of Technology: M. Delbruck	Phototaxis of purple bacteria.	July 1, 1948–June 30, 1949	2,300
Cohn, David U.	Duke University: P. Handler	Carbohydrate metabolism in kidney using radiophosphorous and related topics.	Sept. 15, 1948–Sept. 14, 1949	1,800
Coniglio, John G.	Vanderbilt University: C. S. Robinson	Lipid absorption and transport using radioactive carbon.	do.	2,400
Craze, Robert K.	Harvard Medical School: Eric G. Ball	Fixation of carbon dioxide.	do.	1,900
Davison, Clarke	Harvard University: A. Baird Hastings	Metabolic intermediates.	June 1, 1949–May 31, 1950	1,600
Dielein, Lawrence F., Jr.	Harvard University: A. S. Romer	Physiology and/or anatomy.	Sept. 26, 1948–Sept. 25, 1949	1,500
Duffy, Florence A.	California University: H. M. Evans	Parathormone, dihydroachysterol and irradiated ergosterol.	Sept. 20, 1948–Sept. 19, 1949	1,600
Falkenheim, Marlene	California University: J. G. Hamilton	Some aspects of bone physiology, using radioactive isotopes as indicators.	Sept. 15, 1948–Sept. 14, 1949	1,600
Ferguson, Marion L.	Chicago University: John O. Hutchens	Biological effects of radiation.	Mar. 28, 1949–Mar. 27, 1950	2,000
Forker, Lymon L.	California University: J. L. Chalkoff	Protein metabolism, etc.	July 1, 1948–June 30, 1949	1,600
Garvey, Justine S. (Mrs.).	Ohio State University: J. M. Birkeland	Tracers in immunological studies (radioactive sulfanilic acid-azovalbumin).	do.	1,600

## Atomic Energy Commission predoctoral fellowships in the biological sciences, National Research Council—Continued

## FELLOWS APPOINTED IN 1948—Continued

Name	Location and supervisor	Field of specialization	Term	Grant per annum
Geschwind, Irving I.	California University	Effect of hormones on nucleic acid turnover in the rat.	Sept. 1, 1948–Aug. 31, 1949	\$1,900
Goben, David W.	Washington University: H. J. Dauben	Xanthopterin and preparation of labeled xanthopterin and its metabolism.	Oct. 15, 1948–Oct. 14, 1949	2,400
Goldberg, Robert C.	California University: I. L. Chaikoff	Effects, metabolic and pathologic of radioiodine on thyroid, pituitary, and organism as whole.	July 1, 1948–June 30, 1949	1,600
Grace, John Lamar	University of Rochester: Wallace O. Fenn	Cell metabolism, using tracer carbon.	Sept. 27, 1948–Sept. 26, 1950	2,350
Grant, Norman H.	Illinois University: C. S. Vestling	Role of fructo-furanose in carbohydrate metabolism, insulin implications.	Sept. 16, 1948–Sept. 15, 1949	1,600
Heaney, Robert J.	Colorado University: Irving Goodman	Synthesis and biological action of labelled benzimidazole and its N and C glycosides.	Sept. 27, 1948–Sept. 26, 1949	1,900
Kent, Raymond C.	State University of Iowa: L. A. Ware	Biological effects of microwave radiations.	Sept. 23, 1948–Sept. 22, 1949	2,400
Kulwich, Roman	University of Florida: George K. Davis	Animal nutrition—mineral metabolism in cancerous tumors in rats.	Feb. 7, 1949–Feb. 6, 1950	2,000
Lefevre, George, Jr.	University of Missouri: A. B. Griffen	Comparative genetic effects of X-radiation in somatic and germinal tissues in drosophila.	Sept. 1, 1948–Aug. 31, 1949	2,400
Levedahl, Blaine H.	University of Utah: Leo T. Samuels	Enzyme reactions in the metabolism of steroid using isotopic C and H	July 1, 1948–June 30, 1949	2,400
Levine, Robert P.	University of California: Carl Epling	Experimental study of larval growth rates in natural populations of drosophila pseudoobscura.	Feb. 1, 1949–Jan. 31, 1950	2,000
Lipetz, Leo E.	University of California: J. H. Lawrence	A field having to do with biology.	Oct. 1, 1948–Sept. 30, 1949	1,900
MacEwan, Alan M.	University of Missouri: J. Levitt	The movement of mineral elements in plants.	Jan. 26, 1949–Jan. 25, 1950	2,600
Madison, Mary C. R.	Ohio State University: E. L. Green	Physiological genetics	Jan. 3, 1949–Jan. 2, 1950	1,900
McClement, Patricia	Radiology Research Laboratory: G. Falla	Health physics and biophysics	Sept. 1, 1948–Aug. 31, 1949	1,500
McCulloch, David	Massachusetts Institute of Technology: F. O. Schmitt	Ultrastructure of the mitotic apparatus in animal cells	Sept. 27, 1948–Sept. 26, 1949	1,600
Millar, Florence K.	University of Rochester: F. C. Steward	Growth and metabolism in plants, making use of radioactive isotopes.	Oct. 1, 1948–Sept. 30, 1949	1,600
Nelson, Walter L.	State College of Washington: Luther Smith	Relation of wavelength to biological of X-irradiation.	do	2,400
Nisonoff, Alfred	Johns Hopkins Medical School: F. W. Barnes, Jr.	Rates of enzymatic reactions at or near the equilibrium point under varied conditions.	do	1,900
Norman, Amos	Radiology Research Laboratory: G. Falla	Problems in radiobiology	Sept. 20, 1948–Sept. 19, 1949	1,900
Petersen, Betty S.	University of California: I. L. Chaikoff	Intermediary metabolism of fatty acids labeled with C14	Sept. 15, 1948–Sept. 14, 1949	1,600
Pittenger, Thad H.	University of Nebraska: E. F. Frolik	Analysis of pollen sterilities associated with heterozygous translocations in maize.	do	2,400
Read, Clark P., Jr.	Rice Institute: Chandler	Physiology of the tapeworm, hymenolepis diminuta	Dec. 1, 1948–Nov. 30, 1949	2,350
Rosenlof, Robert C.	University of Nebraska Medical College: John S. Latta	Effects of radioactive phosphorus on cells of the blood and blood-forming organs of the albino rat.	Sept. 15, 1948–Sept. 14, 1949	1,500
Rouser, George L., Jr.	University of Rochester: Elmer Stotz	Physiology and the reticulendothelia system.	do	1,500
Sacher, George A.	University of Chicago: Kenneth S. Cole	do	Sept. 25, 1948–Sept. 24, 1949	2,400
Scher, Allen M.	Yale University: J. F. Fulton	do	Sept. 22, 1948–Sept. 21, 1949	1,600
Schiffman, Gerald	New York University: Milton Levy	Biochemistry	Sept. 28, 1948–Sept. 27, 1949	1,500
Schmidt, John W.	University of Nebraska: E. F. Frolik	Effects of irradiating corn with neutrons	Feb. 1, 1949–Jan. 31, 1950	2,400

Slodovansky, Evelyn.....	New York University: Milton Levy.....	Radioisotopes in the analytical study of silk fibroin protein.....	Apr. 1, 1949-Mar. 31, 1950.....	1,600
Snyder, Robert H.....	University of Wisconsin: Harry Steenbeck.....	Mechanism of vitamin D activity in the body.....	July 1, 1948-June 30, 1949.....	2,400
Spiroff, Boris E. N.....	University of Chicago: R. L. Waterson.....	Effects of unilateral and bilateral leg bud extirpation of the gly-cogenic body in the chick.....	Sept. 28, 1948-Sept. 27, 1949.....	1,600
Watt, Thomas B.....	Duke University: Philip Handler.....	Applied biophysics.....	Sept. 15, 1948-Sept. 14, 1949.....	2,800
White, Lamar A.....	University of Indiana: L. S. McJannet.....	Effects of radiation on micro-organisms.....	do.....	1,600

# ATOMIC ENERGY REPORT TO CONGRESS

---

WEDNESDAY, FEBRUARY 2, 1949

CONGRESS OF THE UNITED STATES,  
JOINT COMMITTEE ON ATOMIC ENERGY  
*Washington, D. C.*

The committee met at 2 p. m., pursuant to call, in room 457, Senate Office Building, Senator Brien McMahon (chairman) presiding.

Present: Senators McMahon (chairman), Connally, Tydings, Hickenlooper, Millikin, and Knowland.

Representatives Durham (vice chairman), Holifield, Price, Kilday, Jackson, Cole, Elston, and Hinshaw.

Also present: Messrs. David E. Lilienthal, Chairman; Robert F. Bacher, member; Lewis L. Straus, member; Carroll L. Wilson, General Manager; Carleton Shugg, Deputy General Manager; Kenneth S. Pitzer, Director, Division of Research; Walter J. Williams, Director, Division of Production; Brig. Gen. James McCormack, Jr., Director, Division of Military Application; Lawrence R. Hafstad, Director, Division of Reactor Development; and Dr. Shields Warren, Director, Division of Biology and Medicine, Atomic Energy Commission.

---

The CHAIRMAN. All right, gentlemen, let us come to order.

Since we last met some months ago, there have been some new members who have been added to the Joint Committee. It seemed the proper thing for us to do to meet the Commission again and to go over some of the things that are of importance to the atomic energy project.

We are very glad to welcome here today the new members of the committee, and I am glad, of course, to welcome the Chairman of the Commission, Mr. Lilienthal; Commissioners Strauss and Bacher, members of the Commission; and the General Manager, Mr. Wilson.

The purpose of the meeting today is to bring the committee up to date on all of those matters which can be discussed in open session. The Chairman personally believes that there are many, many matters—in fact, the majority of the business of the Commission—that can be discussed with the Joint Committee in public session. It is my hope that we shall have many such meetings with the Commission.

We will later inquire into many specific subjects as they occur both to the Chairman and to the joint members of the Committee.

I would like to have the Chairman of the Commission tell us what he will, and what he can tell us at this time, about the work of the Commission and its problems, and we will probably have some questions as we go along.

Mr. Lilienthal.

**STATEMENTS OF DAVID E. LILIENTHAL, CHAIRMAN, ATOMIC ENERGY COMMISSION, AND CARROLL L. WILSON, GENERAL MANAGER, ATOMIC ENERGY COMMISSION**

Mr. LILIENTHAL. Mr. Chairman and members of the Joint Committee on Atomic Energy: The Commission is glad of this opportunity to meet with the Joint Committee on Atomic Energy, which I believe is the first meeting for a matter of months. We second the hope expressed by the chairman of the committee that, as much as possible, the hearings held in the future between the committee and the Commission may be so divided that a good deal of public hearings will be feasible, because they will obviously be helpful within those limits.

I would like to start, if I may, by introducing or asking to rise, members of the Commission's top staff who are here, some of whom are new in the interval in the last 6 months, and some of whom you may not be acquainted with. These are the fellows who carry the load of this work, in a management sense, and we are frankly very proud of the staff that has been assembled.

The two new members of the staff are the Director of Research, Dr. Pitzer, if you will rise, and Dr. Hafstad, who is the new Director of Reactor Development. I would like to put the qualifications and background of these gentlemen in the record at this time.

The CHAIRMAN. Without objection, it will be put in the record.

(Qualifications and background of Dr. Kenneth S. Pitzer and Dr. Lawrence M. Hafstad are as follows:)

**DR. KENNETH S. PITZER**

Prior to his recent appointment as Director of the Commission's Division of Research, Dr. Kenneth S. Pitzer was professor of chemistry at the University of California, Berkeley, where he has been a member of the faculty since he received his doctor of philosophy degree from that institution in 1937.

In addition to his position on the faculty of the University of California, from which he has been granted a leave of absence, Dr. Pitzer is also a councilor of the American Chemical Society, an associate editor of the Journal of the American Chemical Society, a member of the committee on physical chemistry of the National Research Council, and an associate director of the American Petroleum Institute project on the collection, analysis, and calculation of data on the properties of hydrocarbons.

While on a previous leave of absence, from the University of California in 1943-44, Dr. Pitzer served as research director of the Maryland Research Laboratory. He received the American Chemical Society award in pure chemistry in 1943, and was awarded an Army and Navy certificate for his research accomplishments in 1948.

Dr. Pitzer was born in Pomona, Calif., on January 6, 1914, and is a graduate of the California Institute of Technology, where he received his bachelor of science degree in 1935.

**DR. LAWRENCE R. HAFSTAD**

Dr. Lawrence R. Hafstad, first Director of the AEC's new Reactor Development Division, has been executive secretary of the Joint Research and Development Board of the National Military Establishment since July 1, 1947. There his responsibility had been to work with the policy committee which considers strategic applications of scientific developments and to coordinate the work of the research and development groups of the Army, Navy, and Air Force.

Dr. Hafstad has been, and still is, on leave of absence from Johns Hopkins University, where he held the position of director of research of the Applied Physics Laboratory at Silver Spring, Md. It was in this laboratory that he performed much of the work leading to the development of the proximity fuse, upon which he started work for the Army and Navy at the department of terrestrial magnetism, Carnegie Institution, in 1940, and took part in research and development

work on guided missiles. He was awarded the Medal of Merit by the Secretary of the Navy in 1946 for his wartime activities in the development of ordnance devices.

Born in Minneapolis, Minn., June 18, 1904, Dr. Hafstad was graduated from the University of Minnesota in 1926 and received his doctorate in physics from Johns Hopkins in 1933. While in high school and the University of Minnesota, Dr. Hafstad was employed as a telephone lineman and later an engineer. He was associate physicist at Carnegie Institution of Washington, D. C. from 1928 to 1933 and in 1931, with Dr. Tuve, was winner of an award by the American Association for the Advancement of Science for research and development concerning the million-volt vacuum tube. His work also included research and development in propagation of radio waves, the measurement of the height of the radio-reflecting layer and its relation to magnetic storm, atomic disintegrations, and artificial radioactivity. Dr. Hafstad and two colleagues, Drs. Richard Roberts and Merle Tuve, were among the first to demonstrate uranium fission in this country in 1939.

Mr. LILIENTHAL. There is also the Director of Biology and Medicine, Dr. Shields Warren. Also the Director of Production, Mr. Walter Williams. Most of you are familiar with Mr. Williams. And the Director of the Division of Military Application, Brig. Gen. James McCormack.

There is also present today the former manager of the Hanford operations, now the Deputy General Manager, Mr. Carleton Shugg.

Mr. Chairman and members of the Joint Committee: I think the starting point in any discussion of atomic energy in the United States, certainly the starting point so far as this Commission is concerned in discharging its responsibilities of keeping this committee fully and currently informed, is simply a reminder of what everyone knows, and that is that despite the best efforts of this country and its representatives, and the efforts of many other nations of the world, there is today no international agreement on the elimination of atomic energy as a national armament, as a weapon of war, nor is there any early prospect of such agreement.

Therefore, as a nation, the work of this Commission for which this Commission is responsible is pressing forward on every front in maintaining, and if we can, increasing the preeminence of this country in all aspects of atomic energy.

A report was filed on Monday with the Congress pursuant to the provisions of the Atomic Energy Act of 1946 which requires semiannual reports to the Congress. This report is, of course, an unclassified document. It is, I believe, in your hands. It is not my purpose to go over this report since it is a report which you have, and if you have not read, I hope you will. And if you have read it, you will doubtless have questions which, if not answered in this report, the members may desire to ask.

It might be helpful in the interests of the reading of the transcript of these hearings if the foreword of this report, however, which is only a matter of four printed pages, might be inserted at this point since it represents a summary analysis of the report itself.

The CHAIRMAN. Without objection it is so ordered.

(The foreword to the Fifth Semiannual Report of the Atomic Energy Commission to the Congress of the United States, dated January 1949 is as follows:)

#### FOREWORD

Atomic energy development in the United States is now 10 years old. It was in the last week of January 1939 that the phenomenon of nuclear fission was first confirmed in the United States.

In one decade, a whole new body of knowledge has been built up. Frontiers of science have been pushed ahead. Atomic energy has been used as a weapon of war, but it also holds promise of great benefits to mankind. Men are diligently seeking the means of developing the new knowledge and of controlling this force in order to realize those benefits.

Two years ago, the United States Atomic Energy Commission was established under the Atomic Energy Act of 1946, which sets forth the broad policies and objectives of the national atomic energy program.

During these 2 years the trouble spots which threatened continuity of production of fissionable materials have been largely eliminated. The weapons situation has been greatly improved. Important additions have been made to scientific and technical knowledge. A program for the development of nuclear reactors aimed at the possible production of power and the breeding of new fissionable materials has been formulated and is being vigorously prosecuted.

A reorganization of the Commission's principal office to meet operating requirements is nearly complete and the addition of new key personnel has materially strengthened the Commission's staff. The Office of the Director of Intelligence has been established to correlate and evaluate information on foreign atomic energy developments. This office maintains close collaboration with other intelligence agencies of the Government.

This fifth semiannual report of the Commission to the Congress, recording an expansion of effort in all phases of atomic energy development, is prepared against a background of world affairs which makes it necessary for the American people to maintain self-imposed restraints on the dissemination of a vast amount of data acquired since the beginning of the atomic energy enterprise in 1939.

Since that time, the American people have invested more than \$3,000,000,000 in atomic energy, starting with the first allocation of \$6,000 in 1940 and including \$342,000,000 expended by the Commission in 1947 and about \$525,000,000 in 1948. The accounting to the American people for the expenditure of such sums under restrictions which preclude normally free and open analysis, places the Commission in a position not fully consistent with the traditional methods of public accountability and management. Nevertheless, as the scope of this and earlier Commission reports indicates, a wide area of reporting is entirely feasible.

This report, and a subsequent special report on Reactor Development which the Commission will submit to the Congress in the near future, are an attempt to provide information on plants and on operations essential for an understanding of the purposes and results of the Nation's heavy expenditures for atomic energy development, and the problems and difficulties encountered in the program.

The report indicates expansion and improvement all along the atomic energy development chain from the mines to the ultimate use made of fissionable material. Activity has stepped up steadily in 1948. The first year of the Commission's stewardship of the atomic energy project, 1947, was largely spent in analysis and planning, with a start made on needed expansion. In 1948 the full program of long-range development got under way. Actual production operations were improved and output increased. The fact, is however, that the important research and development problems in atomic energy have yet to be solved.

By the year's end the United States atomic energy program had attained a momentum which, if sustained, the Commission believes will maintain and increase the Nation's lead in atomic energy development.

But there are a number of phases of the operations where the rate of progress has not been satisfactory. These include: Adequate budget and accounting reporting; cooperation and exchange of information with industrial firms not actually participating in the program; personnel security clearance procedures; recruitment of scientific and technical talent; policies, procedures, and operations in both the issuance and the control of information. In addition, work on the solution of a number of research and development problems referred to in the report has not progressed as rapidly as it can and will.

One of the first requirements of a well-managed undertaking, public or private is a modern accounting and budget system providing cost and budget data to increase efficiency and make management more fully responsible. No industrial accounting or budget procedures existed when the Commission assumed responsibility.

The Commission's program to establish such a system has made considerable progress, but still falls short of its objectives. Several nationally known firms in this field were called to assist the Commission's Controller in this work. By the time its next semiannual report is issued, the Commission hopes to have in operation a reporting system which will adequately meet the needs of the atomic energy program and better satisfy the requirements of accountability for public funds.

Among the matters reflected in this report which are of special concern to the Congress are the results achieved with the assistance of, and in cooperation with, other agencies of the Government. The Commission desires to report to the Congress its satisfaction with these relationships.

The Department of Justice has worked with the Commission in a cooperative spirit. In particular, the Federal Bureau of Investigation has carried out the large investigative responsibilities assigned to it under the Atomic Energy Act with great thoroughness.

The General Accounting Office has shown broad understanding and aided in the working out of the special accounting problems of the atomic energy program.

The United States Geological Survey and the United States Bureau of Mines, both of the Department of the Interior, have assumed heavy responsibilities in the raw-materials program. Their services have relieved the Commission of the necessity of directly carrying out major raw-materials projects, at savings to the Government.

Improved staff coordination, better understanding of common problems, and the work of the Military Liaison Committee have strengthened mutually helpful relationships between the Commission and the National Military Establishment. This report details many instances of efficiently coordinated staff work and evidences of the desire of the representatives of the National Military Establishment to give every possible assistance in the conduct of the atomic energy program.

The Commission has worked closely with the Department of State in carrying out programs that involve relationships with the governments of other nations. Such programs include export control, procurement of raw materials from foreign sources, the control of information shared with the United Kingdom and Canada, and technical cooperation with these two nations in certain specified areas.

Relationships with the United Kingdom and Canada in the field of atomic energy have continued under the guidance of the Combined Policy Committee of the three nations, of which the Secretary of State of the United States is Chairman. This Committee was first established in 1943. The members for the United States in addition to the Secretary of State, are the Secretary of Defense and the Chairman of the Atomic Energy Commission.

In fulfillment of its responsibility to keep the Joint Committee on Atomic Energy of the Congress fully and currently informed, the Commission furnishes the Committee with a top-secret quarterly progress report; a number of recurring reports on specific activities; and many letters, memoranda, and special reports. The staffs of the Commission and the Joint Committee are in almost daily contact. Representatives of the Committee and its staff have visited the major installations of the Commission and attended the tests of atomic bombs at Eniwetok last spring.

The General Advisory Committee appointed by the President as provided by the Atomic Energy Act, has counseled the Commission on the major scientific and technical developments in the program. The guidance they have given has substantially contributed to the progress of the past 2 years.

The Commission has continued to make extensive use of advisory committees, a practice which has been highly effective in obtaining for the Government the part-time services of outstanding men in many fields of activity related to atomic energy development. Many of these men, whose names are listed in the appendixes of this report, have devoted considerable time and effort to this work at sacrifice and inconvenience to themselves. They have made substantial contributions to the national atomic energy program.

As the Members of the Congress know Mr. W. W. Waymack resigned from the Commission for personal reasons, effective December 21, 1948. During the first 2 years of the existence of this Commission—two arduous years climaxing a far longer period of public service which Mr. Waymack has rendered to his countrymen—he endeared himself to us by his personal qualities and earned our admiration for his mature judgment and our respect for his impartiality and objectivity.

Mr. LILIENTHAL. There are two matters in the way of responding to the chairman's suggestion that the Commission bring the joint committee up to date, as to what has been happening, what the present status of things is, that I would like to proceed to, and neither of these are covered by the public report, the report to Congress, the semi-annual report.

The first of these is the Commission's quarterly progress report. This report is the fifth quarterly progress report made to the joint

committee. I should like to have the courier deliver this report to the chairman.

The CHAIRMAN. Is this a classified document, Mr. Chairman?

Mr. LILIENTHAL. This document is classified "Top Secret" because of its contents, and particularly because of the contents gathered together in one document. I would say this is perhaps one of the hottest documents that has yet been assembled.

On the handling of the document the staff of the committee has established procedure—Senator Hickenlooper and the staff—and I assume this document will be handled in a similar fashion. There are copies available, of course, for each member of the committee.

We would be glad to suit the wishes of the committee as to how members of the committee will have sufficient copies available. Since it is not likely that each member has facilities in his own office for taking care of such documents, we would be glad, of course, to provide courier service and take the documents back to the safes between its reading, or any other method the Chairman desires.

The CHAIRMAN. The committee will discuss that, Mr. Lilienthal, and we will advise you. Obviously I would take it that you regard this as an extremely important report. Therefore, it should be considered by each member of the committee.

Mr. LILIENTHAL. Yes; I would think so. This is the best way we have been able to develop working in cooperation with Senator Hickenlooper and the staff during the past year and a half, to summarize a statement of program goals and of how nearly we are achieving those goals, and of the program itself.

Now, this document does contain some material which is unclassified.

Senator TYDINGS. I would like to ask Mr. Lilienthal: how many members of the Commission, or the Commission staff, have seen this document, approximately?

Mr. LILIENTHAL. This document, parts of it, of course, require services of those people in the various departments. As a completed document, excluding document control clerks who have to sign them in, I would just guess perhaps 20 people.

I may say, Senator, that this document does not contain production rates, production quantities, nor stock-pile information. The committee has indicated that those figures which are known to a much lesser number than this not be provided thus far.

This quarterly report can become the vehicle of transmitting to the committee important, secret and top secret information. It can also be the basis for hearings in executive session, or in some cases, not executive session. I would like to give some indication of its background.

On the 23d of July 1947 the joint committee, through its chairman, requested a statement of program goals and a quarterly program report at intervals of 90 days. This report is, as to its form, therefore, the product of joint consultation with the staff of the committee and the Commission. We would welcome a continuation of suggestions from the committee, such as we have had in the past, to make this report more informative or to change its content, or less informative, if it should happen to be the wish of the committee.

We have deliberately kept it brief so that it can be read. Its sections include a section on weapons, their production, weapon readiness

and research and development. We have reported publicly that the weapon position of the United States has been substantially improved.

The CHAIRMAN. Might I interrupt you there, Mr. Chairman? I notice in the papers, particularly a paper published in Washington on Monday: I show you a headline, "Super Atomic Bombs Put In Production." If this was a single instance it might be not worth mentioning. But I have seen a number of other newspapers which have carried the same headline.

As far as I can see from reading the report, the foreword to the report, and comparing that with the release that I believe was made by the President of the United States after the Eniwetok experiment, there is nothing either in the report or in the release after Eniwetok that justifies that the United States possesses superbombs. Am I correct in that?

Mr. LILIENTHAL. I do not know what a superbomb is. But I assume that you have reference to a bomb that is, say, a thousand times greater than any previously known.

The CHAIRMAN. That is the generally accepted meaning in the public mind. I think it is important that there be complete understanding as to whether or not that situation has been achieved.

Mr. LILIENTHAL. The references in this report to improvement in weapons uses the term "substantially improved" and other similar expressions. These are literally true. But we did not have reference to what you have defined as a superbomb. And the text is not intended to infer that

The CHAIRMAN. Senator Tydings?

Senator TYDINGS. Mr. Lilienthal, is it desirable in your opinion that we give out information as to the progress we are making in weapons that are associated with the development of atomic energy?

Mr. LILIENTHAL. The extent and character of that information, it seems to me, Senator, is the real question. I would suppose it is perfectly clear that the country would expect to know that we are producing weapons, atomic weapons. I suppose it would be important in view of all the other issues involving armament that are being discussed publicly, that they be advised that progress is being made in some general, relative way.

Whether detailed information is given it seems to me imposes a very difficult question that obviously must be canvassed with the greatest of care because it involves a great deal more than simply atomic weapons.

Senator TYDINGS. I have not given the matter any deep thought, and I say this not in a spirit of criticism, but it does occur to me, without thinking deeply about it, that there is a great deal to be said for not giving out information which has to do with the improvement of the atomic-bomb weapon.

I hope we never have another war, and I hope we do not have any enemies. But assuming that those things are possible, it occurs to me that some statement that improvements, if they can be called such, in the development of atomic weapons are constantly being made would be a much more rational way to let the public know that we are making improvements, rather than to make statements that would give rise to a connotation of a superbomb, for two reasons:

The first reason is, I think, the lay public are likely to exaggerate what the superbomb is, as has already been demonstrated by a pre-

vious question. And the second one is, if we are to have a war it would spur our so-called possible enemies on to greater efforts.

I do not like to appropriate money to make our own country safe and at the same time do things that make the other country match our efforts and thereby make us correspondingly less safe. I think very seriously, in the future, without having thought deeply about it, it might be wise if we would detail such improvements in atomic weapons in a little milder way so as to neither alarm our own people on the one hand, or to give impetus to our possible enemies upon the other.

Senator CONNALLY. Mr. Chairman, I want to express my thorough agreement with the position of Senator Tydings. It is a mistake, as I see it, for us to rush into the press every time we make any progress whatever, and tell our enemies just what we are doing here, that we are going to do this or do that. It has the double effect of putting the enemy on the alert, and nursing our people into a state of indifference, thinking: "Well, we have all the bombs and all the improvements and all the weapons, and we do not need a big army or a big navy, or we do not need aircraft."

I agree with you thoroughly on that.

Senator TYDINGS. I do not mean to say that any such statement warranting the deductions that have been made have emanated from the Commission. I only bring it up not to review the past, but to put caution on the future.

Senator CONNALLY. I saw something in the paper the other day, that I cannot recall now, that the bomb is many times bigger than the bomb at Bikini and so forth. I think it is a mistake.

Mr. LILIENTHAL. It is a very difficult question because we are expending public funds.

Senator CONNALLY. I know we are spending them up here. You are not spending any of them. Congress appropriated the money. Why is it necessary, because you spend public money, to go out and blah blah all over the country about these bombs?

Mr. LILIENTHAL. It is the general principle of public accountability of reporting within the limits of security.

Senator CONNALLY. Reporting to whom?

Mr. LILIENTHAL. Reporting to the Congress and to the country.

Senator CONNALLY. That is one thing. Reporting to one country is one thing, but to be running in to the press is another thing. It seems to me that Congress or the Executive, one or the other, ought to have discretion as to what ought to be given out and what ought not to be given out.

I do not think it is the business of the Commission to conduct its own decisions on those things.

Mr. LILIENTHAL. The responsibility for what is and what is not restricted data is one we meet every day, and it is a question of balance. For example, expansion of production is something that obviously cannot be concealed, because it is on a very large scale, involving tens of thousands of people.

The query as to whether you seek to conceal something that cannot be concealed has perhaps as great a bearing, in terms of numbers, as the magnitude of the weapon itself. I will be very glad to have an expression from the committee on that because it comes up all the time.

Senator TYDINGS. To reemphasize my point, I imagine in any plans our military people will be called upon to make for any eventuality, they will have to find out what is happening in other countries where the information is not as public as it is in the United States.

That is a handicap under which our military people have to work. It seems to me that if we are faced with that handicap in reference to our potential enemies, that we should be very careful not to give them, even inadvertently, information which they otherwise could not get, and upon which they can, of course, plan their own strategy and tactics for any eventuality.

My only thought is whatever damage has been done now probably is not material. But in the future, I feel I would not be keeping faith with my job here if I did not point out that there is a great deal aid and comfort in making these statements. We ought not give such aid and comfort.

Mr. HOLIFIELD. In any releases you have given out from your department you have not given out releases which would necessarily justify these sensational headlines, have you?

Mr. LILIENTHAL. No, sir.

Mr. HOLIFIELD. The releases of information have been couched in very moderate terms, such as "substantial" or "marked improvement," and terms along that line, in your report. I have read your report.

Mr. LILIENTHAL. Yes. I should say that the great importance of how these statements should be made was recognized, and the pronouncements about the tests at Eniwetok which were pronounced here in some detail in executive session, were made to the President of the United States, and were cleared with the military.

I do not say this means that they were all-wise, but at least we took the precautions that were appropriate of treating this as a matter of high policy.

Mr. HOLIFIELD. As a matter of fact, the magnification of your releases by sensational headlines are beyond your control and certainly are not warranted by any release I have seen from your Commission and from your report.

Mr. LILIENTHAL. I gather the general impression from speaking to newspaper editors that headlines are beyond anyone's control.

The CHAIRMAN. Mr. Lilienthal, am I correct in saying that the Eniwetok report was made by the President of the United States?

Mr. LILIENTHAL. Yes, sir.

The CHAIRMAN. It was announced at the White House?

Mr. LILIENTHAL. That is correct, Senator.

The CHAIRMAN. Is your report different from that Eniwetok release? Does it report other progress than the Eniwetok tests justified? Or is it the same thing in different language as was contained in the President's release?

Mr. LILIENTHAL. It uses the same qualitative term, namely, "substantial," a "substantial improvement," "substantial gain." That was the language in the President's statement as I recall it, and that is the adjective, the qualitative expression in these descriptions here.

The CHAIRMAN. There are some people, responsible people, too, who have taken the position, both in Government and out of Government, as I understand it, that we should divulge to the Congress, and

hence to the American people, how many bombs we have made. That is a high question of policy which the Congress must, it seems to me, determine.

There are reasons, both pro and con. As I have indicated, I have not made up my mind. I think in view of the discussion which has been had here today, it would be highly proper if the Commission were to give immediate consideration to this question because the question must be determined one way or another, as I see it. We should determine it after careful consideration.

The Chairman would be very, very much pleased if the Commission could carry out that assignment, and of course, it will be reported back to us in executive session where we can consider it, because there might be matters which you might want to give that would be classified information.

Mr. LILIENTHAL. Yes. I suppose the most we could do would be to indicate what the considerations are as we see them on one side, and on the other. I suppose the views of the Commander in Chief and of the Military Establishment would be elicited, and if elicited they certainly would be of greater value than any light we could throw on that. We will do the best we can.

The CHAIRMAN. I would like to point this out: You have a Military Liaison Committee which keeps in touch with the Chief of Staff. You could coordinate that information for us, could you not?

Mr. LILIENTHAL. We could transmit that request; yes.

The CHAIRMAN. Senator Hickenlooper?

Senator HICKENLOOPER. Mr. Lilienthal, is it not a fact that the Commission has definitely and positively adopted the policy of not divulging the number of atomic weapons that we have? Has not that already been settled with the Commission?

Mr. LILIENTHAL. It has indeed.

Senator HICKENLOOPER. In substance.

Mr. LILIENTHAL. It has indeed.

Senator HICKENLOOPER. So I presume what the chairman is suggesting is that you reconsider the already determined policy to see whether it shall be reversed and a different policy on what most of us at least consider to be the very top secret information, that is, among the top secret information, be given.

Mr. LILIENTHAL. Our position has been that the number of weapons in stock pile, production of fissionable material, the rate of production and quantity production of fissionable material which of course are the principal chief components of the weapons, and all matters of production rates and amounts, are classified.

Senator TYDINGS. Mr. Chairman?

Senator HICKENLOOPER. May I just finish this question, to make it clear?

You have taken the unanimous opinion, have you not, since the Commission was set up, that that information would be among the most closely guarded secrets of the Commission?

Mr. LILIENTHAL. That is correct. As I understand the suggestion of the chairman of the committee, it is that the Commission indicate—or at least this I endeavor to make in my reply—considerations in support of that position, and such considerations as there are against it. But this is no indication we are changing the position.

The CHAIRMAN. Let there be no misunderstanding, Mr. Chairman, of what I requested. I am not hinting or inclined for one moment that

you even consider the wisdom or the foolishness, if you please, of divulging the way the bomb is made or any secrets of production of the bomb. I am restricting my request for advice simply to the size of the stock pile. Just so there will be no misunderstanding.

Now, it is true that that has been a highly guarded secret. In my opinion it is high time for this committee to reconsider that question. It may well be that the answer will have to be discerned, but we should at least give consideration in the light of the best advice we can get.

Mr. LILIENTHAL. I think I understand.

Senator TYDINGS. I am rather embarrassed here. I was formerly on the committee and went back off, and am back on it after a lapse of 2 years. This is my first meeting. It occurs to me that I am doing a good bit of talking so I apologize to the members of the committee for horning in. But in my humble opinion this whole discussion ought to be in executive session.

It seems to me that inadvertently we may be partially telling some things that we might otherwise not want to tell. In the event the committee and the Commission and those in authority decide that the information ought to be made public, it seems to me that the discussion of that should be, with all due respect, in executive session. We are getting pretty close to divulging at least some of the possibilities of this situation by talking around here a little bit.

We cannot find out, for example, what other countries are doing in the number of submarines or battleships, or pieces of artillery, or any other factors, as well as that in the field of atomic energy. And I doubt very much the wisdom, every time we invent a new airplane that flies so fast and carries so many bombs and goes so far, of telling the world we have it, because the net result is to spur those that we might have to eventually fight and which might cost the lives of a lot of American boys, with greater action to match those planes or ships that we have.

I respectfully suggest that if we are going to explore this matter it would be wiser to do it in executive session, rather than discuss it here in the open. In the meantime, we should withhold all information about atomic weapons from everybody, in the interests of our national security.

Senator CONNALLY. Mr. Chairman.

The CHAIRMAN. Senator Connally.

Senator CONNALLY. I want to make a short observation. It seems to me that one of the strong points about the atomic weapon is the fact that it creates mystery. They do not know. They do not know the development. They do not know how many we have, how we make them, or anything of the kind.

The more we talk about them and the more we deduce about them, the more we rush into the papers and get a headline, the more they find out about our lack of preparation or our preparation. And it takes away from the appeal that might otherwise be made, a lot of its strength and a lot of its force.

I thoroughly agree that we ought not to discuss these matters publicly, but we ought to do it in executive session. And in the meantime, impress the members of this Commission and anybody else that had anything to do with it, not to be handing out their views and releases, and all of that. We ought to have some responsible authority

somewhere in the War Department or the Navy or the Air Corps, to pass on these matters of high policy—this committee or somebody else.

I do not want the destiny of the country depending on what some man in one of these bureaus decides what to do or not to do.

Mr. LILIENTHAL. Proceeding with reference to this report, in response to the chairman's question about the status of atomic energy development at the present time, this report also deals with the production of fissionable materials and feed materials. There are charts in the report upon which a good deal of effort has been put, which are very revealing and illuminating to the members of the committee as to the relative position of this project in respect of fissionable materials and their production, and a section on raw materials, which I very much hope will receive close scrutiny by the members of the committee.

Also a section on reactor development, and physical research, as well as biology and medicine, and financial aspects and community operation.

During the past 2 years—and it is about 2 years since the Manhattan District was transferred to this Commission by Executive order pursuant to this act—the Commission has been engaged largely in matters of organization and planning during the first year, planning for new facilities requiring expansion, research problems, and so on.

In the second year a full program of long-range development was undertaken and is under way.

Difficulties which might threaten continuity of production have been largely overcome and the production opportunities generally have been improved. As the figures indicate, the operating costs are considerably improved. They still, we believe, can be improved further.

There is a better result, so far as the number of people required to do a given amount of work in communities like that of Oak Ridge, as well as in production of plants.

To summarize the present situation: The Commission feels and wishes to say to the joint committee that we believe these first 2 years now put the Commission in a position to concentrate on the second and third most important parts of the undertaking, the first obviously being related to weapons, on two aspects of development. One are the power plants, the production of reactors capable of producing electricity for ships, for stationary power plants and the like, and emphasis upon basic research.

As to production and operations, these are set out as to unclassified matters in the semiannual report and in more detail, as I have indicated, in the top secret part of the quarterly report. The expansion that has been authorized by the Congress is under way at Hanford, Oak Ridge, and Los Alamos. Forty percent of the 1950 budget which is a nonclassified document, which has been filed with the committee, as well as the classified budget, indicates that about 40 percent of this budget will be devoted to new construction.

The problems of research and development have received an impetus. They are very difficult indeed. Progress has not been as fast as we had hoped, or as we would be satisfied with. Most of the really difficult problems are ahead of us, rather than have been solved.

These, however, we are encouraged about because of the entry into the picture of the Du Pont Co., or the reentry, with a survey team of

very outstanding men to survey the problems, some of the most difficult of the chemical problems; the presence in the program of such organizations in addition to General Electric, as Kellex, Standard Oil Development, and other important industrial concerns.

We have recently held a symposium or seminar on the problems involved in waste disposal and storage, the proper disposition and storage of these very hot and radioactive waste materials, and are getting the benefit of the best judgment in the country, we believe, in that field. In summary there appears to be nothing to be alarmed about, but a great deal of persistent effort will be required.

The research and scientific program is rolling. The national laboratories are now going concerns. The one at Oak Ridge; Argonne; Berkeley; University of Rochester; Ames, Iowa; and so on. But like the program in medicine and biology, it is discussed in the semi-annual report.

I recall Senator Tydings has an interest in the cancer-research program. The information contained in this report is, of course, fairly compressed. This obviously involves no question of security, and we should be glad to have a hearing later and perhaps spend the whole hearing on questions of medicine and biology, and the progress of the country in that respect. It is a rather hopeful one, and has a different aura to it than the subject of weapons.

I should like, if I may, to ask the General Manager of the Commission, Mr. Wilson, to proceed to a description of the program the Commission has adopted in pressing forward on the production of useful power from atomic energy. This is a rather extensive program.

As I say, we are now reaching the point where the weapons situation, being on the rails, and the reorganization problems, including budget and accounting being much improved, emphasis can be given to this subject which holds, we believe, so much of the hope for the future, although that future will doubtless be certainly a decade or two before full realization and practical economic performance.

The CHAIRMAN. Before Mr. Wilson goes into it, how much of the budget this past year, Mr. Lilienthal, was spent?

Mr. WILSON. \$632,000,000. The 1949 budget total was \$632,-000,000.

The CHAIRMAN. Does that include contract authorizations?

Mr. WILSON. Yes, sir. That is the combination of cash and contract.

The CHAIRMAN. This coming budget you have asked for how much?

Mr. WILSON. \$792,000,000 in new obligational authority. That is the combined cash and contract authorizations.

The CHAIRMAN. How does it break down between cash and contract?

Mr. WILSON. Mr. Shugg has the detail on that.

Mr. SHUGG. \$792,000,000 breaks down: \$365,000,000 cash and \$427,000,000 contract authority.

Mr. COLE. Mr. Chairman.

The CHAIRMAN. Mr. Cole.

Mr. COLE. I should like to clarify an expression which you made, Mr. Lilienthal, in which as I recall you said:

Now, after 2 years since the Commission has taken over from the Manhattan District, the Commission is ready to embark on the second and third phases of the atomic energy problems, the first phase being the weapon phase.

Does that mean that the Commission is satisfied with the progress in the weapon phase?

Mr. LILIENTHAL. No. What I said or intended to say, Mr. Cole, we are prepared to concentrate on those which we could not and did not have energy and time enough to concentrate on, because the weapon phase is now rolling. It does not mean that the weapon phase will not continue to be of first importance. It is bound to be the paramount program of the undertaking.

Mr. COLE. Is the Commission satisfied with the progress of the weapon phase?

Mr. LILIENTHAL. We are satisfied that a program directed toward future developments is in good hands and is getting good attention.

Mr. COLE. How far short, if at all, does the production phase fall short of the goal phase, as indicated by the report which you have just submitted?

Mr. LILIENTHAL. This is a question which I——

Mr. COLE. Does it fall short of the goal?

Mr. LILIENTHAL. I would suggest that until the rules about production and rates are changed, that in any case we should explain in executive session why the answer to this question is not——

Mr. COLE. I am not asking for information as to how much is being produced, how it is produced, or what your goal is. What I am interested in knowing is whether the goal you set for yourself is possible of achievement. Has it anywhere near been reached?

Mr. LILIENTHAL. The goal is not set by us and in order to say how the goal is set I think it should be said in executive session.

Senator TYDINGS. Mr. Chairman?

The CHAIRMAN. Senator Tydings.

Senator TYDINGS. I hate to labor this point, and I am not doing it in any spirit of captious criticism. But I am recalling that when we got ready to bomb the enemy in World War II we had to go to telephone books, as I think the Army Air Force will tell you, to get the addresses and the locations of important plants in Germany which lend themselves to strategic bombing. Then to hunt photographs and other things that we could get as a matter of putting the enemy out of business. And all that took time.

I question very much the wisdom of some of the photographs taken here, particularly of one I just saw here. I have forgotten the technical name of the outfit. I can find it in just a moment. It shows that new apparatus that you are now building, a proton synchrotron, or some such thing.

Mr. HINSHAW. It is page 73.

Senator TYDINGS. Yes. It is on page 73. We were unfortunate enough to lose a B-29 bomber or two where the men had to bail out. We did not get those bombers back from some countries. They are now the model of some of the planes we might have to fight in the world should we be plunged into another war.

All of these things are helpful. I question whether giving the location in Government pamphlets, the pictures of them, is a wise thing to do. It is true that they may be found by other means. But at least we ought to put those that want to pry into our affairs to trouble, and possible hazard of detection in trying to find it out for themselves.

This very comprehensive report containing all these pictures of the exact location of all these plants, although they are mentioned in the

press, true, is very, very helpful, and I would like to have some of some other countries I could mention that would show similar things to our own general staff.

I am going to make the suggestion for consideration of the Commission, that in the future it might be well to screen this a little more carefully from the standpoint of illustration, and the like, from the standpoint of national security.

We have a good many of these plants now scattered over the country. The location is shown in great particularity. What is done in each plant is shown in considerable particularity. The new apparatus we are building are shown in considerable particularity. And I do not see much use to throw a screen of secrecy around a lot of things and leave important matters like this open.

Maybe that is overcaution. I am not making any motion. But I am suggesting that for the consideration of the Commission. If the time should ever come, as it may very well do, when we decide publicity is a better weapon than secrecy, then I would be in favor of the opposite course, but until that time comes I believe we have got a force here that we could well afford to be very cautious about disclosing any of its ramifications beyond what might be called a minimum of public necessity.

Mr. LILIENTHAL. Senator, this is of course a subject that is our daily difficulty, because we today live in a country which has a habit of openness and is not inclined to secrecy. That is the kind of country it is. What we are trying to do is balance that wholesome habit with the necessity of secrecy and the requirements of public accountability. I am sure the Senator is aware that that is a difficult question.

Senator TYDINGS. I realize it is easy to sit up here and criticize some phase of the work. I am not doing it in that narrow sphere. But I do believe the longer you live with this thing the more impelled you are to tell somebody about it. I know from my early associations on the Senate Special Committee on Atomic Energy, the things I heard were awfully hard for me to keep to myself because it is just a natural impulse of a man who is carrying dynamite around inside of him, to let somebody else share it with him. But I believe that is the wrong policy.

We are having too much trouble finding out what is going on in other parts of the world. I believe for the time being at least it might be wise for us to err on that side. I furthermore believe that the American people will not criticize wholesome and sound secrecy that has to do with such a devastating weapon as the atomic bomb. Until we can organize the world for peace and security I do not believe we ought to allow anything that may help anybody who may want to start a war, to get hold of any secrets of this thing. I am hoping the day will come when we can outlaw it. Pending that day I believe we would be very wise to err on the side of secrecy rather than publicity.

Mr. ELSTON. Following what Senator Tydings said I understand that some of the security regulations in Oak Ridge have recently been relaxed, and do not require the same clearance at the gates by the guards that was formerly required. Is that correct?

Mr. LILIENTHAL. Mr. Elston, the location of the gates have been changed. There has been no relaxation of security. Indeed, security in the plants has been improved. But the gates, instead of being completely around the village—which is at some distance from the

plants—are, as in the case of Hanford, removed, or being removed, and the access points are at the plants themselves. This makes for better security of the plants. There is no problem of security really in the village itself, any more than in any other village.

Mr. ELSTON. Persons could go in and take photographs where they formerly could not do it, could they not?

Mr. LILIENTHAL. Not of the plants. There have always been photographs of the village. You will recall that after Hiroshima, a great many photographs of the plants were released, and the Smyth Report was issued. I myself think that was right. If I appear to differ with the Senator, I appreciate his spirit of not being critical but of discussing this for what guidance and help it may be to us, and we need it, God knows. If you try to cover more of an area of secrecy than you are able under American conditions to cover, then you discredit the whole secrecy system. For example, the illustration on page 73 of a particle accelerator, this is research.

There are a good many of them through the country, a good many of them built with funds not of the Atomic Energy Commission. No one regards that as having any necessary relation to atomic energy in the bomb or weapon sense.

Senator TYDINGS. But I do not think you will deny that it is an important function or part of the development of atomic energy. I do not think that we ought to publicize the development of atomic energy. For example, in making atomic energy as part of the bomb, after you get it I assume there are many things to be done before you get the bomb.

I do not see any use in disclosing a part of the process if you want to keep the process secret. I do not see any use in disclosing in part how to make the bomb if you want to make the bomb secret. We either ought to blow hot or cold. If this is the dangerous thing then it seems to me, if we decide secrecy is the better part, we ought to play it that way. I question very much the wisdom of allowing airplanes to photograph, from the air, these plants, and make them available for our potential enemies in the future.

I question very much giving the location in a Government document. I question very much all the things that we might say publicly which aid in any small degree those that may not be as considerate of the use of this bomb as we hope we will be, giving that nation the information which could plunge this world into untold misery. And I think we are charged with a particular responsibility here until this world can be organized for peace and security on some sound basis to do everything in our power to keep this information from getting into the hands of those who may use it adversely.

Mr. HINSHAW. Mr. Chairman, will the Senator yield?

Senator TYDINGS. I have finished.

The CHAIRMAN. Mr. Hinshaw.

Mr. HINSHAW. I do not know what importance this book on the laboratory has on the atomic energy project, except it is a very fine laboratory. But I would like to point out to the Senator from Maryland that if this had been in the hands of the United States in reference to another country prior to World War II, it would have been very valuable. If you will turn to the fifth paragraph on page 72, it says:

Two strange towers have recently been completed at Brookhaven. They are needed for study of air currents high above the laboratory so that the operators

of the nuclear reactor will know where its exhaust gases are going. One of them is 420 feet tall—highest structure on Long Island—and has a pipe running all the way to the top. When weather observations are going on, the smoke from a standard Army smoke generator released through the pipe creates a small cloud, which can sometimes be seen for miles around.

I do not know that it is very important to protect the Brookhaven Laboratory from a sneak attack, but on the other hand if I were going to attack it from the opposite side, I would like to know that they have the highest structure on Long Island and that they do have smoke coming from it that can be seen for miles around.

Senator TYDINGS. As you well know, much of our strategic bombing was based on documents, telephone directories, and other information that was assembled by a very expert lot of men in Europe which gave us the places that would do us the most good from the strategic bomb standpoint.

Mr. HINSHAW. Quite possibly the value of the Brookhaven Laboratory will be nil after the commencement of hostilities. But if I wanted to destroy it as an opposing air force commander, that is as perfectly good a picture of how to pick it out as anyone can see.

Senator TYDINGS. I am inclined to take your point of view. I think that the Commission is constantly prodded to give the public everything it feels it can give them, and naturally they want to respond to that democratic ideal and impulse. I am not saying this in any spirit of carping or captious criticism, but I do believe that in the future these reports ought to be screened more carefully, and everything ought to be cleared with the Army Intelligence above all before they are printed. I do not know whether that was done in this case or not.

Mr. LILIENTHAL. This document was prepared in conjunction with the Military Liaison Committee, and was gone over in the usual way.

Senator TYDINGS. I would like to ask if the Central Intelligence Agency, the association of Army and Navy Intelligence and the Air Force, have ever screened this document before it was made public.

Mr. LILIENTHAL. I do not know.

Senator TYDINGS. I would like to ask the liaison general if he knows whether that was screened by the Central Intelligence Agency.

Brigadier General McCORMACK. To answer your question, sir, I am a member of the Commission staff, not of the Liaison Committee.

Senator TYDINGS. I do not think it is wise for this to be published without that screening in the future, because it looks to me like we are giving away an awful lot of information. Now, if there is no threat of war that might be a little healthier climate in which to give it. I am not sold on the fact that we may not have a war yet. I want to do what little I can here, without being foolish about it, to try to protect our own country and its people. I think all this information would be worth millions of dollars to any potential aggressor.

Mr. HOLIFIELD. Mr. Lilienthal, these photographs on pages 73, 74, and 71, are all photographs that have been published in nationally distributed newspapers and magazines, I believe.

Mr. LILIENTHAL. I do not know precisely. I would say that these are not photographs of installations that have any other than research importance. Those photographs, for example, the photograph of the synchrotron, I think it would be a very serious step, Senator, and one that I hope you will hear us on at least, to indicate how costly this kind of secrecy will be in making progress ourselves. If we could

have both that kind of secrecy and democracy, then obviously I would be for it.

If we could have that kind of secrecy and rapid scientific progress in our country, then we would be all for it, but we cannot have them both, and we have to decide how to modify it.

Senator TYDINGS. I think that this is an exceptional case. This is not the discovery of a new 75-millimeter piece of artillery, or a faster-than-sound airplane. This is a question of whether we are going to survive or not on this planet. I do not think it is any secret to say that atomic energy has the potentialities of complete devastation, if it is every carried out on a mass scale. I do not want anybody to get any information about this who is not for certain our friend, until we get a little healthier climate in this world in which we live, particularly when I know that they are doing everything in their power that can be done to find out how to duplicate this work that has been done in the United States.

Again I say that I have had some little contact with the armed services by virtue of the fact I have been on the Armed Services Committee for 22 years, and I have learned how carefully they assemble information of this character for future use. We are not getting this information from other countries in the world, and I do not want this to be a one-way street. I want it to work both ways whenever it is publicized.

The CHAIRMAN. Mr. Lilienthal, in answer to Senator Tydings' observation, do you think that there is anything in this report—and I mean anything, because I should like to know definitely—that advances or could advance the building of an atomic weapon or the use of it by any power?

Mr. LILIENTHAL. No.

The CHAIRMAN. If there is, it should not be in there. Now, was it tested from that vantage point?

Mr. LILIENTHAL. The answer is "No," except if one takes a position which is quite extreme, and that is of course an electronic microscope, or research tool of any kind, is helpful in any research activity, including atomic weapons. But as I understand the question, whether this has any direct help in the development of fissionable material or atomic weapons, in the light of the information that had been made public at the time the Commission took over, I would say "No."

Senator TYDINGS. Mr. Lilienthal, I think that is really an oversimplification of it. One of the things you want to do, if you cannot duplicate what an enemy has that is valuable, is to destroy it. First of all, get what he had, and if you cannot get it, destroy what he has that is better than yours. This report in my mind is in parts at least an open invitation of telling him where it is at least. So his problem then is only to find out how to get to it and destroy it.

The Army just said in a public report, we can have a plane that will fly 10,000 miles and carry 10,000 pounds of bombs. That will bring a plane from certain parts of the world far off to almost any point in the United States. For example, when you come down to security this report, you start out by saying this:

The objectives of security in the Atomic Energy Commission are to assure the safekeeping of information which the Commission has decided cannot be released without endangering the common defense and the safety of the Nation and to protect the plants and installations of the Commission, and its contractors in order that research and production programs will not be interfered with or

valuable materials lost. To achieve these objectives the Commission has built up three independent programs.

Second, physical security, to prevent unauthorized access to installations, materials, and information, and to protect such property against sabotage, espionage, and theft.

Now, from the standpoint of physical security, let us assume that country X has duplicated the plants that we have in the United States. Certainly, if our high chieftains in the Military Establishment knew what they did more or less, knew where the people who worked in them were quartered, it would be an extremely valuable piece of information. I think, in the language of currency, we would pay good money to have it. Now, it seems to me, if we would like to have it, if the other fellow had it and we did not, that if you reverse the circumstances the same rule applies.

I respectfully again make the suggestion that in the future reports of the Commission it first be screened with the CIA in order that nothing of value which we would like to have, if the circumstances were reversed, goes to any potential enemy, the circumstances being what they are. And in that way we will have gone to the pains to reduce to the irreducible minimum any possible leaks that might be of benefit to a future aggressor in this far from peaceful world.

(The following letters, concerning the clearance of the contents of the Fifth Semiannual Report of the Atomic Energy Commission to Congress, were submitted to the chairman, Joint Committee on Atomic Energy, by the chairman, Atomic Energy Commission, for inclusion in the record:)

UNITED STATES ATOMIC ENERGY COMMISSION,  
*Washington 25, D. C., February 18, 1949.*

HON. BRIEN MCMAHON,  
*Chairman, Joint Committee on Atomic Energy,  
Senate Office Building, Washington, D. C.*

DEAR SENATOR MCMAHON: At the public hearing of the Joint Committee held on February 2, you will recall that members of the committee asked questions regarding the clearance of the contents of the Commission's Fifth Semiannual Report to Congress. This letter is written to supplement our testimony. We would appreciate your including this letter in the record of the hearing.

During the preparation of the report, the drafts of the various sections were submitted to the Military Liaison Committee (established by section 2 (c) of the Atomic Energy Act) to assure mutual consultation on the security aspects of the information contained in the drafts. Comments were made informally by the Military Liaison Committee, and the drafts were revised accordingly. Before the report in its final form was submitted to the Congress, we carefully reviewed the report and concluded that it contained no information which would adversely affect the common defense and security. Furthermore, we were assured by the Military Liaison Committee that the report contained no material objectionable on the grounds of military security.

Attached for your information is a copy of the letter dated February 4, 1949, from Mr. William Webster, Chairman of the Military Liaison Committee, in which he states that the report contains no information objectionable on the grounds of military security.

Sincerely yours,

UNITED STATES ATOMIC ENERGY COMMISSION,  
DAVID E. LILIENTHAL, *Chairman.*

FEBRUARY 4, 1949.

HON. DAVID E. LILIENTHAL,  
*Chairman, Atomic Energy Commission.*

DEAR MR. LILIENTHAL: This is to confirm discussions over a considerable period between the staffs of the Military Liaison Committee and the Atomic Energy Commission over the various sections of the Fifth Semiannual Report to Congress.

The report contained no material objectionable on the grounds of military security.

The committee appreciates the manner in which the examination of this particular report was handled.

WM. WEBSTER, *Chairman*.

MR. LILIENTHAL. May Mr. Wilson proceed with a statement on the reactor program?

THE CHAIRMAN. Yes.

I do not want to take issue with my very good friend from Maryland, but I want to point out, Senator, that all of these plants, which employ some 60,000 people, have been extremely well marked for our own people, and I presume the whole world, in that we have the installations at Hanford, the installation at Oak Ridge, and Brookhaven. I do not say that in criticism of what you have observed, but I do want to point out that this project does employ some 60,000 people.

Senator TYDINGS. I would like to make a slight rejoinder to that. There is nobody for whose judgment I have higher respect and for whose patriotism I have a higher regard than the chairman's. Anything I say is no reflection on him or even on the Commission. I am simply trying to suggest the future policy that I hope will be helpful. Of course, if we are going to spend all this money to go through all the departments of the Government to screen over 2,000,000 people to see whether they are loyal to the United States or not, it seems to me that we are screening a gnat swallowed by a camel when we have such a most devastating thing. I am only hopeful that in the future such discussion will not arise, and I do not think they will if the armed services have the right to screen such information before it is made public.

MR. WILSON. Mr. Chairman, members of the committee:

Mr. Lilienthal has spoken of the increased emphasis which we are now able to devote to the program of reactor development. The reactor, to refresh your memories, is, in many cases, called a pile. It is the chain-reaction machine, of which the biggest examples are at Hanford, and smaller ones at Oak Ridge and Chicago. It may be useful to define what happens in a reactor before we go to the program. This is a large program. It is a costly one.

In a nuclear reactor, which is the modern term for a pile—pile was the early term—three things happen. In the fission process, neutrons are produced, energy is released, and fission products or radioactive isotopes are made. These are the three things that go on in every nuclear reactor.

As to neutrons, two or three are formed. As to the energy—and this has a bearing on the power angle—the energy from one fission—that is, one nuclear breaking up—is 40,000,000 times as much as the energy from burning one carbon atom. This is the range in which one has to work. These are all things which appear in the Smyth Report but it seems to me might be useful to remember here.

A reactor is a machine to produce fissions on a large scale, each fission producing these three phenomena: neutrons, energy, and fission products. So that the reactor we have at Hanford, the large ones, the smaller ones at Chicago, at Oak Ridge, all are machines to produce this result.

In considering this reactor development program, which is going to be a long job and a very tough job, it is worth having in mind what are the basic components of a reactor. There is, first of all, the fuel,

fuel that you burn up. It may be uranium 235; it may be plutonium. That is the fuel; it has to be a fissionable material, and it is pretty precious.

The second thing that you have in these structures—and this is true for whatever purpose they are built—is something called a moderator. A moderator is a material that will slow down the neutrons formed in each fission so they are more efficient to produce more fissions or to produce other materials. In other words, you need something in there which will slow down the neutrons that are formed.

The third thing you have in a reactor is a cooling fluid, something to get the energy out. This may be water, as in the case of Hanford; it may be air, as in the case of Brookhaven or Clinton. But, at any rate, you have to pump a lot of something through the reactor to extract heat.

The fourth thing that goes into the reactor is the structural materials that hold everything in a proper relationship.

The fifth are the devices which are controls to keep the thing from running away.

And the last major component is the shielding that goes around the outside. This is a thick—often a concrete block—shielding to keep the harmful radiations from injuring personnel.

So, when we talk about reactors, any reactor has these components, and in it these three things happen and happen on a large scale.

Now, why do we want reactors? First of all we want them to produce fissionable material. At Hanford we have large reactors in which we burn one kind of fissionable material—uranium 235—and produce plutonium. It is a very useful process, and hence one type of reactor is a factor to make fissionable material.

Second is a power plant, and power plants are really in two categories: those in which economy considerations are not paramount, for example, a unit to propel a ship. The governing considerations would be other than straight economic considerations.

The other type of power plant would provide electrical power for civilian purposes. And then there is a third kind of reactor which is to make excess neutrons, to make isotopes for research and other things.

In looking over the reactors that have been built today, all of which have been described in one way or another, and most of them in the Smyth Report, there are two general kinds: one is a research reactor which is a very low-power affair, does not really have to have much cooling fluid. It barely operates at any power, but it does produce neutrons. The first reactor ever built, the one at Chicago, was of this type. The reactors we have had have been research reactors and reactors to make plutonium, as at Hanford.

I think it is worth considering the general characteristics of these reactors we have. The most important, in terms of future power, is that they all operate at a low temperature. You blow air through them, pump water through them, and you throw the energy away. In any case, the energy is at a relatively low temperature when it comes out.

When we consider atomic energy for power, it might be hoped that someday we would find some way of converting this fission process, using it to produce electricity directly. Nobody sees how to do that

today. So the only way in which we can utilize the energy from a reactor is through the regular machinery that we have now: high-pressure steam turbines or gas turbines or the like.

To be useful to operate turbines, the energy has got to be at high temperature, because all of these machines, the efficiency of all of these thermodynamic machines, depends on having your inlet temperature high. Therefore, as we move from where we have been to the development of new reactors, we must go to high temperature.

This is a tough job. The general conditions which have to be met are fairly well known. But how to meet them is another story. For example, we have to have materials in the reactor that will stand these high temperatures. And, if we look at most of the materials that are any good for high-temperature boilers and the like, they are absolutely no good in reactors. The reason for this is that they have the habit of swallowing up the neutrons formed in the fission process, and quenching the whole business.

So, almost all of the structural materials which have been useful in other high-temperature machines, like boilers and the like, are of no use in reactors. This calls, therefore, for a broad program of research and development on materials. And materials, their properties, and their ability to withstand intense radiation and preserve their properties of heat transfer and the like at these high temperatures and high radiations, this is a very big part of the problem of designing and building reactors for power.

So, a considerable fraction of our effort in the reactor-development program is devoted to that part of it. I think it is worth indicating, as stated in the President's budget, that in the fiscal year 1948 the obligations for the reactor-development program were \$54,000,000. In the fiscal year 1949, we estimate the total obligations will be \$61,000,000. In fiscal year 1950, in the budget we are requesting, the obligations will be about \$120,000,000. This is a big program.

As we go into this, it is extremely important to make a careful selection of the types of reactors that one can build, because each one is a major project, costs a number of millions of dollars, takes at least 2 or 3 years to design and build, and hence the choice among many choices of the types of reactors that should be the components of our program is a matter which has received a great deal of study and has been subject to a lot of discussion.

Senator TYDINGS. What does it cost to build a single type of reactor such as you have just testified about?

Mr. WILSON. A reactor can vary from the cheapest that was ever built, which I suppose was the reactor at Chicago, which maybe cost a half million dollars at the most—this was in 1942—to a big modern research reactor, still a research reactor, such as is just being completed at Brookhaven, which will cost about \$22,000,000.

Senator TYDINGS. How long will it take to build one of these reactors of the super kind you last described?

Mr. WILSON. The last one I described, the Brookhaven reactor, the actual construction began about July 1947. It will be finished and operating late this spring. About 2 years.

Senator TYDINGS. If it takes \$22,000,000 to build the largest one, and it takes 2 years to build it, that is an average of about \$11,000,000 a year on that one type of reactor.

Mr. WILSON. That is right.

Senator TYDINGS. How many different types do you suppose you will build in 1949 and 1950, either building or designing?

Mr. WILSON. Building, or either designing for construction, I might group them generally. These can be described in three categories.

Senator TYDINGS. How much will they cost?

Mr. WILSON. There will be one that costs about two and a half million dollars. There is one which will cost about \$25,000,000. Those are the two.

Senator TYDINGS. How about the third one?

Mr. WILSON. There is one that will cost about \$2,000,000. It seems like a big gap. These are all reactors for research and development I am speaking of.

Senator TYDINGS. Those three types would cost roughly about \$25,000,000 to build one of each of the three categories: one of \$2,000,000, one of \$2,000,000, and——

Mr. WILSON. One of each of the three categories of research reactors. Senator TYDINGS. How many do you contemplate building?

Mr. WILSON. One of each.

Senator TYDINGS. Why, therefore, does the appropriation for this particular field of endeavor step itself up in the years 1949 and 1950 so precipitously if the three reactors only cost \$25,000,000?

Mr. WILSON. I have described only one class of reactor.

Senator TYDINGS. What other classes are there?

Mr. WILSON. The other classes are these—power reactors.

Senator TYDINGS. How much do they cost? Roughly, of course.

Mr. WILSON. There is one, an intermediate reactor, which will cost about \$18,000,000.

Senator TYDINGS. What others are there?

Mr. WILSON. There is another power reactor which is being developed by the Argonne Laboratory and the Westinghouse Co., which will probably cost \$25,000,000 or \$30,000,000.

Senator TYDINGS. What others?

Mr. WILSON. One has to get the time base of when the actual construction starts, and so on.

Senator TYDINGS. I am not pursuing that for the moment.

Now, what other types of reactors are there in this second class besides the two you have mentioned?

Mr. WILSON. As reactor design and construction projects, those are the only ones.

Senator TYDINGS. Then you have five different types of reactors in contemplation, three described in your first statement.

Mr. WILSON. For design and construction. There will be studies of others. But these are for design and construction, which involve the big money.

Senator TYDINGS. These are the five you have in mind.

How long does it take to build the last two you mentioned, the one costing \$22,000,000 and the last costing \$25,000,000?

Mr. WILSON. A fair amount of money has already gone into the first one. It will be finished in about 2 years.

Senator TYDINGS. How about the others?

Mr. WILSON. It will be longer. It will be at least 3 years.

Senator TYDINGS. You have five types of reactors which between them will cost around \$50,000,000 for the reactors themselves. And

some of those are spread over a period of 3 years, some 2 years, and some are already in process and some you have in contemplation.

Mr. WILSON. That is right.

Senator TYDINGS. Now, outside of the reactors what other elements enter into the stepped-up appropriations which you previously described for this particular type of work?

Mr. WILSON. There are several. One is the further construction, completion of construction and operation of the Argonne National Laboratory.

Senator TYDINGS. How much will that cost?

Mr. WILSON. The central reactor development laboratory?

Senator TYDINGS. In addition to what you have already given me, of course, how much will that cost? Approximately, of course, because I know you have not those figures before you.

Mr. WILSON. Argonne Laboratory construction will require another \$20,000,000 or more.

Senator TYDINGS. In addition to the reactor cost?

Mr. WILSON. In addition to the reactors.

Senator TYDINGS. When do you expect to start that and when do you expect to finish it?

Mr. WILSON. That is in process now. I am indicating the amounts beyond what have already been obligated.

Senator TYDINGS. How much has already been obligated?

Mr. WILSON. There has already been obligated about \$20,000,000.

Senator TYDINGS. So it will cost \$40,000,000 to finish the Argonne plant, extraneous of the reactors.

Mr. WILSON. That is right.

Senator TYDINGS. How long will that be from the time it is started until it is finished?

Mr. WILSON. The beginning of construction at the new site at Chicago occurred about a year ago in November. It will take another year and a half to complete it.

Senator TYDINGS. Now revert again for just a moment, and name the three figures for the fiscal year 1948, '49, and '50, to which you originally referred.

Mr. WILSON. I gave you \$54,000,000 for 1948.

Senator TYDINGS. How much for 1949?

Mr. WILSON. \$61,000,000 for 1949.

Senator TYDINGS. How much for 1950?

Mr. WILSON. \$120,000,000 for 1950.

Senator TYDINGS. How much for 1951?

Mr. WILSON. I do not have any figures for 1951.

Senator TYDINGS. What are the elements that make this appropriation more than double from 1948 to 1950?

Mr. WILSON. There are some other components I have not mentioned. There is the Knolls Atomic Power Laboratory at Schenectady.

Senator TYDINGS. The reason I am asking you this is not to pursue any policy of economy in this, although that is an element, but we have got to make a decision whether to have a 70-group Air Force or a 48-group Air Force or a 58-group Air Force, and there is only so much money to go around. So that we have got one piece of pie to cut up, and I was just wondering whether it would not be possible to cut it so that maybe we would save something here and have some of the other things that are also essential that we cannot otherwise have.

Mr. WILSON. This is clearly a matter which we expect and expect in the very near future to be submitting for full discussion with the Appropriations Committee.

Senator TYDINGS. These are all peacetime projects, you say?

Mr. WILSON. No, sir. The purpose of reactors——

Senator TYDINGS. I mean these research things.

Mr. WILSON. They are peacetime in only this sense: In order to get on with the reactor development program we have got to know more about the behavior of materials.

Senator TYDINGS. For atomic weapons?

Mr. WILSON. For factories to make fissionable material to go into atomic weapons. For producing fissionable materials.

Senator TYDINGS. For atomic weapons?

Mr. WILSON. Yes.

Senator TYDINGS. You cannot produce sufficient fissionable materials for atomic weapons with what you have now?

Mr. WILSON. We are producing fissionable materials in the factories we now have. We want better ones, cheaper ones, more efficient ones, to make better use of raw materials, et cetera.

Senator TYDINGS. What part of this program would you transfer over to what might be called the civilian side of atomic energy, which is very important? What part of this expense?

Mr. WILSON. It is extremely hard to separate it, Senator Tydings.

Senator TYDINGS. Could you separate any of it?

Mr. WILSON. I suppose the research reactor at \$2,000,000 or thereabouts, which I mentioned in the first category, could be considered predominantly for peacetime purposes. But since the purpose of reactors is to make fissionable materials and to make power, and fissionable materials are needed for weapons program, for reactors to propel naval vessels, and one of these reactors that I mentioned is for the purpose of developing a prototype for naval propulsion purposes, it is extremely difficult. They all, of course, contribute to advancing the day when we will have civilian power, because if you learn how to make an economical reactor that operates at high temperature you have licked a lot of problems which will enable you to go to the next step.

Senator TYDINGS. In the meantime, if we do not keep the United States of America here and a little peace in the world, of course all that program of research is likely to be lost, is it not?

Mr. WILSON. The basic policy underlying the budget and the program we have put forward is that this is what we believe is needed to keep this country in the foreground of leadership in atomic energy, in all parts of it.

Senator TYDINGS. All right.

Mr. WILSON. In the course of discussion with Senator Tydings I have covered the main components of this reactor development program which include three reactors for materials testing and research purposes; two reactor design and construction projects for power, and there are several study projects which are not intended to result in the design and construction of reactors in the period we are talking about in the next 2 or 3 years.

An important part of that which we have had under study for some time is the reactor for an aircraft. We asked the Massachusetts Institute of Technology last summer to put together a group of

people, bring them together from the various industrial laboratories and Commission establishments to make a very complete review of the technical feasibility of developing a reactor to propel an aircraft.

The product of this study, which is called the Lexington Report, was submitted 2 or 3 months ago, has been carefully studied by the Commission, its General Advisory Committee, the Air Forces, the Bureau of Aeronautics, the NACA. We have been discussing with them the issue of this report with the removal of information which should not be included in it from a security standpoint, that this be issued in the near future to provide basic information growing out of this study.

We have looked at this very carefully, and it is our judgment and I believe this view is shared by the Air Forces, and the Bureau of Aeronautics, and NACA that it would be useful in getting on with this program to have a declassified Lexington Report summary made available for public discussion.

Mr. DURHAM. The fact is that, of course, these reactor efficiencies have been greatly improved, which should reduce the cost of these reactors. The efficiency has been greatly improved since the beginning of the study.

Mr. WILSON. Yes. They have been improved.

We hope that those we are now designing and about to be built, will represent substantial strides over what has been done before.

Mr. DURHAM. Is this entire amount being used for reconstruction?

Mr. WILSON. No, sir. The actual break-down—

Mr. DURHAM. I do not care about the break-down.

Mr. WILSON. It is partly for construction of facilities, construction of reactors, partly for operation of laboratories, and operation of reactors.

The CHAIRMAN. Mr. Wilson, I notice the Commission has made very liberal use of the authority which the act provides in the appointment of the advisory committees. How many advisory committees does the Commission now have?

Mr. WILSON. They are listed, Mr. Chairman, at the beginning of page 154 of the semiannual report. And other than the statutory committees there are 12 listed there. These are very active committees, as I believe you know.

The CHAIRMAN. Do you find that system of doing business helpful?

Mr. WILSON. Extremely helpful. I might cite two illustrations: (1) We have an Advisory Committee on Biology and Medicine which meets approximately once a month and each meeting is at a different establishment—Washington, Oak Ridge, Los Alamos, Berkeley, Hanford, Chicago, Brookhaven. They spend a day or two at these meetings and provide constant and very valuable advice on the program and the distribution of emphasis in this whole field of biology and medicine.

The CHAIRMAN. Do these advisory committees see the pertinent parts of this report that we have before us?

Mr. WILSON. Yes, sir.

The CHAIRMAN. In other words, does this Advisory Committee, that is listed here, on Medicine and Health go over the section of the report that deals with that subject?

Mr. WILSON. The pertinent sections are gone over with the Chairman of the Advisory Committee. I am not sure that the Committee

as a whole reviews the portions of the report. But certainly the main points are reviewed by the Chairman of the Advisory Committee.

I might indicate again, in relation to the reactor program, what we have done within the Commission to modify our organization for more effective handling of this job. As reported to the joint committee, we reorganized the structure of the Commission's headquarters last summer and created a new position—that of Director of Reactor Development, in order to bring all of the reactor development which formerly had been under the Division of Engineering Research and Military Application, together in one place.

Senator TYDINGS. Before you leave this, if you have answered the question—these advisory committees, of which there are a number, and which seem to be very ably staffed, do they serve on a per diem basis or without compensation, or just for expenses, or in what way?

Mr. WILSON. The provisions of the Atomic Energy Act, I believe, provide that the General Advisory Committee may be paid \$50 per day for the days they serve. This same arrangement, or same basis, is extended to a number of the other committees, where there are people not employed in any part of the Commission establishment.

Senator TYDINGS. You have some 12 advisory committees. When they are called into session do they all receive \$50 a day?

Mr. WILSON. Some of them do not elect to take it.

Senator TYDINGS. But they are all entitled to it?

Mr. WILSON. Yes, sir.

Senator TYDINGS. How often do these committees meet?

Mr. WILSON. The General Advisory Committee is required, by statute, to meet at least four times a year.

Senator TYDINGS. Leave that one out.

Mr. WILSON. The Advisory Committee on Biology and Medicine has been meeting once a month. The Advisory Committee on Raw Materials meets only about twice a year, but the individual members of the committee travel around and visit our projects and spend time as individuals.

Senator TYDINGS. They are paid while doing that?

Mr. WILSON. Yes, sir. If they elect to receive it. The Advisory Committee on Isotope Distribution meets relatively infrequently. I would think not more than three times a year.

The Patient Advisory Panel perhaps three or four times a year.

The Advisory Committee on Personnel Management has been meeting about every two months.

The Reactor Safeguard Committee probably met five or six times in 1948. I am just trying to give you the feeling. The senior responsible reviewers meet, I think, about quarterly.

Senator TYDINGS. They are labeled as temporary advisory bodies?

Mr. WILSON. That is right.

Senator TYDINGS. The others are permanent?

Mr. WILSON. The others are standing committees.

Senator TYDINGS. I see. Go ahead.

Mr. WILSON. The Industrial Advisory Committee group mentioned here, I think between its appointment in October 1947 and its submitting its final report about the 1st of January, met perhaps seven or eight times.

Senator TYDINGS. Will they go out of business then?

Mr. WILSON. We are currently studying the recommendations they have made in regard to permanent industrial advisory groups. But they were a temporary group which are now discharged.

Senator TYDINGS. Under the temporary groups—to save time—of which there are five, how many of those do you suppose will finally reach the status of permanent rather than temporary, from your contacts already had with them?

Mr. WILSON. Let us take them in order.

The Industrial Advisory Group—I think it is hard to predict now whether we will conclude it is desirable to set up a permanent advisory group. There is a question mark on that.

The Safety and Industrial Advisory Board—I think we might reconvene the group every year to reassess our program, but we have a program now which they recommended.

We intend to establish a successor to the Roberts Board. In other words, we will have a permanent Personnel Security Review Board.

Senator HICKENLOOPER. Is the Roberts Board still an official board or did they resign?

Mr. WILSON. They submitted their final report in October or November, and wound up their affairs.

Senator HICKENLOOPER. They resigned as members of the Board?

Mr. WILSON. That is right.

Senator HICKENLOOPER. I notice their names are carried here as Board members.

Mr. WILSON. That is correct. I think they did agree that we could continue to look to them as a Review Board until we had appointed a successor board.

During the period which this report covers, they were active.

Senator TYDINGS. Is it contemplated that the Personnel Security Review Board will not be permanently constituted?

Mr. WILSON. This group feels that they have completed their studies for us and advised us on policy and procedure and review in many cases, and asked to be discharged, but recommended that a permanent board be established.

Senator TYDINGS. Then it is safe to assume, in your answer, that probably another board will be appointed to take its place.

Mr. WILSON. That is right.

The next committee, I think, is likely to become a standing committee.

Senator TYDINGS. And the next one?

Mr. WILSON. The next one is a temporary ad hoc group.

Senator TYDINGS. When do you think that is likely to be eliminated?

Mr. WILSON. That last one?

Senator TYDINGS. Yes.

Mr. WILSON. It is largely composed of people from the Commission's organization and the National Military Establishment. They will probably complete their labors by June of this year.

Senator TYDINGS. I would imagine that a lot of these advisory committees stem from the fact that the Commission was new and had to walk into many fields with which no Commission could be thoroughly acquainted in every respect, and that as a matter of orderly procedure and efficiency it was necessary to have this council of people who are especially qualified in that avenue.

Now, do you look ahead to the day when many of these advisory committees can be dispensed with completely?

Mr. WILSON. I would expect we would want to continue a number of advisory committees as far as we can see ahead, because they bring a quality of judgment on our problems from distinguished people in various fields which we cannot have in our organization ourselves. So we put a very high value on them.

Senator TYDINGS. I can appreciate that there would be many fields, as this thing has such a scope, where you would want somebody to give you expert advice on it, and who would be better qualified on it in that line.

Do you contemplate adding new advisory committees to the list you have already read?

Mr. WILSON. Yes. We certainly have one in mind: An Advisory Committee on Finance to advise us on the whole scope of our accounting problems and fiscal controls.

Senator TYDINGS. What is the over-all cost, approximately, of all of these advisory committees, both permanent and temporary, per year?

Mr. WILSON. I would have to look that up, Senator.

Senator TYDINGS. Would you look that up and put it in the record?

Mr. WILSON. I will.

(Cost of maintaining advisory committees is as follows:)

UNITED STATES ATOMIC ENERGY COMMISSION,  
*Washington 25, D. C., February 18, 1949.*

HON. BRIEN McMAHON,  
*Chairman, Joint Committee on Atomic Energy,  
Senate Office Building, Washington, D. C.*

DEAR SENATOR McMAHON: In looking over the transcript of the public hearing held before your committee on February 2, 1949, I note there are several matters in my testimony which I should like to clarify. Accordingly, I would appreciate your including this letter in the record of the hearings.

In the discussion between Senator Tydings and myself, it appears from the record of the testimony that I may have given the impression that all the members of our advisory committees are entitled to receive compensation of \$50 a day. This, however, is not the case. The members of certain advisory committees are entitled to receive approximately \$40 a day. This, for example, is the compensation of the members of the Advisory Committee on Personnel Management and of the Reactor Safeguard Committee.

Also, in reading over the transcript I note that I replied in the affirmative to a statement of Senator Tydings that it will cost \$40,000,000 to finish the construction at Argonne National Laboratory extraneous of the reactors. I should like to expand my reply to make it clear that the estimated total cost for the construction of the Argonne National Laboratory, exclusive of the cost of reactors, is approximately \$60,000,000.

In discussing the Commission's advisory committees, I agreed to supply for the record a statement of the approximate cost to the Commission of these advisory committees. Attached is this statement.

Sincerely yours,

CARROLL L. WILSON, *General Manager.*

*Costs of advisory boards and committees for the period July 1, 1947, to Dec. 31, 1948*

Mr. WILSON. In the Commission's organization, as I said, we set up five major components of our work: production of fissionable materials, weapons, reactor development, biology and medical research, and physical science research.

Mr. Lilienthal has introduced Dr. Hafstad, who has just taken over his duties Monday of this week as Director of the Division of Reactor Development.

Mr. DURHAM. Have you at this time any reactors in stand-by, or are they all operating?

Mr. WILSON. They are all operating.

The Division of Reactor Development will be responsible for reactors, the development of materials for them, components, and the safety features dealing with radioactive wastes, and the whole chemical end of the reactor which involves the handling of the partially depleted fuel to recover useful material from it, and dealing with the remaining fission products.

As I indicated earlier to Senator Tydings, the main centers of reactor development are at the Argonne Laboratory at Chicago, which has cooperative arrangements with Oak Ridge National Laboratory, with the Westinghouse Co., and with various other organizations.

The second major center is the Knolls Atomic Power Laboratory, operated by the General Electric Co. at Schenectady.

In considering this program of reactor development we have had the advice and assistance of one of these advisory committees mentioned in our report, the Reactor Safeguard Committee, in helping us to develop the criteria necessary for determining where reactors can be safely and suitably built.

As we look at the reactors which we are proposing to design and build we have concluded that a reactor field station is a necessary part of this program, and we are currently studying various possible sites which would have the elbow room, the power, the water, the conditions for construction and other things which would be necessary.

Mr. Lilienthal mentioned that as a part of this reactor program an essential element is the chemical end of it. We are fortunate in having the du Pont Co. engaged in a survey of all of the problems relating to plutonium chemistry. They put an excellent team on it and I am sure that we will benefit by that study which will be available in a few months.

Mr. DURHAM. Did I understand you to say that Westinghouse operates at the present time under contract at Argonne?

Mr. WILSON. No, sir. Argonne is the central reactor development laboratory. We have a parallel contract with the Westinghouse Co., who are working with the Argonne Laboratory in the engineering phase of one of the reactors being built at Argonne.

Mr. DURHAM. Which is the one at the University of Chicago?

Mr. WILSON. Argonne is operated by the University of Chicago, but the governing board is made up of 29 representatives of directors of universities in the Middle West.

The CHAIRMAN. Mr. Wilson, you, I take it, have come to the end of the reactor phase of the program now?

Mr. WILSON. Yes, sir. I will be glad to answer questions.

The CHAIRMAN. You have other major divisions in your mind to give us. What are those divisions?

Mr. WILSON. The other major divisions of the Commission's organization, the program divisions, are first the Division of Production, which is responsible for the production of fissionable materials.

This embraces raw materials, exploration, development, mining; the preparation of feed materials for the plants, that is, taking the ore concentrates and making metal or feed for Oak Ridge.

The third component is Oak Ridge, which is the production of uranium 235; the fourth component is Hanford, which is the production of plutonium.

The second division of the Commission's program operation is the Division of Military Applications, responsible for research, development, production, and test of atomic weapons.

The third component is the Division of Reactor Development, responsible for the program I have described.

The fourth is the Division of Biology and Medicine, which is responsible for the program of research and training in the field of biology and medicine.

The fifth, and final component is the Division of Research which is responsible for research in the physical sciences.

The CHAIRMAN. There are some members of the committee who have notified me that they have engagements at 4 o'clock. This would seem to be, therefore, unless there is objection, a good place to desist for the day.

Senator KNOWLAND. Mr. Chairman?

The CHAIRMAN. Senator Knowland.

Senator KNOWLAND. I have no question of the Commission. I would like to inquire from the chairman just how soon you expect to have an executive session with the Commission.

I am sure there are a number of questions that some of us desire to go into quite thoroughly, and obviously that cannot be done at a public hearing.

The CHAIRMAN. I think we must have one very soon, because the chairman was handed, before you came in, the quarterly top-secret report, which I think the committee in full should go over with the Commission in full, as much of the Commission as we have, with one member missing.

I have no particular idea on that, Senator, but I will endeavor to accommodate as many of the members as I can.

Senator HICKENLOOPER. May I ask that you contemplate a meeting with the Commission to review this report after we have had a chance to read it?

The CHAIRMAN. I think that we ought to perhaps do it at a regular meeting day.

It has been suggested, I believe, by Mr. Durham, vice chairman of the committee, that we make it Wednesday afternoon. That would seem to be the most suitable time for the Members of the House. Am I correct in that?

Senator HICKENLOOPER. Afternoon meetings will interfere with sessions, would they not?

The CHAIRMAN. At least until the sessions of the Senate are interfered with, perhaps we can tentatively agree to meet on that day. I am open to suggestions, Senator. If you have any suggestion, I will be glad to have it.

Senator HICKENLOOPER. No, sir. It seems to me it would be better in the morning. But that may not meet the convenience of the House.

The CHAIRMAN. I have had many requests from Members saying do not make it on this day, or that day, or the other day. We have the chairmen of other committees on here, as you know.

Senator Tydings has his Armed Services Committee on Thursday, and Foreign Relations on Tuesday.

Senator TYDINGS. I would suggest, for the sake of discussion, that we make it 2 o'clock on Wednesday, and if either the House or Senate is in session, that if it be convenient the appropriate members ask to be excused.

If we find the session is fully under way, we can then take new stock and fix some other day.

The CHAIRMAN. If that is agreeable to the membership of the committee, we will consider it settled, at least, temporarily.

Perhaps we can have an executive session with the Commission on Friday morning of this week, if that is convenient to the membership of the committee.

Mr. HINSHAW. That is convenient, sir, if we get an opportunity to see this report in the meantime.

The CHAIRMAN. You mean the top secret report?

Mr. HINSHAW. Yes, sir.

The CHAIRMAN. Perhaps we could read it aloud in the meeting. Do you think that would suffice?

Mr. HINSHAW. If it is not too long, yes.

The CHAIRMAN. It is not too long. We can read it in 20 minutes. It will obviate the necessity of getting it around. If that is agreeable we will recess until Friday morning at 10 o'clock.

(Whereupon, at 4 o'clock p. m., the hearing was adjourned.)

# CONFIRMATION OF GORDON E. DEAN AND HENRY DeWOLF SMYTH AS MEMBERS OF THE ATOMIC ENERGY COMMISSION

---

THURSDAY, MAY 12, 1949

UNITED STATES SENATE,  
SENATE SECTION OF THE  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The committee met at 10:30 a. m., pursuant to call, in the Senate District of Columbia committee room, the Capitol, Senator Brien McMahon (chairman) presiding.

Present: Senators McMahon (chairman), and Hickenlooper.

Also present: Representative Price.

The CHAIRMAN. Come to order, please.

Dr. Smyth, would you come over here, please?

The meeting this morning is for the purpose of considering the nomination of Dr. Smyth and Mr. Dean to be members of the Atomic Energy Commission.

Mr. Dean advised me by telegram that due to an illness in his family he will be unable to be here until Saturday, and so we will schedule another meeting on either Monday or Tuesday. We will advise the press later as to whether it will be on Monday or Tuesday.

But we have with us this morning Dr. Smyth, Dr. Henry DeWolf Smyth, who has been nominated by the President to be a member of the Commission.

I have here a biographical sketch of Dr. Smyth submitted to the Senate by the White House, and I shall read it for the record.

The doctor lives in Lafayette Road in Princeton, N. J. He was born in Clinton, N. Y., on May 1, 1898.

Doctor, that makes you——

Dr. SMYTH. Fifty-one.

The CHAIRMAN. In 1918 you received an AB at Princeton. In 1920 you received an AM at Princeton. In 1921, Princeton seemed still to approve of you, because they granted you a degree of doctor of philosophy. And in 1923 that was repeated by Cambridge University.

Under the table of experience, from 1921 to 1923 Dr. Smyth was a fellow of the National Research Council, in Cambridge, England. In 1923 and 1924 he was at Princeton University, and in 1924 and 1925 he was an instructor in physics at Princeton.

From 1925 through 1929 he was an assistant professor at that university, from 1929 through 1936 an associate professor, and since 1936 a full professor.

Since 1935 he has been chairman of the department of physics at Princeton, and from 1927 through 1930 he was associate editor of the *Physical Review*.

I suppose that is a magazine devoted to the physical sciences.

Dr. SMYTH. Yes, that is right. It is the professional journal of the American Physical Society.

The CHAIRMAN. From 1940 to 1945 Dr. Smyth was consultant on war-research projects to the National Research Council and to the Office of Scientific Research and Development. From 1943 to 1945 he was consultant to the Manhattan Engineer District (atomic bombs), United States engineers.

And there is one thing that is not on here, Doctor. You are the author of what has become known as the Smyth report, quite a famous document, of which I believe many thousands of copies have been printed and distributed. Am I right about that?

Dr. SMYTH. As far as I know, the University Press at Princeton—their particular edition has sold about 120,000 copies.

The CHAIRMAN. It has been printed by the Government Printing Office, though, too?

Dr. SMYTH. By the Government Printing Office, yes. Why the public prefers to pay a dollar and a quarter to the University Press rather than 45 cents, or whatever it is, to the Government Printing Office, I don't know, but that seems to be the way it works.

The CHAIRMAN. Do you know how many copies have gone through the Government Printing Office?

Dr. SMYTH. No, I don't.

The CHAIRMAN. Doctor, what date was the report issued?

Dr. SMYTH. It was issued first in a litho-printed form in the summer of 1945. I can't give you the exact date, but it was just a few days after President Truman returned. It must have been 2 or 3 weeks after the dropping of the bomb on Hiroshima.

The CHAIRMAN. I think it would be of considerable interest to the committee and to the public, Doctor, if you were to trace the report from its genesis to its release, with your part in it.

#### STATEMENT OF HENRY DeWOLF SMYTH, PRESIDENTIAL NOMINEE TO THE ATOMIC ENERGY COMMISSION

Dr. SMYTH. I will be glad to do that as well as I can recall it.

I know my first participation in the idea was when I was at the metallurgical project in Chicago in the winter of 1944. That was, I should say, in February. I remember discussing the general idea of a report that might be eventually released to the public first with Dr. Compton and then with Dr. Conant when he came out there.

I am not sure where the idea originated, but I at least showed interest in the idea, and a month or two after that I was called here to Washington to talk with Dr. Conant and General Groves, and at that time General Groves asked me if I would undertake the preparation of such a report.

There was at that time no decision, obviously, as to whether it could ever be used, or in what form it could be used, or what parts of it could be used.

I started work almost immediately, although I had other duties, so it was not a full-time job. I worked on it, there, for around 15

months, off and on, at various times submitting outlines and chapters, and at one time most of the report to General Groves and Dr. Conant and others for their criticism.

In fact, it was rewritten two or three times, most of it.

Then, in May of 1945, I was called to Washington and told by General Groves and Dr. Conant that they felt they would like to have this report really prepared in such form that it might be released. In fact, they asked me if I could have it done by—I think the date they asked for was June 10, or something like that; and I said I couldn't, but I would try to have it done by the first of July.

I had, of course, in the meantime, shown revelant sections of the report to a number of the project leaders. And then, in July, I completed the report. No, it was earlier than that, I think. I had talked with General Groves earlier, and pointed out, which was something that he obviously didn't need to have pointed out to him, that I couldn't take the responsibility alone as to what should and should not be in the report. He therefore suggested that Dr. Tolman should collaborate with me in going over the material that I had prepared. Dr. Tolman and Dr. Conant were the two principal scientific advisors of General Groves. Dr. Tolman and I discussed at considerable length what we thought should and should not be in the report, in terms of both positive criteria and negative ones. We then drew up a list of those and submitted them to General Groves, and he considered them, modified them somewhat, and then issued to us a directive of what should and should not be in the report.

We then, each of us, separately, went through the copies that I had prepared at that time, with a red pencil, and cut out a good deal of material. I had felt that the only way to prepare the report was to be rather complete, and then eliminate; rather than trying to eliminate as I went along.

We cut out a great deal of material. We then submitted it to General Groves again. I am not quite sure who read it at exactly that stage. I think General Groves and Dr. Conant did, and probably General Farrell. They made some suggestions and some further eliminations.

It was then mimeographed in that form as a top-secret document, and sent out to the various projects by courier, and the project heads were asked to look over the sections that were of particular relevance to their work, and also to have some few of their senior men look them over, with a view to considering, first, whether what I had said in the report was accurate and, second, whether it was releasable; that is, whether it would in any way damage the security of the country to release it, whether such release was inadvisable.

Those men actually were asked to sign clearances of some sort covering those two points, as I remember.

It then came back, and we incorporated many of their suggestions, I think most of their suggestions, into the report. There weren't very many. It had to be done rather hastily. I mean the actual circulation was done somewhat hastily. I don't mean that we didn't have time to consider their suggestions. Those, I think we considered carefully.

Then, as we were preparing it for publication in final form, Dr. Tolman went over the entire report, paragraph by paragraph, with a copy of the directive that General Groves had given us beside him

for any paragraph which he thought might possibly be questionable, citing justification in terms of the directive.

I think that is the last stage with which I am familiar.

The CHAIRMAN. Was there not a board of advisors that General Groves had, Doctor, of which Mr. Harrison of New York Life was a member?

Dr. SMYTH. Yes.

The CHAIRMAN. Did that Board have anything to do with the release of the report?

Dr. SMYTH. I am now speaking of things of which I have no direct knowledge, since I was at a lower level.

There was such a board. It included Dr. Bush, I think, and Mr. Harrison, and others. I assume—in fact I am practically certain, and only my scientific caution makes me qualify the statement—that they passed on the question of whether this report should be released or not, and made a recommendation that it should be released.

The CHAIRMAN. That was the committee that was appointed by the then Secretary of War, Mr. Stimson, I believe, Mr. Henry L. Stimson.

Dr. SMYTH. Yes.

The CHAIRMAN. I do not recall every member of the Board, but I do recall that Dr. Bush and Mr. Harrison were members, and I vaguely recollect that at some point in our work here, it was represented to me that that Board had passed upon the release of the report.

Well, Doctor, do you think that report helped anybody materially to construct atomic weapons or make fissionable material? I might say, Doctor, that you are not unaware of the fact that there has been a controversy on this matter. At some times it gets more virulent than at others, depending upon the particular incident that is under examination, or depending more particularly on who is talking about it. The allegation has been made that the Smyth report has helped, for instance, the Soviet Government to make progress faster than they would have if the Smyth report had not been issued.

I realize, Doctor, that you were an employee; that you had your orders to write this report; that you wrote it; and that, as far as I can ascertain, you did not make the decision as to publication of it. That is correct, is it not?

Dr. SMYTH. That is correct.

The CHAIRMAN. Not that I want to put you in the position of disclaiming responsibility for it. I do not. I just want you to state that is factually true.

Dr. SMYTH. That is factually true. Also, I would not want to disclaim the responsibility for it, because I believe the decision to publish it was a correct decision.

The CHAIRMAN. I notice that General Groves as late as last summer, in a magazine article he wrote for the Saturday Evening Post, stated at some length his vehement belief that that was a correct decision when it was made, and that it is correct now. So you are not alone in that.

Dr. SMYTH. In answer to your question as to whether it may have helped the Russians to produce fissionable material: To know how much it helped them, I would have to know a very great deal more about technology in Russia than I do know. In fact, I know nothing about the state of technology in Russia.

I would suppose that it might have helped them a little bit. I think it helped us very much more. I have seen statements by supposedly

responsible people that that report contains complete directions for making an atomic bomb. All I would say is that I would hate to be the director of a project that was handed that report and asked to make atomic bombs on the basis of it, because I don't believe I would get very far.

In considering whether it was right to release the information in that report, in forming a judgment on that, I think it is necessary to know not only what is in the report but what is not in the report. And that is obviously something that I cannot discuss.

The CHAIRMAN. In other words, what is not in the report is the material anyone who was asked to construct a bomb would need and want.

Dr. SMYTH. Yes.

The CHAIRMAN. Doctor, I would like to have you develop for us for the record your authority for your statement that to publish the report helped us.

Dr. SMYTH. Well, I feel that the whole atomic energy project, the existence of atomic bombs, the possibility of using atomic power for peaceful purposes, is a very startling and a very new development in science and technology, and I feel that it posed a great many problems of administration and control, of security, a great host of problems that were too big to be settled in secret by a few officials "in the know."

I feel that it was quite essential that the American people should know the general outlines of this development, and that is the reason why I was very much interested in writing the report, and one reason why I still feel it was right to have it released. I tried to phrase that in the foreword to my report, and I would merely repeat that. I want to explain it more fully.

There is another reason, which turns out to be a very practical one, and that is that having that report delimits the area of publication. That is, there were many thousands of people who had worked on this project. I think it would have been entirely impractical to say to all of them, "You mustn't say anything about this." Particularly once the bomb had been dropped, the fundamental information, the great secret, was whether this would or would not work. And that was settled very clearly.

The CHAIRMAN. I think you said that, at one time, if I am not mistaken, the greatest secret disappeared at Hiroshima.

Dr. SMYTH. I have said that several times, and I think that is true. The fundamental information, the fundamental scientific information, was general knowledge in 1940; I mean general knowledge throughout the scientific world. The great question was, Would it work, or wouldn't it work? And to tell people that it would work was a much greater help to anyone who wanted to make one than to give an outline of some of the procedures that were carried out in making it work.

The CHAIRMAN. Have you any other observations, Doctor? I want you to feel free to volunteer anything that you would like to say.

Dr. SMYTH. Well, I am not sure that I have entirely finished this statement about the area of secrecy.

The CHAIRMAN. I think that is very important. Why not develop that now?

Dr. SMYTH. I think the general problem of secrecy is often misunderstood.

The CHAIRMAN. I will guarantee that that is right.

Dr. SMYTH. The reasons for keeping things secret are often very tangible and very simple and clear and obvious. The reasons for not keeping things secret are often much more intangible, but I think often equally valid or more valid. And I believe that what one has to do is to consider each case, each question on its merits, to consider whether revealing something will be of greater help to you, to us, than to a potential enemy; and, on the other hand, I believe one has to always remember that when you keep something secret you are paying a very heavy cost; it is going to cost you something, not just the trivial matter of paying a lot for guards and security police, and so on, but in slowing down your work, in preventing the criticism of the work that is the very lifeblood of scientific work and of many other kinds of enterprise in a healthy democracy.

The CHAIRMAN. Including administration of public business.

Dr. SMYTH. Including administration of public business; yes.

So that I think you do pay a great price for secrecy.

On the other hand, it is clear that in this project you must have some secrecy. And returning to our original point, the publication of this report did give a standard to which people could adhere, so that you didn't have everybody rushing off in all directions, talking about what they had done.

The CHAIRMAN. Of course, Doctor, implied in what you said, and I am sure specifically stated at one point, there is the thought that there are some things which we of necessity must keep secret in the present state of the world's condition.

Dr. SMYTH. Certainly.

The CHAIRMAN. Knowledge as to how to fabricate the weapon, certainly, I am sure you must agree, must be kept inviolate, if it can be; and at least I am hopeful that it can.

Dr. SMYTH. Certainly.

The CHAIRMAN. Also mechanical know-how in the production of fissionable material should, I am sure you will agree, be kept as secret as possible.

Dr. SMYTH. Yes.

The CHAIRMAN. Now, Doctor, I think I have just about covered everything that I wanted to have disclosed in the record, and so I am going to turn you over to Senator Hickenlooper, the ranking member of the committee.

Senator HICKENLOOPER. Doctor, I am very interested in your discussion of the Smyth report. I want to make it perfectly clear that I not only have never criticized the Smyth report but I believe it is an unusually able and a highly helpful document in the development of this science. But it has been controversial. I think you will recall that Mr. Lilienthal said about 2 years ago that it probably was one of the biggest breaches of secrecy—I am paraphrasing—that had happened in the project. And then, sometime later, he said it was one of the greatest helps in the education of the public. So we run the gainst of people who know about it, who have taken different positions.

But I just want to assure you that I feel that you have contributed a highly able and a highly essential work in this new science. So I have no criticism, and never have had, of the Smyth report. Perhaps all of us would rather that the weapon end of it could have been kept under complete wraps and locked up some place; but, as you did originally point out, perhaps the biggest secret of all was that the thing would go, and that was what the scientific world had been speculating about since the thirties, and even before that.

So as far as I am concerned, the Smyth report is on the credit side with me, and I think you can be well proud of the part you had in it.

There are one or two phases of the operations of the Commission that I would like to get your views on, however, because the Commission is not only charged with this tremendous scientific business but it also has vast public responsibilities, such as operating physical plants, and operating a Government monopoly, one which is extremely monopolistic, and extremely secret in its operation, and which therefore has a relationship to the Congress, which has set the original policy, and a relationship to the public.

I take it that you have read the act itself.

Dr. SMYTH. I am ashamed to say that I haven't reread it. I have read it.

Senator HICKENLOOPER. The policy set out in the act is quite a unique policy in the handling of public affairs, I believe. Do you agree with that?

Dr. SMYTH. I would certainly agree with that, yes.

Senator HICKENLOOPER. I am not critical of the policy, because I am sure all members of the special committee that sat in on this in the early days of the hearings on the law will agree that we could find no other way of handling this at that time. And, perhaps, the present time. But because of its monopolistic phases and because of its relationship to the public and the vast public interest and, sometimes, public apprehension as to this whole mysterious business, I think the relationship between the Commission and the joint committee of the Congress is a most important thing. Because the joint committee is the only genuinely and thoroughly informed source that either the Congress or the public has to rely upon in the operation and development of this thing. Manifestly, that comes from the secrecy involved and the necessity for controlling information on weapons.

In the provision setting up the joint committee in this bill, there is a requirement. Well, it is a mandatory duty, as I interpret it at least, both upon the joint committee and upon the Commission. The joint committee is charged with the responsibility of making—

continuing studies of the activities of the Atomic Energy Commission, and of problems relating to the development, use, and control of atomic energy.

I am quoting from the act.

On the other hand, the Commission—

shall keep the joint committee fully and currently informed with respect to the Commission's activities.

So that puts an injunction on both the committee and the Commission, and I do not think there is any dispute about the fact that it was put in there because the device of a joint committee was the only device that could be found for a liaison between this secret monopoly

of the Government, on the one hand, and the Congress and the general public.

As far as my own personal opinion is concerned, I think it is working very well. But I merely wonder what your attitude would be; that is, as a member of the Commission, toward the fullest possible cooperation with this joint committee of the Congress.

Dr. SMYTH. I have tried to make clear that one of the reasons why I was interested in having the report published was because I felt that in this country it was essential that the people should be informed, so that through their representatives in Congress they could follow and control the development of this field. I think that is really my answer, but I will answer more specifically. I would certainly hope, as a member of the Commission, should I be confirmed, that I would do everything I could to cooperate with the joint committee. In other words, I thoroughly approve of the way it is set up.

Senator HICKENLOOPER. That is fine. I think that is ample.

I do not have before me the original hearings on the confirmations of the first Commissioners, but I may suggest that in those hearings it was very clearly brought out by those first Commissioners themselves—Mr. Lilienthal, Mr. Strauss, Mr. Waymack, and the others—that the cooperation of the joint committee would extend even to those occasions in which participation by the joint committee in the deliberations of the Commission would be indicated. They all expressed themselves as feeling that way about it. I do not believe such participation has ever occurred, but I believe they went that far. I believe you will find that in the testimony of the Commissioners; access to the minutes of the Commission's activities, and all those things.

I wonder if you feel that your attitude is the same, generally, as the Commissioners expressed. I could not expect you to affirm the specific words I am using, because I cannot give you the accurate statement as to that; but it indicates the full degree of participation that the Commission members now in office felt that this cooperation should attain.

Dr. SMYTH. I would hesitate to give you a specific answer in terms of administrative set-ups.

Senator HICKENLOOPER. I understand that. I do not want you to be too meticulous about it.

Dr. SMYTH. But certainly it seems to me that the whole enterprise will work best with the closest possible cooperation. I think the danger in the enterprise lies in the necessity for secrecy, and therefore one must have internal criticism such as perhaps only the joint committee can provide. Well, it isn't exactly internal criticism, but at least the joint committee is a qualified body which can be told the secrets and therefore can criticize objectively; in the way in which I wish the whole Congress could, theoretically, at least, if it weren't for the secrecy.

Senator HICKENLOOPER. I think there is a restlessness on the part of everyone and we cannot just open this whole coconut, and permit everybody to look inside of it. I think we are in agreement that there are practical reasons why we cannot.

This project, up to now, at least, and for some time to come, I am personally convinced, is largely, in bulk of money and in bulk of installations, a weapon project. That is, the major end of it is accented toward weapons at this moment. I take it from your answers

to Senator McMahon that you are in thorough accord with the maintenance of the utmost secrecy and the safeguarding to the highest degree within this country of information leading to, or bearing directly upon, weapon production from atomic energy.

Dr. SMYTH. That is correct. And I would like to just reaffirm that.

In the past 3 years I have made a number of speeches in which I have tried to explain the problem of secrecy. I have always emphasized at the beginning of those speeches that there are fairly large areas, such as weapons production, that should be, will have to be, kept secret at the present time.

Senator HICKENLOOPER. The reason for my question, there, roughly stated, is that, as I think you will agree, there are people in the country who, without doubt utterly sincerely, urge the publication of all information about weapons and everything else that we know about this project. I have to thoroughly disagree with them myself, but I was interested in what your personal attitude would be, as I might rely upon it being reflected in Commission activities.

Dr. SMYTH. I can give you a somewhat fuller statement about the secrecy problems, if you wish, but I think it is essentially a repetition.

Senator HICKENLOOPER. I do not want you to repeat any more than necessary. But I think this is a tremendously vital phase of this thing.

You stated a moment ago that while the release of this information might have benefited someone else, it was more beneficial to us. To give you a very crude illustration of what I am trying to get at in the differentiation of attitudes on release of information, let us assume that some other nation was able to build and fabricate a substantial number of the Hiroshima-type bombs but that meanwhile we had been able to go ahead and build better bombs and more bombs. I have leaned quite strongly to the idea that there might come a time when it would not make any difference how many more bombs we had than somebody else.

If the other fellow had enough bombs to blow us out of the water, that would be the test. It would not make much difference whether he had a cruder bomb than we might have, or a less efficient bomb than we might have; he could still do the damage, in spite of our fancier bomb, or more efficient bomb.

It is that particular line of thinking that I am wondering about—whether you might think that the release of information which would lead to weapon making might be justified because by its release we would be able to make a more efficient bomb or develop more information. I do not know whether I make myself clear or not, Doctor, but I think perhaps I am just a little bit adamant on this position.

Dr. SMYTH. My training is such as to make me willing to consider almost any proposal, almost any flight of the imagination, and yet it is very difficult for me to conceive of a situation where the release of information about how to make a bomb would help us enough in the making of a better bomb to justify that release. Does that answer your question?

Senator HICKENLOOPER. Yes. It does as to your attitude, I think. And I think it is a satisfactory answer. It is a rather difficult field to explore, but I have the feeling, myself, that at the moment and in the reasonably foreseeable future, it is tremendously important to us

and to the world that we do not give any aid to anybody in the manufacture of atomic weapons except our own people. And I am not able in my own mind to conceive of any situation in which the giving of any information respecting weapons would have an overriding benefit to us here. I am just expressing an attitude.

Dr. SMYTH. The only situation that I can conceive of would be something in the development of the problem of international control. I would merely say, there, that I don't want to get into a hypothetical discussion.

Senator HICKENLOOPER. I am leaving out the matter of international control. I am thoroughly committed to the idea that if proper machinery can be set up and satisfactorily safeguarded, international control would be desirable. So I am not trying to talk about that phase of it.

I do feel that the greatest possible attention and the most meticulous care must be exercised to prevent our aiding any other individual nation or combination of two or three nations toward their development of atomic weapons, either directly or indirectly. And I am also aware of the great advantages of scientific information being disseminated with the greatest possible freedom, short of that point.

There is another phase upon which I would like to get your attitude, Doctor, and it is a phase of this thing that I think is of tremendous importance. It is on the personnel end of the operation of this very great project.

Because of this secrecy that comes as a result of weapon production, we have had to establish some quite rigid safeguards against the wrong kind of personnel being employed in the project. The law in general provides that before people can have access to restricted data, or be cleared for any access to restricted data, they must have been investigated by the Federal Bureau of Investigation. Do you disagree with that philosophy of the law, under all present circumstances?

Dr. SMYTH. No. I agree with that.

Senator HICKENLOOPER. I would hope that the time might come sometime when we would not have to do that. But you do agree with that philosophy?

Dr. SMYTH. I do.

Senator HICKENLOOPER. In connection with some of the examinations and the historic associations of some employees of the Commission who have been given what we call a "q" clearance for access to restricted data, there developed facts and circumstances surrounding the history and background and associations of some of these people which raised very substantial doubts as to their being good security risks for clearance.

I would like to ask you a question in that connection; and I don't mean this question to be embarrassing, but I think it is very vital that it be asked.

Let us take a hypothetical case where investigation of a man or a woman, who is posted for a "q" clearance, discloses a substantial association with subversive groups, or with individuals who are known to be spokesmen and leaders and agitators of subversive groups, with especial emphasis on the list of subversive organizations that the Attorney General has set up.

Generally, could you express what your attitude would be toward a clearance or a nonclearance of people of that kind for access to restricted data, in view of the fact that the Commission has the sole and final authority to clear or not clear?

Dr. SMYTH. Well, I will say this: It is perfectly clear that security is something quite different from loyalty. It is perfectly clear that you might refuse to give "q" clearance to Mr. "X" or Mr. "Y" even if they had no association with any so-called subversive group, just if he talked too much, or got drunk and talked too much.

Senator HICKENLOOPER. I will call your attention to the fact that the law says that they shall pass upon the loyalty, character, and associations; I mean, those are the three categories.

Dr. SMYTH. Yes. I am not suggesting that the man should not be adjudged loyal. I am suggesting that the criterion is a much stiffer one than that.

Senator HICKENLOOPER. I think you have a very good grasp of the field there, and I am glad you have.

Dr. SMYTH. I am sorry that the public sometimes gets confused on that, because I think it is very unfortunate that when a man gets refused clearance for work on secret material it sometimes is interpreted as meaning that the man is disloyal, which it may not mean at all.

It is also unfortunately the case that there are those who feel that because they are American citizens, they are entitled to work on this project, and have access to secret materials, just by reason of that fact, just because they are free, loyal Americans. I think that is nonsense.

Senator HICKENLOOPER. I thoroughly agree with you. I could not have stated it as well myself.

Dr. SMYTH. I do feel that the whole process of clearance, of investigating large numbers of people by having the FBI make investigations of them, is an unpleasant business. I think it is essentially contrary to our American tradition. In other words, I consider it a necessary evil. I would like to limit it as much as possible. I would like, where possible, to avoid this process. I do not at all enjoy the idea that there is a stack of documents somewhere here in Washington that tells all about my past history. I am not ashamed of my history, but I would rather not have a dossier here on it.

Senator HICKENLOOPER. I have every reason to believe that you have no reason to be ashamed of what is in that file.

Dr. SMYTH. Well, that is very kind of you. I don't know. They may have missed some things.

The CHAIRMAN. You know, Doctor, I have the same feeling about having my fingerprints on file. I do not know whether they are or not. I know they have many millions of them; and undoubtedly it furnishes a good record in the event of, oh, many unfortunate accidents that can happen to a person. But the idea of having your fingerprints down on a card on file—it is not reasonable to resent it, but I just do not like it.

Senator HICKENLOOPER. I took my whole family and had them fingerprinted some years ago, and have them on file. My wife usually runs our family affairs, and she agreed to it.

The CHAIRMAN. Doctor, you have to agree that many millions of Americans sent in their fingerprints voluntarily. So your feeling and mine is not universal. But it is one that we share.

Dr. SMYTH. If I may return to this question of clearance. At present the work of the Atomic Energy Commission impinges on so many fields in science, and particularly in the physical sciences, that it can be a very serious handicap to a man in getting a position if he has been refused clearance. That is the reason I wanted to emphasize the fact that the refusal of clearance was not necessarily a reflection on loyalty.

Senator HICKENLOOPER. Yes. That gets me to another phase of this very difficult problem.

There are two difficulties, or two major fields of difficulty, in the question of clearance, that arise where something questionable appears, or a danger flag is raised against somebody who is being investigated.

One of the most difficult things, from a human standpoint, is to raise that question about someone who has already been employed, and has had a history of continuous employment for some time, where investigation shows that there is something derogatory, substantially so, in that person's habits, attitudes, or things of that kind. It then becomes a question of removing that person or not removing him from a job. That poses a difficult human problem.

There is another difficulty, however, that I cannot say is customary, but has too often arisen in Commission activities in the past, where some individual would be engaged for a job, practically put on the job, permitted to stand around for 2 or 3 months cooling his heels, and then has something come up in his investigation, upon which the argument is advanced, "Well, he is already practically on the job; therefore, we must overlook certain derogatory signs in his background."

It has always seemed to me that a person who is being considered for employment, or for a "q" clearance, could well be looked into in advance, before any commitments have been made; and that it would eliminate all this human element of offense to an individual, or blocking him from getting a job some place else, if they would merely look into it in advance of the commitment. Then there would be no publicity about it. There would be no question of hearings. There would be no fanfare. And this issue of blasting a person's character, or making possible a misunderstanding of the reasons for his being refused employment, could all be eliminated. The Commission could very well say, "No, we will not make that man a proposition," or "We will not solicit his services."

I hope you realize I am not trying to commit you in advance to any particular decision, or as to any particular case. Perhaps I am expressing my own views as a result of some experience in this thing.

Then, of course, there is the case where examinations may be made quietly, without the individual necessarily knowing it. Those cause no trouble if something derogatory comes up.

There are those cases where the man or the woman has been actually on the job, maybe at the Manhattan District, or some place else, or came to the Manhattan District prior to an examination. There is the difficulty, of course, of having to fire such persons, of having to tell them, "We do not need you any more."

Then there is the practice in, I would say, a great minority of the cases, a practice which it seems to me should be eliminated, of putting somebody on a job in a project, and then sending him for clearance. And then finding that there is something in that person's background which does not make him or her desirable as a security risk. It would seem to me that that practice could be eliminated, and that a practice could be substituted which would afford far less difficulty and far less embarrassment than often obtains now.

I might say, just to clarify this situation, that I think the record of loyalty and character in this whole project, from the Manhattan District down to the present time, through the present Commission, has been of an unusually high order. I think the percentage of undesirable people who would have occasion to have access to restricted data is remarkably low and indicates a standard that probably could not be excelled and perhaps not even equaled among any other group or class of people. So I do not take the attitude that everybody is bad.

But let me ask you about this, because this has apparently been bandied around somewhat: Sometime ago, last year in fact, the Commission adopted a policy of selecting younger men as follows: To be educated for doctorate and postdoctorate degrees, and to create a reservoir into which the Commission might later dip to get highly trained people to do classified work and other work.

When that program was suggested, I personally said that the theory was, in my mind, good. I had no objection to it. I thought it was a constructive theory. But at the same time I raised the question with the Commission: "Are you going to have these people investigated by the Federal Bureau of Investigation before you put them on the Government pay roll and educate them at Government expense?"

I realize fully that in their fellowship activities, they do not have access to restricted data. I realize that. But they are being educated at Government expense, and they are to constitute a reservoir from which able people may be available in the future to the Commission.

I was told, when the program first came up, in my communications with the Commission, that they would, of course be investigated by the Federal Bureau to see whether or not there was anything in their backgrounds that would eventually make them undesirable for clearance for access to restricted data if, as, and when the Commission, after educating them, might want to use them.

I find now that a very few of the first 246, I believe, were in fact investigated by the FBI, but that thereafter investigation ceased, and that as to probably 200 of them no investigation, no genuine investigation has been made.

Investigation, however, did disclose that one man who is now receiving a substantial stipend from the Atomic Energy Commission is being educated, I think, in a postdoctorate field. I have his name here; it was published in the fifth semiannual report. He is taking postdoctoral work now, I am told, at somewhere around \$3,600 to \$3,800 a year. He is known to be a Communist. His wife is known to be a Communist. I am told that in the first few that were investigated, a number of others had extremely derogatory information in, as generally outlined in the act, their "backgrounds and associations." And while I knew nothing about this matter yet, the night before last a radio news commentator, Mr. Fulton Lewis, Jr., talked about the

approval of and the offering of a scholarship to a young man at the University of North Carolina who has been a Communist leader in Chicago, and who is reputed to be the Communist spearhead in the student body at the University of North Carolina. As I say, I have no information on that, other than the information I got from the broadcast. I was called about this information two or three times on the day of the broadcast. I had to confess that I knew nothing about the case; that I had no idea about it; that it had never come to my attention. I do not know about the truth of the matter, except that I have done some checking and find that this young man is generally reputed to be the spearhead of the Communist agitation at the University of North Carolina.

I would like to ask your opinion, if you care to give it, whether in this program these people who are to be educated at Government expense with the avowed purpose of, first, I think, creating a reservoir from whom able people, trained people in nuclear physics, can be brought into Government service at some later time, not all of them, again I say, to be brought into Government service, but people to provide a reservoir from which selection could be made, should be examined beforehand; and I would like to ask what your opinion would be as to the advisability of examining those people before they go on the Government pay roll to become, at Government expense, a part of this reservoir.

Dr. SMYTH. Well, I should first make it clear that I am not a Commissioner.

Senator HICKENLOOPER. Again, let me say to you that I am not going to pull out any particular record on you and say, "You promised to cross this 't' and dot this 'i'," and so on. I am trying to get some idea of your general philosophy on what I believe to be the most vital human element.

The CHAIRMAN. Might I interrupt, Doctor, just to say this to the Senator?

Of course, as you know, we have set down a fellowship program hearing for an open meeting on Monday, May 23, at 10:30 a. m. We have already had one short meeting on the subject, and the whole program has been under the scrutiny of the staff for some time. Of course, that has no bearing on the questions directed to Dr. Smyth, but I just want to say, since this is an open meeting, that that program is being looked into.

Senator HICKENLOOPER. Well, Mr. Chairman, may I say this:

I am frank to say that I believe you are going to be confirmed, Dr. Smyth. I am not hostile in this at all. The reason I am asking you this now is that it is very likely that before we can conclude the hearings on the fellowship program—I believe we originally intended to have them this week did we not, Mr. Chairman?

The CHAIRMAN. That is right.

Senator HICKENLOOPER. Before we conclude those, it is very likely that you will be confirmed as a Commissioner. And I am very, very sorry that this matter was not up 2 years ago, so that I could have asked the other Commissioners prior to their confirmation what their general attitude would be on this thing.

The fact of the matter is that I am somewhat surprised that they changed their attitude on the investigation of these students, when I did have the assurance that a preliminary or prior investigation of

these people was a part of the program when they first set it up. Now it seems not to be. So I am very interested in attitudes on this matter.

The CHAIRMAN. I want to be clearly understood. I just wanted to point out that I realize it is a perfectly proper question of Dr. Smyth, and one on which you are certainly entitled to have an answer. I might say for the record that I have not come to any firm opinion as to whether or not there should be a full scale FBI investigation of the young men, Senator, but I certainly agree with you that if we are going to dispense public money, the applicant should be required to fill out and swear to a very full statement of his credentials and the organizations to which he belongs, and I believe he should be required to state his loyalty to the United States Government. Then, if it develops later that any statement therein is untrue, he certainly would have opened himself to the charge of perjury. That, however, would be a matter of the mechanics, related to the full scale FBI investigation, and laying a predicate, if a man is untruthful, for making him pay the penalty for his untruths.

I am sorry I interrupted.

Senator HICKENLOOPER. That is all right. I might say, just as a sequel to that, and just to make this situation perfectly clear, that there have been instances in this project where people have been required to make out what we call a "PSQ," in which they swear to their associations, and so on; and that a later investigation, after these people have gone into some important positions, has shown, I will say just by way of illustration, that they have belonged, as a matter of proof and later admission, to organizations that I do not believe you and I tolerate.

The CHAIRMAN. If they perjured themselves, they should be held to account.

Senator HICKENLOOPER. But the point is that the cat was out of the bag. They were given access to important information meanwhile.

I know the chairman and I have discussed this, and I do not believe we have any substantial disagreement on the philosophy of the thing, but I am definitely taking a position on this, so that there will be no question about it. I do not mean to oppose education. If a man is a Communist, he can go and get himself educated any place he wants to. But I do not want him to do it with public money. That is probably it, in a nutshell. And for any person who is maintained at public expense, educated in this highly specialized field, expected to become a part of a reservoir from which we can later obtain specialized people, I think there should be a thorough FBI investigation, just the same as for anyone else on the project, and before he begins to be educated at public expense.

I agree that I would welcome the time when we could safely get away from these investigations. They are offensive to me too. But I think they are necessary in the case of those who are going to work on the project, and I think they are just as necessary where public money is being used to educate these people; and people who at least in several instances could not by any stretch of the imagination pass the investigation for a "q" clearance later. That is my philosophy on that, Doctor.

Dr. SMYTH. First I ought to make it clear that the only position I can take, in answering you, is the position that is taken by a man who

has been chairman of a physics department for a good many years, and has seen a good many young students in training. And actually we have now several AEC fellows, both predoctoral and postdoctoral, at Princeton.

My position would be that I would hope that this clearance procedure would not be necessary. As you have pointed out, these men have no access to secret material. Many of these universities, I think, take the position that we do at Princeton, that secret work is inappropriate at the university; so there isn't any secret work around.

Senator HICKENLOOPER. On that point, and in that limited sphere, I agree with you that, per se, education and training in a college or university should not require investigation. I mean, people have to stand on their own and be responsible for their own affairs. This goes further than that, however. It goes to the point of the use of public funds to educate people who will be available later for use on highly secret and classified matters.

The use of the public funds to educate them at public expense seems to me to put them in a different category, than, say, the mill-run of research people, who certainly have a right to educate themselves, or get their education, as they may. So it is just a little different. I agree with the major portion of your philosophy.

Dr. SMYTH. All I am saying at present is that I hope this will not be necessary. In other words, I would like to give you some of the reasons why I hope it will not be necessary.

These boys who are the best people going into scientific research, the best material for graduate students, the best material to make scientists out of, are the people with an inquiring turn of mind. They are the kind of people who question the validity of scientific principles. And that is the way we modify scientific principles and get them more nearly correct; that is the way we make scientific advances: by having men of questioning minds. They are apt to be politically rather naive, certainly in their early stages. They are apt to have concentrated on their scientific work.

I would say that I would consider it more difficult to judge a student of 21 or 22 years old in terms of fundamental loyalty and discretion, particularly as to what he is going to turn into after 2 or 3 years of graduate training, than almost any other class.

Among that group I think it is extremely difficult to set up a reasonable standard of loyalty to apply to these youngsters. I think if you apply this idea of FBI clearance for all these people, you will tend to get—

Senator HICKENLOOPER. May I just interrupt to correct that statement, Doctor, which you probably do not mean. The FBI does not clear anybody. The FBI only investigates, and says: "Here is the result of our investigation. We do not evaluate it. We do not say it is good, bad, or indifferent." The agency to which it reports has the duty and the burden of evaluating that and clearing or not clearing, you see.

Dr. SMYTH. Correct.

Senator HICKENLOOPER. There is some misconception about that.

Dr. SMYTH. That is correct. I spoke carelessly.

I am afraid that just the people you will most want to be trained in this field will be the people who will have the strongest objections, however irrational, the kind of irrational objections that Senator

McMahon and I have to this procedure. They will also be the kind of people who will not need the AEC fellowships—I don't know whether that is good or bad—because they will be the best ones. Or not necessarily. I am sorry.

I do not know anything in detail about the present procedure. I share your discomfort at the idea of public funds being used to educate members of the Communist Party. There certainly is not the slightest disagreement there. I do think I have a somewhat different conception of the value of the AEC fellowships; or at least that there is another objective, which I think you probably have in mind. I believe that they can be valuable not only in providing men who will go directly into Government projects, doing secret work, but I think they will be just enormously valuable in lifting the whole tone of science in this country. We have precedent for that in the National Research Fellowships.

Senator HICKENLOOPER. In that philosophy I certainly agree with you; that is, as to the broad objectives. And I did agree when the Commission set up the program. That is, I am in agreement as to the potential or very evident benefits that can come from this program.

I am also convinced that in this program there are, in numbers, very few involved. I do not know what the program eventually will be, but it may be a total program of five or six hundred, or something along in there. They have listed in the fifth semiannual report, I think, 245. I believe there are 245 listed here now as of January 1 in this fellowship program, and they are adding more. And frankly, I think there are very few, in numbers. Therefore it would seem to me that an elimination of the small minority who could not possibly, under their present records, at least, be considered for clearance for access to restricted data, would not in any way hurt the program. Oh, it is possible that someone who was eliminated might eventually, sometime in the future, turn out to be the top man in some line; but it seems to me that surely, out of all these hundreds of brilliant young men and women who would be otherwise eligible for these fellowships, there would be an ample reservoir, and that the few that could not qualify, would not foul this program up in any way, or substantially retard it.

Dr. SMYTH. May I ask you this: What would you feel about similar fellowships set up, let's say, by a national science foundation, where the individuals would also be supported by public funds?

Senator HICKENLOOPER. I would feel exactly the same way, if public funds go into it. If it is a private foundation, I think under our system the private foundation has the right to educate anybody that they want to, within, of course, reasonable limits. They cannot educate people and train them how to go out and kill people or assassinate the President, or anything of that sort. However, as a private foundation, I would say, they have their rights and their privileges. But when it comes to foundations or groups supported entirely by public funds, it is another matter. And these people would be maintained by the income derived from these public funds. They may be fortunate enough to have some money of their own, but I presume the overwhelming number, practically all of them, would be living on the public funds that go into this fellowship.

Dr. SMYTH. One of the laws of science is that nobody who has money ever goes into science. There are exceptions, of course, to that law.

The CHAIRMAN. If he does have money, he speedily loses.

Senator HICKENLOOPER. As I say, where public funds constitute the support for this thing, it is my opinion that we must be careful that we do not use those public funds to educate people who would not in the future be eligible to work for the Government in classified fields.

Dr. SMYTH. Well, I think our differences are probably in terms of mechanism, not in terms of philosophy, and I do not believe that my familiarity with the present procedures and the details of the problem is sufficient for me to say more; except that I hope that the idea will not get abroad that the only people who can get AEC fellowships are people who have been completely conformist. I know that is not your view.

Senator HICKENLOOPER. I would not put it that way myself, if I were stating it. I would say the people who cannot get the AEC fellowships are people about whose background and record there is certain derogatory information which would preclude them, under our rules at the present time, from having access to secret information. I would not say they would have to be conformists, in fact, we are all nonconformists. I suppose there is no normal human being, so everybody is a nonconformist. But I think there is a pretty well-defined category in which we believe that certain agitations and beliefs are not for the best interests of the body politic and our social and moral institutions.

Dr. SMYTH. Certainly.

Senator HICKENLOOPER. And I think we can define that line with reasonable exactitude, and I think it is the characteristic of the American people that they lean over backward to give the other fellow the benefit of the doubt, too, very often, so that there are many who are not as rigid in these matters as perhaps I would be, and I may be too rigid in my attitude. But I would emphasize that this is a specialized program of the Atomic Energy Commission and not necessarily a general educational program, because the Commission, under the law, has no business going into a general education program. Their business is atomic energy. The justification, I think, for their fellowship program is that they will build up a reservoir of specially trained people, people trained in nuclear fields, who eventually can be brought to the aid of this great new developing science, and I do not believe that the Atomic Energy Commission has any business going out and just educating people, willy-nilly, to advance the general level of the educational system. I think we have other means of doing that. Therefore I consider it a specialized activity. As a specialized activity, I believe it should be limited to people who can qualify within the very tolerable limits—the limits are not too severe—the very tolerable limits of security risks. That is my philosophy on it.

Dr. SMYTH. As I said before, I think I would be very distressed to have an AEC fellow, a predoctoral fellow, who had benefited by that training, and benefited by the public funds, come to his doctorate and then apply for a job at some AEC laboratory where clearance was required, and find that he was refused clearance.

Senator HICKENLOOPER. Exactly. My point is that we ought to do as much as we can to eliminate that possibility before we begin to ex-

pend money from the public funds on him. I realize that after you examine or investigate somebody for the purpose of having him go into this fellowship program, he can do many things between the time of that investigation and when he begins that work, and 2 or 3 or 4 years, maybe, or whatever time expires until he might become desirable otherwise, to work on this project. I realize that overnight he can do things after the investigation.

Dr. SMYTH. He can do things in either direction. I mean, maybe, when he is a senior, he thinks communism is wonderful. Maybe when he gets some sense, a year or two later, he thinks it is terrible. And I would rather have him investigated at the time that the clearance question becomes acute.

I am sorry. I am getting into detail here which I do not really think I am qualified to speak on.

Senator HICKENLOOPER. That last statement of yours I am in thorough disagreement with, Doctor. I just happen to be pretty adamant on the idea that the only sound procedure is to investigate these fellows before we start spending money on them. And there are plenty of people who have not developed these vagaries of social and political thought that a lot of us think are very harmful, and I think we could eliminate the others at the start and just not take them on.

Just one more observation, because I think I might make it now. I am sure you have a very substantial conception of the great extent of the physical operations of this Commission, and I am also quite confident that your attitude would be to operate it in the public interest as economically as possible, considering the justifiable programs that have to be developed, and the development of the science, and the maintenance of our preeminence in it; in other words, that it is a public thing, run by public money, and that economy is to be desired in this just as much as in anything else, but economy within reasonable limits of maintaining our preeminence in our development. I take it there is no disagreement with you on that.

Dr. SMYTH. I pay taxes. I don't want to pay any more.

Senator HICKENLOOPER. That is right. Well, I had something else that occurred to me a moment ago.

Dr. SMYTH. Might I return to the other question?

Senator HICKENLOOPER. Yes, indeed. I would be glad to have you say anything you want.

Dr. SMYTH. Because I may have given a false impression.

I would say, speaking as chairman of a physics department, that I hope it won't be necessary to have any people that we nominate in our department for AEC fellowships investigated.

Now, in our particular department, I would feel perfectly happy about it and perfectly safe. I don't think there would be any trouble, but I just hope it won't be necessary. Maybe it is. I understand your point of view.

The CHAIRMAN. You would not have the same objection, Doctor, or, to use a better word than "objection," the same "hope," as to procedure which would require any applicant in his application to state where he came from and all about himself, and what organizations he was a member of, and also to make an oath of allegiance to the United States. Would you have any objection to that?

Dr. SMYTH. I don't think so.

The CHAIRMAN. Without in any way wishing to preclude the Senator, I do want to reserve full discussion of this matter until we hold the hearing which has been scheduled for next week, an open hearing, on this whole problem. It is a very serious problem, a grave one. It is serious because we are operating in a democracy, and we must have support for our Government and we must have confidence in our Government. I am thinking now in terms of taxpayers, not the Rockefellers and the Vanderbilts but some fellow who is having some part of his wages withheld from him after he works, as a carpenter, perhaps, or in an automobile factory. And while we cannot, as I see it, jeopardize our scientific progress by attempting to conform to what may be that man's conception of how we should try to advance scientific progress, yet we must have a decent regard, Doctor, for the opinions of our citizens as a whole. I am sure there is something shocking to them in the thought that we would pay out public money for the education of a youngster who paraded his communism. It has a scandalous kind of a connotation.

This illustrates perfectly, it seems to me, the difficulties of operating this kind of a project in this kind of a democracy. It is a very difficult thing.

Against that, let me place the other proposition. We must not, it seems to me, so constrict this, so try to make it uniform, that all we get is the kind of person who must wear four buttons on his coat if all the others are wearing four buttons on their coats. It is a problem of balance here.

At any rate, perhaps on a full investigation of it, on May 23, we will be able to develop the facts and arrive at some kind of a conclusion.

Doctor, there is just one question I want to ask. I am pretty sure I know what the answer is going to be. Are you in general agreement with the United Nations' plan for control of atomic energy?

Dr. SMYTH. Yes; it seems to me an intelligent plan.

The CHAIRMAN. I have had a question suggested to me, Doctor, that I am going to ask you. It goes back to this other thing.

Would it not tend to discourage unwise experimentation by college youth in Communist front groups, if they knew in advance that such participation would bar them from a very desirable fellowship?

Dr. SMYTH. Well, that is a question having to do with the operation of the undergraduate mind. And after 30 years of experience, I hesitate to make any answer.

The CHAIRMAN. As to what induces them and what does not?

Dr. SMYTH. Exactly. There is always the problem, in teaching chemistry, I have been told, as to whether to tell the boys what particular mixtures are explosive or not to tell them, and I think most chemistry departments would oscillate between the two policies, because if you don't tell them, they may make up an explosive mixture by mistake. If you do tell them, they probably will make up an explosive mixture because they are interested in producing it.

Senator HICKENLOOPER. Is not that question a whole lot like the philosophy that one hears once in a while, that a minister ought to go out and raise the roof once in a while so that he would know what to preach against?

Dr. SMYTH. Yes, exactly.

The CHAIRMAN. Well, Doctor, there are no further questions that occur to me.

Senator HICKENLOOPER. There is just one that I have. It will be very short.

The CHAIRMAN. Go right ahead, sir.

Senator HICKENLOOPER. I would just like to have your expression on this, Doctor. Do you have any deep-seated convictions or feelings which, under the present circumstances—I am just talking about today and the immediate future—would cause you in any way to tend to oppose the continuing development of the weapons program in atomic energy?

Dr. SMYTH. No.

Senator HICKENLOOPER. I am speaking of present circumstances, now.

Dr. SMYTH. I understand.

Senator HICKENLOOPER. I am not speaking of the time when we hope the world may be reliably assured of peace, or anything of that kind.

Dr. SMYTH. If I had any such convictions, I would not have accepted the present appointment.

Senator HICKENLOOPER. Of course, I understand that we all wish we did not have to make weapons. I am not saying anything about that.

Dr. SMYTH. Of course. I do not enjoy the idea of making weapons. But I certainly have no convictions that would prevent me from accepting the job of doing so.

Senator HICKENLOOPER. And of promoting and developing a weapons program to the greatest possible degree consistent with the reasonable needs of the time and the occasion, and our own national security?

Dr. SMYTH. That is correct.

Senator HICKENLOOPER. All right, Mr. Chairman.

The CHAIRMAN. Doctor, it is obvious that we have been sitting as a subcommittee, Senator Hickenlooper and I, this morning. We will report to the full committee. The record will be available for each member of the committee.

I may say for the record that Senators Connally and Vanderberg are in the Foreign Relations Committee in hearings on the Atlantic Pact. Senator Tydings is presiding at the Armed Services Committee.

Senator HICKENLOOPER. I saw Senator Knowland in the hall on the way down, and I think this is an important meeting of the Armed Services Committee. He said that he had to attend that, and he said he did not dislike Dr. Smyth, anyway.

The CHAIRMAN. It is attributable, probably, Doctor, to their confidence in you, that they are willing to trust your at least immediate adjudication to Senator Hickenlooper and myself.

At any rate, we will report to them, and we will hear the other nominee to the Commission, Mr. Dean, on Tuesday next.

I am anxious to get this business concluded as quickly as possible, because the Commission now is operating with three members, and I think it is highly essential that you get into office as quickly as possible. So I assure you that we will not delay. You can make your arrangements accordingly.

Thank you very much, Dr. Smyth.

(Whereupon, at 12:20 p. m., the hearing was closed.)

# CONFIRMATION OF GORDON E. DEAN AND HENRY DeWOLF SMYTH AS MEMBERS OF THE ATOMIC ENERGY COMMISSION

WEDNESDAY, MAY 18, 1949

UNITED STATES SENATE,  
SENATE SECTION OF THE  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The committee met at 2:30 p. m., pursuant to call, in room G-48, the Capitol, Senator Brien McMahon (chairman) presiding.

Present: Senators McMahon (chairman), Knowland, and Hickenlooper.

Also present: William L. Borden, Executive Director, and Harold Bergman, Deputy Director, Joint Committee on Atomic Energy.

The CHAIRMAN. The meeting will come to order.

We have with us Mr. Gordon Dean, whose name has been sent by the President to the Senate as a nominee to the Atomic Energy Commission.

I have here biographical data on Mr. Dean as submitted to the Senate by the White House, which I will read into the record.

His address is Alta Vista Drive, Vista, Calif. He was born in Seattle, Wash., on Dec. 28, 1905. His education was as follows [reading]:

Attended public schools in Chicago, New York City, and Pasadena, Calif.

1927: A.B., University of Redlands, Calif.

1930: Doctor of jurisprudence, University of Southern California.

1932: Master of laws, Duke University Law School, Durham, N. C.

Then, under "Experience," the biographical data statement continues [reading]:

"1930-34: Assistant dean and instructor in law, Duke University Law School, Durham, N. C.

1934-36: Attorney, Criminal Division, United States Department of Justice.

1936-37: Chief, Appellate Section, Criminal Division.

1937-40: Special executive assistant to Attorney General Homer Cummings and later to Attorney General Robert H. Jackson.

1937: Special lecturer at American University on the American Legal System.

1940-43: Private practice of law, Washington, D. C.

1943-45: Entered United States Navy as lieutenant, senior grade, in the Intelligence Branch, and served until September 1945.

1945-46: In May 1945 named assistant to Justice Jackson, United States chief of counsel for the prosecution of the major Nazi war criminals, serving in London, Berlin, and Nuremberg. In charge of all public relations at the Nuremberg trials.

1946 to date: Professor of law, University of Southern California, private practice of law; owner and operator of Dean Ranch, Vista, Calif. Appointed February 1949 member, Western States Loyalty Board.

1940-44: Appointed by United States Supreme Court on advisory committee to draft rules of criminal procedure for the United States district courts and served until rules were adopted by the Congress and the United States Supreme Court.

I think it should be said that Senator Hickenlooper, Senator Knowland, and I will act as a subcommittee for the Senate committee members of the joint committee, who are either engaged in other committees or are on the floor of the Senate.

Mr. Dean, we have before us the consideration of your nomination to this very important post. I have read your biographical sketch as it has been submitted to us.

Now, sir, will you proceed to make any statement that you care to make in connection with your nomination?

### STATEMENT OF GORDON DEAN, PRESIDENTIAL NOMINEE TO THE ATOMIC ENERGY COMMISSION

Mr. DEAN. Mr. Chairman, I would prefer, since you have the biographical statement before you, to give any elaboration that your committee would like to have of it. It is necessarily rather brief. If there is any phase of it that you would like to inquire into, I would be happy to fill it out.

The CHAIRMAN. Well, from 1940 to 1943, you are listed as being in the private practice of law in Washington. You were associated then with the chairman of the joint committee in the practice of law?

Mr. DEAN. That is correct.

The CHAIRMAN. Did you sever your connection with the firm when you went into the Navy?

Mr. DEAN. Shortly thereafter.

The CHAIRMAN. What subjects have you been teaching at the University of Southern California up to this point?

Mr. DEAN. I have been teaching primarily criminal law at the University of Southern California. That happens to be one of my subjects. I have taught, however, other subjects in times past.

I should say, in order to clarify some of the newspaper accounts that have labeled me as a professor, that that is really not primarily my occupation. I would consider myself primarily as a lawyer. But I have, last year, and during a portion of the year before, taught at the University of Southern California on a rather crowded schedule, Mondays and Tuesdays.

The CHAIRMAN. You do not offer that clarification because you think there is any stigma attached to being a professor?

Mr. DEAN. Not at all.

The CHAIRMAN. Dr. Smyth might enter an objection.

I note that you were appointed by the United States Supreme Court on the Advisory Committee to draft rules of criminal procedure for the United States district courts. Would you mind elaborating on that?

Mr. DEAN. I was appointed by the then Chief Justice of the United States Supreme Court, Mr. Charles Evans Hughes, to serve on that committee. It was a committee of some 15 lawyers, which were spread from one coast to another. The task at that time was to simplify and unify the rules of criminal procedure for the United States district courts of this country.

The chairman of the committee was Arthur Vanderbilt, the former president of the American Bar Association and now, I believe, chief justice of the newly created Supreme Court of New Jersey.

The CHAIRMAN. Was that work completed?

Mr. DEAN. That work was completed. The Supreme Court adopted it about 3 years after the commencement of the work of the committee, and then it was finally submitted to the Congress, adopted by the Congress, and is now law.

As far as I know, there have been no changes in that original draft, so those that participated in it are rather proud of it.

The CHAIRMAN. I notice you served with Justice Jackson in connection with the Nazi war criminals trials at Nuremberg, and in London and Berlin. I presume that was preliminary work to the Nuremberg work.

Mr. DEAN. That was preliminary work. I was the first appointee on his staff. I was then in the Navy on the Pacific coast, just about to leave for Okinawa, when he asked that I be assigned to his staff. The staff originally was six members. It grew, I think, to something like a thousand within a period of about 6 months.

I went with him to London, and was in all of the negotiations with the British, the French, and the Russians, leading up to the creation of the tribunal, and in the formulation of the charter and rules of procedure by which that tribunal operated. I then left for a short period, and returned to the States for hospitalization, in August of 1945, and then went back to Berlin, where the indictment was returned and where for a period of 2 weeks I was in charge of the United States staff, Justice Jackson having gone to Nuremberg.

I then went back to Nuremberg, and my principal duty there was the establishment of what might be termed the public relations set-up for the trials; that is, the press, radio, motion pictures. I didn't do it myself, I assure you. It was done with the cooperation of many other people, but I headed that phase of it.

The CHAIRMAN. When did you come home from there?

Mr. DEAN. I came home from there in the spring of 1946, at the conclusion of the American and British case.

The CHAIRMAN. Now, Mr. Dean, since your nomination and, in fact, in the last few days, the question of the fellowship program of the Commission and how it should be administered has arisen. I believe that was since you have come to Washington upon the committee's request to appear.

Mr. DEAN. That is correct.

The CHAIRMAN. Are you familiar with the hearings that we have had and the testimony that has been given?

Mr. DEAN. A portion of it. I heard the testimony yesterday morning of Dr. Bronk, and a portion of the testimony yesterday afternoon, and the testimony of Freistadt this morning.

The CHAIRMAN. I could frame a lot of questions about that for specific answers, but I think it would simplify it if you would tell the committee your thoughts about this matter. Obviously it is a proper question for a nominee to the Commission at this time.

Mr. DEAN. Well, I feel somewhat handicapped by the fact that I have not had the advantage of experience over the months, which a commissioner would have had he dealt with this problem, and all of

its headaches, so that anything I might say I would ask the committee to treat as thinking out loud, and as perhaps thinking without some of the premises that I might like to have, and which I would have had if I had been sitting on the Commission, or on this committee, possibly.

I am quite aware of, and I think I appreciate, the considerations which Dr. Bronk listed yesterday morning. In other words, I think I know what he fears when he says he fears an invasion of the freedom of academic life. I have yet to hear the reason why he fears it, or to see the evidence that the program could not be so carried out as to guarantee that we do not have a repetition of the Freistadt incident. I think that it may have set the program back considerably in the public mind to have had this thing come forward at this time, because I think the public has placed the Commission on a very high level, and I think they like to feel, and I know I do, that it is somehow above reproach, and that it is just all being run right. If they do not think that, they hope it and pray it every night.

So I should definitely and flatly state that I see no reason why we should ever have a Freistadt case arise again. And when I say a "Freistadt case," I have no reference to this particular young man's capabilities or qualifications. He is just an incident in the program, as I see it.

Does that answer your question?

The CHAIRMAN. Well, temporarily, at least.

Senator Hickenlooper?

Senator HICKENLOOPER. Mr. Dean, I will say that I do not know that there is anything I could add to my store of knowledge about you, as far as your character and ability are concerned. I made some inquiry about you from people who know you, and I am thoroughly satisfied that you are a man of ability and character.

Mr. DEAN. Thank you, sir.

Senator HICKENLOOPER. So I shall not go into that unless something that I do not know about would develop, which I do not anticipate. But I can say to you that I am satisfied on that score without further interrogation.

However, I am concerned about this matter that has beset us in the last few days, here. I think, with the publicity that has been given it, the exploration that it has had, that as a member of the committee I should ask for just as specific and concrete and detailed an answer on the general attitude connoted by this whole situation as you can give.

Perhaps I can ask you a question or two.

Here is an instance of a young man who is an admitted Communist, who is openly, publicly, a Communist. The Attorney General of the United States has classified the Communist Party in this country as subversive. I want to ask you flatly:

In such a case, would you, as a commissioner, authorize the contribution of a fellowship, or public support, to a man who is admittedly, or is known to be, a subversive or a member of a subversive organization?

Mr. DEAN. I would not, Senator, and I could not.

Senator HICKENLOOPER. Thank you.

I would like to get your view on whether or not it would be your policy, as a commissioner, in this whole field of the fellowship pro-

gram, or other activities of this kind, to use every reasonable means or to insist upon the use of every reasonable means, to give all reasonable assurance, in such instances, that an applicant, or a person who was proposed to receive aid or assistance, or a grant of this kind, was not a subversive? I say: Would it be your policy to make such reasonable inquiry as to give you all reasonable assurance that he was not?

I realize, of course, that nobody could ever say, "Well that closes the door, and there is no possibility of any other interpretation," but I ask you to consider this from the standpoint of a reasonable man and a practical man.

Mr. DEAN. My answer is that it would.

Senator HICKENLOOPER. I do want to ask you about this, Mr. Dean: What connection or background is there, as far as you are concerned, as to the atomic energy program, under the Commission that we have set up? I mean, What connection have you had with this whole thing, if any?

Mr. DEAN. You are not speaking of talents that I may have that would be adaptable to it.

Senator HICKENLOOPER. I understand that you are not a scientist and not a technician. I understand that.

Mr. DEAN. I do not pretend to be, Senator.

Senator HICKENLOOPER. Have you had any intimate association? I will illustrate:

Mr. Lillenthal had been chairman of the Acheson-Lilienthal committee, and Admiral Strauss has a history of a good many years of an avocation in nuclear science as a private individual. And Dr. Bacher was a top flight scientist in the nuclear field, and so on. Do you have any such connection or association in the nuclear field?

Mr. DEAN. No; if I understand your question. I have tried to keep myself informed, but it has not been information gained through any advisory committee or through any governmental connection, or anything of that type.

Senator HICKENLOOPER. In other words, your information on this field is as a layman who is a citizen and interested, and who reads what he can about the development of it.

Mr. DEAN. As far as the technical phases of the problem are concerned, that would be true. I think I would be about the same as the man whose vacancy I might fill if I were confirmed, Mr. Waymack.

Mr. HICKENLOOPER. I do not want you to understand that I think we must have a nuclear scientist in that position.

Mr. DEAN. I want you to understand that I have not had that training.

Senator HICKENLOOPER. As we have done in the confirmation of the original appointees, and as they very freely expressed in those confirmation hearings—by the way, have you read the confirmation hearings of the original appointees at all?

Mr. DEAN. If I have, I do not recall.

Senator HICKENLOOPER. I thought if you had, you would be somewhat familiar with it.

Mr. DEAN. That was rather protracted; was it not?

Senator HICKENLOOPER. I will say that at least it had its moments.

Mr. DEAN. No; I am not familiar with it, Senator.

Senator HICKENLOOPER. I would merely, then, like to get an expression as to your general conception at this time of your relationship with the joint committee as a member of the Atomic Energy Commission, in the light of the law which charges the joint committee with making continuing studies of this whole program, and in the light of the injunction upon the Commission to keep the joint committee constantly and fully informed as to the whole situation. I would like to have an expression of your idea on that, whatever it might be.

Mr. DEAN. I would say that I would have to comply with the specific requirement that is contained in the act. I believe in that requirement. I regard this committee, for example, pretty much as the watchdog for the public that has been superimposed over the Commission, a commission which has been granted extremely unusual powers, and powers upon which there must be a check. I think the relationship set up in the Atomic Energy Act between the committee and the Commission is a healthy one, and one which I should think would call for the fullest disclosure between the two, rather than the least, if there were a question of emphasis.

Senator HICKENLOOPER. In other words, I take it that you would approach it from the standpoint that this joint committee is in fact a trustee for the progress of atomic energy, on behalf of the Congress, and in turn on behalf of the public.

Mr. DEAN. That is my conception of it.

Senator HICKENLOOPER. From a legislative standpoint, that is, that Commission being the trustee from an administrative standpoint.

Mr. DEAN. And the joint committee may be regarded as a trustee immediately on behalf of the public, perhaps, because it would be impracticable to require the House and the Senate to do the specialized job that this committee does.

Senator HICKENLOOPER. I do not think that I have any further questions.

I may say, as far as that is concerned, that I have no questions because no one has raised any charge against you one way or the other, Mr. Dean. I congratulate you.

Mr. DEAN. Thank you, Senator.

The CHAIRMAN. All right, Mr. Dean. I guess that concludes the hearing. We will inform the other senatorial members of the committee. We will poll them, and we will notify you as to the action we take. Thank you very much.

Mr. DEAN. Thank you.

The CHAIRMAN. Dr. Smyth?

Doctor, you appeared before the subcommittee one day last week. What day was it?

#### STATEMENT OF HENRY DeWOLF SMYTH, PRESIDENTIAL NOMINEE TO THE ATOMIC ENERGY COMMISSION

Dr. SMYTH. Last Thursday.

The CHAIRMAN. And over the week end I had a talk with Senator Hickenlooper. He had read the record of the testimony you had given us on that day, and the Senator requested we ask you to pay us a return visit because there were a couple of questions that he wanted to address to you. Thank you for coming down again.

Senator Hickenlooper?

Senator HICKENLOOPER. I want to say, Doctor, that I am sorry to have caused you any inconvenience in coming back. One reason that I did not pursue this particular line of questioning before was that I felt your position here the other day in not being quite fully informed, or aware of what the particular controversy in connection with these fellowships might have been did not warrant my urging you to make any particularly definite commitments at that time on what you would or would not do. But I do feel that as the record was left, it is not fully satisfactory to me, and I would like this opportunity of just seeing if we cannot clear up this field just a little bit for my own peace of mind.

I think there may be somewhat of a difference in your approach and mine to this program as far as certain parts of it are concerned. I again repeat that I have not only no objection to a fellowship program, within reasonable limits, but I have expressed my approval of the philosophy of the thing.

We have this situation, now, which has been given considerable attention, where this young man, who was and is an admitted Communist, a member of an organization that has been designated by the Attorney General as subversive, has been awarded a fellowship which carries with it a certain amount of support in grant.

I would just like to have you express your views on this situation. It seems clear to me that it is quite apart from the standpoint of the question of freedom of education. Because to my mind education is still free in this country. There are hundreds of schools and colleges and other mediums for getting an education. I ask that you consider it from the standpoint of the appropriation of public funds to support an individual who is a member of and a supporter of a subversive movement.

Dr. SMYTH. Senator Hickenlooper, I assumed that it was in connection with the general question of fellowships that you wanted to ask me further questions, and I therefore prepared a statement on Sunday which I hope will clarify my general position in regard to these fellowships, and then I would be glad to answer more specific questions as well as I can.

May I read this very brief statement?

Senator HICKENLOOPER. If it is all right with the chairman, it is all right with me.

The CHAIRMAN. Yes; certainly.

Dr. SMYTH. I want to emphasize that it was prepared on Sunday, previous to what I have heard in the last few days.

I am glad to have an opportunity to reaffirm my position with regard to the AEC fellowships as I gave it on Thursday, May 12. I shall try to amplify and clarify what I said in that previous hearing. Before doing so, I should once more point out that I am not a commissioner. Yet, as chairman of a physics department, I do speak from a background of considerable experience with questions of this kind. By that I mean questions concerning the young men who are interested in pursuing the study of science, and also questions of clearance, because I have a call from the FBI about once a week—not about myself, of course, but others.

The CHAIRMAN. Incidentally, Doctor, you have what is known as a "q" clearance; have you not?

Dr. SMYTH. That I believe is correct; yes.

Let me first state what I understand to be the areas of agreement between Senator Hickenlooper and myself. We both agree that the objectives of the AEC fellowships are desirable ones. We agree that it is a good idea to give certain individuals professional education in this field at the public expense.

I believe that it is impossible to guarantee the future behavior of those individuals. Most of them will be able and loyal citizens. A few will also be great scientists. And one in a million, or, I don't know, one in a thousand, or one in ten thousand, may perhaps become a traitor to his country, no matter what precautions are taken.

I believe Senator Hickenlooper agrees with me that the public funds should be used in such a way as to produce as many loyal, able men as possible, at the same time, we both want to keep even the tiny chance of educating a potential traitor as small as possible. I am afraid we disagree somewhat as to the methods. He suggests that full FBI investigation be made of students when they apply for these fellowships, or at least before they are appointed, even though these men are not to have access to any secrets.

I believe that such investigation should be postponed until these men are considered for access to restricted information, a time when investigation is clearly necessary. I base this belief on my knowledge of students, and on my knowledge of the atmosphere of suspicion created in a close knit community by a detailed investigation of a young man's ideas and associations. Investigations of this sort are a necessary evil; let us limit them to those occasions where they are required, remembering that such investigations create a fear psychology, particularly among young people. Good work is not done by people who are afraid.

To sum up, I think the damage that early FBI investigations would do to our first objective of developing able men is more important than the possible additional safeguard provided by these early investigations.

Besides the particular concern that I have in the matter of these AEC fellowships, I fear that FBI investigations will be extended to all students receiving any support from public funds. Logically, this would presumably include future fellowships of a national science foundation, students at the land-grant colleges, members of the ROTC units, and even students in schools receiving Federal aid. Once we give up the principle of confining investigation—and I mean FBI investigation—to those expected to have access to secret information, there seems to be no clear limit to the extension of police activities in our schools and colleges.

I would like to emphasize the fact that there I am speaking as the chairman of a department of physics. I am saying again, as was said several times before—that is, several times in the last few days, though not before I wrote this statement—that I believe the cost of this extensive an investigation to the fellowship program would be very severe.

Senator HICKENLOOPER. For your information, it is \$100 a person.

Dr. SMYTH. I don't mean the financial cost. I mean the cost in terms of the reactions of the students.

It is not easy to give tangible evidence of that. It is an opinion based on a long experience.

I am no longer reading my statement. I am trying to answer your question with regard to the particular case. I have said that I think it is impossible to guarantee the future behavior of the individuals that we appoint to this program. I think that is true.

Senator HICKENLOOPER. I am in wholehearted accord with that statement. There is no argument, as far as I am concerned, about that.

Dr. SMYTH. I also say that we want to keep the chance of educating a potential traitor as small as possible. And I think that is really what we are talking about. We are talking about someone who might go on into the atomic energy program, or in any other way in the future might in some way get away or sell secrets to the enemy. As far as the question of giving a fellowship to a member of the Communist Party is concerned, I feel that membership in the Communist Party indicates at best a fuzziness of mind, a lack of political insight; at worst, actual loyalty to some other country. Therefore, I feel that you are taking more than a reasonable chance of educating a traitor if you undertake to educate a member of the Communist Party on public funds. But I think that the question that one has to balance against that is whether the means that you followed to make sure that you do not educate a member of the Communist Party are, in the first place effective, and in the second place, not too damaging.

Senator KNOWLAND. Right at that point, might I ask a question, Mr. Chairman?

The CHAIRMAN. Yes; surely.

Senator KNOWLAND. In line with the statement that you have just made, could you see any objection, as a potential Commissioner of the Atomic Energy Commission, to having a question in the applications that are passed out to be filled in for the fellowship program, reading, "Are you or have you ever been a member of the Communist Party?"

We are getting aside now, for the moment, from any investigation, but considering merely an affidavit form which would be subscribed to and sworn to by any applicant for the fellowship.

Dr. SMYTH. I don't see any objection to that; no. If I may put it another way: In administering these fellowships, we have to consider not only that we should do the wisest job possible in terms of the fellowship; we also have to consider that we should appear to do the wisest job. And I mean in a legitimate sense.

The CHAIRMAN. May I interrupt?

In other words, Doctor, it is an old and wise bit of advice in public office, that you not only have to be right, but you have to seem to be right.

Dr. SMYTH. I am afraid that is true. I wish the two could always be the same.

Senator KNOWLAND. But at least in the instance of the case that has been before the country in the last few days, had that question been asked, the information would have been before the board making the

award; and in exercising their judgment, all factors considered, they would have at least had their eyes open when they made the decision and quite possibly would not have made the decision that they did.

Dr. SMYTH. Yes.

Senator HICKENLOOPER. The day before yesterday, Doctor, I asked Dr. Richards, whom you know, this question. It is somewhat involved and long, but maybe the meat of it can come out. I said:

I would like to ask, Dr. Richards, would you see any harm or any objection from the standpoint of the foundation, if the Atomic Energy Commission, in setting up this program, would state to your group: "We want to educate a certain number of brilliant young people, scientists, but we have certain qualifications that we would like to lay down in advance. No. 1, they must, within your judgment, be able and capable of doing a job. No. 2, they must be of good moral character; we want no immoral people, if we can help it, in the program. No. 3, they must not be people who are subversive or reasonably potentially subversive people, so far as the Government of the United States is concerned. We would like for your group to operate within that program. Do you think you could do it?" If they came to you and asked you something like that, would you see any great restrictions in trying to operate within a program ~~that you or I, 'dip' pur: s'etom poos 'puoos: 'Amiq' 'srl' :pud' taq' jo~~ people who are subversive in their beliefs or reasonably potentially subversive—would there be any harm in such?"

Then Dr. Richards said:

There wouldn't be any harm on the part of the Atomic Energy Commission making that request, but the National Research Council Committee might well say, "We are not equipped to discover potential communistic tendencies."

Then I said:

Granted, Doctor. And I should have gone a little further and said that in outlining that program the Commission would be, in effect, saying to you: "Now, gentlemen, we respect your judgment. You are able, capable, and zealous people, and we want you to help us, but please do not be offended if we discover in some of these recommendees some people that fall within the last two categories, either unacceptable as to morals, or subversive people. We just do not want you to be offended if we find some of those people and do not accept them, because we know you are not equipped to do that kind of a job."

Dr. RICHARDS. That would be O. K.

Now, can you say, Dr. Smyth, that you would subscribe to this kind of a guiding principle in your activities in connection with the Atomic Energy Commission: the principle that the Commission should insist on every reasonable inquiry and every reasonable means of inquiring into the backgrounds of applicants for fellowships, with a view to finding out if they belong to subversive organizations, or, for instance, had an objectionable degree of immorality in their backgrounds? Do you believe the Commission should assume that responsibility, or could you support such a policy?

Now, I am specifically leaving out the question of the mechanics of an investigation, of an FBI investigation, if you please. It may not be quite fair to pin you down to the use of any particular agency or group. But I am rather broadly suggesting a reasonably curious inquiry into the backgrounds of these people that would give reasonable assurance to reasonable men as to their associations, and their connection or lack of connection with subversive activities.

Dr. SMYTH. By "subversive activities," I presume you mean activities of people who believe in attempting to overthrow the Government of the United States by the use of force.

Senator HICKENLOOPER. Well, I hate to define the word "subversive," except that it probably means generally someone who believes in doing substantial harm to our form of government and to our institutions.

Dr. SMYTH. While my scientific training always inclines me to put qualifications on every statement, I don't see why the Atomic Energy Commission should not have such information; and I think our entire disagreement, insofar as there was a disagreement, last week, was in terms of the specific suggestion of a method of doing it. I would, if I should become a Commissioner, want to examine very carefully the method of doing it.

Senator HICKENLOOPER. Do you agree that it should be a part of the responsibility of the Commission to quite thoroughly satisfy itself as to the background and associations of an applicant for a fellowship prior to the awarding of public money to him?

Dr. SMYTH. Yes. Not because I think any grave damage would be done, actually, in educating some young students who are politically naive, and mistaken in their views, in educating them in a wide open field where all they are using is material that is completely available to everyone, but because the money that is being spent is the people's money; and not only that, but because the Atomic Energy Commission is associated in the people's mind with a highly secret enterprise. Therefore it seems to me unwise to run the risk of the appointment of someone—or I won't say "run the risk," because you can't avoid that. But I think it is wise to minimize the risk of the appointment of someone who has subversive political views to an Atomic Energy fellowship.

Senator HICKENLOOPER. The clearance under the Atomic Energy Act goes to loyalty, character, and associations, those three categories.

Dr. SMYTH. Yes. But that is clearance to restricted material.

Senator HICKENLOOPER. Well, that is clearance, under the act, to restricted data. It is entirely possible that an investigation on those three points will go infinitely further and take into account many factors which might deny the individual clearance to restricted data, but which for educational purposes might well be overlooked. I can see that side of it. But there is one thing that I think is quite fundamental, and that is as to an individual who is subversive, or belongs to subversive organizations which have the destruction of our present form for their purpose. While there might be some things in a man's character that might be sufficiently derogatory to deny him clearance to restricted data, yet by the same token they might not be sufficient to bar him from going ahead in a specialized training program in an education or fellowship field. His associations might be sufficiently bad to warrant denial of clearance for access to highly secret data in the atomic energy program, and yet I could imagine instances where those associations would not, in my own mind, be sufficient to shut the door of education against him under a fellowship program with Government funds.

But I do believe that the question of loyalty, the question of subversion, and of adherence to other ideologies to the prejudice of our own, is pretty much of a block in the road to the use of public money to support that individual in this program. This is not to close the doors of publicly supported universities, where he can go under his own power, but is a matter of special support in subsidy to that individual in this program.

The question of subversive beliefs would seem to be pretty much of a roadblock, to me, in that category. The other two might be pretty

well overlooked on occasions, either of them or both of them. But I am thoroughly convinced that the Commission has a responsibility to look pretty thoroughly into the broad political attitudes of individuals from the standpoint of membership in organizations of that kind before it considers the spending of public money.

Would you have any basic objection to reasonable assurance along that line on the part of the Commission before it grants fellowships?

Dr. SMYTH. No. Let me put it this way: If there were an oracle to which you could go and say, "Is this man loyal to the United States?" or, "Does he believe in changing the form of this Government by force, and will he work toward that?"—if there were such an oracle to which you could go and get a clear answer, and not have to go to all his friends and associates, all around, making an elaborate investigation, I would say that certainly would be wonderful. If you could find that out, then you would certainly say "No" as to the ones that did belong to a subversive organization in that sense.

Now, my understanding of the ancient oracles is that their answers were anything but unequivocal. And my chief concern is with the great difficulty of getting an unequivocal answer to this thing. And the real danger that you run is of destroying, or not destroying but weakening, the program if you take too elaborate measures to try to reduce probability of making a mistake from, let's say, a tenth of a percent to a hundredth of a percent.

Does that answer your question?

I think I am perhaps really talking to questions that we were talking about last Thursday, as to the FBI investigation, rather than your immediate question.

Senator HICKENLOOPER. Well, let me ask you this question: Would you have any objection to requiring applicants to fill out a questionnaire under oath as to their membership, their past or present membership, in various organizations?

Dr. SMYTH. No.

Senator HICKENLOOPER. And under the penalties of perjury, if they lied about it?

Dr. SMYTH. No. But I think I would object—let me put it this way. I will keep my personal objection out of it. I think that if you asked them to sign such a thing, and then, in order to make sure that they had not committed perjury, filled the campus with FBI agents who asked their friends all about their views and their associations, I think you are going to very seriously weaken your program. Maybe you have to do that in order to satisfy the feeling of the people that there is something very secret about atomic energy.

Senator HICKENLOOPER. It is the public's business, of course. This is not the business of science, or of the educators, but the public's business.

Dr. SMYTH. Yes. I do seriously say that you will weaken the program if you find such procedures necessary.

Senator HICKENLOOPER. I had not really intended to include the suggestion that such a questionnaire would be followed by the FBI. I was merely trying to see whether you would object to the requirement of a questionnaire under the penalties of perjury if a man had lied about certain organizations to which he might have belonged.

May we leave it this way, then, Doctor? Do I understand you to be in full accord with the idea that the Atomic Energy Commission has a responsibility, or should exercise a responsibility, to be as reasonably certain as they can that the individuals who are receiving these fellowships are not subversive people; that is, have no subversive background or subversive present tendencies at the time they receive the award?

Dr. SMYTH. Yes.

Senator HICKENLOOPER. Are we in any disagreement on that?

Dr. SMYTH. No; we are not in any disagreement on that.

Senator HICKENLOOPER. In view of the fact that I think to set up specific machinery at this time is impractical, I do not believe I will pursue that any further.

Dr. SMYTH. I would say that if this were a general educational program, then I might feel differently. But I feel that you are right in saying that this is not an educational problem.

Senator HICKENLOOPER. I think we have all been trying to insist, all of us on the committee, here, that this is not an issue involving general education. There have been many discussions on the freedom of education and the general field of education. I do not believe there is any disagreement with the philosophy about education and its freedom in this country. But this is a specific instance of the use of public funds to support a subversive individual in the program.

I do not believe I have any more questions, Mr. Chairman.

The CHAIRMAN. Senator Knowland?

Senator KNOWLAND. Doctor, do you agree that in the final analysis the Atomic Energy Commission itself cannot delegate its responsibility to the Congress and the people on any program of this kind? They may delegate certain phases of their preliminary work, but the ultimate responsibility still must rest with the Atomic Energy Commission?

Dr. SMYTH. Well, I certainly don't see how the Atomic Energy Commission can say that a mistake was made in appointing Mr. X to a fellowship "but it wasn't our fault."

My understanding of the delegated authority is that the person who delegates still keeps the responsibility.

Senator KNOWLAND. And your position, as I understand it, is that you can see no objection in this fellowship program to having a questionnaire that would ask that question, so that those facts would be before the fellowship board; that that information would also be available to the Commission itself in any decisions which they might ultimately care to make. Is that correct?

Dr. SMYTH. That is correct. I think it is possible you will lose some applicants who are peculiar but brilliant. I think that is perfectly true.

Senator KNOWLAND. But that is a calculated risk you would be willing to take?

Dr. SMYTH. That is a calculated risk; and as long as the funds come from the Atomic Energy Commission and the general public sentiment is as it is, whether right or wrong, I think it is a calculated risk that you would have to take.

Senator KNOWLAND. And while, of course, there is no way that you can guarantee that someone in the distant future might not become

subversive, and no one can write a guaranty on that, in the particular case we have before us, entirely without what is generally known as an FBI investigation, if the question had been asked and answered as it was to this committee in the letter to Senator Hoey that would have been the first red flag [laughter] or at least flag or notice, that might have been raised. And, secondly, had there been merely a simple check by the FBI in their own files, without sending anybody to a campus, all of this would have probably been disclosed at that point. Is that not correct?

Dr. SMYTH. Yes. I think this appointment was a very unfortunate one; not because I think this boy is going to learn anything secret—I doubt that he would, even if he did, give it away to anybody—but because the reaction reacts very badly on the Atomic Energy Commission, which has a great many other things to do.

Senator KNOWLAND. As I understand your statement to the committee, had you been on the board making the award of fellowships, had you been, entirely aside from your position on the Atomic Energy Commission, on one of the boards making such awards, with the facts before you that are now before this committee, it would have been your judgment that that would not have been a wise selection to make.

Dr. SMYTH. That is correct.

Senator KNOWLAND. That is all.

Senator HICKENLOOPER. Mr. Chairman, I have just one more question I would like to ask Dr. Smyth and also Mr. Dean.

I will preface this my saying that we live in a political government, administratively, and partisanship enters into our administration of government. I do not find myself in disagreement with that principle. But I feel that the Atomic Energy Commission, its personnel and its operation should be completely nonpartisan, that from a partisan political standpoint it should be above partisanship, and that it should in no way take partisanship or partisan political attitudes into account in its administrative affairs.

Do you agree with that, Dr. Smyth?

Dr. SMYTH. I certainly do.

Senator HICKENLOOPER. I will ask Mr. Dean: What do you think about that?

Mr. DEAN. I certainly do, Senator. There is no question about it.

The CHAIRMAN. Thank you very much, Dr. Smyth, for coming back.

What I said to Mr. Dean concerning the future you heard, of course.

Ladies and gentlemen, this meeting is now closed and, as you know, we are meeting in executive session with the Commission at 4 o'clock.

(Whereupon, at 3:45 p. m., the hearing in the above-entitled matter was closed.)

TUESDAY, AUGUST 2, 1949

CONGRESS OF THE UNITED STATES,  
SUBCOMMITTEE OF THE  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The subcommittee met, pursuant to notice, at 10:05 a. m., in room 304, Old House Office Building, Hon. Henry M. Jackson (chairman) presiding.

Present: Representatives Jackson (chairman) and Cole.

Mr. JACKSON. The committee will come to order.

This meeting has been called this morning, pursuant to the appointment by the chairman of the full committee of myself and the gentleman from New York, Mr. Cole, as a special subcommittee to look into the school problem at the Hanford atomic energy project.

Last April I was designated by the chairman of the full committee to look into, among other things, the responsibility, if any, of the Federal Government to provide school facilities to the school districts adjacent to the Hanford Atomic Energy Works in the State of Washington.

I visited Hanford in April, and during the course of that visit I met with the local school people and with the Hanford officials. I came to the conclusion that it would be advisable, at least, to have a committee designated by the Commission to look into all of the problems in connection with this matter.

As a result of that suggestion, a committee was set up consisting of Mr. H. F. Alves of the United States Office of Education, acting for the Commissioner, I believe; Mr. E. L. Lindman, representing the State superintendent of public construction, and Mr. E. S. Black, superintendent of schools at Kennewick, Wash., representing the local school districts.

I suggested that these people get together and determine what responsibility, if any, the Federal Government owed to the various school districts. I would like to make it clear that I requested that they determine not what the responsibility was that the Atomic Energy Commission, as such, owned to the districts, but the responsibility of the Federal Government to the districts in question.

Subsequently, this committee got together and agreed upon a proposed report, which has been submitted to the Commission and the Commission, in turn, has sent the report to the chairman of the full committee, together with a letter explaining its position on the matter.

Prior to going into that, in order to convenience Congressman Holmes, who has a urgent committee meeting, I would like to call on him to make a brief statement at this time.

I may say that Congressman Holmes has been in touch with me on this matter from time to time, and this particular problem is located in the heart of his district, and I know that he is most anxious that some amicable arrangement be worked out without delay because of the serious predicament in which the various school districts are at the present time.

Congressman Holmes.

**STATEMENT OF HON. HAL HOLMES, A REPRESENTATIVE IN CONGRESS FROM THE FOURTH CONGRESSIONAL DISTRICT, STATE OF WASHINGTON**

Mr. HOLMES. Thank you, Mr. Chairman.

The problem of dislocation brought about in the school systems in this area of the Fourth Congressional District is based primarily upon the impact of the increased population and is directly connected with the Hanford Engineer Works and the expansion that the Hanford Engineer Works has caused in this area, not only through people, numbers of people, but the problems pursuant to the increased population.

There are primarily six communities involved in varying degrees of directness: Grandview, Kennewick, Kiona-Benton City, Pasco, Prosser, and Sunnyside.

I have been working on this problem for the last year and a half, and we have pursued every avenue of approach open to us in trying to bring about its solution.

This subcommittee, being appointed by the atomic energy legislative committee, has before it now the results of work and findings of Mr. Alves of the Department of Education, who as the chairman, Mr. Jackson, said, went out there on June 20 and had a meeting with the people interested in the problem.

I understand the report that Mr. Alves is to make was unanimously agreed upon. It centers around three important points: (1) A large number of the Hanford employees with families residing in the area surrounding but excluding the city of Richland and commuting to the Hanford Engineer Works; (2) the population increase in this area resulting indirectly from the activities of the Hanford Works; and (3) the lack of essential school construction during the depression, war years, and postwar years.

In summing up before this subcommittee, I cannot overemphasize what I consider in my own mind to be the definite need for the solution of this problem, and I ask the counsel and wisdom of the subcommittee to give it their most careful attention and consideration, because definitely the dislocations in the school systems of these six communities that I have mentioned are very great and very serious.

Undoubtedly, Mr. Alves will give you his report from the region that he visited, and the area that is involved, and I wish to supplement his report with these remarks, emphasizing again the definite need for the solution of this problem. We have moved in every direction, and it looks now as if we have a report here upon which the committee can act and will help solve the problem.

I thank you very much for the opportunity of appearing before your committee.

Mr. JACKSON. Do you have any questions, Mr. Cole?

Mr. COLE. I wonder if you have had a chance to study the report of Mr. Alves?

Mr. HOLMES. Yes; I have studied the report.

Mr. COLE. With respect to the community—and I particularly call your attention to the committee's recommendations and to ask your comment with respect to the committee recommendations.

Mr. HOLMES. Of course, after studying the report and going over it, I am wholeheartedly in favor of the committee's recommendations.

Mr. COLE. Do you have any modifications or changes to suggest?

Mr. HOLMES. No; I think the committee has a good, sound, thorough piece of work.

Mr. COLE. I do not suppose you have any idea of what that recommendation will cost the Federal Government?

Mr. HOLMES. I have not the actual dollar values involved in that.

Mr. COLE. Do you even have the approximate value in cost?

Mr. HOLMES. As I understand it, it would be in the neighborhood of three and a half to four million dollars.

Mr. COLE. Annually?

Mr. HOLMES. No; not annually.

Mr. COLE. This is a capital contribution?

Mr. HOLMES. A capital contribution; yes, sir.

Mr. JACKSON. About a thousand dollars per pupil, I believe, net.

Mr. COLE. It does not contemplate a recurrent annual expenditure?

Mr. HOLMES. No; not this report.

Mr. COLE. Well, do you know of any further study or need that would contemplate an annual Federal contribution to the education in this area?

Mr. HOLMES. Not that I know of.

Mr. COLE. I realize that you have been interested and active on this problem for some time, because, as you know, you brought it to my attention, as I recall, longer ago than a year and a half. It was nearer 2 years ago, and I am glad to see that there is some progress being made toward finding a solution.

Mr. JACKSON. Just one question, Congressman Holmes. I recall the provisions of the laws in the State of Washington with reference to the raising of funds to build school buildings. They stipulate that all such revenue must be raised from the taxable property in the school districts.

Mr. HOLMES. That is right.

Mr. JACKSON. Plus whatever small allowance the legislature may appropriate from time to time.

Mr. HOLMES. That is right.

Mr. JACKSON. Is that correct?

Mr. HOLMES. Yes.

Mr. JACKSON. And in addition we have a limitation in our constitution known as the forty-mill tax law.

Mr. HOLMES. That is right.

Mr. JACKSON. And under certain circumstances, I think, they can raise up to possibly \$25,000,000 additional for school construction, but that is the very maximum.

Mr. HOLMES. That is true—excuse me. That is by way of the avenue of special levies.

Mr. JACKSON. Special levies; yes. But that is the only source of revenue which a school district can rely on to build a new building.

Mr. HOLMES. That is right.

Mr. JACKSON. In the absence of any other funds the districts are stuck, so to speak, in getting any further help.

Mr. HOLMES. And are taxed to the limit, and special levied to the limit, in relation to the supplying of physical facilities to the increased school population.

Mr. JACKSON. Any further questions?

Thank you very much. We appreciate your appearing here this morning so that we can have a first-hand view of the situation that the area faces over there.

Mr. HOLMES. Thank you very much, Mr. Chairman.

Mr. JACKSON. We will call Mr. Alves, the chairman of the committee, next. He is H. F. Alves, Director, Division of School Administration, United States Office of Education.

As I indicated earlier, Mr. Alves was designated by the Commission to go out to Hanford and look into this entire matter. He worked with Mr. Shaw, the Deputy Manager of Hanford, and with Mr. Lindman of the State Office of Public Instruction, and Mr. Black, and I believe the report submitted by this group to the Commission is a unanimous one, and we would appreciate hearing from you at this time, Mr. Alves.

I think, just before calling Mr. Alves, it might be well to place in the record the letter from the Commission dated July 29, 1949. I do not think we need to take the time to read it. It will be included at this point.

(The letter referred to is as follows:)

UNITED STATES ATOMIC ENERGY COMMISSION,  
Washington 25, D. C., July 29, 1949.

HON. BRIEN McMAHON,  
Chairman, Joint Committee on Atomic Energy,  
Washington, D. C.

DEAR SENATOR McMAHON: We have recently received a report, a copy of which is attached as appendix A, of a committee appointed to consider and make recommendations to the Commission with respect to requests of school districts in the vicinity of our Hanford Works for financial assistance to enable them to provide additional school plant facilities. The committee consisted of Mr. P. L. Lindman, deputy State superintendent of public construction, Washington; Mr. E. S. Black, superintendent of schools for the Kennewick school district; and Mr. D. F. Shaw, Deputy Manager, Hanford Operations Office. Mr. H. L. Alves, director, Division of School Administration, United States Office of Education, served in a consultant capacity. A copy of his report is attached as appendix B.

The committee concluded that, if essential school plant facilities are to become available, the Federal Government will have to provide immediate financial assistance to the State and local educational authorities concerned in meeting the school plant needs required for the school load resulting from the activities of the Commission. The committee recommends that the Federal Government render such financial assistance in accordance with a formula specified in its report. Mr. Alves has informed us of his concurrence with the findings and recommendations made by the committee.

We have already given considerable financial assistance to the school districts in the Hanford area in view of the additional enrollment which is AEC induced. The attached summary (appendix C) shows the approximate amount of the assistance which has been furnished by the AEC to these school districts. This assistance has been designed to meet emergency situations and to afford the State and the school districts time in which to devise measures to cope with the problem. While we have permitted the school districts at their option to use funds furnished for temporary facilities toward the cost of permanent facilities, we have not in the past furnished financial assistance based upon the cost of permanent facilities. The recommendations of the committee involve Federal contributions based upon

the cost of permanent facilities, and in our judgment, they pose a number of problems involving significant policy considerations.

The question of financial assistance by the Federal Government to schools for the building of permanent school facilities, including such assistance to schools overburdened with increased enrollments resulting from Federal activities, is one which the Congress has given considerable attention. There are now pending before the Congress various bills relating to the question. Thus, the problems faced by the Commission in this field are closely connected with legislative policies now being considered.

Accordingly, we should like to discuss the matter of financial assistance to the school districts in the Hanford area with the Joint Committee. The matter is one in which the Committee, through its representative Congressman Jackson, has taken an active interest.

Sincerely yours,

UNITED STATES ATOMIC ENERGY COMMISSION.  
CARLETON SHUGG, *Deputy General Manager.*

(Enclosures: Appendixes A, B, and C.)

(Appendixes A, B, and C, respectively, mentioned above as enclosures will be found on pp. 5, 7, and 12, respectively.)

### STATEMENT OF H. F. ALVES, DIRECTOR, DIVISION OF SCHOOL ADMINISTRATION, UNITED STATES OFFICE OF EDUCATION

Mr. ALVES. Do I assume, Mr. Chairman, that persons have had a chance to read both the statement filed by me and the committee report?

Mr. JACKSON. I think it might be well to read the report into the record.

(Discussion off the record.)

Mr. JACKSON. At this point in the record will be placed the findings of the committee and the statement submitted by Mr. Alves.

(The findings and statement referred to are as follows:)

(Appendix A)

JUNE 24, 1949.

#### FINDINGS OF A COMMITTEE CONSIDERING A PLAN FOR PROVIDING SCHOOL PLANT FACILITIES FOR THE ATOMIC ENERGY COMMISSION-INCURRED ENROLLMENT IN SIX SCHOOL SYSTEMS IN THE RICHLAND AREA

At the instance of Congressman Henry M. Jackson, a committee was formed for the purpose of working out certain recommendations regarding Federal contributions to school districts in the vicinity of the Hanford Works of the Atomic Energy Commission. The committee comprised:

- E. L. Lindman, deputy State superintendent of public instruction of Washington.
- E. S. Black, superintendent of schools of the Kennewick school district (serving as the designated representative of the six school systems involved).
- D. F. Shaw, deputy manager, Hanford Operations Office, Atomic Energy Commission.

This committee held three meetings (one each on June 21, 22, and 23) with H. F. Alves, Director, Division of School Administration, United States Office of Education, serving upon request in a consultant capacity to the Atomic Energy Commission.

At the first meeting, the chairmen of the boards of education and the superintendents of schools of each of these six school systems—Grandview, Kennewick, Kiona-Benton City, Pasco, Prosser, and Sunnyside—were present. At the second meeting these school systems, except Benton City, were represented by their superintendents of schools, who, by common consent, selected Superintendent E. S. Black to represent them at the meeting on June 23 of the committee. H. F. Alves served upon request as chairman of these three meetings.

The specific purpose of these meetings was to formulate, in terms of the facts and conditions revealed by analyses of the school situations in these districts, recommendations for the provision of essential school plant facilities for the

federally incurred school load in these districts. Federally incurred school load, as used in this report, is defined as those pupils whose parents or guardians were employees, during the 1948-49 school term, of the Atomic Energy Commission and the General Electric Co. and their subcontractors or concessionaires at the Hanford Works.

#### NEED FOR FACILITIES

The need for school plant facilities in these districts at the present time can be attributed to the following:

1. A large number of Hanford employees, with families, residing in the area surrounding, but excluding Richland, and commuting to the Hanford Works.
2. Population increase in this area resulting indirectly from the activities of the Hanford Works.
3. Lack of essential school construction during the depression, war years, and postwar years.

Since the year of the Federal impact, namely 1943, there has been a marked general population growth, accompanied by a related school population growth. Whereas, during the school year 1942-43, the combined school load of these six districts, as measured by average daily attendance, was approximately 4,400; in 1948-49 this load had increased to approximately 9,800. In terms of enrollment increases, as estimated in column 7, table I, attached, the combined increases as of 1948-49 was 5,940. Of this number, 3,266 represent the federally incurred school load, and 2,674 the nonfederally incurred load.

The combined total school load of these six districts has more than doubled in 6 years. The percentage of increase (see table I), in terms of average daily attendance, varies from approximately 68 in the Prosser school district to 268 in the Kennewick school district. The most seriously affected school district is Kennewick. During 1948-49 the federally incurred school load in this district was 1,573. This group of pupils represents a school load nearly twice that of the total school population in Kennewick in 1943.

#### COMMITTEE FINDINGS

The committee finds—

1. That these six school districts have experienced, during the past 6 years, a sudden and excessive increase in school load because of Atomic Energy Commission activities (including Manhattan Engineer District, United States Army activities prior to January 1, 1947).
2. That the incurred school enrollment, by reason of these Federal Government activities, constitutes in each of these districts a substantial percentage of its total school enrollment.
3. That these districts, under existing conditions of overcrowding because of lack of essential school plant facilities, cannot provide satisfactory minimum educational opportunities.
4. That these districts cannot secure from their local tax bases sufficient funds to provide their needed school-building requirements.
5. That the local and State educational authorities cannot be expected to secure sufficient funds from available sources to meet the costs of providing school-plant facilities necessary to house the total school impact in these districts.
6. That alleviating the school housing shortage, caused by the increased school load, other than the federally incurred school load, will require the maximum effort of both the local districts and the State.
7. That experience during the 6-year period indicates that the school impact, represented by the federally incurred school load, may be expected to be of a permanent nature.

The committee is agreed that the State and the local school districts involved should assume responsibility for providing school housing for the school impact exclusive of the federally incurred school load, and that the Federal Government should assume responsibility to assist the State and local school districts in providing facilities required to house the federally incurred school load. The committee is convinced that the provision of the latter facilities will require funds clearly in excess of those that the local and State educational authorities may be expected to derive, with due diligence, from available local and State sources. In short, the committee is of the opinion that, if essential school plant facilities are to become available, the Federal Government will have to provide immediate financial assistance to the State and local educational authorities concerned in meeting the school-plant needs required for the federally incurred school load.

## COMMITTEE RECOMMENDATIONS

In view of its careful analyses and its consideration of the afore-mentioned findings and related basic facts, the committee recommends that the Federal Government assume responsibility for its proportionate share of the cost of providing school-plant facilities for the federally incurred school load. Thus the Federal Government's share of the cost per pupil for providing these facilities for the federally incurred school load would be the State average per-pupil cost of school construction as certified by the State department of public instruction—

Less any other Federal contribution per pupil subsequent to the date of impact, usable by the district involved for permanent school construction;

Less a local contribution per pupil, in terms of the school district's assessed property valuation, determined in the proportion that the federally incurred school load (in terms of estimated enrollment increases set forth in table I, appendix) bears to the total estimated school enrollment of the district.

Less a State contribution per pupil to which the district involved is entitled under existing provisions of the State program of school-plant assistance.

E. L. LINDMAN.

E. S. BLACK.

DAVID F. SHAW.

## (Appendix B)

JULY 15, 1949.

STATEMENT BY H. F. ALVES OF HIS ACTIVITIES AT THE HANFORD OPERATIONS OFFICE, ATOMIC ENERGY COMMISSION, RICHLAND, WASH., DURING THE WEEK OF JUNE 20

In accordance with arrangements made with Mr. David F. Shaw, Deputy Manager, Hanford Operations Office, I spent June 20-24, inclusive, in Richland, Wash. The purpose of my visit was to meet and cooperate with a committee, formed at the suggestion of Hon. Henry M. Jackson, Member of Congress from Washington, in formulating recommendations concerning the provision of school facilities in certain school districts in the Richland area for children of project-connected workers of the Atomic Energy Commission. This committee consisted of the following:

E. L. Lindman, deputy State superintendent of public instruction, Olympia, Wash.

E. S. Black, superintendent of schools of Kennewick School District, representing by agreement the affected school systems.

David F. Shaw, Deputy Manager, Hanford Operations Office, Atomic Energy Commission, Richland, Wash.

In my conference on Monday with Mr. Shaw and Mr. Norman G. Fuller, Chief, Office of Community Management, it was agreed that affected boards of education should be represented at a meeting scheduled for Tuesday of the superintendents of schools of the school districts involved, a representative of the State

department of education, and representatives of the Atomic Energy Commission. An invitation was extended that day to the chairman of the boards of education. The following school districts were represented at this meeting: Grandview, Kennewick, Kiona-Benton City, Pasco, Prosser, and Sunnyside.

The purpose of the Tuesday meeting was to give these local school authorities opportunity to discuss the developing educational situations in their several districts since the date of impact of the activities of the AEC and particularly during the past 2 years, and to consider problems involved in the efforts of these districts to provide adequate programs of education. Certain basic and derived data, as set forth in tables A, B, and C (attached), were made available to this and following meetings. The schools in these districts, referred to in table C as off-project schools, have experienced during the past 6 years, and especially since the school year 1946-47, marked increases in school population because of Federal Government activities in the Richland area. These increases in school load, measured by average daily attendance, are shown by districts in table A. A study of the data in this table reveals that the increases in school load and consequently in school attendance of these districts have been rapid and excessive. Resultingly, these districts face a critical shortage of school housing facilities.

For purposes of considering school-plant requirements, it was recognized in the discussions that membership (or net enrollment) would be a better measure than average daily attendance. The former figures were, however, not uniformly available. Increases in school load, as measured by average daily attendance and estimated enrollments, for the 6-year period are reported in columns 6 and 8 of table B. Some consideration was given to the nonproject-connected school increases in contrast to those represented by dependents of workers directly connected with the Federal Government project.

The chairman of the boards of education in attendance agreed that the superintendents of schools should represent the school districts at the Wednesday afternoon meeting.

The purpose of the Wednesday meeting was to consider possibilities of providing needed school-plant facilities with State and local funds, and to establish a basis for determining responsibility, if any, of the Federal Government to assist in this program.

Careful analyses were made of the data in tables B and C, with particular emphasis on the ability of these districts to raise, from local and State sources, sufficient funds for respective capital-outlay needs. In these analyses, full consideration was given to the legal provisions and limitations for securing capital-outlay funds, and to the amounts of these funds that could reasonably be secured from currently available sources in relation to total funds required to provide, without further delay, critically needed school housing facilities. There was general agreement on certain findings revealed by these analyses. These findings were considered so significant that the committee incorporated them in its report. There was also general agreement that the major concern at this time of these six school districts was the provision of permanent school housing for what could be reasonably determined as a permanent school impact. It was clearly recognized and accepted that temporary facilities only should be provided for temporary school impacts. Some temporary facilities have been provided by the AEC during the past 2 years in several of these districts.

General agreement was reached to the effect that the State and the school districts involved should assume full responsibility for providing facilities needed for the increase in school load not directly connected with AEC activities and that the Federal Government should assume responsibility for assisting the State and local school districts in providing facilities for children of workers directly connected with these activities; that is, the federally incurred school load (see definition in committee report). It was also agreed that the committee should prepare its report of findings and recommendations, as they relate to this Federal responsibility, without reference to possible limitations in existing authority of the Atomic Energy Commission.

The purpose of my meeting on Thursday with the committee was to outline the proposal for a committee statement in terms of the general agreements reached by the representatives of the meeting on Wednesday and to translate into as objective terms as possible their agreements regarding the respective responsibilities of the local, State, and Federal Governments for providing school-plant facilities for the federally incurred school load. After this had been done, the committee requested that I draft, in accordance with the outline set forth, a statement of findings and recommendations as the basis for the committee report. It was decided that one table of selected basic and derived items of information be made an integral part of the committee report. Table 1, incorporated in the

committee report, presents among other significant items the Federal-incurred and the non-Federal-incurred school loads as of the school year 1948-49 (see columns 8 and 9, table 1, committee report).

My draft of this statement was checked carefully late Friday, June 24, with Messrs. Shaw and Fuller, who attended the three meetings. Certain revisions were made by us. These are incorporated in the committee report entitled "Findings of a Committee Considering a Plan for Providing School-Plant Facilities for the Atomic Energy Commission—Incurred Enrollment in Six School Systems in the Richland Area." This report is dated June 24, 1949.

Mr. Shaw sent copies of this report to Mr. E. L. Lindman and to Mr. E. S. Black for their concurrence. I have been advised that the report has been accepted by the three members of the committee and that, in the absence of a copy signed by them, I should feel free to transmit the committee report indicating that the three members had accepted the report. Mr. Norman G. Fuller provided me with the above information last week by telephone and also supplied me with 1948-49 data, as incorporated in table A of this statement.

I feel that the committee's approach to the solution of the problem is logical; that its findings, based on careful analyses of existing facts and conditions, are sound, and that its recommendations are fair and equitable.

A copy of the committee report is attached.

H. F. ALVES, *Director, Division of School Administration.*

TABLE A.—Average daily attendance, by schools, from 1940-41, through the school year 1948-49

<sup>1</sup> A school district secures these funds by voting bonds (limited to 5 percent of its valuation) and by special millage levy voted by the people.

## (Appendix C)

*Summary of the approximate amount of the assistance which has been furnished by the Atomic Energy Commission to the off-site school districts in the Hanford area*

School districts	Maintenance and operations		Building fund <sup>2</sup>	Total	Number school busses loaned
	1947-48	Estimate <sup>1</sup> 1948-49			
Grandview.....	\$10, 225	\$17, 000	\$54, 800	\$82, 023	1
Kennewick.....	142, 758+	100, 000	470, 000	712, 758	15
Kione-Benton City.....	15, 575*	38, 000	68, 400	121, 975	2
Pasco.....	52, 783	24, 000	187, 000	263, 783	3
Prosser.....	12, 157	21, 000	72, 800	105, 957	2
Sunnyside.....	20, 730	32, 000	130, 000	182, 730	4
Whitstran.....	0	5, 300	0	5, 300	0
Total.....	254, 228	237, 300	983, 000	1, 474, 526	27

<sup>1</sup> Since the amounts of the payments made by the Atomic Energy Commission for operation and maintenance under its agreements with the school districts are dependent in part upon the average daily attendance, and inasmuch as the sums listed in this column represent estimates made prior to the completion of the 1948-49 school year, some revision in the sums listed may be necessary.

<sup>2</sup> The sums listed in this column represent payments made by the Atomic Energy Commission in lieu of furnishing temporary school facilities. The Atomic Energy Commission also furnished certain temporary school facilities on a loan basis to a number of the school districts during 1947-48 and 1948-49.

Mr. JACKSON. Suppose you just summarize the report.

Mr. ALVES. My trip out there, or just the report?

Mr. JACKSON. Summarize the trip out there and the report.

Mr. ALVES. All right.

First of all, may I say that the Office of Education was glad to be of assistance to the Atomic Energy Commission in providing consultative service in connection with this problem, as it had done previously, January a year ago, on a related problem.

According to the request that came from Mr. Wilson of the Atomic Energy Commission, our interpretation was that I serve as a consultant or in a consultative capacity to the Atomic Energy Commission, and one of my responsibilities was to see whether or not the committee of three, to which the chairman has referred, could be brought together to where it could issue a report.

I found upon my arrival at Richland that apparently efforts during the past year or more to try to get together had resulted in a partial solution in that a decision had been made by the Atomic Energy Commission that it would provide not to exceed \$300 per pupil of project-connected children for temporary school construction.

There were three meetings held. The first one was attended by the chairmen of the boards of education and by the superintendents of schools of these six districts and by representatives of the Atomic Energy Commission, the other members of the committee and myself.

The group asked that I serve as chairman of the meetings that would be held.

The first meeting, held on Tuesday, made analyses of the conditions that had developed district by district since the date of the impact of the Federal Government activities.

Certain decisions were made that day with reference to the use of certain basic data. For example, you will find that the picture is portrayed, as far as developments educationally in the district are concerned, in terms of a school load measured by a. d. a. Let me not—

Mr. COLE. What is a. d. a.?

Mr. ALVES. A. d. a. is "average daily attendance."

That may not sound significant, but it is very significant in that it is highly conservative as a measure for building needs.

To illustrate, a school system may have 3,000 different boys and girls enrolled in a session. Of that number, it might develop at the end of the year that 400 had come and gone, which left 2,600 who stayed after they enrolled. For that 2,600 the a. d. a. might be 2,400, so I would like to be very emphatic about the fact that the measure of school load in terms of average daily attendance is a highly conservative figure. There cannot be any padding in it.

The reason for doing that—

Mr. COLE. Excuse me, but do you not feel that it is a very fair figure to use?

Mr. ALVES. It is a fair figure, certainly, so far as the Government help is concerned. If there is anything unfair about it, it might be in the line of the direction of the districts, there have to be more seats than the total school load, as measured by average daily attendance.

Since there were no uniformly derived figures on enrollment that the group wished to accept, and since everybody agreed that in the State of Washington attendance in the schools was very high, approximating 90 percent, we took these a. d. a. figures and multiplied them by 1.1.

Mr. COLE. Approximating 90 percent—90 percent of what?

Mr. ALVES. Ninety percent full attendance of those who were enrolled. In other words, if you had a thousand pupils starting in September—

Mr. COLE. You mean that the average daily attendance was 90 percent of the enrolled student load?

Mr. ALVES. On a State-wide basis. That is the figure proposed in Washington State. I did not derive those figures. Those were the State Department figures.

So, we took these load figures, as measured by average daily attendance and multiplied them by 1.1 to get an estimated enrollment.

Now, what that actually does is this: Here is a school district which had a thousand different boys and girls on the rolls. They were enrolled; they were members of that school. Some of them remained just for a few weeks, some for 2 or 3 months, and some throughout the year. There were 200 of those who left before the close of the year. They had to have seats for them while they were in school. That left 800, which is a more steady figure. But of the 800, only 600 were an average daily attendance, or in this case, to be exact, 720 (on the basis of 90 percent). So, you see we use figures as measures of load which are highly conservative and certainly fair to the Federal Government. If they are unfair they will be unfair in the direction of the districts, in that if they provide for facilities only in terms of those restricted load figures. These districts will have some pupils without seats which, of course, you find now in a number of their situations.

That first day was spent discussing this type of a problem.

The second meeting was attended by the superintendents of schools of all the districts involved, but not by the chairmen of the boards of education who had, the day before, decided that the superintendents should represent them.

At this meeting, there was a general agreement on certain findings revealed by the analyses of the day before and the second day.

The group decided that the committee should have the privilege to incorporate those findings in its report, and they are so incorporated as committee findings.

There was also general agreement on this one point, and this was one of the points of variation for the past 12 to 18 months; namely—that the major concern of the districts was to provide—as they spent their own money as well as State money and the hoped-for Federal money—permanent facilities; and that they should spend wisely. The decision of the group was that the major concern at this time was to determine, if humanly possible, some way to show what permanent school housing facilities should be built.

Mr. JACKSON. Might I interrupt at this point, Mr. Alves?

Mr. ALVES. Yes.

Mr. JACKSON. As I understand, there are two basic problems in connection with the impact of the Federal Government on the school system: One is operation and maintenance and two is the question of capital outlay for new buildings or for permanent or temporary buildings.

As I understand, point No. 1, operation and maintenance, that problem has been more or less a settled question.

Mr. ALVES. Yes.

Mr. JACKSON. That part of the problem has been worked out, so that your primary mission is to deal with this subject of capital outlay.

Mr. ALVES. That is right.

Mr. JACKSON. The question of new facilities, whether they should be permanent or temporary.

Mr. ALVES. Right.

Mr. JACKSON. All right. I did not mean to interrupt you. I just wanted, for the purpose of the record, to make it clear that this inquiry is directed to the question of the responsibility of the Federal Government in providing new school—

Mr. ALVES. Plant facilities.

Mr. JACKSON. Plant facilities.

Mr. ALVES. Yes.

Mr. JACKSON. For permanent attachments to the projects.

Mr. ALVES. Yes.

The reason I mention the points that I have was that you have to have some measuring stick for determining what plant facilities you need.

Mr. JACKSON. That is right.

Mr. ALVES. Our second meeting also reached two other points of agreement. One was that the local school district and the State should assume full responsibility for providing school plant facilities for that increase in school load which was not federally connected.

The second point was that the Federal Government should assume responsibility for assisting the State and the local school districts in providing facilities for children of workers directly connected, and these, in the report, are referred to as the federally incurred school load.

It was also agreed at this second meeting—and I think that this is a rather significant agreement—that the committee of three should prepare its report of findings and recommendations as they relate to this Federal responsibility without reference to any possible limitations in existing authority of the Atomic Energy Commission.

The third meeting was held for the distinct purpose of the committee's, and my working out an outline for the committee's statement

which the committee, as well as the personnel at the second day's meeting, had requested me to prepare in terms of all of the decisions that they had made.

Mr. COLE. Let me interrupt, Mr. Alves, to inquire——

Mr. ALVES. Yes.

Mr. COLE. If you are aware of any limitations of the Atomic Energy Commission with respect to this problem.

Mr. ALVES. If I may, I should like to postpone that question for the time being?

Mr. COLE. Yes.

Mr. ALVES. And take it up a little later? Is that satisfactory?

Mr. COLE. Surely.

Mr. ALVES. Late Thursday afternoon and Friday, I prepared the report of the committee, in cooperation with Mr. Shaw and Mr. Fuller at Richland, as requested by the committee.

Mr. JACKSON. Mr. Fuller, representing——

Mr. ALVES. Mr. Fuller is—I have forgotten his title, but he is an Atomic Energy Commission representative.

Mr. JACKSON. Representative of the Hanford project.

Mr. ALVES. Mr. Fuller's office has the files of the data of all the school districts, so any and all data that were supplied came from the official records in Mr. Fuller's office.

The committee report was drafted by Friday afternoon and checked later in the afternoon with Mr. Shaw and Mr. Fuller. We made some revisions that we thought would be advisable from the standpoint of wording, and in accordance with the request of the two other members of the committee, Mr. Shaw submitted copies of that report to Mr. Lindman and Mr. Black for their concurrence or rejection.

Both of those members, as well as Mr. Shaw, according to a communication, a telephone communication, that I had from Richland about the time I wrote my report, accepted the committee's report.

I have these comments that I would like to make with reference to the committee report. Not being a member of the committee of three but serving in a consultative capacity, I would like to say that I feel that the committee's approach to the solution of the problem is a very logical approach, and that the findings of the committee, based on the analyses of the existing facts and conditions are sound and that I believe its recommendations are fair and equitable.

With reference to the committee report, which I helped prepare, it sets forth, as you will recall, about a page of introductory statements, and then the need for facilities.

I would like to call three statements relating to "need" to your specific attention: The need for plant facilities in these districts at the present time can be attributed to three things: (1) A large number of Hanford employees, with families, residing in the area surrounding, but excluding Richland, and commuting to the Hanford Works; (2) population increase in this area resulting indirectly from the activities of the Hanford Works; and (3) lack of essential school construction during the depression, war years, and postwar years.

So, in considering the problem, these factors have to be recognized.

Certainly, there would be nothing logical in proposing that the Federal Government should provide school-building facilities that were needed 10 or 15 years ago.

On the basis of these three factors, the analyses of all the facts and conditions were made. I shall not take time to place in the record the increase district by district. You have access to that. If you want to ask questions later, I will be glad to try to answer them.

The committee findings were seven in number, and remember these were not the findings of the three committee members. These were findings the committee accepted because everybody in the first 2 days' meetings agreed that they were perfectly sound and obvious:

First. That these six school districts had a sudden and excessive increase of school load because of Federal Government activities.

Second. That the incurred school load by reason of these Federal Government incurred activities constitutes in each district a substantial percentage of the total school load.

Third. That these districts, under existing conditions, cannot provide a satisfactory program of education to the children coming to them, primarily because of lack of essential facilities, which means half-day sessions, crowded rooms, and so forth.

Fourth. That these districts cannot secure from their local tax bases sufficient funds to provide the school buildings needed by them.

Fifth. That the local and the State education authorities cannot be expected to secure sufficient funds from available sources, both State and local, to meet the costs of providing school-plant facilities necessary to house the total school impact in these districts.

Mr. COLE. What is the reason for that conclusion?

Mr. ALVES. The reason for that conclusion is that if you bonded every local district to the limit——

Mr. COLE. But you include the State.

Mr. ALVES. And the State from available sources——

Mr. COLE. You mean that is because of State constitutional limitations?

Mr. ALVES. No. It is the cost of the amount of money the legislature has appropriated for State school plant assistance.

Mr. JACKSON. May I interrupt there?

Mr. ALVES. You see, in the State of Washington, Mr. Cole, there are State funds which are made available to local districts in terms of their ability to finance school buildings, in addition to the money they derive from their local taxes. In other words, in that respect we consider that the State of Washington is pretty well out in front in the matter of financing school buildings.

Those State moneys are made available in such a manner that the district with the least ability gets more State money to supplement its own local capital outlay funds, in contrast to a district with more wealth.

In other words, a given district might get twice as much money from the State as it can raise locally, while another district might only receive an equal amount from the State. In contrast, a still wealthier district might have to raise from local sources twice as much as it would receive from the State. In other words, State funds are provided to help the districts that can least help themselves.

Now, that is why we say in the committee findings that funds from available sources, State and local——

Mr. JACKSON. Mr. Alves, might it not be well to explain, too, that the source of revenue to take care of school-construction costs is the primary responsibility of the local district?

Operation and maintenance, however—at least, a very substantial part of that—comes from the State legislature. The local school district can be bonded to the limit, provided by the constitution through special levies, but the State does provide, as you have indicated, on an equalization basis. It is an equalization law, and the State can provide funds to school districts in a very small ratio to cover building-construction cost.

The primary function of the State legislature, so far as schools are concerned, is to raise funds for the operation and maintenance, I believe, in the State of Washington.

Mr. ALVES. Yes. During the last biennium, I think, the State of Washington spent around \$20,000,000 to assist local school districts in building school buildings.

Mr. JACKSON. How does the State of Washington rank among the 48 States in providing education—I mean teachers' salaries, school buildings, and so on? Is it not about third or fourth?

Mr. ALVES. I would not prefer to give an earmarked rank. I would say that so far as making provision for an adequate program of school finance, both in this instance, for current expense and school buildings, the State of Washington is toward the top. I do not want to say it is third or fourth. I do not know exactly.

For current-expense purposes, as we found a year and a half ago in these same districts, we figured an average teacher unit cost of \$2,200, plus 20 percent for instructional supplies, and materials, and so forth, bringing it up to \$2,400 average.

Mr. JACKSON. Mr. Alves, I think it might be well if you could supply for the record information showing the efforts that are being made by the State of Washington in relation to other States to provide: No. 1, funds for operation and maintenance; and, No. 2, funds for school building facilities.

I make the inquiry because I believe that in any determination that the committee might make, it is certainly a very important consideration in determining the responsibility, if any, of the Federal Government to those States where there is an impact on—

Mr. COLE. Well, the problem of operation and maintenance is not involved.

Mr. ALVES. Not in this consideration.

Mr. JACKSON. No; but I just thought that for the purposes of the record it would be pertinent.

Mr. COLE. I do think it would be very important to indicate the relative position of the State of Washington with respect to the other States of the Union on the question of the amount of public funds it appropriates for public-school construction.

Mr. JACKSON. Yes.

Mr. ALVES. From State sources?

Mr. COLE. Yes.

Mr. JACKSON. Because I think the committee may want to scrutinize very carefully, in determining whether there is responsibility in other States, exactly what each State that is affected is doing to solve this problem.

Mr. ALVES. If I understand the request correctly—

Mr. JACKSON. We will limit it to capital outlay.

Mr. ALVES. What you are really asking me to do is to provide information for the State of Washington as well as any other State that

provides State funds for constructing school buildings. In other words, you have not any relative position.

Mr. COLE. That is right.

Mr. JACKSON. Well, the relative position.

Mr. ALVES. I am not sure that I can supply that for all the States currently.

Mr. JACKSON. What is the relative position of the State of Washington as it compares with other States; whether they are making a real effort to solve the school problem, which is very relevant to this whole problem. It goes to the heart of it.

Mr. COLE. Yes.

Mr. ALVES. Yes.

(The information referred to will be found on p. 50.)

Mr. ALVES. Now, we continue with these findings.

Mr. COLE. Let me get this clear, first.

Mr. ALVES. Yes.

Mr. COLE. As a result of your study, it is your conclusion that the amount of State funds from Washington which are available to meet this problem in Hanford, in the Hanford area, together with the taxable resources available locally are still insufficient to meet the needs—

Mr. ALVES. To meet the total need.

Mr. COLE. Of this area?

Mr. ALVES. That is right, of these districts.

Now, remember that says "available sources."

Mr. JACKSON. We understand. It is the source provided by law.

Mr. ALVES. Legally provided now.

Mr. JACKSON. That is right, provided by law, either constitutionally or by statute.

Mr. ALVES. Yes.

Another finding of the committee was that to alleviate the school housing shortage, other than the federally incurred school load, would require the maximum effort of both the local district and the State.

In other words, as an explanation, experience shows that recent school-building construction in Washington in terms of the State-wide average approximates \$1,600 per pupil.

Mr. COLE. A. d. a. pupil?

Mr. ALVES. Per pupil.

Mr. COLE. What kind of pupil?

Mr. ALVES. Yes, A. d. a. Consequently, if you have a thousand pupils to provide for, the amount required in terms of this average unit cost, approximates \$1,600,000.

One can determine quickly how much within the legal bonding capacity these districts can provide, and then proportionately how much each can expect from the State. This is the basis for this last finding.

Lastly, experience during the 6-year period since the date of impact indicates that the school impact, represented by the federally incurred school load, as set forth in the committee report, may be expected to be of a permanent nature.

I think I should like, if it is not too time-consuming, before we consider the recommendations, to call your attention to a few problems.

It is perfectly obvious, as experience has shown for the last 10 years in this country, that when you get a highly active Federal Government

activity into an area that you have waves of up and down as to the impact of population.

When we first start an activity, we have a quick rise in population, followed by a leveling off.

If there are then expansion or reactivation of activities there is another increase up, and then possibly another leveling off.

I think it must be obvious to all of us that nobody can predict with 100 percent accuracy as to any of the situations in there.

There have been times when, during the war, we thought that every time a camp was set up for 10,000 adults we could expect three-tenths child per adult. In some cases this proved correct; in others we missed it by a hundred percent.

Mr. COLE. High or low?

Mr. ALVES. Both ways.

I remember one installation in which after we thought we had established the factor of nine-tenths pupil per family unit, we found it to be about three-tenths.

At the same time in an installation this factor was nearly two children of school age per family unit. You can strike averages, but when you get to specific locations, you have some variation.

Mr. COLE. Your national average then is six-tenths child per family unit?

Mr. ALVES. I do not know what it is now. I was talking about several years ago. That is when we had in the Federal Government activity areas—

Mr. JACKSON. Lanham Act funds.

Mr. ALVES. Military reservations, housing projects, and so forth. The kinds of workers involved had a bearing on the ratio of the school population to the total population.

One of the basic questions in the Richland area is how much of the population will be permanent, how much of it will be there today and gone tomorrow? How much of it will be federally connected today and not so tomorrow?

As we made analyses, district by district, in terms of detailed records from which these basic data were taken, we found variations, but through it all we found a trend which seemed to point to the fact rather conclusively that in terms of the 6-year period of time—unless, for example, the Congress should decide to close the installation out there—we could expect a permanent school impact, approximately in agreement with what is reported as the federally incurred school load.

It may be that there may be as much as 10 percent variation, above or below, in the federally incurred school load for a given district in terms of a permanent impact.

In connection with this finding relating to permanency of school impact, I found that there had been a decision in about April that the federally incurred school load, as measured by average daily attendance, not by enrollment or gross enrollment, represented to the most stable figure available.

The committee itself was positive that if essential school plant facilities were to become available in these districts, the Federal Government would have to provide immediate financial assistance to the State and local educational authorities concerned in meeting the school plant needs required for this federally incurred school load.

Now, so far as the committee's recommendations are concerned, experience in the State of Washington, with its State school plant assistance program had already established what was accepted on a State-wide basis as a per-pupil cost of school construction at approximately \$1,600.

The general opinion of the committee members was that a given district might get hurt if it relied wholly on this \$1,600—a State-wide average—if it had to build practically all high-school facilities rather than both elementary and high-school facilities in the proportions generally found.

The committee report recommends that the Federal Government should assume the responsibility for its share in terms of the cost per pupil as certified by the State department of education. Whether this cost be \$1,400, \$1,600, or \$1,800 per pupil, it would represent the State average, the figure recognized by the State school-plant assistance program.

The committee's recommendations in short, are: That for the federally incurred school load the Federal Government should assume as its share, this \$1,600 per pupil, minus, first, any other Federal contribution since the date of the impact for the purpose of school buildings, minus, second, a local contribution per pupil in relation to the federally incurred school load, such local contribution to be determined in terms of the district's assessed valuation.

Mr. COLE. I do not understand that.

Mr. ALVES. May I just finish that and then try to explain that in terms of a district?

Minus, third, any State contribution to which that district is entitled under the State school-plant assistance program.

Now then, if I may take a district and call it district X, with a thousand pupils, average daily attendance, the school load today. Multiply that by 1.1, for its estimated enrollment. Of that number, let us say, 300 represent the federally incurred load.

Mr. COLE. Direct?

Mr. ALVES. Direct. That is, according to the definition here—let me read it so I will not get us confused. [Reading:]

Federally incurred school load as used in this report is defined as those pupils whose parents or guardians were employees during 1948-49 school term of the Atomic Energy Commission, and the General Electric Co., and their subcontractors or concessionaires at the Hanford Works.

Now, the fact that those pupils were there during 1948-49 may mean that a good proportion of them have been there for 5 years, and some for only 1 year.

Mr. COLE. Why do you include the concessionaires as being a part of the school load?

Mr. ALVES. Concessionaires—this definition was originally determined 2 years ago in connection with a related program. The determination was made that employees, either of the Atomic Energy Commission directly, of its contractor, subcontractors or concessionaires—that is, every activity in Richland—were equally considered as Federal employees.

As I understand that, it means that if I am an employee of the administrative staff of the Atomic Energy Commission at Richland, my child is what they originally called eligible—what we here say is federally incurred school load.

If I were an employee of the General Electric Co. my child would also be eligible; if I were an employee of a subcontractor of either the Atomic Energy Commission or General Electric, if I worked in any of the business establishments in Richland, on Government property, whether it was the drug store, the barber shop, the motion-picture show, the restaurant or not, I was considered a Federal employee. If I am incorrect I will be glad to stand corrected.

Mr. COLE. Well, as to those people who live in Richland, they are eligible for school facilities——

Mr. ALVES. In Richland.

Mr. COLE (continuing). In Richland, all of which is supported by the Federal Government.

Mr. ALVES. Correct.

Mr. COLE. What is the situation with respect to somebody who lives outside of Richland but who works in Richland, is he eligible to go to school at Richland?

Mr. ALVES. No; he goes to school in the district in which he resides unless there is an arrangement for transfer; but the Richland schools are not in a position to take anybody from the outside.

Any employees of the Atomic Energy Commission, General Electric Co., their subcontractors or concessionaires, who live outside of Richland and whose children are eligible to go to school are the children who constitute the federally incurred school load in these districts.

Mr. COLE. Suppose the Atomic Energy Commission leases a store site to an individual who has children, and that individual lives outside of Richland. He then would not be computed—that child of his would not be computed as a part of the Federal load.

Mr. ALVES. It would in that district where he lives; yes, sir.

Mr. COLE. Not according to your definition.

Mr. ALVES. Yes, sir.

Mr. COLE. He is not a concessionaire. He is a tenant, unless you consider that a tenant is on the same basis as a concessionaire.

Mr. ALVES. That is my understanding of this definition as used for 3 years now. Is that right, Mr. Shugg? If I am a druggist and work in the drug store in Richland, I am a Federal employee under this definition.

Mr. SHUGG. I do not think it was as scientific as that, Mr. Alves. I think that in the attempt to find some meeting ground here that we did accede to the fact that the children of concessionaires would be considered as federally induced, but there was no more logic or reason behind it than there is, for instance, behind the fact that some of the General Electric employees, permanent operators, living outside the city may own their home, and by paying real-estate taxes and just as much being a citizen of this outside town as any original settler, but we have to overlook that, too.

There was no attempt to try and separate out Federal employees who might own their own homes in these outlying districts, because then we would have to get into the point of how much did the rent payer contribute to his rent to the landlord to pay taxes.

Mr. ALVES. Mr. Cole's question, as I understood it, was: Suppose I leased a business establishment in Richland and lived outside. Would my children be counted in this federally incurred school load of the district in which I lived? My answer was "Yes."

Mr. SHUGG. That is right. There is no scientific justification.

Mr. JACKSON. It is an arbitrary determination in order to work out a settlement previously—

Mr. SHUGG. Yes, sir. Instead of trying to analyze those who own homes and those who did not own homes. There were several problems like that, and we took, for the sake of arriving at some meeting of the minds, and lumped the children of concessionaires who resided outside the district, and who went to the school district in which they resided. We allowed them to be included in the federally incurred school load.

Mr. ALVES. Yes.

Mr. COLE. My point is a leaseholder from the Atomic Energy Commission is in the same category as a concessionaire from the Atomic Energy Commission.

Mr. SHUGG. Yes.

Mr. JACKSON. How many are in this category?

Mr. ALVES. I do not have a break-down of the distribution of children according to classifications of occupation.

Mr. JACKSON. Do you remember, Mr. Shugg, approximately what percentage of the children would come under the category of the concessionaire definition?

Mr. SHUGG. No, sir. I do not, Mr. Chairman.

Mr. JACKSON. It is a very small portion.

Mr. ALVES. It would be relatively small.

Mr. SHUGG. We could take such a poll as to how many children were children of concessionaires, how many were the children of construction workers, and how many were the children of operating personnel.

Mr. JACKSON. I assume it would be a very small percentage of the total.

Mr. SHUGG. I assume so.

Mr. JACKSON. You may proceed, Mr. Alves.

Mr. ALVES. Coming back to the case that I wanted to use, Mr. Cole, to illustrate these, these recommendations, I had the district with a thousand average daily attendance, whose estimated enrollment was 1,100. I said suppose the district had 300 in the federally incurred and 200 in the nonfederally incurred loads. This means that it had, previous to the impact, a school load of 600.

Now, it has 1,100. Let us assume further that at the date of impact its assessed valuation, was \$3,000,000, and that now it is five and a half million dollars. The recommendation is that the Federal Government shall assume the cost per pupil for the federally incurred load, that cost to be \$1,600, minus, first, other Federal contributions for school building purposes since the date of impact.

The reason that this deduction is in there is that the Atomic Energy Commission had made arrangements with the districts to provide not to exceed \$300 per pupil for the federally incurred school load, which the district could use for temporary facilities. AEC gave the district the privilege, if it wanted to, to put its own money with that \$300, as I understand it, to use it for permanent facilities. So, we would subtract the \$300 because it is a Federal contribution.

The next deduction is the local contribution per pupil. The district with 1,100 pupils, and a valuation of 5½ million would have \$5,000 assessed value per pupil.

We do not assign the total tax base. We use only that part which is represented by the federally incurred school load. We would

assign only three-elevenths of the district's valuation because it is responsible, with the State, to provide school facilities for any others over and above the federally incurred school load. The \$5,000 assessed valuation per pupil, when multiplied by 5 percent, the legal bonding limit, for capital outlay purposes, would produce \$250 as the local contribution.

You subtract that \$250.

A district with this assessed value per pupil would receive from the State an amount approximately about one-third of its local contribution, or about \$75.

Mr. JACKSON. Under the equalization act.

Mr. ALVES. Under the equalization plan, it averages about 1-to-1. So we would subtract \$250 as the local and about \$75 as the State contribution.

Excluding for the minute the fact that the Atomic Energy Commission already advanced \$300, we would deduct the \$250 local and about \$75 State contribution, thus leaving about \$1,275 as the Federal contribution per pupil.

Now, when we apply that to these districts, we do not get as large a local contribution because their tax bases per pupil are less.

There is one table attached to my statement—that is table B—which shows that in 1942-43 these six districts had \$13,500,000 assessed valuation, which increased to \$27,900,000 in 1948-49, roughly a hundred percent increase.

As you study that table you find two sets of figures in columns 9 and 10.

Column 9 shows the increase per additional pupil, obtained by dividing the increase in assessed valuation by the increase in school load. Column 10 shows the valuation per-pupil enrolled. There is practically no difference between these two per pupil figures. If you assume that \$2,500 as the average for the six districts combined, it would mean that their average local contribution would be about \$125. If on this average basis, a district provides 40 cents out of each dollar, and the State 60 cents, the State would provide 1½ times \$125, or about \$190, which would bring the local and State contribution combined to about \$315.

Roughly, we figure across the board for the six districts, even with corrections, that would come in assessed valuations, that the local and State contribution would be expected to be somewhere from \$300 to \$325 per pupil for the federally incurred school load.

This means that, in addition, these districts have to use their remaining bonding capacity, and special millage levies plus state funds to provide for the nonfederally incurred school load.

Does that clarify the question you had, Mr. Cole?

Mr. JACKSON. Spelled out, what is the average net cost per pupil for this proposal?

Mr. ALVES. For these six districts?

Mr. JACKSON. Yes, on the average, the average amount.

Mr. ALVES. Allowing me a 5-percent error in my guess, I will say it approximates \$1,275 to \$1,300 Federal contribution per pupil.

Mr. JACKSON. Per pupil.

Mr. ALVES. That is approximate. Does anybody have a better figure than that?

Mr. JACKSON. And how many pupils average daily attendance?

Mr. ALVES. Federally incurred school load that that would be applied to? That is 3,266—say about thirty-two hundred roughly.

Mr. JACKSON. Thirty-two hundred times approximately \$1,275.

Mr. ALVES. Or \$1,300. It comes out around  $3\frac{1}{2}$  to 4 million dollars.

Mr. JACKSON. That is the final obligation owed by the Federal Government in the area?

Mr. ALVES. In terms—well, let us be specific on that.

Mr. JACKSON. Insofar as the school construction costs are concerned.

Mr. ALVES. At this time?

Mr. JACKSON. How much?

Mr. ALVES. If 2 years from now you have another reactivation of some kind and you bring in another load, why, you have another problem.

Mr. JACKSON. You would not have any idea where the dividing line is? In other words, I mean, suppose there is normal load growth in the area, that is in the operation of the plant at Hanford, how final—in other words, how final is this report so far as the Federal Government's responsibility to provide permanent school facilities is concerned?

Mr. ALVES. Well, as far as I know, it is up to date, and when you say "final," I am a little confused. I am not sure that I know what you mean. Are you raising a question—

Mr. JACKSON. Well, you have determined that the number of attachables by the formula you have worked out approximates 3,266.

Mr. ALVES. Yes.

Mr. JACKSON. Which is the average daily attendance for the school year 1948-49. Suppose that two situations exist: No. 1, is that we have a doubling of the permanent personnel at the project. Then you have—

Mr. ALVES. Obviously, this is not final.

Mr. JACKSON. The problem all over again.

Mr. ALVES. I said final in terms of the existing situation.

Mr. JACKSON. I understand.

Now, suppose that there is the normal fluctuation that takes place in a business enterprise where the number next year may be 3,400, 3,500, but just a normal increase in the population growth.

Mr. ALVES. I think you can expect to look forward to that in this area. Let us assume, by some magic or other, that on September 1 all these building facilities were provided and all youngsters were housed, the federally incurred load. We still have a nonfederally incurred load of 2,600 who have to be provided for, which will probably take those districts and the State several years. But if you had a relatively stable federally incurred load, I think this would be final. But if next year a district that has now a 300-federally incurred load, and bonds itself to the limit, got another 300 pupils, I think you would hear some more noise out there.

Mr. JACKSON. Mr. Cole, do you have any questions?

Mr. COLE. Well, assuming there is no change in the Federal load out there, this is the end of the Federal obligation to meet the need for the—

Mr. ALVES. School-plant facilities.

Mr. COLE. School-plant facilities, school operations, in the Hanford area, is it?

Mr. ALVES. Yes.

Mr. COLE. It is not contemplated that there will be any future claim by the Hanford area, school districts, for Federal assistance to the maintenance and operation of these schools?

Mr. ALVES. No. Of these schools? No.

Mr. COLE. Of the schools in this area.

Mr. ALVES. Well, the maintenance and operation is so distinct from this that maybe it would be worth while to get that arrangement in here.

In the State of Washington State money is distributed on the basis of a. d. a., as of the last year. In other words, a budget is made up now by a school district for next year in terms of its load last year, a. d. a., plus 5 percent. There is a general recognition in the State that so far as current budgets are concerned there ought to be a 5 percent recognition of normal growth.

Whenever a district in the Richland area received during that school year what we called "eligible" children, that is children of workers, as we defined them awhile ago, there is no State money coming to that district for the first year's attendance obviously, so the arrangement that has been in effect for this—this is the third year—has been that the Atomic Energy Commission has provided the first year's current expense, and then the State and local districts take over this responsibility.

Mr. JACKSON. That is to take care of the gap in there.

Mr. ALVES. To take care of the lag.

Mr. JACKSON. One year.

Mr. ALVES. Therefore, I would say, in answer to your question, that after the Federal Government assisted in building these school buildings, I see no reason why these districts would ask AEC for a continuing current expense because their own program of State aid takes care of that.

Mr. JACKSON. There has never been any dispute on that point, has there?

Mr. ALVES. No.

Mr. JACKSON. Now, they have only asked for payment for the period in which the State program failed to cover.

Mr. COLE. Well, did they indicate to you—the State or the local authorities—that this recommendation which the committee made to the Atomic Energy Commission, after consultation with you, represents the total of the State or local claims against the Federal Government for assistance in public education because of the Hanford operation?

Mr. ALVES. For facilities only.

Mr. COLE. I want to make certain that 2 years from now, 5 years from now, the school districts out there, the same school districts, do not come back to Uncle Sam and say, "Now, you admitted that you were responsible for this because of the fact that you came in and spent \$4,000,000 putting school buildings here. We have got to have some help to hire the teachers, to pay the janitors, to maintain the schools, and we want you to come in and contribute."

What I want to find out now is whether this proposal of your committee represents the total of the claims that the people out there in the section have against this Federal Government for their school operations.

Mr. ALVES. It represents the position of the six school districts named with reference to school plant facilities. There was no refer-

ence at all to the current expenses, and since that is taken care of by agreements otherwise which have no relation to this, I cannot see why any district or the State under the State program of school finance, would claim anything like this.

Mr. COLE. To me it is entirely logical for them to come back and claim this.

Mr. ALVES. But the committee, in this document and in these considerations, raises no question about current expense because that is separately—

Mr. COLE. I can imagine that they are happy to ask for this much, and they would not ask for more. But I think it would be entirely logical for them to come back and claim assistance from the Federal Government for the maintenance of these schools.

Mr. JACKSON. I think in that connection, Mr. Cole, the question of operation and maintenance expense has been settled on the basis of the increase in load growth for the 1-year period in which the State funds do not apply, and that is an over-all consideration—as I understand it in the past up until now—to the entire problem without relation to specific school buildings, so that if there is any question about it, I think it ought to be included in any agreement reached. I quite agree with you, but I do not think the school people in the area that I have talked with have any desire or any intention to ask for operation and maintenance expense in connection with the specific funds that might be allocated for these schools.

The only requests that they would come in for operation and maintenance money would be the over-all increase in the number of attachables in any given period. Is that a policy up to now?

Mr. ALVES. I will go so far in my answer to this question to put this statement in the record, Mr. Chairman—and I will verify it within 48 hours—I think if Mr. E. L. Lindman, the Deputy Superintendent of Public Construction, were here now—

Mr. JACKSON. Of the State of Washington, State Superintendent.

Mr. ALVES. Who was a member of this committee and you raised the question with him as to whether the State or the districts would in a year or two come to the Federal Government to ask for Federal funds for teachers' salaries and other current expenses for the children who would go into these building facilities that are in question, his answer would be, "No, our State program of school finance would not permit us to do so."

Mr. JACKSON. That is something that ought to be included in any event, under any understanding.

Mr. VOLPE. Mr. Chairman, that has been the problem at the present time.

Mr. JACKSON. Yes, Mr. Volpe.

Mr. VOLPE. As a matter of fact, the Federal Government faces two problems from the standpoint of assistance to local communities. One is the question which has not been faced by the Federal Government as yet, namely, permanent construction; and the other is assistance for operation and maintenance of schools.

Now, we have been making contributions to these local communities for operation and maintenance of schools, and—

Mr. ALVES. May I supplement that? By paying the total first year's current costs per pupil.

Mr. COLE. Do you agree with that, Mr. Volpe?

Mr. ALVES. That is the way your agreements have been.

Mr. VOLPE. We have been making contributions per pupil. We have made other contributions by way of materials, the loan of busses, for example, temporary buildings, and the assistance has been in various ways.

Mr. COLE. Has your per pupil contribution measured in dollars been for more than this lag which Mr. Alves has indicated, to pay for the pupil who comes into the district after the budget has been set for that school year, to carry that pupil along until the next budget comes, and then the Federal obligation with respect to that individual ceases?

Mr. VOLPE. That is not my understanding of it, but I would like to check it.

Mr. JACKSON. I understand—my understanding is—that at Hanford, in response to Mr. Cole's inquiry, that the answer is in the affirmative, that it has only been in the 1 year, at least in that area. Maybe Mr. Shugg can confirm that.

Mr. SHUGG. We have made for that first-year lag a payment of \$254,288 in 1947-48, and \$237,300 in 1948-49.

Now, that is just to balance the \$240 per pupil payment expected from the State in the next year.

In addition to that we have paid out approximately \$983,000 for temporary facilities.

Mr. JACKSON. Which is under the proposal here not considered at all.

Mr. ALVES. Not considered at all.

Mr. JACKSON. It is not considered, but deducted.

Mr. SHUGG. That makes a total payment of \$1,474,526 in those 2 years in addition to which there have been a number of facilities loaned to the school districts, portable buildings, and 27 school busses, and any other equipment or temporary help that we could give them. So there are three types of assistance: It has been the \$240 first year operating and maintenance—

Mr. JACKSON. Only for 1 year.

Mr. ALVES. One year only.

Mr. SHUGG. That is right, sir. Second, the approximately \$900,000 for temporary facilities; and then, third, the loan of various pieces of equipment.

Mr. ALVES. Mr. Chairman, I would like to read some recommendations into the record here from my report of January 14, 1948. I think it might clarify this.

Mr. JACKSON. In connection with this same district?

Mr. ALVES. And I think this is identical with what the Commission adopted [reading]:

First, the Atomic Energy Commission in terms of the provisions of its contract—

at that time with the Kennewick School district—

should contribute an amount to pay the full cost of educating additional new pupils during their first 180 days of attendance in these districts. These districts have no source of income which they can use to provide for the education of these new pupils during the first year they are in attendance.

That was the first recommendation.

The second one was [reading]:

That the Atomic Energy Commission assist these districts in providing pupil transportation services for those eligible pupils entitled to such services. The provisions for this purpose and the Commission's contract with the Kennewick school district are applicable in the remaining districts.

The third one was [reading]:

That the Atomic Energy Commission provide temporary classroom facilities to accommodate the impact. These districts should not be expected to provide through special levies or otherwise funds for permanent capital outlay until there is a leveling off following the expansion program. In the meantime they will not be in position to provide a standard of education prevailing last year for their onrush of eligible pupils which apparently has just begun.

Now, the specific question awhile ago, by Mr. Cole, related to current expense, and I think that is the answer. I was going to mention the fact that an arrangement is also in effect and has been, for this is the third year, I think, where the Atomic Energy Commission loans school busses to the districts that need them—I do not know how many of them get them.

Mr. SHUGG. Twenty-eight, I believe.

Mr. ALVES. But in this committee report, since there had already been agreements and arrangements made with reference to current expense, transportation, and temporary facilities, the considerations by the committee and others present were limited to provision of permanent school facilities. That is the reason it was a little difficult to answer your broad question awhile ago.

Mr. COLE. But to put it differently, the Commission has not in the past and does not contemplate in the future contributing toward the public education of any of the direct children for their second, third, or fourth year of public construction of—

Mr. JACKSON. And operation.

Mr. COLE. Except for, perhaps, the bus and temporary building use.

Mr. SHUGG. That is my understanding, sir.

Mr. COLE. But in the dollar contribution the Commission's assistance to the school district has and will be limited to the first year of the pupil's instruction, as to that pupil not included in the budget for the particular district.

Mr. SHUGG. That is as regards operation and maintenance.

Mr. ALVES. Yes.

Mr. COLE. I have only one other question: What school year, what period will be used as the basis upon which to determine the school load which you must know in order to arrive at a Federal contribution?

Mr. ALVES. For this construction?

Mr. COLE. Yes.

Mr. ALVES. The committee, as well as all the superintendents and Board members who were there, agreed that they were perfectly willing to accept as the basis the data as set forth in the table attached to the committee's report, which lists the federally incurred loads as actually defined therein and as determined and used by the Richland office of the AEC.

Mr. JACKSON. For the school year 1948-49?

Mr. ALVES. Yes.

Mr. COLE. 1948-49?

Mr. ALVES. That is the school year closed June 30 last.

Mr. COLE. And that is to be used as the basis for determining Federal contribution?

Mr. ALVES. Yes.

Mr. COLE. How does the Federal responsibility compare with 1946 and 1947, the per pupil load? Is it going up or going down?

Mr. ALVES. That, you will find, in table A attached to my statement. The 1942-43 load in the districts was the one we started with. Compared to 1948-49 they have all had a decided increase. When we compare 1948-49 with 1946-47, in the case of Grandview, the load increases.

Mr. COLE. Can you take the total or do they vary?

Mr. ALVES. I do not have that total. In the case of Grandview the 1946-47 load was 948 average daily attendance. It is now 1,126. Kennewick's load was 1,537 in 1942-43, and 2,841 in 1948-49.

Mr. JACKSON. Comparing with what year is this?

Mr. ALVES. 1946-47 and 1948-49. That is due to the fact that the AEC expansion program, I believe, started in the fall of 1948 or the spring of 1947. Is that correct, Mr. Shugg?

Mr. SHUGG. Yes.

Mr. JACKSON. May I propound this inquiry at this point? As a general proposition is it not true that the number of children arriving at school age each year from now until at least the next 5 years will result in a very substantial increase in the school population, not only in the State of Washington but throughout the country?

Mr. ALVES. Yes.

Mr. JACKSON. We start with that sort of an assumption, to begin with. There is a definite trend upward.

Mr. ALVES. Yes.

Mr. JACKSON. In the school population per family?

Mr. ALVES. Yes.

Mr. JACKSON. In the United States. Excuse me, I did not mean to interrupt.

Mr. COLE. That is all right.

Mr. JACKSON. I think it is an important factor to take into consideration because the families of the people who are working at the plant, the school families, children of school age, are bound to increase in the next few years if the national average can be stated to be a reasonable index.

Mr. ALVES. Which means, in other words, that these six districts, on the assumption that they got these facilities for the federally incurred load, and then provided for the nonfederally incurred load, still face a continuing problem of at least 5 percent a year increase in school population because of increased birth rate.

Mr. JACKSON. Putting it another way, getting right down to the specific attachables, where Federal responsibility attaches it can be said that assuming the same number of families staying at Richland at the present time or at the Hanford project, that there will be an increase—

Mr. ALVES. Yes.

Mr. JACKSON (continuing). In the total school population, over and above the average for 1948-49.

Mr. ALVES. Yes.

Mr. JACKSON. Based on the assumption that the national average is upward.

Mr. ALVES. Now, in the considerations by the groups and the committee, that very point came into play, and although where there are now 3,600 of these federally connected pupils—I mean 3,200—there might be in a few years three or four hundred more children of those same workers.

It was felt that if there was a possibility that the leveling down process would reduce the number of workers, that then the 3,200 might remain fairly stable, but that in this respect the districts were taking a good chance.

Mr. JACKSON. That was a factor that was taken into consideration in working out this formula?

Mr. ALVES. That is right.

Mr. COLE. I would like to ask Mr. Shugg if it is anticipated that the Commission's operations at Hanford will be expanded in any substantial proportion in the near future.

Mr. SHUGG. No, sir; I do not think it is. I think that when certain facilities, still to be built, are completed that the extra operators for those still to be completed facilities, will be offset by the reduction in construction personnel.

Mr. JACKSON. Mr. Shugg, it is contemplated that there will be additional construction workers in the area in the next 2 or 3 years, but you feel that that will be offset by the construction workers now employed in the area. It will be pretty well equalized.

Mr. SHUGG. First, to make it clear, I can first take the immediate situation, which is a drop-off in constructions. It is at a low level now and will be low for another few months.

Construction will increase above the level at which it is now. One helpful factor is that when it does increase there already exists very adequate camp facilities and trailer facilities and temporary school facilities in our own site to take care of the increase in construction load.

But, Mr. Cole I understood asked about a longer range picture, and the answer to that longer range picture is that the total Federal induced load should not be above what it is now. If anything, it should be less.

Mr. COLE. You feel that the base period of 1948-49 is a period which reasonably reflects the permanent——

Mr. SHUGG. Peak, sir.

Mr. COLE (continuing). Peak of the operation of the Federal Government out there?

Mr. SHUGG. Yes, sir. I believe it is a peak.

Mr. JACKSON. Does that conclude your statement? Thank you very much, Mr. Alves.

Mr. ALVES. Mr. Shugg's last statement bothers me a little. Did you say right now was a peak so far as school load goes? I thought the peak had already kind of passed by in the school load during the year.

Mr. SHUGG. There is a dropping off now, is there not?

Mr. ALVES. Yes.

Mr. SHUGG. Because of the big drop in production. I am speaking of these 1948-49 figures used here.

Mr. ALVES. Which were taken late in the year, about April, when they already started down, I understood.

Mr. SHUGG. Well, our actual slackening itself did not really begin until the 1st of March. I doubt if there is much effect there yet in the movement of families. I would expect these enrollment figures here to represent about as high as it will go.

Mr. JACKSON. Mr. Volpe?

Mr. VOLPE. Mr. Chairman, I would like to ask Mr. Alves a few questions.

Mr. JACKSON. I wonder if perhaps you and Mr. Shugg would come up to the table here.

All right, Mr. Volpe. You would like to ask Mr. Alves some questions?

#### STATEMENT OF JOSEPH VOLPE, JR., GENERAL COUNSEL, UNITED STATES ATOMIC ENERGY COMMISSION

Mr. VOLPE. Before doing that, I would like to make two comments, one on the question asked by Mr. Cole about the policy of the Commission on the action taken by the Commission to provide local assistance, that is, to simply say, as I understand it, the Commission's practice up to the present time, as was the practice of the Manhattan District, is substantially the practice of the Federal Government, and that is to provide local assistance under emergency conditions, and it was in view of this policy and in view of this practice that the Commission has over the few years made contributions, both by way of money contributions to the first-year pupils, and also by way of materials and facilities and busses and so on.

I point that out because I think the distinction needs to be made between what has been a problem or practice and policy of the Federal Government up to the present time and that with which we are confronted here this morning; namely, the problem of permanent construction of school facilities.

Mr. JACKSON. Up until now the consideration of the Atomic Energy Commission has been directed to the making of provision for temporary—

Mr. VOLPE. Meeting an emergency situation.

Mr. JACKSON (continuing). Facilities on an emergency basis.

Mr. VOLPE. That is right.

Mr. JACKSON. The question of operation and maintenance has been handled in the way that Mr. Shugg has outlined the problem generally at Hanford. Is that correct?

Mr. VOLPE. Yes.

The other point I wish to make—and I would like to make a remark off the record.

Mr. JACKSON. All right; off the record.

(Discussion off the record.)

Mr. JACKSON. All right, Mr. Volpe.

Mr. ALVES. That should not be that I represent the Commission; I represent the Commissioner of Education.

Mr. JACKSON. In the course of the hearings at the outset this morning, a possible inference was made that Mr. Alves, appearing here today, was representing the Commission.

Mr. Alves is here representing the United States Office of Education in connection with the assignment given to him to look into the school problem at Hanford.

The report which has been included in the record previously today represents the views of the people signing the report, as a recommendation to the Commission, and does not necessarily represent any view, either temporary or final, of the Commission.

Mr. VOLPE. Thank you, sir.

Mr. JACKSON. Our next witness will be Commissioner Dean of the Atomic Energy Commission.

### **STATEMENT OF GORDON E. DEAN, COMMISSIONER, UNITED STATES ATOMIC ENERGY COMMISSION**

Mr. DEAN. Mr. Chairman, so far as the attitude of the Commission is concerned with reference to this problem, I think the letter which is already in the record tells the complete story.

The Commission feels, I think, that in giving the answer to this problem there are very many broad problems which should be explored in connection with it. One is the question of comparable grants by the Federal Government at one time or another for military or similar establishments.

There may be other analogies; I do not know. It was a new problem to me when I first faced it, so I immediately explored the question of whether this was a precedent or whether it was not.

We had two or three legal problems that faced us at the outset, I think, in considering this. I think we are over those hurdles.

The first one was and had to do with the meaning of section 12 (a) (5) of the Atomic Energy Act.

There we had three specific problems that occurred to us. I think the general counsel has satisfied the Commission that those do not represent at this point any real hurdles insofar as the law is concerned. One of them was the question of whether the words "at project sites" in section 12 (a) (5) made it possible for the Commission if it wished to do so to give this aid off the site proper.

The general counsel to the Commission has satisfied himself that the legislative history of the act is such that off-project assistance was contemplated.

The second point that came up in connection with 12 (a) (5) was whether the word "welfare" included education, and whether or not the omission of the term "education" as such, in that listing in the statute of "housing, health, safety, welfare, and recreation," was significant.

Likewise, on that point, I think the general counsel has satisfied himself that the word "welfare" does include education.

Similar activities were going on under the Manhattan Engineering District at the time, and the committee which considered S. 1717 was aware of that situation.

Mr. JACKSON. Health, safety, and welfare are three words that go together pretty much and are interpreted in the light of general police power that is exercised by the States. I assume that is the construction.

Mr. DEAN. I think apparently that hurdle was overcome.

The third one was the question of whether the words "personnel employed by the Commission" included personnel that were employed by the contractors, and I think again on that the legislative history is probably clear so that should the Commission want to go forward with any arrangement it could legally do so under 12 (a) (5).

No; those are the simple legal hurdles to get over, and I think we are over those pretty well.

The Commission is not concerned with those primarily, but with the broader question of what is involved in this precedent; also, a little bit, we are concerned with such things as what other forms of assistance might be requested, such as sewers in a community, or other facilities which might be for the welfare, health, and safety of the people identified with atomic-energy projects.

There is also the other broader question which goes beyond the Hanford one, and that involves similar assistance in other atomic-energy projects, so we feel quite happy to have the whole thing explored by your committee since you have in mind these broader problems. There are now, I understand, a good many bills in the hopper—

Mr. JACKSON. I would like to say at that point that this hearing is not being held in criticism of anything the Commission has done. It is in recognition of a very difficult problem that must be solved, and the urgency of it I think at Hanford is quite apparent, because one of these school districts is now in the process of awarding a contract or calling for bids for a very substantial school construction program in the Kennewick school district. Is that not correct?

Mr. ALVES. Two or three others also.

Mr. JACKSON. And two or three others are in the same situation, and the facilities will not be available if the bids are called now or the awards are made.

Mr. DEAN. The Commission is quite aware of the need, Mr. Jackson. I am sure of that.

Mr. JACKSON. On the other hand, I would like to say, as chairman of this subcommittee, that I am aware of the problem the Commission faces; namely, working out of a formula that will be representative not of the responsibilities of the Atomic Energy Commission but of the responsibility of the Federal Government, if any, to the school districts in these impacted areas.

Mr. DEAN. That is the broader problem.

Mr. JACKSON. I would not want, for any one moment, to say or indicate that in my opinion the responsibility in a given area is greater because the Atomic Energy Commission is operating in that section than if the Army or the Navy or the Bureau of Reclamation or some other agency is operating in the area.

Mr. ALVES. Of course, this whole problem arises because of the absence of Federal Government policy.

Mr. JACKSON. That is right.

Mr. DEAN. That is very true.

Mr. JACKSON. It is also in recognition of the fact, Mr. Alves, that it is quite obvious, I think, that Congress will not get around to acting on this particular problem prior to adjournment, and we are confronted with a situation here in which, in this particular area, we will have to take some immediate steps, and I think that in considering from now on out in this hearing that factor should be borne in mind.

I realize we are confronted with a precedent problem, but we are also confronted with an emergency; so it is not as though we were sitting down to lay out a policy here that would be applicable to all Federal Government agencies in general. We are confronted—and

I would like to make that fact clear, as indicated by the report that is already in the record—with an emergency, so we have two problems: (1) The responsibility of the Federal Government in general and (2) the responsibility of the Federal Government in this emergency that exists, and that does cast a little different light on suggestions that the Commission may care to make in connection with this specific problem at the present time.

Mr. ALVES. Mr. Chairman, if the other gentleman has finished and it is the pleasure of the Chair, I would be glad to get some statement in here in connection with Commissioner Dean's request indicating that he thought I might supply information as to what the Federal Government had done in similar situations. I will be glad to do that.

Mr. DEAN. I only suggested that, Mr. Chairman, because I thought that might be your wish, and there were probably no other witnesses in the room who could do that better than Mr. Alves.

(The information referred to will be found on p. 44.)

Mr. JACKSON. The chairman might volunteer this information based on personal experience:

The Subcommittee on Interior Department Appropriations of the House, of which I am a member, made money available in the 1950 appropriations bill, which is still pending in the Senate, for the construction of school facilities at Grand Coulee Dam, growing out of a responsibility to the school children in that area, determined by the committee of the Federal Government.

The agency involved was the Bureau of Reclamation. The reason for making the money available for the school building and, as I recall, in its entirety, no deductions but building the entire school plant, was based on the premise that the taxable source of income for school construction in the State of Washington is limited to the real property available within the school district, except as to minor funds made available under the equalization law of the State of Washington.

In that particular school district, 90 percent of the land is owned by the Federal Government. The Bureau of Reclamation, through its operations in the area, has taken over virtually all of the land.

I cite that as the first case, I believe, where permanent construction has been made available in a given area, and this area, of course, is north of the Richland project at Grand Coulee Dam proper.

Mr. ALVES. May I make a comment off the record here?

Mr. JACKSON. Yes.

(Discussion off the record.)

Mr. JACKSON. All right, Mr. Dean.

Mr. DEAN. I have no further observations, Mr. Chairman, unless Dr. Smyth might add a word.

#### STATEMENT OF HENRY D. SMYTH, COMMISSIONER, UNITED STATES ATOMIC ENERGY COMMISSION

Mr. SMYTH. I would like to add just one or two words.

Mr. JACKSON. All right, Commissioner Smyth.

Mr. SMYTH. Of course, in repetition and in emphasis of what Mr. Dean said, I am unfamiliar with this type of problem, but it does strike me as possibly setting up a very difficult and dangerous precedent.

I have also been sitting here thinking about the other Atomic Energy Commission installations. There are a number of them, at

least two that I can think of: Brookhaven and Argonne. At those places the Commission has definitely avoided setting up any housing facilities or any village of any sort, and yet in at least one of them, the school problem is quite serious in there, I know, in getting people to go there, so that there is likely to be pressure from the professional employees at those installations to get assistance to the schools along these lines; and that raises a different kind of problem, and it is something to think about.

Mr. JACKSON. I think that comment or the comment that you have just made is a very timely one, and I think it spells out the importance of a proper formula being worked out by this committee in the form of possible recommendations to the Commission in dealing with this extreme difficulty.

I would like to make this observation, Dr. Smyth, and see how it strikes you: Would you say that in Kennewick, where the school population has increased by reason of the project, I think about fivefold in a very small community to start with—how many thousands of people at Kennewick?

Mr. ALVES. The school load increased about 300 percent.

Mr. JACKSON. Yes.

One of the factors I would think that would have to be considered is the relationship of the project to the population of the nearby area. Pasco and Kennewick are two very small communities, very small, and away from any large center of population. When the atomic energy program was set up it caused a terrific impact on that area, as compared with Oak Ridge to Knoxville.

Do you not think, first of all, that that is a consideration that is very necessary in working out any formula or even in considering the formula?

Mr. SMYTH. Yes; I think there is a great difference in degree.

Mr. JACKSON. Yes. The larger the nearby community, the greater the power of absorption. Shall we put it that way?

Mr. SMYTH. Yes.

Mr. JACKSON. To meet the impact in a given area.

New York City, or Los Angeles, or Chicago can absorb an increase in the Federal pay roll of 4,000 or 5,000 without noticing it; whereas, a community that only has perhaps 3,000 or 4,000 to start with as its entire population would be confronted with a problem that would be entirely different.

Mr. SMYTH. Yes; I think that is true.

Mr. JACKSON. I am just suggesting that as a point of consideration. It seems to me a very vital one in determining what the effect is going to be on any recommendation in connection with the specific emergency that we have at Hanford.

Mr. SMYTH. I believe that the Commission, with the help of the joint committee and others, can work out reasonable formulas to apply in various places. The general principle is something which the Congress will have to decide.

Mr. JACKSON. Yes. I appreciate very much your suggestion.

Mr. SMYTH. I think that is all I have to say.

Mr. JACKSON. Thank you, Dr. Smyth.

Now, would you like to proceed on the report and the letter that has been submitted by the Commission, Mr. Shugg, or proceed in whatever way you would like to proceed?

**STATEMENT OF CARLETON SHUGG, DEPUTY GENERAL MANAGER,  
UNITED STATES ATOMIC ENERGY COMMISSION**

Mr. SHUGG. I had in mind, Mr. Chairman, in making a statement originally that I should try to channel my remarks to three main points.

The first point would be to gather up the past history and bring it to where we are now, and then include the present survey and the needs which that survey presents.

The second point would be to just touch on the responsibility as it is quoted in the report of the Federal Government.

And the third point, in order to be responsive to the desire for action, to get right down to the Atomic Energy Commission's own position in the matter.

A good deal of that has already been covered, so I will only attempt to bring out what I think has possible been missed.

As regards the first point, summing up the situation to see where we are today, I believe we have to be clear as to whether there is an emergency as regards the coming school year.

The Commission has taken the attitude that under section 12 (a) (5) it was not only enabled but had a responsibility to take care of the welfare of the people connected with the project.

The manager at Richland, I believe, will already have—I think we should possibly make sure of it—under the past practice made sure that the emergency as regards the opening of the school year has been met on a temporary basis.

Mr. JACKSON. I should clarify my use of the word "emergency."

Previously, I indicated that there were two considerations: First, the over-all responsibility of the Federal Government to these impacted areas; and, second, the emergency situation that exists. I am using the word "emergency" in the sense that arrangements have to be made now for the school construction program that would be made available—I mean school facilities that will be available for the school year beginning 1950-51, and, as I understand it, the school districts are now in the process of trying to award some contracts or will this early fall, next month, so that they will be ready a year from now. It is an emergency in that sense.

I am well aware of, and I think there is no dispute of the fact, that the Commission has taken care of and made arrangements to take care of all of the students that they are responsible for, for the school year beginning next month and terminating next June.

Mr. SHUGG. Yes, sir; because we, without any prompting, have felt that was our responsibility and have, each year, endeavored to make sure that we were meeting the minimum temporary requirements for the following year.

The only statement that I can make is to lift the probably well-known fact as regards the Federal thinking on this point. Apparently a subcommittee release, dated July 21, 1949, of a Senate subcommittee states that during this session of Congress alone 40 bills have been introduced for the purpose of authorizing Federal financial assistance for school construction.

The third point, so far as the Atomic Energy Commission's ability in this situation is concerned, I believe it has already been brought out that the Commission considers that the enabling language which

has allowed it to proceed, as it has in the past years, is based on 12 (a) (5) which authorizes the Commission to provide, arrange for the housing, health, safety, and welfare of the personnel employed by the Commission.

Now, it has appeared, I believe, to the Commission that that requires a finding by the Commission and a factual finding as to what is necessary for the welfare of the persons employed by the Commission.

Now, a factual finding should probably recognize the difference between the districts. The need is not exactly the same in each district nor is the cost of fulfilling what need is determined the same for each district, and also a factual finding on which the Commission could really base its authority to contribute funds would also recognize the timing.

In the relations out there in Richland, prior to this committee, there was an attempt by the local Atomic Energy Commission personnel to avoid a uniform formula and to lump the situation, the actual needs of each of the six districts as being equal.

Now, we think that it is still worth noting that the only enabling language that we have is that in 12 (a) (5) and that, strictly speaking, the Commission is called upon to make a factual finding as regards any contributions it makes and to be able to find that they are necessary for the welfare of those employees.

Up to the present time, the Commission has not been able to make such a finding in regard to permanent style construction. To discuss all the phases of the matter, even if it were finally recognized that the particular Federal agency which should take care of the situation would be the Atomic Energy Commission, and assuming that we were enabled to do so by some legislative language or action, the matter of funds comes up, and there are no funds in the 1950 budget request which the Commission made for this assistance.

The Commission's 1950 budget request has not been acted upon by the Senate as yet, but there is every indication that it will suffer a very severe cut, so that at the end of all of these determinations which have yet to be made, in the end there would be a matter of money, and I think it should be pointed out that we have no excess funds. We expect to be very hard pressed to apply the funds which will be authorized by Congress to cover our original program, and the so-called vital parts of that program.

In the last thing to be borne in mind, perhaps, it is that there will be, and we can expect some form of restrictive language in regard to our use of funds for nontechnical facilities, at least. But I believe that the most difficult thing is to try to make a distinction between what facilities are needed for the welfare of those children and present presentation, which is that the facilities should be of a permanent type of construction, which may mean 20, 30, or 40 years of life, and that is, I believe, the thing which the Commission would have the most difficulty in making a factual finding about, as being included in those things necessary for the welfare of the employees.

That is all I have, sir.

Mr. JACKSON. We will now adjourn, subject to the call of the Chair.

(Whereupon, at 12:10 p. m., an adjournment was taken, subject to the call of the Chair.)

## HANFORD SCHOOL FACILITIES

THURSDAY, AUGUST 4, 1949

CONGRESS OF THE UNITED STATES,  
SUBCOMMITTEE OF THE  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The subcommittee met, pursuant to call, at 10:05 a. m., in room 1015, New House Office Building, Hon. Henry M. Jackson (chairman) presiding.

Present: Representatives Jackson (chairman) and Cole.

Also present: H. F. Alves, Director, Division of School Administration, United States Office of Education; Gordon E. Dean, Commissioner, Henry D. Smyth, Commissioner, Carleton Shugg, Deputy General Manager, and Everett L. Hollis, Deputy General Counsel, all of the United States Atomic Energy Commission.

Mr. JACKSON. The committee will come to order. Commissioner Dean, do you have a statement to make?

Mr. DEAN. It might be well to take up two or three items which are at hand showing that there are similar problems in the country. There is one thing that I noted particularly with respect to some of the examples which appeared in an appendix to a report to the Committee on Appropriations of the United States Senate, prepared in the Legislative Reference Service, Library of Congress.

Mr. JACKSON. Proceed, Commissioner Dean. You go ahead.

Mr. DEAN. This is not lengthy, and I do not think it will clutter up the record. As a matter of fact, it only goes for three pages. It will be appendix A of the report to the Committee on Appropriations of the United States Senate, Eighty-first Congress, first session, dealing with the education of children living on Federal reservations in localities particularly affected by Federal activities.

Mr. JACKSON. What is the document number? In connection with what appropriation is it?

Mr. HOLLIS. It was in connection with a study requested by various Members of the Congress and printed by the Senate Appropriations Committee at the suggestion of Senator Hayden and other interested Senators.

Mr. COLE. Dated July 21?

Mr. DEAN. I would suggest that you might wish to have that in there, particularly for the benefit of the full committee so that they will know that there are comparable situations. One of these is from South Carolina. There are two from Texas, one from Oklahoma, and one from Ohio, and I am sure there are many other examples available.

One deals with the impact on a community growing out of the establishment of an ordnance depot; another, in the case of the Charleston Navy Yard; another in the case of an Air Force base, another in the

case of an Air Force base, and another in the case of a federally owned shipyard operated by a private company which was built in the district.

Mr. JACKSON. Mr. Dean, do they relate to requests for funds for permanent school construction or for temporary construction?

Mr. DEAN. I do not think that the request is specifically directed one way or the other. It is simply a description of the problem.

Mr. JACKSON. It points out the problem?

Mr. DEAN. That is right. As a matter of fact, I do not think there is a distinction between construction, on the one hand, and operating contributions on the other.

(The examples referred to are as follows:)

[From "Education of Children Living on Federal Reservations and in Localities Particularly Affected by Federal Activities," Committee on Appropriations, U. S. Senate, 81st Cong., 1st sess.]

#### (Appendix A)

#### EXAMPLES OF THE EFFECT OF FEDERAL ACTIVITIES ON THE ABILITY OF COMMUNITIES TO MAINTAIN AND OPERATE SCHOOLS

##### *Pantex, Tex.*

At the beginning of the war land was acquired in Carson County, Tex., for construction of the Pantex ordnance depot. The only land available at the time to provide housing for the employees to operate the depot was located within the depot boundaries. The Department of the Army gave the FPHA a use permit for sufficient land to construct 300 housing units. It was later found that additional housing units were needed and the FPHA obtained additional land immediately across the road from the ordnance depot to construct another hundred federally owned housing units.

The State of Texas designated the boundaries of the depot and the housing across from it as an independent school district. No school facilities or other community facilities were provided for this area. It was necessary to transport all school children to Amarillo, Tex., and to pay the cost of transportation and tuition. The situation during the present school year is typical of what has existed in this school district for the past several years. There are approximately 250 children living in the housing projects. The 300 housing units located on Army property make no payments in lieu of taxes for any purpose because they are constructed on Government-owned property. The 100 housing units located off the depot pay about \$2 per child for school purposes. State aid for this district equals \$55 per child, making a total of State and local income available to the school district of \$57 per child. Tuition in Amarillo, based on the per pupil cost in that city, is \$160.64 per child, leaving \$103.64 deficit per child after all State and local revenue is considered. This situation is the result of Federal activity. The school district has no authority to levy taxes or to alter the situation. It depends entirely on Federal action for the amount of money it receives for education of its children.

##### *Cooper River school district No. 4, North Charleston, S. C.*

Immediately prior to World War II, enrollment in the Cooper River school district was 3,540. During the war employment in the Charleston Navy Yard, a federally owned ship-building installation, was greatly expanded and in addition the Charleston Army air base and the Charleston Army depot were constructed in the district. In order to house the large influx of persons who came to work at the federally owned tax-free installation, the FPHA built approximately 3,000 housing units in the district. School enrollment reached a peak figure during the war of 10,356; an increase of approximately 7,000 due solely to activities of the Federal Government. Since the war enrollment has dropped to approximately 8,700, which is twice the number enrolled prior to the war.

The assessed valuation for each enrolled child in 1939, the last normal year, was \$2,000. In 1948 the assessed valuation had dropped to \$1,200 per pupil. Payments in lieu of taxes on the usable housing units in the district amounts to \$26 per year, which is approximately one-fifth of the local share of the cost of educating the children that live in the housing project. In addition, there are 335 housing units in the district under jurisdiction of the Navy on which no payments in lieu of taxes are made.

The school district has raised its assessed valuation and increased its tax levies to the point where home owners are paying almost twice the tax rate that was

necessary to pay before the war and still the school district has a deficit each year of approximately \$100,000 for maintenance and operation of its schools.

*Midwest City, Okla.*

Midwest City was a small school district located in a sparsely settled area adjacent to Oklahoma City. Tinker Field, a technical Air Forces base, was constructed within the school district during the war at a reported cost running into hundreds of millions of dollars.

Before this field was constructed there were just over a hundred children enrolled in the public schools. The large number of employees at the base increased the enrollment until it reached 1,200 for the 1946-47 school year and was approximately 2,200 for the 1947-48 school year. Activities at the base are being increased with the expanded defense program and the enrollment the first week of school for the 1948-49 school year was 2,600.

This phenomenal increase in school enrollment was the direct result of Federal activities. The installation at which the majority of the people are employed, which is equivalent to an industrial establishment, pays no taxes because it is owned by the Federal Government. The school district has received assistance from the Lanham Act each year since the impact of new population. It could amply finance its schools if the federally owned property was under private ownership and paid the normal amount of taxes.

*Mad River Township, Ohio*

This school district is located adjacent to the Wright-Patterson Air Forces base. The school census increased from 836 children in 1939 to 2,591 children at the beginning of the 1946-47 school year. This increase was more than 200 percent. During this period over a million dollars worth of taxable property was removed from the tax rolls by the expansion of the federally owned airfield. Just prior to World War II the school district had bonded almost to its legal limit to build additional school buildings. The reduction of taxable property resulting from acquisition of land by the Federal Government left the remaining taxpayers to pay the standing bonded indebtedness. During the 1946-47 school year 300 elementary children were on half-day sessions and it was necessary to transport 373 high-school students to an adjoining school district at a tuition of \$170 per child per year. Twenty-six of the forty-six classrooms in the district were in leased buildings and many of them very unsatisfactory for school purposes. Just prior to the beginning of the 1948-49 school year a trailer camp accommodating several hundred trailers was placed in the school district, again increasing the school enrollment but adding very little to the assessed valuation.

Prior to the war this district had \$3,327 of assessed valuation for each school child. In 1947 the assessed valuation had dropped to \$1,637 for each child because of acquisition of land by the Federal Government and increased enrollment. The assessed valuation per child to be educated is a good measure of a school district's ability to finance school services.

*Orange, Tex.*

Prior to the war Orange independent school district, Orange, Tex., had a total population of approximately 10,000 people and a public-school enrollment of roughly 2,000. A federally owned shipyard operated by a private company was built in the district. The population increased to a peak of 40,000 and school enrollment reached 8,300, a 400 percent increase. A substantial number of the immigrant war workers were housed in federally owned war housing projects.

When shipbuilding was discontinued after the cessation of hostilities the school population dropped to 6,200 and in the 1947-48 school year was 5,500 students. This is still 150 percent increase over the normal prewar period. Although shipbuilding was discontinued the Department of the Navy maintained a large area of valuable river-front property as a berthing station which employs a substantial number of people and no taxes are received on this property.

Approximately 40 percent of the current school enrollment comes from the 3,000 federally owned housing units. The payments in lieu of taxes on these amounts to less than one-fifth of the actual cost of educating the children living in the housing projects. In addition, the Navy operates a federally owned housing project of 500 family units upon which no payments in lieu of taxes are made.

The school district has increased its assessed valuation to the point where it is twice as great in 1948 as it was in 1946. The tax rate for maintenance and operation is at the legal limit and the residents of the city have apparently done everything in their power to meet the full cost of elementary and secondary education. Even after this effort has been made the school district was dependent upon the FWA for \$200,000 to meet the deficit in the maintenance and operation of their schools for the 1947-48 school year.

Mr. JACKSON. Is there anything else?

Mr. DEAN. There is one other thing that I thought you might want to have reference to—certainly not included verbatim—and that would be the debates in the House so that the full committee would have it pointed up to them.

Mr. JACKSON. I think that possibly at this point in the record we might have included a synopsis of proposals that have been submitted in the form of bills in connection with this and similar educational grants. Is that agreeable?

(The information referred to is as follows:)

**DIGEST OF BILLS INTRODUCED IN THE EIGHTY-FIRST CONGRESS AUTHORIZING FEDERAL CONTRIBUTIONS FOR THE CONSTRUCTION OF SCHOOL BUILDINGS IN CERTAIN AREAS**

H. R. 1972. Mr. Tollefson; January 27, 1949 (Education and Labor).

Authorizes \$20,000,000 for fiscal year 1950 for grants by the Federal Works Administrator to local agencies overburdened with war-incurred or postwar national defense incurred school enrollments. Grants may be used to construct, remodel, lease, etc., school facilities, provide approaches, etc., thereto and procure materials, equipment, supplies, etc., for such facilities.

H. R. 2423. Mr. Tollefson; February 7, 1949 (Education and Labor).

Authorizes \$150,000,000 for grants by the Federal Works Administrator to local school districts overburdened with war-incurred or postwar national defense incurred enrollments.

Prescribes terms and conditions of grants for construction of school facilities by the school districts.

Prescribes conditions under which the Administrator may construct needed school facilities and make them available to school districts.

The grant for any project shall be equal to 50 percent of the cost of the project.

H. R. 2617. Mr. Lanham; February 10, 1949 (Education and Labor).

Authorizes \$150,000,000 for grants by the Federal Works Administrator to local school districts overburdened with war-incurred, or postwar national defense incurred enrollments.

Prescribes terms and conditions of grants for construction of school facilities by the school districts.

Prescribes conditions under which the Administrator may construct needed school facilities and make them available to school districts.

The grant for any project shall be equal to 50 percent of the cost of the project.

H. R. 3230. Mr. Miller of California; March 3, 1949 (Education and Labor).

Authorizes \$150,000,000 for grants by the Federal Works Administrator to local school districts overburdened with war-incurred, or postwar national defense incurred enrollments, "or by Federal activity in such district."

Prescribes terms and conditions of grants, for construction of school facilities by the school districts.

Prescribes conditions under which the Administrator may construct needed school facilities and make them available to school districts.

The grant for any project shall be equal to 50 percent of the cost of the project.

H. R. 3487. Mr. Curtis; March 11, 1949 (Education and Labor).

Authorizes \$150,000,000 for grants by the Federal Works Administrator to local school districts overburdened with war-incurred, postwar national-defense-incurred, or certain Government construction-incurred enrollments.

Provides that grants for construction of school facilities by the school districts shall be conditioned upon the specifications being approved by State and local law.

Prescribes conditions under which the Administrator may construct needed school facilities and make them available to school districts.

The grant for any project shall be equal to 50 percent of the cost of the project.

S. 137. Mr. Robertson of Virginia; January 5, 1949 (Labor and Public Welfare).

Educational Facilities Finance Act—Authorizes the Reconstruction Finance Corporation to make grants totaling \$300,000,000 and loans totaling

\$300,000,000 to the States for elementary and secondary school buildings, and appurtenances and permanent equipment necessary to the proper functioning of such buildings.

Loans and grants are restricted to 50 percent of total cost of educational facilities.

- S. 287. Mr. Neely; January 10, 1949 (Labor and Public Welfare).

School Construction Act—Authorizes \$98,000,000 for fiscal year beginning July 1, 1949, and \$490,000,000 for each of the next five succeeding years for allotment to States to assist them in the construction of public elementary- and secondary-school facilities.

- S. 1263. Mr. Butler; March 16, 1949 (Labor and Public Welfare).

Authorizes \$150,000,000 for grants by the Federal Works Administrator to local school districts overburdened with war-incurred, postwar national defense-incurred, or certain Government construction-incurred enrollments.

Provides that grants for construction of school facilities by the school districts shall be conditioned upon the specification being approved by State and local law.

Prescribes conditions under which the Administrator may construct needed school facilities and make them available to school districts.

The grant for any project shall be equal to 50 percent of the cost of the project.

- S. 1670. Mr. Humphrey; April 22, 1949 (Labor and Public Welfare).

Appropriates \$500,000,000 per year for the fiscal year ending June 30, 1950, and each of the five succeeding years for the construction of elementary and secondary public schools under the administration of the United States Commissioner of Education. To be eligible for aid, in an allotment based on per capita income and school population between the ages 5 and 17, each State must submit an acceptable detailed plan of action to the Commissioner, which plan must be adhered to if the State is to remain eligible. Provision is made for emergency construction out of the first year's allotment.

- S. 1699. Mr. Bricker; April 26, 1949 (Labor and Public Welfare).

School Construction Act of 1949: Authorizes \$3,000,000 to be paid to the States for an inventory of existing school facilities and for a survey of the need to construct additional facilities.

Authorizes \$250,000,000 for the year 1950, and each of the next 4 years for allotment to the States to assist them in the construction of public pre-elementary, elementary, and secondary school facilities. Funds shall be apportioned to each of the States, with the Commissioner determining the amount of the Federal contribution on the basis of need, but in no case less than 40 percent nor more than 90 percent of the cost.

In administering the act, the Commissioner shall consult with a Federal School Council, consisting of persons outstanding in fields pertaining to education.

- S. 1914. Mr. Hoey; May 23, 1949 (Labor and Public Welfare).

Authorizes \$231,000 for cooperation with the public-school authorities of Person County, N. C., in the construction of a school building, to be available to all Indian children of that county and Halifax County, Va., without discrimination.

- S. 200. Mr. McCarran; June 7, 1949 (Labor and Public Welfare).

School Construction Act: Authorizes the Federal Works Administrator to make loans and grants to local school agencies for the construction, remodeling, etc., of school facilities which have been approved by State educational authorities. Grants shall be in amount equal to 50 percent of the cost, subject to increase up to a maximum of 75 percent in the case of public-lands States. Supervision or control by the Federal Government is prohibited. Necessary annual appropriations are authorized.

- S. 39. Mr. McCarran; January 5, 1949 (Public Works).

School Construction Act: Authorizes the Federal Works Administrator to make loans and grants to local school agencies for the construction, remodeling, etc., of school facilities which have been approved by State educational authorities. Grants shall be in amount equal to 50 percent of the cost, subject to increase up to a maximum of 75 percent in the case of public-lands States. Supervision or control by the Federal Government is prohibited. Necessary annual appropriations are authorized.

- S. 834. Mr. Magnuson and others; February 7, 1949 (Public Works).

Authorizes \$150,000,000 for grants by the Federal Works Administrator to local school districts overburdened with war-incurred, or postwar national defense-incurred enrollments.

Prescribes conditions under which the Administrator may construct needed school facilities and make them available to school districts.

The grant for any project shall be equal to 50 percent of the cost of the project.

S. 1085. Mr. Stennis; February 25, 1949 (Public Works).

Authorizes \$150,000,000 for grants by the Federal Works Administrator to local school districts overburdened with war-incurred, or postwar national defense-incurred enrollments, "or by Federal activity in such district." Prescribes terms and conditions of grants, for construction of school facilities by the school districts.

Prescribes conditions under which the Administrator may construct needed school facilities and make them available to school districts.

The grant for any project shall be equal to 50 percent of the cost of the project.

S. 2317. Mr. Humphrey and others; July 22, 1949 (Labor and Public Welfare).

School Construction Act: Authorizes \$5,000,000 to assist States to inventory existing school facilities, to survey the need for construction of additional facilities in relation to distribution of school population, to develop State plans for school-construction programs and to study the adequacy of State and local resources available to meet school facilities requirements.

Title II authorizes "such sums and for such fiscal years as Congress may determine" to assist the States in the construction of public elementary and secondary school facilities. Sums are also set aside for emergency school construction by reason of war activities, transition from war to peacetime conditions, reactivation or expansion of defense establishments, construction or operation of new defense establishments, or by reason of Federal activities.

Mr. DEAN. If you simply want a reference to this particular day's debate, it occurred in the House of Representatives on July 27, 1949, of the Congressional Record for that day, at page 10506 and following.

Mr. JACKSON. Commencing on which page?

Mr. DEAN. 10506.

Mr. JACKSON. All right, fine.

Mr. DEAN. That was the only suggestion I had that might fill out the record.

(Discussion off the record.)

Mr. ALVES. I would like at some point to provide a statement to show that the Federal Government has set plenty of precedents to accept this kind of obligation, if that fits here—I am not sure that it does.

Mr. JACKSON. Yes. That is all very relevant, and I think that information ought to be included.

Mr. ALVES. Probably this is not the point where it should be included.

Mr. JACKSON. This is the point, and you can supply it in the next day or two, so that it will be in the record.

Mr. ALVES. Yes.

(The document referred to is as follows:)

#### FEDERAL FUNDS MADE AVAILABLE FOR AND USED IN CONSTRUCTING SCHOOL BUILDINGS LOCATED OFF FEDERALLY OWNED PROPERTY

#### FEDERAL FUNDS (LANHAM ACT) FOR SCHOOL BUILDINGS DURING THE DEFENSE AND WAR PERIODS

During the defense and war periods (World War II) provision was made through Lanham Act funds to assist school districts in providing needed buildings for increases in school load occasioned by defense and war impacts. This program was administered by the Federal Works Agency. No attempt is made herein to provide exact figures. Some of these school buildings were constructed on federally owned property. An example would be the school buildings erected in the Plainview School district, Kansas, where the district consisted entirely of a Federal public housing project. Most of these buildings were built off Federal property.

In a large number of these cases local district contributions were made to cover a part of the total cost of the school building project. In numerous instances, however, the school building was a 100 percent federally constructed building. The title was placed then in the Federal Government, pending possible negotiation for settlement. The title still remains in the Government for a number of these buildings which are still used for school purposes by the districts in which the buildings are located.

FEDERAL FUNDS FOR SCHOOL CONSTRUCTION AS SET FORTH IN THE INTERIOR  
DEPARTMENT APPROPRIATION BILL, 1950

Considerations below are reported in Senate Report No. 661 (to accompany H. R. 3838) filed July 13, 1949:

*Education of Indians*

"\* \* \* The total recommended by the committee is \$282,000 in excess of the revised budget estimate, \$12,700,000, and this increase is due largely to the fact that the House earmarked items totaling \$282,000 not in the 1950 estimates, for which the committee is recommending that funds in the amount of \$270,000 be included in the bill. \* \* \*

"The break-down of the increase recommended by the committee follows:

(1) Operation after conversion for school purposes of the Bushnell General Hospital plant, Utah (Chee Dodge School), proposed in a supplemental estimate, S. Doc. 47-----	\$500, 000
(2) Eufaula School, Oklahoma, for which the House earmarked funds but did not include an appropriation-----	70, 000
(3) Pipestone School, Minnesota, for which the House earmarked funds but did not include appropriation-----	200, 000
(4) Repairs and improvements, Kinishba Museum, Arizona-----	6, 000
(5) Crafts program, Anadarko, Okla.-----	6, 000
Total increase recommended-----	782, 000"

(The House committee in its Report No. 324 (to accompany H. R. 3838) filed March 28, 1949, made the following statement with reference to the approval by the committee of the 1950 estimate of \$12,200,000 for the education of Indians: "In approving \$12,200,000 for education, the committee intends that \$200,000 should be devoted exclusively to the operation of the Pipestone School, Minnesota, and that \$70,000 be utilized for the operation of the Eufaula School, Oklahoma. These nonreservation boarding schools are expected to be continued in operation.")

*Truxton Canon, Camp Verde, Ariz.*

"The committee recommends that the following language be added to the bill: "Truxton Canon, the prior year appropriation of \$8,000 for the replacement of the Camp Verde, Arizona, Indian School is hereby made available for cooperation with the public school district of Camp Verde, Arizona, for public school facilities;".

"In 1946 the Camp Verde Indian School burned. The \$8,000 later appropriated for rebuilding this school has not been used because arrangements were made with the Camp Verde School district of the Arizona public schools to take the children into the public schools. At the Senate hearing the committee was advised that the Indian Bureau has a request from the Arizona State Department of Education to transfer to the Camp Verde public school the \$8,000 to assist the State in a program of enlargement of its public schools, and the committee recommends that this request be approved."

Advances to Colorado River Dam fund, Boulder Canyon project----- \$500, 000

"The \$500,000 increase proposed by the committee which will provide a total appropriation of \$6,761,650 for this project, is earmarked for the second unit of the Boulder City Schools.

"As the bill passed the House, \$25,000 was included in the bill for this school. "Enrollment in the Boulder City schools has steadily increased each year since the establishment of the schools in 1932. Progress is being made in providing facilities for classrooms, study hall library, and administrative personnel in the first unit, and the second unit of the high-school plant is needed to provide a gymnasium, shop classroom building, and an auditorium. A large percentage of the community is occupied by Government residences and public buildings, and there is insufficient tax base for financing the construction of school facilities."

*Columbia Basin project, Washington*

"The committee concurs in the statement on page 13 of House Report No. 324 (81st Cong., 1st sess.) that of the funds appropriated for this project \$225,000 be used for new school construction and \$100,000 be devoted to repair and improvement of existing school facilities at Coulee Dam, Wash., and recommends that proportionate amounts, based on the relative enrollment of the dependents of reclamation and contractor employees, be expended on school facilities at Grand Coulee, Wash., in accordance with Public Law 835, Eightieth Congress."

This committee action proposes Federal funds for the construction of school facilities at Coulee Dam as well as in the Grand Coulee School district.

## FEDERAL FUNDS FOR SCHOOL CONSTRUCTION BY ARMY ENGINEERS

Authorization Public Law 526, Seventy-ninth Congress, second session, for expenditure of funds for school construction in connection with the following projects:

Harlan County, Nebr.	Detroit Reservoir, Oreg. <sup>2</sup>
Garrison Reservoir, N. Dak.	Dorena Reservoir, Oreg. <sup>2</sup>
Clearwater Reservoir, Mo.	Lookout Point Reservoir, Oreg. <sup>2</sup>
Fort Randle, S. Dak., Lake Andes. <sup>1</sup>	Bull Shoals Reservoir, Ark.

The United States Office of Education has been advised by a representative of the Arkansas State Department of Education to the following effect:

A grant of \$60,000 was made by the Army engineers for use by the local school district in constructing a new school building. The district supplemented the \$60,000 grant with \$30,000 district funds and constructed a permanent one-story building, known as the Mountain Home School, which was occupied early in the calendar year 1949 for high-school purposes.

In addition to making the grant of \$60,000 for school construction, Army engineers have also made a grant of approximately \$10,000 this past year to supplement the current budget of the school district.

Public Law 782, Eightieth Congress, second session, extended the above list to include the following:

Fulson Reservoir, Calif.	Pine Plant Reservoir, Calif.
Isabella Reservoir, Calif.	Oahe Reservoir, S. Dak., Pierre. <sup>1</sup>

Mr. JACKSON. I cited the case at the last hearing of the appropriation approved by the House and concurred in by the Senate Appropriations Committee in connection with the Interior Department appropriations bill, which made funds available for permanent school construction at Grand Coulee Dam, growing out of the activities of the Bureau of Reclamation in that area. That is the only specific situation—which again is not identical with Richland—and as one will find in practically all of these cases, the facts are somewhat different, but you still have the same basic question of policy to be decided.

Mr. ALVES. I am having a check made over the last 5 years or longer, if necessary, of any and all activities where the Federal Government has assisted in providing school facilities.

Mr. JACKSON. And with particular reference to funds made available for permanent school construction.

Mr. ALVES. Yes. I do not have that statement prepared now but I will have it in the next day or two.

Mr. JACKSON. Supply it for the record.

Have you anything else?

Mr. COLE. I think, Mr. Chairman, it is important to have in the record other situations where the Federal Government has aided local education.

<sup>1</sup> Although specific information has not been supplied, the United States Office of Education has been advised by a representative of the Army engineers that school buildings have been built off reservations with Federal funds supplied by Army engineers.

<sup>2</sup> The Office of Education has been advised by a representative of the Army engineers that some school plant facilities have been built off these reservations with Federal funds.

Mr. ALVES. Yes.

Mr. COLE. In order to determine the precedents for this action by the Commission, but I also think it would be important to have in the record other problems of a similar nature which the Commission itself has, and which this act, in itself, establishes a precedent for the Commission's action.

Mr. DEAN. We are concerned with that, Mr. Cole. I think I mentioned the last time, for example, we may have demands made upon us for the construction of sewers in the community where the demand is heavy. There may be demands for the construction of additional water facilities where there has been an attack on the water supply in that community.

We have a request at the present time for—I do not know how formalized this is, Mr. Shugg—but I believe it is in the works for the construction of a bridge along the Columbia River because of the additional traffic that is involved as a result of the installation out there, and I am sure——

Mr. COLE. Well, can you not go further than to say that you may have a demand for assistance in sewage and water, because have you not already had demands out there for water?

Mr. DEAN. Yes; we have.

Mr. COLE. But how about other localities with respect to school assistance?

Mr. DEAN. We have the same problem there.

Mr. COLE. Does that exist? Where are they and how substantial are they?

Mr. DEAN. That matter was gone into slightly at the last hearing, and I think it was agreed that there is a difference in degree between the Hanford project, on the one hand, and the dislocation which would be comparatively slight in the case of Chicago, for example, where the school system could literally devour the burden without any trouble. But you will come to communities such as Oak Ridge and others where you are on the line again, and it will be hard to make the determination as to whether it is a proper expenditure of Federal funds.

Mr. COLE. I am wondering whether it is not possible to work out a formula by which it is determined that this expenditure for Hanford is justified by correlating the increased direct school load in a given school district to the existing school load which in this, in the Hanford situation, is striking. What the percentage is, I have no idea, but in the Chicago area it would be insignificant.

Mr. JACKSON. Could we not agree upon the few general principles, I mean, along that same line?

Mr. COLE. I was going to ask Mr. Alves if there is a yardstick by which the increased school load occasioned by Federal students is measured in terms of percentages.

Mr. ALVES. There is no universally accepted yardstick. However, I would like to call attention to, I think it is the first finding of the committee report, which, in effect, sets two or three principles concerned with this very problem.

Mr. COLE. Let me ask it a little bit differently—that finding is already in the record, Mr. Alves, and there is no need to repeat it—but what is the lowest percentage increase of any of the school districts, the six school districts, in the Hanford area caused by direct Federal students? Is that figure available?

Mr. ALVES. That is available, sir, 68 percent. The highest is 268 on the basis of data reflecting average daily attendance, and it also shows in another table that increase year by year since 1942-43.

Now, what I had reference to a minute ago in the committee report, the committee felt that if the increase was insignificant there was no case at all, so that its first finding was that the increase was excessive.

Mr. COLE. Certainly it seemed to me that where the increase exceeds 50 percent that local communities are justified in asking for assistance. It is not right for the Federal Government to expect the local communities to absorb that 50 percent increased load.

Mr. ALVES. I think attempting to measure it only by percentage of increase would not be too fair. A district might have a 50-percent increase in the last 2 years, but previous to that have used up its total fiscal ability to build buildings that it had on hand, so it would not make any difference whether it was 50 percent or 40 or 30. It would still be unable to help itself.

However, there is a low point—I do not think it ought to be the basis of one or two or three or four or five; that percentage would vary in accordance with the size of the district.

Specifically if you had a district that had only, say, 60 pupils, and you added 25, it might create as much of a problem as if you added 200 in a district that had 10,000 or more.

Mr. JACKSON. Mr. Alves, could we not lay down, say, three or four principles here that might possibly make a little sense? From what has been testified to so far, No. 1 is that the fact that the Federal Government may have certain students of the families that are employed by it in a given area does not in and of itself place any responsibility upon the Federal Government to provide school assistance in that area. I think everybody can agree in that.

That the liability, if any, in each given area must be based on certain considerations, (a) the impact that this particular activity may have on the school economy in the area affected; (b) in determining that impact, consideration must be given to the efforts made within the legal framework of the school district to provide in every way possible for education of the students in the school district out of its own local funds; (c) the difference between what the local area is able to do—and by “local area,” I include the State itself—is a problem and a consideration for the Federal Government.

Now, that observation—and it is just an observation, one out of the hat—but I toss it into the hopper for what it is worth, so that boiled down, all you can do is to try to work out some general principles that may not be universal in application, but they can be considered in coping with a given situation in a given area.

Mr. HOLLIS. Mr. Jackson, I wonder if it would be helpful in the record also to refer to this report that Mr. Dean referred to earlier, a report prepared by the Legislative Reference Service for the Senate Appropriations Committee.

It points out that the Lanham and Landis Act extensions, the act and the extensions, as the report says, “have been based on the assumption”—I am quoting now—

that in a few years the school district will be able to make the necessary adjustment to finance school services without Federal assistance.

Then, in connection with that, the comment of the debate in the House of July 27, that the Committee on Labor and Education, I believe it is, in appointing a subcommittee to go into the broader and

more difficult problem of permanent assistance, that is related to the difficult problem that we have here.

Mr. ALVES. Mr. Chairman, if I may comment, that is related to current expense only.

Mr. JACKSON. The Lanham funds.

Mr. ALVES. Yes; and Landis funds. There are no facilities——

Mr. HOLLIS. I commented on the possible relevance of the congressional understanding, the congressional assumption, that over a period of time that would occur—whether it is a valid assumption or not.

Mr. JACKSON. Incidentally, I believe it is taken into consideration in the record made by the committee, as I recall, and the committee tried to work out a formula which would be indicative of the gain to the area in the form of revenue of a period of time by reason of the Federal activity.

In other words, it is a balance of the liabilities and the assets of the project, recognizing that in time the taxable revenue in the area will increase by reason of the project, and deductions have been made for that consideration in the report.

Mr. ALVES. Mr. Chairman, I think I am supposed to supply one other bit of information at the request of the Chair, and that is with reference to, as the Chair requested, the relative position of the State of Washington with reference to funds provided by the State and the local district for the support of public schools.

The most recent information available on that question will be found in the report entitled "The 48-State School Systems" issued a few months ago by the Council of State Governments.

Effort can be measured by the percent of the total income payments to individuals for a given year represented by revenues from State and local sources allocated for public school purposes.

It is generally agreed that so far as a single measure is concerned that income payments to individuals constitute the best single measure——

Mr. COLE. What is income payment to an individual?

Mr. ALVES. It is income earned by individuals in the State, earned therein or out of the State.

Mr. COLE. You mean the average per capita income?

Mr. ALVES. No. In this case I am talking about the total income. You could convert it to an average.

Mr. COLE. You said the income payments to the individual——

Mr. ALVES. Yes, sir.

Mr. COLE (continuing). Which does not mean much to me, unless by that you mean the average per capita income for a given locality.

Mr. ALVES. You could add——

Mr. JACKSON. You could give gross incomes.

Mr. ALVES. You could add all incomes of all of the individuals in the State together and get a total income, and that is the figure supplied by the United States Department of Commerce.

Mr. JACKSON. The total State income as distinguished from national income.

Mr. ALVES. It is not the total State income. It is the total of income payments to individuals, such income earned in or out of the State.

Mr. JACKSON. Yes. Well, the total income of the United States last year was \$225,000,000,000, which is income earned by individuals from all sources.

You are putting it on the State level, the same thing on the State level.

Mr. ALVES. Table 3 in this report that I referred to sets forth the ratios of State and local revenues for public schools, and for public education, including colleges, to the total income in each State, and also sets forth the percentages of State and local revenues allocated to public schools for the year 1947-48.

During that year the median percentage for public-school purposes of the total income represented by revenues from State and local sources in the 48 States was 2.3. That is for the 48 States, as a group, 2.3 of the total income in the 48 States was allocated for public schools.

Mr. COLE. What is the highest?

Mr. ALVES. At that same time the State of Washington allocated 2.6 of its income which, when arranged in accordance with rank for the 48 States, places Washington fourteenth, with three other States having the same ranking, South Carolina, Oregon, and North Dakota, each of which allocated 2.6 of its total income payments for public schools.

Mr. COLE. What is the highest percentage?

Mr. ALVES. The highest percentage is New Mexico with 3.6. The median is 2.3, and the low is 1.5.

Mr. JACKSON. What State is that?

Mr. ALVES. The low is 1.4, Illinois, which, by that percentage rating, becomes forty-eighth.

Mr. COLE. That is not a very extensive table, and why do we not put that whole thing into the record as a matter of interest.

Mr. ALVES. All right, I will be glad to place the whole table in the record.

(The table referred to is as follows:)

TABLE 1.—Percentages of total income <sup>1</sup> represented by revenues from State and local sources for public schools (K-12)

[Data below from table 3, p. 177, The Forty-eight State School Systems, Council of State Governments, Chicago, Ill., 1949]

<sup>1</sup> Total income payments to individuals for 1947. Source: U. S. Department of Commerce, Survey of Current Business (August 1948), p. 18.

<sup>2</sup> 1946-47 data.

<sup>3</sup> Estimated by State authorities.

Mr. JACKSON. Do you have a break-down for special activity, such as funds for school buildings, operation, and maintenance?

Mr. ALVES. I do not have that with me, but I can supply that. The most recent data that are tabulated for all the 48 States are nearly 2 years old, and I was trying to get more recent data. I am trying to get, if not for all the States, a representative number of States which would show these expenditures.

Mr. JACKSON. You feel that the table that you have just submitted is a pretty good index on the effort being made by the respective States?

Mr. ALVES. It certainly is in terms of the measure indicated, which is generally accepted, not only in educational circles, but in business circles, illustrated by the fact that the Department of Commerce uses that consistently.

Mr. JACKSON. Is there anything else we need to put into the record now?

Mr. SHUGG. There is one point I think that would be more complete as an answer to Mr. Cole's question as regards the percentage increase.

The percentage increases which Mr. Alves read, I believe, are the percents which represent the total increase in the school enrollment. It includes both the federally incurred and the nonfederally incurred.

Mr. COLE. Well, that was not what I intended.

Mr. SHUGG. No. I have very briefly here some figures. If I take table 1 of the committee report, and if I take their 1942-43 average daily attendance, and multiply that by 1.1, which is the same factor that the committee used to translate average daily attendance to estimated enrollment, I can compare and give you very shortly the federally incurred percentage, which is in column 8, and if that is of interest, Mr. Cole, I can read that.

The first column will be the name of the school district, the second column will be its estimated total enrollment in the year 1942-43, and the third column will be the federally incurred increased estimated enrollment for 1948-49, and then the last column will be the percentage.

Grandview, 1942-43, 691; federally incurred increase in the most recent year 202. That is the percentage of possibility 30 percent.

Kennewick, 1942-43, 849; federally incurred 1,573. That is an increase of 200 percent.

Kiona-Benton City, 1942-43, 165; federally incurred 242; an increase of 150 percent.

Pasco, 1942-43, 866; federally incurred 572; an increase of 66 percent.

Prosser, 724; Federal increase 237, or 32 percent.

Sunnyside, 1,540; federally incurred increase of 440, or 28 percent.

That makes the average increase represented by the federally incurred load 67 percent. The high is Kennewick, with 200 percent, and the low is Sunnyside with 28 percent.

That is simply indicative of how much the situation varies in each one of the six districts, from 28 to 200 percent.

Mr. JACKSON. Do you think it is an area, Mr. Shugg, that should be treated in its entirety or should these districts be treated severally?

Mr. SHUGG. Well, I can only reply to that, Mr. Chairman, that as we have proceeded up to date under the authority which we consider that we have in section 12 (a) of (5), that up to this date we have

considered that we had to make a factual finding of the actual need in each district; that we were not able to apply a uniform formula that would fairly express the need in each individual district. That is simply under our present enabling language, which apparently makes it obligatory for us to make a finding of the need for the welfare.

The second point, Mr. Chairman, that I might make clear, in case I did not bring it out clearly enough at the first hearing, as regards a present emergency, I had stated in that hearing that we believe that all of the school children who needed schooling this year would be taken care of, as they were in preceding years, and I did call the Hanford manager after that hearing in order to ascertain first-hand if that was his present intention; and he confirmed the fact that they do understand that they should take, under section 12 (a) (5), under that clause, any steps necessary to be sure that the welfare of those children is taken care of for the coming school year, as we have the previous school years, so that that is simply to clarify that the emergency in our minds does not exist—does not pertain to the teaching of those children this coming school year.

The third point, entirely aside from our taking care of the situation actually confronting us each year and thinking of the permanent construction, I realize that it is very difficult for anybody to predict what is going to happen to the present federally incurred total enrollment in those six districts. It totals for the year just past 3,266; that is the total of the 6 districts' federally incurred enrollment.

Now, without attempting to make any prediction as to whether that will drop off a certain percentage or what will happen to it because we cannot be sure what the habits of these people will be—if times are not good, I suppose a great many of them will stay in that vicinity whether their employment ceases or not; if times are good elsewhere that is the sort of thing that makes them move out—but I did ask the Hanford office to give me the most up-to-date figure they had on what are the facts as regards the present 3,266 enrollment, and their reply is that 955 are pupils of permanent employees, and that 2,311 are pupils of other than permanent employees. They do not have the separation available as to the break-down between General Electric employees, Atomic Energy employees, construction employees, and concessionnaires; but I simply put that one present break-down—simply supply that figure—without pretending to be able to estimate what will happen in the future.

My feeling is that the number of permanent employees will increase over the present 955.

Mr. JACKSON. That is permanent employees of all kinds, General Electric, AEC—well, those would be the only two?

Mr. SHUGG. Yes, sir. That should be expected—in all fairness, I think, we should say that we would expect that to go up, because when new construction is finished it will require some added operation.

Mr. COLE. But that increase of permanent employees will nowhere near approach the number of temporary employees, will it?

Mr. SHUGG. I have one estimate from them, Mr. Cole. I told them that they simply would have to make an estimate to be responsive—we should make the best figure we could, and after some consideration of it they said that the Hanford office felt—the Hanford office stated—that on an estimated basis they thought the 955 children of permanent employees might increase to 2,100 by September 1952.

Mr. COLE. What would be the temporary number?

Mr. SHUGG. That is the part that we have not been able to make an accurate figure on.

Mr. JACKSON. In that same connection, it should be well to point out the observation, I think I made at the last hearing, and that is that the school population per family is on an upward trend.

Mr. SHUGG. Yes, sir.

Mr. JACKSON. So that you do not get an accurate index necessarily from the number of permanent attachables in the school year 1948-49. I believe that is in line with what was testified to by Mr. Alves. Is that correct, Mr. Alves?

Mr. ALVES. I would think so.

Mr. JACKSON. I mean that Nation-wide the school population is increasing.

Mr. ALVES. Yes, sir; it is.

Mr. JACKSON. Even though the number of families in the area remain static with an over-all increase in population in the State.

Mr. ALVES. Mr. Chairman, if Mr. Shugg is finished, I would like to make a few comments.

The percentage of increase that I gave in response to Mr. Cole's question, I thought was the one he wanted, that he wanted the total percent increase.

Mr. COLE. Of federally incurred students.

Mr. ALVES. I misunderstood that.

Now, the percentage figures which Mr. Shugg provided are those that represent the federally incurred load. I would like to raise a question in that connection just from the standpoint of practical business of how you expect school districts to segregate federally versus nonfederally incurred increases so far as school plant needs are concerned, without any question as to whose responsibility it is.

Obviously, each district will have to, of necessity, build its own case when you get to the point of distributing funds; even State funds.

In that connection, I want to raise two or three questions for consideration. As I understand it, and I think reported the other day, provisions have been made, and the districts have accepted \$300 per pupil for temporary construction.

The figures Mr. Shugg just gave with reference to the number of children who are children of permanent employees, and those of temporary employees, were not available when I was there. I am glad they have been obtained.

Those districts feel, and the State feels—and I concur—that it would not be good business nor would it be good expenditure or a wise expenditure of public funds to build temporary facilities for children who are expected to be there for any period of time, which immediately raises the question, What do we mean by "permanent"?

If a child is there for 5 years and then leaves, if that child is a dependent of a so-called temporary worker, he is replaced by some other child, permanent or temporary.

So far as available facilities are concerned in most of the districts, I think it is well established as a fact that the rooms are terrifically overcrowded; the teacher load is terrifically high. I do not have those figures, but I can supply those, so that if there are now definitely established figures that approximate 1,000 children who are designated

as children of permanent workers, it occurs to me that since it is felt that by 1952 that category of children would go to 2,100, it would not be good business or wise expenditure of public funds to build temporary facilities.

Now the question arises then as to why the districts should not take the \$300, plus their own money, plus State money, to build those buildings, and use the \$300 for permanent construction.

I think there are two factors involved there. One is that in order to do that some of these districts would have to exceed the bonding capacity by four or five or six hundred percent. That is one factor.

I would like to introduce this factor, not with reference to those six districts, but with reference to any school districts in which there is a federally incurred school impact. At what point should the Federal Government assume its obligation in providing services and facilities for that school load which is there by virtue of its own activities? That is the fundamental question. I think that is where your precedents in the past will indicate that although there is no established policy as such, it has been recognized over and over that there is a point at which the Federal Government has accepted its obligation by precedent not only for temporary but for permanent facilities.

I find it fairly difficult, if not practically impossible, to make a distinction between a youngster who is the dependent of a worker who is there because of an expansion program, or a reactivation program for 5 years, and the youngster who happens to be the dependent of a worker classified as permanent, either of one entity or another.

So far as the children are concerned, those 5 years are gone. Now, whether or not it is a wise expenditure of public funds for those districts to take their own money and couple it with Federal funds allocated for temporary facilities to provide for that load, which we now have some reason to believe is permanent and expect to be permanent in 2 years, is a question that, I think, is answered by the fact that the fiscal ability just is not there.

The factor that I want to introduce again is the fact that I think the Federal Government has an obligation, whether it is in the six districts or anywhere else where Federal Government activities exist.

Mr. JACKSON. Is it fair to say in connection with the 3,266 attachable students at the present time that there is with that group a certain group of children who are there indirectly as a result of that activity and who are not included in the list? Is there some kind of a rule of thumb or formula that is applicable in that situation? Is that a fair question? I just wonder whether it is.

Mr. ALVES. Well, for the 3,266 who represent the purported federally incurred load, there are 2,647 nonfederally incurred.

Mr. JACKSON. Yes. What percentage of that balance is being absorbed in the entirety by the school district?

Mr. ALVES. All of it, either absorbed or new facilities provided.

Mr. JACKSON. Maybe I do not make myself clear, but suppose—well, we do not need to suppose—in this situation you have 3,266 students who are directly traceable to parents who are employed by the project.

Then, in addition, there certainly must be students of parents who have come to the area, working in other types of collateral, if I can use that word, activity, such as new stores, services of all kinds, that

naturally go with an increase in population. Now, that group, whatever percentage is involved, is being absorbed in the entirety by the school district, is that correct?

Mr. ALVES. The word "absorbed" bothers me. You mean the district does not have to make available school facilities?

Mr. JACKSON. No, I am just trying to point out that there must be a certain percentage of students whose parents have come to the region by reason of the activity, even though they are not included in this list of 3,266. I mean that factor ought to be in the record or explained so that it is understood that this particular formula that is included in the report relates only to the traceable increase to the project.

Mr. ALVES. To me the committee report is very clear and positive on that.

Mr. SHUGG. May I speak to that?

Mr. JACKSON. I did not see it in the report. I would think it would be very difficult to determine unless you make a census.

Mr. SHUGG. May I speak to that, Mr. Chairman?

Mr. JACKSON. Yes.

Mr. SHUGG. I would expect that that nonfederally incurred student load of 2,674 included several segments. One would be those incident to the normal growth and population; another would be whether it is large or small, some due to the increased irrigation activities, and prospects, of the Columbia Basin. Another segment, whether large or small, might be due to the McNary Dam activities, which are to the south of the school districts, and then another segment would be due to, you might say, the camp followers who come in wherever there is a marked increase of activity, and I would not have any idea of the break-down between those several factors.

Mr. COLE. This 2,674 then included the increase of everybody except your direct federally incurred students?

Mr. SHUGG. At Hanford. I think it must also include any number which are there by reason of the McNary Dam activities, even though they are federally incurred.

Mr. COLE. I see.

Mr. ALVES. I understood that Kennewick had about the only impact from the McNary Dam at the time I was there, and that constituted about two classrooms of pupils then. It expected by fall, I think, to include four classrooms for the McNary Dam pupils.

Mr. SHUGG. Well, the McNary Dam students would literally be federally incurred also, so that this column, 3,266, is not only federally incurred, but federally incurred in connection with the Hanford project.

Mr. ALVES. Yes.

Mr. JACKSON. I do not know whether there is any merit in it, but my point, and I presume there is not any rule of thumb, because it balance of two-thousand-six-hundred-and-some-odd students made up of the people who have lived there for a long time, plus, shall we say, a few floaters, and the important group that we do not have any tabulation on, that percentage, that is present in every increase in activity in a given region by reason of the Federal activity. I do not know if there is a rule of thumb or whether it requires study to make a census.

Mr. ALVES. I am willing to make a statement now that I understand what you want. In Washington State, as I indicated the other day, each school district sets up its next annual school budget on the basis of an anticipated 5 percent normal increase. So that since 1943 a district would have roughly on the basis of that accepted percentage a 30 percent normal increase, which is included in this 2,674.

Therefore, if we take the total load of the six districts in 1942-43, which is 4,395 pupils in Ada, multiply that by 1.1, we come pretty close to 4,850 estimated enrollment in those six districts in that year.

If we take 30 percent of that, as representing the normal increase of 5 percent a year, we come out with about 1,450 pupils out of the 2,674, which are there by virtue of an increase in school load because of increased birth rates, and because of the normal accession of people—let us say 1,500 roughly.

When we subtract that from the 2,674 there would be an estimated 1,174 pupils who are there by virtue of being dependents of people who have come in as service workers, accompanying the federally incurred impact.

Mr. JACKSON. That is what I was getting at. A little less than half of the balance then would be indirectly traceable to the new activity providing for services and other normal activities that take place in any community.

Mr. ALVES. Translated into another ratio, we have roughly this: On the basis of those figures—

Mr. JACKSON. If I may complete that statement.

Mr. ALVES. I am sorry.

Mr. JACKSON. And that group of one-thousand-one-hundred-odd are being absorbed by the school district and are not included in the consideration given in the report, I mean as to the liability for the 3,266.

Mr. ALVES. Well, the 1,174, plus the 1,455, representing the normal increase, combined to make 2,674, have to rely on the district and the State for their school housing facilities.

Mr. JACKSON. Yes. What I am getting at is that the participants in the report have recommended only the payment of grants for the increase directly incurred by the project.

Mr. ALVES. That is right.

Mr. JACKSON. And in addition you have over 1,100 more, an increase of 1,100 by reason of the indirect effect it has had on the balance of the population.

Mr. ALVES. I started to say, translated into another ratio that would mean that for about every three federally incurred pupils, there is one nonfederally incurred pupil who would be the dependent of a service worker to those—

Mr. JACKSON. Which the district is absorbing under the recommendations contained in the report.

Mr. ALVES. Yes.

Mr. COLE. How many of this number of 3,266 is not related to the atomic work?

Mr. SHUGG. As far as we know, Mr. Cole, all of that 3,266 are related to the Hanford activities.

Mr. COLE. But all of the 1,174 indirect are not related to the atomic energy project.

Mr. SHUGG. I think it would be fair to say that all are not because there has been some activity at the McNary Dam and the irrigation.

Mr. JACKSON. It is by reason of Federal activity of various kinds, reclamation, Corps of Engineers. .

Mr. SHUGG. Yes.

Mr. COLE. But the 3,266 are just atomic students?

Mr. SHUGG. Yes, sir.

Mr. JACKSON. The eleven-hundred-odd are not included in the 3,266.

Mr. ALVES. No.

Mr. COLE. What is the answer to the possible charge that if the Commission's representative out there now has reason to believe and does believe that all of this load of 3,266 directly related Federal children will be taken care of, properly schooled, housed and facilitated in their education this year, and if out of that 3,266 are included 2,200 temporary pupils, pupils of temporary employees, and it is expected that the permanent employee load will not exceed 2,100 which is substantially less than the present 3,200, why is it necessary for any Federal assistance to be given?

I mean if these children are going to be taken care of for this coming school year and you have got the plant facilities to give them the normal school training, why is not the problem already solved? Of course, I think I know what the answer is, but I would like to have somebody put it in the record, other than myself.

Mr. SHUGG. I think, Mr. Cole, to continue to care for students who may be permanent, on a temporary basis, does bring up the obvious point that it may be excessively costly and there will be a high maintenance of the temporary facilities to continue year after year on a temporary basis instead of once and for all building permanent facilities which would and should have a lower maintenance cost and should pay off in the long run.

Mr. JACKSON. What is the nature of the temporary facilities now?

Mr. SHUGG. They vary, Mr. Chairman. For Kennewick we brought up, I think the equipment for 22 classrooms by towing up barracks from Portland, Oreg., which were—

Mr. JACKSON. They are very temporary units. I mean, they are just converted barracks.

Mr. SHUGG. They are frame barracks, and they have been converted, and I believe it is our responsibility, minimum responsibility, to see that conditions are tenable as regards heating and space, but that can be a high maintenance cost over an extended period of years.

Others are hutments. In one city we have turned over, I believe, the American Legion barracks. They have been converted, and then at Pasco they are using the naval air station barracks which have been converted to classrooms.

Mr. JACKSON. In other words, a very substantial percentage of the school population in the area is now housed in temporary facilities.

Mr. SHUGG. Yes. I do not know what percentage that is.

Mr. JACKSON. I wonder, Mr. Alves, maybe you could get in touch with Mr. Black or someone, and we could get the information for the record as to the number of temporary facilities, and in particular, the percentage relationship to the entire permanent structures in the area. I think that is what you want.

(The information above referred to will be found in the statement of Mr. E. S. Black, starting on p. 63).

Mr. JACKSON. I think it also might be noted in that connection that at the last hearing—it was not included in the record—there was a

newspaper item which came to my attention from the Tri-City Herald, which announced that one of the grade schools in Kennewick had been destroyed by fire which, I assume, may cause a further impact as far as the schooling is concerned.

Mr. DEAN. I think it was Pasco, Mr. Chairman.

Mr. JACKSON. Pasco—but all of that information, I think, should be included in the record.

Mr. ALVES. I will be glad to get that, Mr. Chairman.

Mr. JACKSON. It should be included at this point. That is fine.

(The information referred to will be found in the statement of Mr. E. L. Lindman, starting on p. 117.)

Mr. ALVES. I would like to raise the question at this point: When the statement was made that provision had been made for the coming school year, does that include the \$300 per pupil which the Atomic Energy Commission proposed to make available, and the districts accepted on a temporary construction basis?

Mr. SHUGG. I think it does, Mr. Alves. We have the responsibility of seeing that these children are properly housed. In the case of several districts we have provided physically the barracks to house them.

If the school district, however, chose to accept the sum which we would otherwise spend to directly provide the facilities, if they chose to accept an equivalent sum, we have agreed with them to let them have the funds, and administer those funds to their best needs.

Mr. ALVES. The \$300 for the 3,200 pupils, running a little more than a million dollars, as I understood when I was there, was being held in abeyance by the districts pending any possible outcome of these discussions, these considerations, so that although the \$300 has officially been made available they do not, those \$300 do not, represent classrooms that are to be used at the opening of the school, with the result that, with the exception of one or two districts which are completing buildings from their own bond issues or special levies, it is my understanding that when the school opens in the fall there would be little relief from the overcrowding in the form of actual school-plant facilities that were not available at the close of school.

Mr. JACKSON. That is my understanding. It is proposed that the contracts be let either this month or next month for new facilities which would be available for the school year beginning in the fall of 1950. Maybe I am in error in that, but that also can be included in the record when you obtain the other information.

Mr. SMYTH. Those would be replacement facilities for the temporary facilities.

Mr. JACKSON. They would be replacement, plus an expansion that would allow for normal classrooms rather than overcrowded classrooms. I think that is the proposal. At least, it is my understanding that the classrooms are overcrowded now, based on normal practices in most schools, school systems.

Mr. SHUGG. May I make one brief statement, Mr. Chairman, responsive to the remarks that Mr. Alves made after I read those statistics?

I had no intention of drawing any conclusions from those statistics or to imply any segregation of federally incurred or nonfederally incurred. I mean those are supplied simply as facts as they stand.

Mr. JACKSON. We understand. I think there was just a misunderstanding as to what was intended in connection with Mr. Cole's inquiry, and Mr. Alves understood it to be the over-all inquiry.

What Mr. Cole had in mind was the specific increase traceable directly to the students—

Mr. ALVES. I did not mean to imply that Mr. Shugg indicated that he was attempting to segregate. I wanted to get the question in that it was difficult, if not impossible, to segregate one impact from another because you cannot build buildings by going out here and picking twenty pupils out of the total and saying, "You can go to that building but the rest of you cannot."

You just do not build buildings that way, so in the total consideration you cannot segregate.

Mr. COLE. The final question I have, Mr. Chairman, is now that the committee has heard Mr. Alves set forth the committee's report, and has some understanding of the nature of the problem out there, the final question is, What does the Commission propose to do about it, if anything?

Mr. DEAN. Well, the Commission has read the report. It has taken the only action in the form of the letter addressed to the joint committee. No action, as such, has as yet been taken by the five Commissioners.

Mr. COLE. Well, I have not read that letter. What does it say in substance; that the Commission will consider the committee's report?

Mr. DEAN. It says in substance—I hope I quote it correctly—that the Commission is bothered by some of the broad problems that are involved in making any transfer of funds for the construction of permanent school buildings. Specifically, we are interested in precedents. We want to know how far this is taking us, and we would appreciate having the matter gone into by a subcommittee of the joint committee, so that our decision can be made wisely, if and when it is made. That, in substance, is, I think the letter.

There is one other question, I think. I do not know whether it is in the record sufficiently, Mr. Chairman, and that is the question of our financial situation.

As you know, if the language which is now in the Senate Appropriations Committee report remains in there, the cut on the Commission is going to have to be absorbed in four nonweapons programs. One of those is community development.

I do not know whether that language will remain in there, but there is certainly something that bears on one phase of our problem.

Mr. COLE. On the question on whether this Hanford problem creates a precedent or not, has the Commission made any studies from which it can be determined whether there are other atomic energy areas where the school problem is as acute as the one at Hanford? If there are no such areas, then I do not know any reason why the Commission should be too hesitant about this being a precedent. If there are other comparable areas where localities are hit just as hard as the people at the Hanford area, then, of course, they should consider it.

Mr. DEAN. Personally, I do not know offhand any community that would be as hard hit as the Hanford area, where you have very small towns, and where you have this heavy impact, but nevertheless we were concerned with the taking of this step as to where is a line to be

drawn. I mean it should be drawn with some kind of criteria in mind, we felt, and not simply because this was the first place.

Mr. JACKSON. Mr. Dean, your main concern, I take it, is this: That heretofore the Commission has reached decisions in the allocation of funds for temporary school construction. That has already been done at Hanford.

Mr. DEAN. That is true.

Mr. JACKSON. The big question in your mind is——

Mr. DEAN. Permanency.

Mr. JACKSON (continuing). What should be done in connection with requests for permanent construction.

Mr. DEAN. That is it.

Mr. HOLLIS. In accordance with that policy, there has been no provision made in the Commission's 1950 budget for permanent school assistance.

Mr. JACKSON. Permanent construction.

Mr. HOLLIS. Yes, sir.

Mr. JACKSON. So that when you analyze the whole thing the Commission has reached a decision on temporary construction, and offers were made to the local school districts, and funds have been turned over to them on the basis of \$300 per student; so that the question that remains is a question relating to permanent construction.

Mr. DEAN. We have set the precedent for aid on a temporary basis, although, when I first faced this as a new Commissioner, to me I wanted that explored by myself to see whether this next step took us into dangerous territory.

Mr. COLE. If the Commission is justified in spending public funds for school aid on a temporary basis, I do not see how it can say it is not justified——

Mr. DEAN. For permanent.

Mr. COLE (continuing). On a permanent basis, when it is found that the temporary condition has become a permanent condition.

Mr. DEAN. I agree with you, Mr. Cole, if we could make that finding. There is this little difficulty which pops up when you look at the language of the act. It says in substance that we must find that it is necessary for the housing, health, safety, welfare, and recreation of the personnel employed by the Commission.

Before we can construct these buildings and facilities at projects, project sites, where such facilities and services are not available, we must make that finding. Query: Are they available? They are today in temporary form.

Mr. COLE. Would the Commission prefer to have specific statutory authority to make this kind of appropriation?

Mr. DEAN. No; I think we have the authority to do it, without any question, but I think any finding we make ought to be made after considering everything.

Mr. COLE. Sure of your ground, of course, but it would seem to me that this Hanford situation is acute.

Mr. DEAN. There is no question about it.

Mr. COLE. And if the delay is to be occasioned by reason of an uncertainty in the minds of the Commission with respect to its legal authority, then I think that should be resolved quickly.

Mr. DEAN. That is not my concern. It is not a question of what the act says. Any decision we make must meet the test that is laid down here.

Mr. JACKSON. Unless there is some additional information to go into the record, and I would like to state that we understood, if it is satisfactory with Mr. Cole, that any charts or other figures or data that ought to go in, I think, can be satisfactorily included in the record after our meeting——

Mr. HOLLIS. Mr. Chairman, did I understand that Mr. Alves was going to put into the record precedents on construction? That would be very helpful to us.

Mr. JACKSON. Yes; he is going to include that, and I say if there is any additional information, just so I am advised that it is going in, and I will make it available, of course, to Mr. Cole, that will be in the record, and that can be included, too.

All right, we will now go into executive session.

(Whereupon, at 11:15 a. m., the committee adjourned, to go into executive session.)

# HANFORD SCHOOL FACILITIES

---

MONDAY, AUGUST 8, 1949

CONGRESS OF THE UNITED STATES,  
SUBCOMMITTEE OF THE  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The subcommittee met, pursuant to call, at 10:10 a. m., in room 1015, New House Office Building, Hon. Henry M. Jackson (chairman) presiding.

Present: Representatives Jackson and Cole.

Also present: Henry D. Smyth, Commissioner; Joseph Volpe, Jr., General Counsel; Carleton Shugg, Deputy General Manager; Everett L. Hollis, Deputy General Counsel; and David F. Shaw, Deputy Manager, Hanford Operations Office, all of the United States Atomic Energy Commission.

E. S. Black, superintendent of schools, Kennewick school district.  
MR. JACKSON. The committee will come to order.

I thought that we might call Mr. Black first. He is the superintendent of schools at Kennewick, Wash., and he represents all of the school districts in the area affected by the Hanford operations.

You may recall that he was a member of the committee which worked out the report.

During the last hour, as I recall, there were two main points that we desired to obtain some information about: No. 1 was the nature of the temporary school housing in the area; and, No. 2 related to proposed plans for permanent school construction in this same area, and in that connection, I believe it was the desire of the committee to have some information as to the urgency of permanent school constructions facilities.

Mr. Shaw, will it be all right if Mr. Black goes on first?

MR. SHAW. Certainly.

MR. JACKSON. It does not make any difference, how we call him?

Mr. Black, with the understanding that we are interested in those two principal points, I wonder if you would be willing now to make a statement to the committee.

I believe you have a prepared statement that you want to read first.

## STATEMENT OF E. S. BLACK, SUPERINTENDENT OF SCHOOLS, KENNEWICK SCHOOL DISTRICT

MR. BLACK. Yes; I do.

MR. JACKSON. All right, if you will proceed.

MR. BLACK. Gentlemen, I called the committee representing all of the districts together, and I have several complete files of the need in the particular districts, and also the recommendations of the committee.

My first statement, which will be just a little general, is one in which I would like to make in this manner.

Gentlemen, I appreciate this opportunity, as a representative of the school districts surrounding the Hanford Works, to be able to present our problem to you men who are in a position to weigh its real merit. I am superintendent of the Kennewick school district, so many of my references are pertaining to Kennewick; however, all six districts have similar problems in a varied degree.

In 1943 at the outset of the Hanford Works the Kennewick school district had an average daily attendance of 772 students. At the close of this fiscal year, June 30, we had a net enrollment of better than 3,200. May I say that previously a satisfactory contract has been completed with AEC for maintenance and operation support and that additional school-bus transportation has been provided. Therefore this testimony will confine itself to school building needs.

At the beginning of 1943 the Kennewick school district had adequate building facilities for 500 students. In 1944 a 32-room elementary building was constructed through State, local, and Federal Works—FWA—funds. This solved the problem for a short time only. The enrollment in the schools in Kennewick soon grew to a place where every available space in town was used. Enrollment in many rooms reached 60 students. At this time the Atomic Energy Commission constructed 22 temporary classrooms. These 22 temporary classrooms, outside of having adequate room space are minus all the facilities that go with a standard school. Students and teachers alike traveled outside several hundred feet to lavatories and due to the severe weather this past winter, several casualties were incurred and even the insurance companies have warned us that this part of our system was a poor risk. Without liability the district could not operate a day.

The buildings are of a tropical nature and are heated with only about 60 percent of the necessary capacity. The results were that during the last year a heavy absenteeism was caused due to lack of heat, which would not permit proper ventilation. This resulted in a terrific drop in efficiency and a financial loss to the district in operations. During the coldest part of the winter the temporaries forced the district into closing for a period of 8 days.

This past year we have operated five classrooms upstairs over a school-bus garage. This had to be done in definite violation of requests from the State health department and the State fire insurance commission. If a catastrophe had taken place I am sure someone would have had a moral load placed on their shoulders.

One of the buildings now in use is a building built in 1900 for a small high school. Twelve of the rooms were built to adequately house 16 students. In order to get the children under a roof the enrollment is maintained at about 35. These conditions place a most inefficient and unbearable condition on what would be a standard school system. The above conditions have made it almost impossible to maintain a teaching force and added to this difficulty is the fact that we operate within a short distance of the city of Richland, which seemingly has available about 30 percent more operational funds on a per capita basis. This makes it difficult to employ teachers at a lesser rate under the most improvised conditions.

Our requests of the AEC for building funds are based on the average cost within the State for their pay roll attachable students. This

does not include about 50 percent more students who do service work for these people within the community. The formula submitted for settlement does not include these service people, therefore, the Atomic Energy Commission would be able to settle by the formula for about 65 percent of the total federally incurred load.

Another situation which presents a great problem to all schools is the fact that the rules within the reservation were such that upon termination of an employee he has only a few days to leave the reservation. Due to the fact that he could enjoy liberal social security in our State they would move into our area and remain while collecting this social security. The surrounding schools have been required to absorb this situation.

At the present time the Kennewick schools are approximately \$4,000,000 behind in obtaining a standard school system. If the Atomic Energy Commission settles on the formula that is submitted by a previous committee the Kennewick school district would receive approximately \$2,000,000. Together with what local and State funds are available, that would still leave the district more than a million dollars below a standard adequate system. If this entire load were left to the district, it is more than could be raised under present laws, with triple taxation within 30 years. Added taxation would immediately become a burden upon the several thousand houses built in our area backed by the FHA. The profit of the Hanford endeavor at present seems to be national security and the people of our community feel that they are willing to stand their share of expenses on a national basis, to meet the overcrowded conditions. The problem has gone far beyond any diligence of the community to meet the situation.

If it is necessary for the United States Government to move people into an area and create such tremendous overcrowding, the Government then has a moral obligation to meet its just share of inconvenience, and any agency of the Government that creates such a legitimate obligation should not feel it is within its sphere to avoid such obligations.

Based on present comparison, surrounding districts can operate on approximately 30 percent less per pupil than the reservation. The building costs in surrounding districts are approximately 25 to 30 percent of the cost of buildings constructed within the reservation. Therefore if the Government is economically minded, a real saving could be made by aiding the outside schools.

Gentlemen, the Kennewick school district now has the plans and specifications ready to advertise for bids for a senior high school that will house 600 students. A commitment for funds immediately by the Atomic Energy Commission would permit us to begin the construction of this building in its entirety and save money to all concerned in the end. If a commitment is made now so that the district can proceed now with the construction of the building, the district will do everything in its power to accept all students for an education; however, if the commitment is not forthcoming the district will have to take some action which will bring the Kennewick School under a more efficient basis August 29, 1949, that being the opening of the school. It is our wish and desire to cooperate in this problem but we are far from being magicians in solving the problem without a realistic approach.

If there are any questions before I go back into the complete statistics on each district, bringing up their individual problems, I would be glad to answer them.

Mr. JACKSON. I think that in your prepared statement you made reference to the fact that some of these people were on social security. I assume you meant they were drawing unemployment compensation?

Mr. BLACK. That is right.

Mr. JACKSON. Mr. Black, I think if you could take each district as listed in the table here, starting with Grandview, and first explain the number of temporary units now being utilized in the district, how long they have been using them, and the nature of the facility, and then proceed to indicate the urgency in that area, if any, for new school construction, and the plans of the school district for new construction, that would be all right. Would you mind doing it that way? I think that is what the committee would like to know at this point in the record, because that information, of course, was not contained in the report, and other than in a general statement of need; but I believe if you would take it up first as to the temporary and then as to the permanent construction, that would meet the wishes of the committee.

Mr. BLACK. I have them arranged here in the order of their size.

Mr. JACKSON. Well, either way, just so that we can cover each district in the record.

Mr. BLACK. Kennewick, first of all; summary of improvised school classrooms, improvised and inadequate classrooms: During the 1949-50 school term, classes of Kennewick schools will occupy approximately 40 inadequate, outmoded and substandard classrooms, a part of which will be over a garage which is in direct opposition to all State health regulations and fire safety rules.

Temporary classrooms, 22; inadequate classrooms, 17; bus garage, 5, for a total of 44.

Overcrowded classrooms—

Mr. JACKSON. How many temporaries?

Mr. BLACK. Twenty-two.

Mr. JACKSON. Twenty-two; and they have been supplied by the Atomic Energy Commission?

Mr. BLACK. That is right.

Mr. JACKSON. With reference to the schoolroom over a garage, or schoolrooms over the garage, is that a temporary arrangement?

Mr. BLACK. Well, it was a school building at one time, and was abandoned on condemnation, and the garage was placed there, and we have very inadequate facilities, and a very inadequate situation. It is over a workable garage which, I think, I know in our State is against all rules from every angle.

Mr. JACKSON. How long have you been using these temporary facilities put up by the Atomic Energy Commission?

Mr. BLACK. We got into them last fall, I believe.

Mr. JACKSON. Were some put up prior to that?

Mr. SHAW. No. The first of them went into use just after the opening of school last fall, between the opening of school and the first of October.

Mr. BLACK. Overcrowded classrooms: All classrooms in Kennewick are designed to accommodate 30 average daily attendance. However, all classrooms vary from 35 to 55 enrollment.

Total classrooms needed now: The total number of classrooms as indicated on the chart needed at present are 78.

Discussion of inadequate rooms—amount of need: In the chart of recapitulation of capacities, first we have one suitable elementary building with 32 classrooms, which lacks seven rooms of efficiently taking care of the first three grades. In the intermediate department we have 22 temporary classrooms constructed by the Atomic Energy Commission, which have ample room space, however, six of them are built in line of three rooms each and two of them with two rooms each. These have no inside hall connections. Teachers and youngsters alike must travel several hundred feet outside to lavatories and this winter with more than a month of zero and sub-zero weather, snow and ice, has caused quite a discontent among students and teachers alike, resulting in teachers and students casualties due to such conditions. These casualties are even causing insurance companies to frown on us as a liability. You are aware that we could not operate a day without liability coverage.

Each one of the buildings has a separate heating plant and the capacity of the heating furnace is approximately 60 percent of that needed during the recent cold spell. This plus a number of other things has resulted in the school being closed eight school days so far and a possibility of a recurrence. Such educational time becomes a complete loss to the student. I feel the community cannot consider continuing such educational facilities. I therefore feel that we cannot count these rooms in considering an educational system.

I might say that outside of the 8 days that we were closed, there were days after days that we operated with a temperature in the classrooms of between 45 and 48 degrees.

Junior-senior high school: In 1936 our junior-senior high school building was built to house 500 students. We had an enrollment in the two organizations at the time of 425. We now have a total enrollment in the two organizations of 1,135. You will note by the enrollment that our grades are well over 325 per grade through the fifth grade now and continue better than 250 per grade through the junior high school. These large classes moving up are creating a complete break-down in our junior-senior high school organization and the school district feels the first step to be taken in solving this building program is to build proper facilities for these organizations. Due to the type of work, temporary facilities will not serve the purpose of these organizations.

The construction of the proposed senior high school at present would accommodate the senior high school and the overflow of the junior high school for the next year. Then an addition to our present junior-senior high school would be necessary to make it large enough to accommodate the enrollment of the junior high school.

You will note by the chart that the school is now using in the junior high school organization 12 inadequate rooms. These rooms are inadequate for many reasons but the greatest reason they are inadequate is because they are in a building that was constructed in the year 1900 for a high school with a small enrollment with rooms adequate for approximately 16 students. Under the present-day apportionment of funds by the State to the school district on a student basis, an enrollment of 25 is necessary to maintain funds for an adequate teaching unit. You will note the present enrollment of these rooms puts them

in a position almost as sardines would be packed. Efficiency at the junior high school stage under such conditions is impossible. There are two or three of the inadequate rooms that are large enough but haven't the necessary natural or artificial lighting or ventilation, as they have been temporarily constructed to meet the emergency need.

Also two elementary buildings are needed, one in the east and one in the west portion of the district, to accommodate the elementary and reduce the transportation problem. Besides the above need of a senior high school to house 800 students and an addition to the present junior-senior high school double its size to accommodate the junior high school in the future, our architect's estimates show that we are behind in construction in the sum of approximately \$4,000,000, based on present costs and the State average cost per pupil. We are, therefore, requesting your earliest possible consideration and help in construction of a senior high school so that it may be available and save the complete break-down of our educational system in the fall of 1949.

I have something else here; need for facilities, population increase within the district: Population in 1940, 2,200; 1949, 19,800; students, 1942, 772 average daily attendance; net enrollment in February 1949, 3,145.

Federal agencies creating need: AEC atomic plant, McNary Dam, Federal public housing.

Public housing includes 200 temporary units, and 2,500 permanent homes. The Kennewick school district is the hub of the above activity.

School-building needs now amount to 65 percent of the total taxable valuation of the school district. This need alone completely breaks down the economy of one community in its ability to solve such a problem.

Building needs: Senior high school to house 800 students, project now requested; junior high, present junior-senior high school expanded from 500 to 1,000 enrollment; two elementary buildings.

Relief will be necessary by September 1949, or the district will be unable to carry on.

Cost of building: Senior high school, \$1,800,000; expanded junior high school, \$1,000,000; two elementaries, 15 rooms each, \$1,170,000; total cost needs, \$3,970,000.

Financial picture: Local bonds—voted, not sold—not expended, bringing the district to capacity of bonding, \$300,000; grant from AEC, not expended, \$353,000; and the State request but not appropriated by the legislature, \$700,000, which would have brought it up to \$1,353,000; granted by AEC, 1948, expended on temporaries, according to the submitted list, \$117,000.

The local district's needs are greatly handicapped due to the district's lack of capacity to raise funds. The district has carried extra millage for 13 years repaying bonds for building purposes, plus a 5-mill special levy in 1944. When present bonds are sold the district will again be bonded to the limit.

Any failure of the Atomic Energy Commission to make a commitment prior to the opening of school August 29, 1949, will force the Kennewick district into taking drastic action and in some way cut back enrollment to where it can be handled efficiently. Kennewick has one of the highest ratings of matching in the State due to sudden growth and overcrowded conditions based on value per pupil. However, the last legislature failed to raise the \$40,000,000 requested within the State because it would have required the raising of new taxes. The legislature passed a resolution granting a bond election to the people of the State in the November general election, 1950, to raise money. The amount of money available in the State now, due to the recent earthquake which did several million dollars' worth of damage to schools within the State, will make any funds available from the State very minor in comparison with the needs.

The Kennewick school district hopes that some arrangement can be reached and that we can carry on and cooperate as we desire. Our cooperation at present has far exceeded our ability to carry on.

Now, to give you some idea of the situation with respect to how it is moving, I have the final report sheet for the year ending that goes to the State from all the districts, and it shows that the average daily attendance in school every day during the year was 2,841 students, while the total enrollment for the school year amounted to 3,891, with 528 transfers, which leaves us better than 3,300 students in school at any one time.

The total enrollment in grades—for instance, first grade last year was 485; 422 in the second; 418, until we get down to the senior class in high school. We had 109, so you can see the difference of the classes moving up.

We will increase from 1,000 to 1,500 students in our system just by the move-up in the classes that are there at the present time over those that are graduating.

Then the elementary, one through six, which prior to the war held about the same number of students as the upper six grades, this past year had a total of 2,635, I believe it was, enrolled, and in the junior and senior high schools; the junior high school had 829 and the senior high school 417. So you can see what the size of the lower grades moving up there does to the situation.

Are there any questions?

Mr. JACKSON. You are still on Kennewick?

Mr. BLACK. I am finished with Kennewick now.

Mr. JACKSON. The record of attendance and enrollment will be placed in the record at this point.

(The documents entitled "Record of Attendance and Enrollment" and "Recapitulation of Capacities" are as follows:)

*Record of attendance and enrollment: Kennewick school district No. 17, Benton County (school opened Aug. 30, 1948, and closed May 27, 1949)*

[Number of days taught: 172]

				Total				
<b>1. Actual attendance:</b>								
Elementary school (1-6) (full days).....				291,045

<sup>1</sup> Temporary.<sup>2</sup> Adequate rooms.<sup>3</sup> Inadequate rooms being used.<sup>4</sup> 55 adequate rooms.

Mr. JACKSON. If I got it straight, the temporary buildings were not put in until the fall of 1948. How did you get along prior to that?

Mr. BLACK. Well, it was the next thing to using hooks—everything that you could find to hang a youngster on is where they were placed.

We had many Monday mornings from one to three classrooms of new students to appear with us with no teachers, no rooms, and no facilities, and we just had to load them onto someone else until we could find a place, a teacher, and some basement room to place them in.

Mr. JACKSON. The rooms were classrooms which were completely overcrowded prior to that. Some of them you had to turn away?

Mr. BLACK. We did not, no; even if we had as high as better than 60 students per grade, we did not turn them away. We have done everything in our power to hold on and carry on so far, but the people of our community feel now that they have carried so far and have broken down the entire efficiency for their own system for which they paid, and that they are entitled to some consideration in obtaining somewhat of an efficient system back in the school district.

Mr. JACKSON. How many students do you average in each classroom now with the temporary facilities?

Mr. BLACK. Last year, I would say it was, the average was close to 45. Standard in the State is 30.

Mr. JACKSON. And prior to that it was over 60?

Mr. BLACK. Yes.

Mr. JACKSON. And the State average is what?

Mr. BLACK. The State standard is 30 per room in elementary school, 25 in junior and senior high school.

Mr. JACKSON. Thirty and what?

Mr. BLACK. Twenty-five in junior and senior high school.

Mr. JACKSON. You do not know what the State average is now?

Mr. BLACK. I could not give that to you, sir.

Mr. JACKSON. Do you want to ask any questions on Kennewick, Mr. Cole?

Mr. COLE. Yes.

What are the terms of this present arrangement which you have, which you say is satisfactory with respect to maintenance?

Mr. BLACK. In the State of Washington, which is one of the best States in the Union, they pay on a previous year's attendance.

Mr. COLE. I am speaking of the agreement you have with the Atomic Energy Commission with respect to—

Mr. BLACK. That is what I was leading up to.

Mr. COLE. Oh.

Mr. BLACK. They pay on the previous year; so after the first year of attendance the State picks it up and on attendance, for operation purposes alone, the AEC pays on the first year only, and after the first year, then it is taken care of by the State. So the operations are completed after the first year's attendance—taken over by the State.

Mr. COLE. Well, what was this source of the \$300,000 item to which you made reference as coming from the AEC?

Mr. BLACK. That was for temporary construction, an agreement, I believe, that differenct schools have with the AEC at present which enters into the sum of probably a million and a quarter dollars, or something like that; I just do not know what it is.

Mr. COLE. That is based on \$300 per pupil?

Mr. BLACK. Yes, sir.

Mr. JACKSON. And that is deducted from the over-all figure proposed in the report, as I understand it; is that right, Mr. Shaw?

Mr. SMYTHE. This \$353,000 has not been expended?

Mr. BLACK. No.

Mr. JACKSON. And that is a deduction?

Mr. SHAW. It was the idea of the method in calculation shown in the report, and—

Mr. JACKSON. Yes.

Mr. SHAW (continuing). Envisage the subtracting of any funds furnished of that nature from what would be computed by using the formula proposed.

Mr. COLE. Is that the only manner in which the AEC participates in maintenance and operation in this initial year's enrollment?

Mr. BLACK. Yes, sir.

Mr. COLE. Last week we were told there were some additional means of help given to the districts by way of operation through transportation.

Mr. BLACK. Transportation; yes. The fact of the matter is that we owned and operated 19 58-passenger school busses at the district's expense when this began, and the loads on those busses developed to a place where we were hauling many times that, with 138 getting off a 58-passenger bus, so the State patrol came in and offered to close all our transportation unless we had it helped in some manner, and if it had not been we would have had to close AEC people off the busses because the other people had spent the money and paid for the busses.

We are now operating 15 of the AEC busses in addition to our own 19, making a total transportation system of 34 busses.

Mr. COLE. What do you mean you were operating? Did the AEC just give you the bus and you provided the driver?

Mr. BLACK. Yes.

Mr. COLE. And maintenance, and you pay the gasoline and upkeep?

Mr. BLACK. Yes, sir.

Mr. COLE. All they do is to lend you the use of the bus; is that the nature of the assistance?

Mr. BLACK. Yes, sir.

Mr. COLE. What is the situation with respect to the Richland schools? Are they filled to capacity?

Mr. BLACK. Well, I believe Mr. Shaw could answer that better than I could.

Mr. SHAW. May I speak to that? They are.

Mr. COLE. But they are nowhere near as congested as the Kennewick schools, I assume. What I am inquiring about is to what extent you have considered taking into the the Richland school system, by bus system, some of your people who are living in Kennewick, and to that extent relieve the Kennewick congestion?

Mr. SHAW. Well, of course, I cannot answer as to the appropriateness of that, but as to the actual number of pupils in the Richland school district, it did amount last year to a degree of crowding which was comparable to that in the surrounding areas.

However, our facilities that we do have are new, of course, in Richland, and we have completed some structures since then, so that when it comes to comparing good modern school buildings in the Richland school district as compared with those in surrounding districts, Richland is much better off.

Mr. COLE. Do you not have room at Richland for more students?

Mr. SHAW. No; we are full. We have some room in North Richland. We will probably have some room in North Richland.

Mr. COLE. What is your average classroom use—not capacity, use?

Mr. SHAW. I do not have a figure very readily available. From some data I have here, I could get a right figure for you.

Mr. COLE. Do you know what it is, Mr. Black?

Mr. BLACK. What is that?

Mr. COLE. Do you know what it is in Richland?

Mr. BLACK. I do not.

Mr. SHAW. It is in the vicinity of 35 or 36 pupils per classroom.

Mr. COLE. As against Kennewick's 45?

Mr. SHAW. As against Kennewick's 42.

Mr. JACKSON. You have taken some overflow from Richland into Kennewick and elsewhere, or have they all been taken care of in Richland?

Mr. SHAW. No, the school districts have all carried their own pupils. It is a geographic set-up with respect to the school districts there, and each one has staunchly taken care of its own pupils.

Mr. JACKSON. I mean, have you been able to take care of all of them in Richland?

Mr. SHAW. Yes.

Mr. COLE. What is the distance between Richland and Kennewick, about 5 or 6 miles?

Mr. SHAW. About 10 that I counted.

Mr. BLACK. Nine.

Mr. SHAW. Nine you counted.

Mr. BLACK. That is close enough.

Mr. COLE. What did you mean, Mr. Black, you could do business on the outside of the reservation at a 30 percent advantage?

Mr. BLACK. On the average cost.

Well, now, I will tell you how I gain my estimation on that.

Mr. COLE. What were you talking about, first? Building construction?

Mr. BLACK. No. The first remark I made was on the operation cost per capita, and I will explain how I got that idea.

The State appropriates on an attendance basis so much money, and our district funds represent 75 percent of our total cost of operation.

Richland printed their budget in the paper, and the total amount they got from the State that they matched dollar for dollar, which could not be matched in Kennewick, that was the printed budget for this next year, which would give them a decided—I figure according to the budget rather conservatively, and also Mr. Shaw can answer this one probably better than I, but I have been informed by State officials that in Richland, in addition to this, they are granted their utilities and buildings free of charge, which is quite an item in an operating budget, so—

Mr. COLE. Do I understand that Richland's school system receives State help?

Mr. BLACK. Yes, sir.

Mr. JACKSON. They get so much per pupil.

Mr. COLE. On the same basis as Kennewick?

Mr. BLACK. They get exactly the same money from the State, with this exception, as I understand it. The valuation in the district times 10 mills, which the district can levy without a vote of the people, represents local funds, and in our State we have what is known as an equalization law; if that 10-mill levy does not raise 20 cents a day the district makes up the difference, and in Kennewick, I think the equalization fund from the State to us is about \$70,000 a year. It is the only fund in Richland that the State does not make up because they have concentrated construction there that is not valued or not taxed.

Mr. COLE. Did I understand you to say that the utilities of Richland school system are not charged against the school system?

Mr. BLACK. That was my understanding.

Mr. COLE. But are furnished by AEC?

Mr. SHAW. They are not shown in the Richland school budget. We show them in our appraisal of our school system.

Mr. COLE. Why do you cite that as a factor which indicates that you can operate cheaper on the outside than you can on the inside? You have to pay for your utilities, and they do not.

Mr. BLACK. They do not, but it is a part of the cost of education, and if added to it would increase the cost to a place where we would be at least that much or lower in cost of operation.

Mr. COLE. You mean, assuming that the Richland district paid for its utilities on a comparable basis—

Mr. BLACK. That is right.

Mr. COLE (continuing). As your district did?

Mr. BLACK. That is right.

Mr. COLE. That you would then—

Mr. BLACK. Be operating—

Mr. COLE (continuing). Be operating at a 30-percent more favorable differential over the operation at Richland?

Mr. BLACK. Yes, sir.

Mr. COLE. I do not understand why you can do it?

Mr. BLACK. Well, we are operating by the State average cost, and the fact of the matter is that we are caught in a bind where we have to operate at much less than the State average cost.

Mr. COLE. Is your teacher salary scale less than Richland's?

Mr. BLACK. I am quite sure it is.

Mr. JACKSON. I wonder if this might be helpful at this point?

Mr. COLE. Go ahead.

Mr. JACKSON. What is the cost per pupil for operation and maintenance in the Kennewick school system as compared with the Richland school system on a comparable basis?

Mr. BLACK. Last year is the only year for which I can actually give you statistics, and the average over-all cost, as I recall, in Kennewick was \$1; and the over-all cost as listed by the State report, I think, in Richland, was \$1.16, which was not inclusive of utilities.

Mr. JACKSON. They have had quite a difficult problem in getting teachers in there, too, have they not? I mean, during part of this period you have had a shortage of school teachers up until just the past year.

Mr. BLACK. There were approximately 100,000 short throughout the Nation as a whole.

Mr. JACKSON. Yes; but I mean has there not been some bidding for teachers?

Mr. BLACK. Yes, sir.

Mr. JACKSON. So that it has been a problem and school districts have been varying quite a bit in operation and maintenance costs.

Mr. BLACK. However, we have tried to maintain and remain at the State average cost.

Mr. JACKSON. But what I meant to say was that I know that in some school districts in the State, the operation and maintenance cost will vary about—I do not know how much, but a percentage due to, especially, the expanding school areas where they have had to bid for teachers, so to speak, and have had to pay more for salaries and other things.

Mr. BLACK. However, I do think that last year the total cost, over-all cost, in Kennewick, Pasco, and Sunnyside, with all comparably sized systems, was exactly the same.

Mr. JACKSON. You mean among those three?

Mr. BLACK. The three largest surrounding school systems.

Mr. COLE. How much does this AEC assistance by way of the initial year's contribution, which I consider to be comparable to tuition—how much does that amount to for the coming year?

Mr. BLACK. Well, this would only be a guess: The first year, the year before last, it seems to me that it was better than \$50,000 or \$60,000, and this year, I believe it was \$80,000 or \$90,000; and based upon that same basis, unless we get another terrific influx, it will practically level off this next year on an appropriation basis.

Mr. COLE. At about \$90,000?

Mr. BLACK. No. It will level off at no cost to the AEC.

Mr. COLE. There will not be any, because there is not anticipated that there will be any.

Mr. BLACK. Increase.

Mr. COLE. Initial students.

Mr. BLACK. If enrollment levels off, then the costs will stop.

Mr. COLE. Using the Alves committee formula against the estimated cost of this new high school of \$1,800,000, what would be the Commission's contribution?

Mr. BLACK. Well, on a per capita basis, for the over-all system, including additions and deductions, I would say that their total, including this contract we have previously signed at \$353,000 at Kennewick alone, which is approximately half of the whole outside area, would amount to between two and two and a half million dollars at Kennewick.

Mr. COLE. I am just directing my attention now to the school building for 300 students.

Mr. BLACK. Eight hundred.

Mr. COLE. Eight hundred?

Mr. BLACK. Yes.

Mr. JACKSON. This is a senior high school?

Mr. BLACK. Yes, sir.

Mr. JACKSON. And what Mr. Cole has in mind is what the contribution would be by the AEC to the cost, the total cost of the construction of the building.

Mr. BLACK. Well, it would be, according to the formula which might be worked out if you want to take it building by building—

Mr. JACKSON. Following the report, I mean on the per capita basis.

Mr. BLACK. The building could not be built if it were followed on the per capita of the one individual set-up.

We have previously taken care of a lot of the load in the rest of it, and they are taking the average cost over-all. The cost per capita on the high school alone in the building—it could not be built.

Mr. JACKSON. You mean you have to treat it as an entirety, the whole school-improvement program?

Mr. BLACK. Yes.

Mr. COLE. I do not see why you cannot use the same formula against the cost of several buildings.

Mr. BLACK. Because, although the funds are available, for funds matched on that one building, they would not match it. For instance, the average cost in the State as submitted to AEC was \$1,600, and I got a certified cost from the State the other day on a senior high school, and their costs in the State at the present time are about \$2,650 per child, with equipment and—

Mr. JACKSON. What was that again?

Mr. BLACK. It is right in the neighborhood of \$2,650.

Mr. JACKSON. For a senior high school?

Mr. BLACK. Yes.

Mr. JACKSON. How much is it for a junior high school?

Mr. BLACK. \$2,100 and some, and the elementary is a little less than \$1,500.

Mr. JACKSON. That would still bring the average above \$1,600, would it not?

Mr. BLACK. No; if you weight them, as we had weighted them. I think it will come up to a little better than \$1,800, minus your other deductions which will bring it back to less than \$1,600.

Mr. JACKSON. I am sorry. Mathematically, I was assuming they would all be in equal proportion, but your point is there would be more of the junior high than grade school.

Mr. BLACK. Elementary.

Mr. JACKSON. Elementary school construction.

Mr. BLACK. That is right.

Mr. JACKSON. And this first building that you propose to build involves the highest element of cost, namely, the senior high school, which would bring your costs per pupil above the average, which applies to all three types of school construction.

Mr. BLACK. That is right.

Mr. JACKSON. Is that the point?

Mr. BLACK. Yes, sir.

Mr. COLE. I do not see how the Commission can be expected at this time to indicate its readiness to participate in construction of the new high school until it knows what that participation is going to amount to.

Mr. BLACK. Well, sir, if it is worked out on the formula basis, as I said, the total contribution would be slightly over \$2,000,000.

Mr. COLE. That is for building what you hope to build within the next 2, 3, or 4 years.

Mr. BLACK. Well, they are all in the formulation of the plans now to carry on. They will have to follow this logical sequence. The fact of the matter is that the elementaries will have to be constructed during the winter. We cannot tie onto a junior high school just because we have to have it for operation during the year, but we would expect it to begin by the close of the next school term.

Mr. COLE. You mean it is impossible then to break the total school load for the Kennewick district down into separate items to arrive at the fair contribution from the Commission?

Mr. BLACK. If you would take it on the average cost, as this is placed, and expect us to build with what funds are available, the senior high at the higher rate, then we could not do it because there would not be enough money available.

Mr. COLE. You mean you could not build it?

Mr. BLACK. That is right.

Mr. COLE. You could arrive at the amount of the Federal contribution.

Mr. BLACK. We could arrive at it, but it would not make possible the building.

Mr. COLE. What is that figure, do you know?

Mr. BLACK. What is that?

Mr. COLE. What is that figure, the Federal contribution?

Mr. BLACK. Totally is the only way I can give it to you.

Mr. COLE. How many Federal students are enrolled in your high school?

Mr. BLACK. Pay-roll attendees, as the chart puts forth in the recommendation of the committee, which was audited by the auditors in Richland, were 1,573.

Mr. COLE. Is that an average daily attendance figure or a total enrollment figure?

Mr. BLACK. It was the pay-roll attendees this last year.

Mr. COLE. That was the total enrollment?

Mr. JACKSON. 1,573 for all schools—grade, junior, and senior high schools?

Mr. BLACK. Yes.

Mr. COLE. What is it for the high school, senior high school?

Mr. BLACK. We do not have that segregated.

Mr. COLE. Can you estimate the number of Federal students enrolled in your senior high school?

Mr. BLACK. I cannot unless I would call back home. I do not have the statistics with me.

Mr. COLE. Does anybody have any figure that he could throw out as being the amount representing the Commission's share for the cost of this new school building? That is the immediate problem, is it not? Before you let a contract to construct a new building, you want to know where you are going to get your money from, as I understand it.

Mr. BLACK. Yes, sir.

Mr. COLE. As I understand it further, you do not feel that you are in a position to let a contract; in fact, you cannot, unless and until you get some assurance from the Federal Government that there will be Federal assistance, and unless that Federal assistance is sufficient to make it possible for you to do it.

Mr. BLACK. That is right.

Mr. COLE. On the other hand, the Commission has some responsibilities in handling its money. Its sources of revenue are not unlimited either. Before it undertakes to give you that assurance it has got to have some indication of what it is going to cost the Commission.

Mr. BLACK. Well, I say, sir, that in every district here, the cost of buildings needed all exceed whatever local and State and Federal, combined, would do, which they must move toward building immediately, and would still leave them far in arrears, so, as worked out on a 3-day conference in Richland, a formula whereby they would pay all by the average, because it is pretty difficult to—

Mr. JACKSON. That is true, Mr. Black, but I think Mr. Cole raised a good point here, that we have an immediate situation, as you stated with reference to the high school. The Commission's funds are a source of difficulty from time to time. At the moment, they are between the House and Senate in conference, and the specific situation at the moment is this, as I see it: How much money would be added from the AEC immediately to take care of this senior high school? I think that is the point.

Mr. BLACK. I can answer that so far in this —

Mr. JACKSON. That is the point Mr. Cole has made.

Mr. BLACK (continuing). That the district would have \$300,000 available if they sold their bonds. Now, how much help Mr. Shaw could give me, with Mrs. Pearl Wanamaker, who was the State superintendent of schools—she had \$6,500,000, and I think that that is allocated in the amount of \$7,500,000 already before she gets to us with ready money, and whether it would not be used, or not, and whether there would be any left available back for us, would be another problem, but the building will possibly run in the neighborhood of \$1,800,000 and \$300,000 of ours, it would take \$1,500,000, and there would have to be funds from someone else in order to carry on with program.

Mr. JACKSON. Wait a minute. You have \$300,000 of bonds, I mean, that have been levied.

Mr. BLACK. Voted, but not sold.

Mr. JACKSON. Not sold, but, anyway, they are authorized.

Mr. BLACK. That is right.

Mr. JACKSON. And you received from the Commission in connection with this temporary school program——

Mr. BLACK. We have a contract. We have not accepted any fund as yet.

Mr. JACKSON. I mean that money has been appropriated. It is in the till.

Mr. HOLLIS. \$353,000.

Mr. JACKSON. Yes.

Mr. HOLLIS. You already have that.

Mr. BLACK. We have the contracts worked out.

Mr. JACKSON. The money is obligated, so that is \$353,000.

Mr. COLE. Let me ask: Can all of that \$353,000 be applied, if you want to, to this new school building?

Mr. BLACK. Under the contract it can be, if the building exceeds that amount of money.

Mr. COLE. Can the Kennewick district apply all of the funds given to it by the Commission for temporary school housing, which amounts to \$353,000—can that be applied by the school district for this senior high school?

Mr. BLACK. Yes, sir.

Mr. COLE. It can.

Mr. JACKSON. Under the agreement—if I am in error in this, I would like the record corrected—as I understand it, the allocation of funds for temporary school housing does not necessarily have to be used by the school district for temporary units; it can be used for housing for permanence if the school district so decides.

Mr. SHAW. That is correct. The intention of that money is to help them to keep their heads above water during the emergency period. If they find, that is, the school district, that it can raise from its own sources, and coupled with State money as it can get it, it can use our money to obtain better classrooms than they could using that money for a separate entity. We have agreed by the terms of our contracts to permit them to so do.

Mr. COLE. That is their business.

Mr. SHAW. Yes.

Mr. COLE. It is up to them to decide.

Mr. SHAW. Yes, they can get over the hump and wind up with something that is more valuable to them in the long run. We made the contacts, so that they could do it.

Mr. JACKSON. We have \$653,000, if my arithmetic is correct, in the till, or can be put in the till, and the school building costs \$1,800,000, which leaves roughly \$1,200,000.

Mr. BLACK. I think offhand we probably could bleed Mrs. Wana-maker. Off the record.

(Discussion off the record.)

Mr. COLE. Put it on the record that you can bleed her for five—do not let——

Mr. BLACK. According to the schedule, they are supposed to give us \$7,000.

Mr. COLE. Well, then, bleed them for eight. I am surprised that you make the statement that you think you can bleed them for two.

Mr. BLACK. Well, it would be bleeding, because I do not think she has the money.

Mr. COLE. She has a million which she has not allocated as yet.

Mr. JACKSON. The legislature appropriated \$7,000,000.

Mr. BLACK. Six and a half, but there was——

Mr. JACKSON. And the earthquake took about how much?

Mr. BLACK. \$7,500,000.

Mr. SHAW. Excuse me, but is it not appropriate to call attention to the fact that by their schedule of State matching money, the school district is entitled to \$700,000 or more from the State for the \$300,000 that it has; is that correct?

Mr. BLACK. But if it is not there, the building cannot be built. We cannot sign the contract until the commitment is in the till—the money is in the till.

Mr. JACKSON. What we are trying to do is to get as much factual information as we can in connection with this emergency situation so that the Commission may have some idea as to how much money they will need immediately, forgetting for the moment the formula, that we have discussed, the committee worked out. I believe that is a fair suggestion, is it not, Mr. Cole, that we want to get the immediate need as far as money is concerned, to meet this proposed senior high school building?

Mr. BLACK. Well, that leads to a question of high importance. If we spend all of our money, and supposing we get all we got from the State and you helped us on this one building and we went into it, then we would be sitting back with no money of our own, no money from the State, and with a junior and two elementary buildings to build.

Mr. COLE. Well, would you not be sure of getting enough assistance, so that you could go ahead and construct the high-school building than not to accept that present solution for the immediate future, with the expectation and the mere hope that you might get Federal assistance for your entire program?

Mr. BLACK. Well, sir, it has been since 1943 trying to solve our problems, that it has taken approximately 14 hours a day of my time on financing to keep the district above water. It would be much easier for us to grant the AEC their busses back and permit them to travel through the district and pick up their students and take them to Richland at a higher cost. It would certainly save us lots of headaches and lots of problems.

Mr. JACKSON. Give us the picture with respect to the rest of the school districts.

Mr. COLE. I still would like to get some figure which would represent the Federal share of this new high school, so that we would know whether to urge the Commission to go to the Budget Bureau and ask the Bureau of the Budget for immediate clearance on its authority to obligate the Commission to the extent of whatever that figure may be, so that you can go ahead and let your contract, but I am not going to be in a position to urge the Commission to do it or not to do it without getting some idea of what the amount is.

Mr. BLACK. Well, I doubt very much if the State could find any place over \$200,000 at the present time to add to this building program until after the bond election in November of 1950, and the figure given on that building is the building itself and not equipped, which again, will probably add another \$150,000 to the cost of it, so, with our \$300,000, and \$353,000, as you consider already obligated, and \$200,000 from the State, would give us approximately

\$853,000 as against \$1,950,000, which would leave on that one building one-million-one-hundred-some-odd-thousand dollars. But I will get a terrific reaction in my own community in proposing one building.

Mr. COLE. You are not proposing it; you are not. The community should not get the idea that you are proposing it. Somebody else is making the proposition, not you. I do not know as anybody is making it yet. I am trying to find out whether the proposition should be made or not, but certainly I can see that you are not in a position to make it as a proposition and go home alive. Did not somebody last week testify that the Federal shares under the Alves' formula would amount to about 60 percent of the cost of construction based on the number of Federal students?

Mr. JACKSON. If so, I think it was for the entire program. I do not believe it was broken down.

Mr. COLE. For the entire program?

Mr. BLACK. I think that could be explained in this way: That after all the Federal pattern throughout the war, in the war effort, at least, was one service person or concessionaire for every two on the pay roll, and every district has that, which is not included.

The only place that they take care of the concessionaires is in Richland, and we have between six and seven hundred students who are causing a squeeze in our place, according to this, and 703 would include our normal growth, too; but in 1943 it was 772, and the average daily attendance this year is 2,841, an increase of 2,069, with a percent of increase of 268, corrected by just a set figure, brings a total enrollment of 3,125 increase over 1943 of 2,276. Those connected on pay roll—that was audited out—1,573, leaving federally incurred otherwise 703 individuals; and you can see that problem alone is approximately double what our original started out to be; that we have to care for outside of the pay-roll attachments that amount.

Now, taking those in total——

Mr. JACKSON. If you do not have it, you can supply it later for the record.

Mr. BLACK. These can be added up. I think it has been added on the original sheet—3,260 is the total pay-roll attachees of all district, and the Kennewick load is 1,573.

Mr. JACKSON. You said that did not include the service personnel?

Mr. BLACK. That is right.

Mr. JACKSON. By that do you mean to exclude the concessionaires? They are included.

Mr. BLACK. The formula is—no, they are not.

Mr. JACKSON. I think according to Mr. Alves' testimony——

Mr. BLACK. No; not in our district. They are included if they are in concessionaire work within the reservation, and live within our district, but those who live within our district and do concessionaire work for people who live there, which has caused the absurd growth of 703 people in addition to that are not cared for.

Mr. JACKSON. I see what you mean. You mean the children whose parents live in your district but who operate a concession in Richland?

Mr. BLACK. They are paid for, but the operation——

Mr. JACKSON. They are paid for?

Mr. BLACK. But if the concession is in Kennewick they are not paid for.

Mr. COLE. The Commission does not have any concessions outside.

Mr. JACKSON. You are referring to indirect service personnel?

Mr. BLACK. That is right.

Mr. COLE. If the Commission were to assure you that it would participate in this new high school to the additional extent of \$500,000 beyond this \$350,000, which is already committed, can you not see your way clear to get the funds to put up the building?

Mr. BLACK. No; because the State does not have it.

Mr. COLE. But under the State formula you are entitled to it.

Mr. BLACK. The State did not appropriate the money. It is not there.

Mr. COLE. It is difficult to understand why a State would adopt a formula for local assistance with one resolution and fail to support it by appropriating sufficient funds to match the formula.

Mr. BLACK. I might say that the amount requested to match all of them on the matching basis within the State which would have been required for the State of Washington was \$40,000,000. The amount given the State superintendent to disburse was \$6,500,000.

Now the legislature did pass a resolution sending this thing to a bond election as of November 1950, for the \$40,000,000, hoping that it would take care of some of the increase there so that the money is still to be raised, so the superintendent has \$6,500,000 as against a \$40,000,000 request. In addition and on top of it along came an earthquake that required \$7,500,000.

Mr. COLE. I am ready to go to another district, but first let me understand, you are authorized to speak for the other districts?

Mr. BLACK. Yes, sir.

Mr. COLE. I assume, therefore, that the other districts are satisfied or will be satisfied with the degree of insistence on which you represent their problem as against your own?

Mr. BLACK. My understanding with them is that they want to settle on the formula basis, which is the basis on which they will be satisfied.

Sunnyside is the next largest district in this community.

Improvised and inadequate classrooms: During the 1949-50 school term, classes of Sunnyside schools will occupy 27 improvised, outmoded, and substandard classes.

Mr. JACKSON. Classrooms you are referring to?

Mr. BLACK. Yes, sir.

In the local Federal housing project they will have two rooms; in the local church basement, three rooms; in a bus garage, two rooms; in outmoded and unsatisfactory school buildings, eight rooms; in storerooms, halls, outbuildings of schools, behind and under auditorium stages, and in other improvised space there will be 12 rooms, for a total of 27. That is in Sunnyside.

Overcrowded classrooms: In the Sunnyside system this fall there will be at least 30 classrooms designed to accommodate no more than 30 children each, which will house 40 or more children.

Number of classes needed to alleviate this condition, 12.

Total classrooms needed now: The total number of classes needed for the coming school year to meet minimum standards would be 39.

Now under construction: At the present time five classrooms and a gymnasium are being added to one of the elementary school buildings at a cost of about \$170,000.

Buildings planned: Senior high school, including industrial arts shops, trades and industries shop, agriculture shop, auditorium and library, approximately \$2,000,000.

Two 15-classroom elementary buildings or additions at a cost of about \$450,000 each, or \$900,000, for a total cost of buildings planned of \$2,900,000.

Financial information: The Sunnyside school district No. 201 has, during the past 8 years, endeavored to raise funds to provide facilities for the children of the district. During this time it has bonded itself to the legal limit three times and voted two special levies, one for 40 mills, and one for 20 mills. These levies, as well as millages for bond redemption, are over and above the 10 mills allowed without an official special vote of the people.

The district now finds the three sources for raising money expended to the limit. No more than 2 mills from the original 10 mills can go into the building fund. But, with a rapidly increasing enrollment, it is necessary to use all this, plus special aid to operate the schools. The 5-percent bond limit has been passed and all the bonds voted cannot be sold until valuations increase and some bonds have been redeemed. Therefore, the district cannot have another bond election for some years to come. Special levies can be voted by the people every calendar year, which has been done.

However, if every source were utilized, it would be impossible to raise enough money to house the natural increase plus the students whose parents work for the Atomic Energy Commission.

The citizens of the school district have accepted the problem and have been willing to extend every effort to provide building facilities. Therefore, they now feel that some assistance should be forthcoming so that all the children in the district do not suffer because of the influx, over which they have no control.

Money that has been raised has been used for the construction of an elementary school completed in 1949 at a cost of \$650,000. Five classrooms are now under construction. There is a small balance left, which will apply on the next project undertaken.

Enrollment information: The enrollment of the Sunnyside school district has approximately doubled since 1943-44, which was the beginning of the reorganized district. The total enrollment in 1948-49 was 3,327. An increase of about 200 is anticipated for 1949-50. However, the marked increase coincided with the beginning of the Hanford project. During the past school year, we had 528 students whose parents worked on the project.

Needed facilities to alleviate problem: Several surveys of the building problem have been conducted and all have come to the same conclusion. A new elementary building has recently been completed and additional rooms are under construction. However, to house all the children it will be necessary in the next 3 years to make additions to two existing elementary schools, and build a new high school, thus converting the present high school into junior high school. This will provide no more than adequate space for natural growth, not including growth caused by Federal projects. All new buildings that can be constructed will be inadequate before they can be finished.

The Sunnyside school district must have maximum effort locally, maximum from the State, and maximum assistance from the Federal Government if the children are to have buildings in which to go to school.

Here is the average daily attendance in 1943-44. They had a total of 1,514. Then it grows each year on up until 1948 and 1949, and their total enrollment was 2,453. The total they estimate, something over 200—an increase—during the next year, which will probably more than likely hold true in Kennewick. Graduating a class of 104 seniors out of high school, and an estimated incoming class into the first grade of 350, will still leave us well over 200 as a growth from that situation alone.

Financial situation in Sunnyside 1940-41 they voted 10 mills, 1941-42, 9 mills, 1942-43, 1.25 mills. I guess they did not have any there for a number of years, but 8 mills on bonds; in 1941-42, 5 mills; 1942-43, 7 mills; 1943-44, 8 mills; 1944-45, 3 mills; 1945-46, 7.5 mills; 1946-47, 9 mills. In 1947-48, 7 mills.

Mr. JACKSON. You can put that all into the record.

(The financial data together with miscellaneous information referred to is as follows:)

\* Basis for apportioning State funds for educational units.

Mr. JACKSON. As I read that table 1, which was included in the report, in the case of Sunnyside under the formula there are 440 federally incurred students, and you have 1,573 in Kennewick.

Mr. BLACK. That is right.

Mr. JACKSON. How many temporary classrooms were supplied by the Atomic Energy Commission in Sunnyside? Maybe Mr. Shaw can answer that?

Mr. SHAW. Five.

Mr. JACKSON. And the rest of the temporary facilities that you made reference to in your report on Sunnyside, I take it, are improvised buildings that have obtained them in their own areas?

Mr. SHAW. No; they built themselves a permanent new 21-classroom elementary school that they finished early this spring, about February or March.

Mr. JACKSON. Well, he is talking about one classroom over a garage or something.

Mr. SHAW. Those are things that they have been using over a long period of time; very inadequate space, but they have been making use of it, just like all other school districts.

Mr. BLACK. This report submitted to me says that these facilities will have to be used in 1949-50. I can see that because they have had nearly 30 rooms under double shift in Sunnyside. That is the only school in the area that double-shifted.

Mr. JACKSON. They operated on a two-shift basis?

Mr. BLACK. Yes, sir.

Mr. COLE. I was wondering how that worked out.

Mr. BLACK. Achievement has proved that that efficiency is about 50 percent of a normal full day's school system.

Mr. JACKSON. When does their first class commence on the two-shift basis?

Mr. BLACK. I believe they started 7:30 in the morning, and that lasted until noon, and went through from 12:30, and went through to 5.

Mr. JACKSON. It started at 12:30 and lasted until 5?

Mr. BLACK. Yes.

Mr. JACKSON. Do you have any questions?

Mr. COLE. No.

Mr. JACKSON. Proceed then to the next district.

Mr. BLACK. I might just say that the total for Sunnyside, total enrollment for the year, was 3,327 students, with 556 transferred, which would leave them approximately 2,800 net enrollment at one time.

Mr. JACKSON. Do they have an immediate school construction program at Sunnyside?

Mr. BLACK. The suggested high school, additions to two elementaries, and——

Mr. JACKSON. They are under consideration, but they have not called for bids or anything?

Mr. SHAW. Not to my knowledge. Having just finished this 21-room school, and having just added 5 other classrooms to another school, they are not actively pursuing another building, to my knowledge.

Mr. BLACK. All right. This will be Franklin County, Pasco.

Mr. JACKSON. They have 572 federally incurred students under the committee formula.

Mr. BLACK. Five hundred seventy-five, according to the report.

Mr. SHAW. It is the other column.

Mr. BLACK. Oh, yes, 572; I beg your pardon. Those are the unattachables.

Mr. JACKSON. Yes; I am referring now to the federally incurred, under the formula, 572.

Mr. BLACK. May I say in behalf of Pasco that about 2 weeks ago, I think one of their 18- or 19-room buildings was burned out, so they are left with 18 and 19 rooms less, and I think they are constructing a 24-room elementary building that will be ready for fall, which will not much more than replace what they lost in the fire.

Mr. JACKSON. Twenty-four classrooms?

Mr. BLACK. Yes.

Mr. JACKSON. Twenty-four-classroom building? And that will be ready in September, next month?

Mr. BLACK. They hope for it to be.

Mr. JACKSON. Was that to supplement or replace the building that was destroyed by fire?

Mr. BLACK. It was in addition to take care of the growth.

Mr. JACKSON. Do you want to comment on that point?

Mr. SHAW. Well, I can. The new building that Pasco is building is an 18-classroom building, 10 rooms of which are the equivalent in funds theretofore available to them through our temporary classroom aid. It was intended that they would be able to move out of some poor quarters that they are currently using, and since they have had this fire where they lost 17 rooms, they are going to have to continue to use those other substandard buildings.

Mr. JACKSON. First, how many temporary classrooms are supplied by AEC to Pasco; temporary classrooms?

Mr. SHAW. None.

Mr. BLACK. They were fortunate in maintaining temporary space in the Pasco Naval Airport by transporting them out 2 miles to it. They have the entire administration building constructed into temporaries.

Mr. JACKSON. They use the surplus Government facilities at the Pasco Airport?

Mr. BLACK. Yes, sir.

Mr. SHAW. We made a little money available to them which they used for some remodeling work out there, but they were able to work out their own deal, and have used it, and those were the quarters which they had hoped to be able to abandon during the coming year, but which, fortunately, they still have and can still use.

Mr. JACKSON. You provide school busses for them?

Mr. SHAW. Yes; we furnish them some busses.

Mr. HOLLIS. Three.

Mr. JACKSON. Three busses?

Mr. SHAW. Yes.

Mr. BLACK. Here is a little capitulation of their building, and so on. The Longfellow has 13 regular rooms and 4 temporaries, and takes care of 672 students; the Whittier has 8 regular rooms, no temporaries, 295. The airport primary, no regular, 4 temporaries, 159; the airport intermediate, no regulars, 12 temporaries, 409; high school, 9 to 12, 19 regulars and 2 temporary, housing 413, for a total enrollment of 1,948; total temporary rooms, 22; regular, 40 rooms.

On July 26, the Longfellow School was destroyed by fire, and 17 classrooms became unusable. A new elementary school, containing 16 regular classrooms and 2 kindergarten rooms will be completed and ready for use in September, but the growth in enrollment will demand 3 more rooms than are available, and the 6 first grades in the new building will be run on a double-session basis.

The facilities and pupils are expected to be distributed as follows when school convenes next month: 18 regular rooms, 850; the Whittier, 8 regular rooms, no temporary, 270; airport primary, no regular rooms, 4 temporaries, 175; airport intermediate, no regular rooms, 12 temporaries, taking care of 400 students; high school, 19 rooms, 2 temporaries, taking care of 450; expected enrollment of 2,145. Eighteen temporaries will be used, and 45 regular rooms.

The airport schools consist of two frame buildings constructed by the Navy for the Pasco Naval Air Station. They are reasonably satisfactory for temporary use as schools although they are not well lighted; they are insufferably hot in warm weather and hard to heat in winter. The fire risk is quite serious, and all pupils who attend must be transported from town, a distance of 2 miles.

The two temporary rooms at the high school are in a flimsy wooden shack which was built for a contractor's tool house. They are used for band and for the showing of films. The school has no auditorium.

Building plans: Were it not for the recent fire, the Pasco elementary grades, kindergartens through sixth, would have been housed in regular classrooms with two rooms to spare. The eight sections of seventh and eighth grades would have been the only groups housed in temporary structures. In order to get these pupils into permanent buildings and to provide for the steady growth in enrollments, the

directors had planned to employ an architect at once to prepare preliminary plans for a new secondary school which could be commenced in 1950 or 1951. The following table shows the expanding enrollments at the upper levels:

Year	Junior high 7-8-9	Senior high 10-11-12	Year	Junior high 7-8-9	Senior high 10-11-12
1949-50	400	330	1953-54	600	450
1950-51	450	350	1954-55	625	485
1951-52	485	390	1955-56	685	535
1952-53	535	400	1956-57	725	600

It is based on the present population and makes no allowance from any increase from river development which is certain to come within a year or two.

Mr. JACKSON. What kind of development?

Mr. BLACK. Reclamation. They are on the reclamation side of the river.

Mr. JACKSON. Oh, yes.

Mr. BLACK. Even though the Airport Intermediate School should continue to be used, it will not accommodate more than 400 or 450 pupils and this number will be exceeded within a year.

The present high school cannot handle more than 500 and in order to do so it needs an auditorium and the science and home-making laboratories must be completely remodeled as they are but temporary arrangements.

In order to start a fund for the high-school building a 17 mill special levy was passed November 1948 and it will be collected in March of 1950. It should yield about \$110,000. Another bond issue to the legal limit of 5 percent was planned for the fall of 1950 and it might bring as much as \$165,000. With the \$275,000 available and some anticipated State aid a start was to be made on the high school plant which, when completed, would likely reach \$1,250,000.

It now appears that the proceeds of the 17 mill special levy will have to be used with the insurance money from the burned building to replace it and the high-school program will have to be postponed for at least 2 years. The building situation is becoming desperate and it does not seem possible to meet it with local and State resources alone.

Their average daily attendance for this past year was 1,817.5, and their total enrollment for the year was 2,421.

Mr. JACKSON. As I understand it they have no immediate school construction program under way. I mean they have completed the elementary school?

Mr. BLACK. Oh, yes. They have got to reconstruct an elementary building, for the one just burned down.

Mr. JACKSON. Well, are they going ahead with that now?

Mr. BLACK. Yes; they have—Mr. Booth submitted this to an assistant—

Mr. JACKSON. As a replacement?

Mr. BLACK. Yes.

Mr. JACKSON. Do they have enough insurance to cover the cost?

Mr. BLACK. Well, I could not exactly answer that question from an insurance standpoint whether they have revalued and brought their values up-to-date or not.

In Kennewick we carry a blanket form, 90 percent coverage. When one building burns we are covered for the whole appraised value, and every 2 years we have to make a new appraisal to keep it up to formula, and I do not know just what plan they are under in insurance. I know here a while back a school building burned out there and they did not have any insurance.

Mr. JACKSON. Go ahead.

Mr. COLE. Mr. Chairman, looking at the clock, it indicates 11:30, which allows us only a half hour to go, and the Commission is here, and I do not want to get caught in the position of having to conclude the hearing without having had a chance to develop with the Commission what the result of its deliberations were since we met.

(Discussion off the record.)

Mr. JACKSON. At this point in the record we will place the record of attendance and enrollment of the Pasco schools.

Mr. JACKSON. At this point in the record we will place the information with respect to Prosser, Kiona-Benton and Grandview public schools.

(The documents referred to are as follows:)

## BUILDING PROBLEMS OF THE PROSSER SCHOOL DISTRICT, 1943-49

*Temporary facilities used as classrooms*

1. Basements.
2. Corridors.
3. Church basement.
4. Transformed lunchroom into classroom.

*Needs and plans for future buildings*

Within the last year two school buildings have been built—a vocational building at the high schools and an elementary building for grades kindergarten, 1, 2, and 3. Both have relieved somewhat the overcrowded classroom conditions that existed. Funds were supplied by the local district, State, and Atomic Energy Commission.

The construction of bare classrooms does not solve the housing problem. There are other necessary rooms needed in all modern school buildings.

The following buildings and alterations are considered necessary to bring the school system up to a standard consistent with good established school practice.

1. Prepare old junior high auditorium—gym and basement entirely into classrooms and construct a new auditorium with facilities for music classes and cafeteria. Estimated cost..... \$250,000
2. A gymnasium for physical education classes large enough to provide for two classes going at once, bleachers, showers and locker rooms, and storage facilities. Estimated cost..... 200,000
3. Replace old plumbing at Riverview elementary. Estimated cost... 20,000
4. Rewire and relight at Riverview elementary. Estimated cost..... 15,000
5. If basement is to be used at Riverview, it should be put into better condition. Estimated cost..... 25,000
6. Grounds improvement at Riverview..... 2,000

Total cost..... 512,000

## HANFORD SCHOOL FACILITIES

KIONA-BENTON CITY CONSOLIDATED SCHOOLS,  
*Benton City, Wash., August 4, 1949.*

Mr. E. S. BLACK,  
*Superintendent of Schools, Kennewick, Wash.*

DEAR SIR: In compliance with your request I am summarizing the status of the school-housing emergency which exists in our district due to the sudden increase of enrollment brought about by the proximity of the Hanford Works of the Atomic Energy Commission.

Faced with necessity for (1) immediate increase of school rooms or (2) placing the schools on a two-shift basis, at the beginning of school last fall this district secured six tropical hut-type housing units and moved them upon our school grounds as a temporary measure for meeting overcrowded conditions. While we used these huts last winter they were highly unsatisfactory for the following reasons:

1. Temperature control is impossible. During cold weather temperatures usually varied during the day between 40° and 60° Fahrenheit. Children sat around in overcoats and sweaters. On several days cold was so severe in these huts that school there had to be dismissed. In order that these huts should not be intolerably cold in the morning fires were maintained during the whole 24 hours at a very high fuel cost. Then when warm weather came in May temperatures within the huts soared to 94°.

2. Heating arrangements are such that there is a constant fire hazard.

3. Floors are of loosely fitted one-half inch plywood making them very noisy and difficult to keep clean.

4. The huts have no indoor toilets and small children have to go through outdoor cold to a separate building for lavatory facilities.

5. Lighting and heating and ventilating facilities in the huts are below even moderate health standards.

In short the huts are a temporary makeshift to be endured for as short a time as possible. Even by using these huts and every possible space in our permanent school structure enrollment in elementary rooms under one teacher ran as high as 58.

In order to increase classroom space our high school is operating without home-economics or manual-training departments and hall space and basement storage space have been converted into classrooms.

To alleviate these unsatisfactory conditions the school district has purchased a site and has had an architect submit temporary plans for a new elementary-school building with 11 classrooms estimated to cost about \$400,000. To meet its share of the cost of such a building the local district has voted bonds in the full amount permitted by State statute limitations. We are sincerely hoping that Federal and State aid will make this building possible.

Very truly yours,

H. R. SIMONSON,  
*Superintendent Kiona-Benton City Consolidated Schools.*

GRANDVIEW PUBLIC SCHOOLS,  
SCHOOL DISTRICT NO. 200,  
Grandview, Wash., August 5, 1949.

The total enrollment of the Grandview schools, by years, is given as follows:

1943.....	860	1947.....	1,229
1944.....	980	1948.....	1,342
1945.....	1,065	1949.....	1,475
1946.....	1,187		

The average daily attendance figures for the same years are:

1943.....	660	1947.....	955
1944.....	709	1948.....	1,021
1945.....	782	1949.....	1,127
1946.....	874		

The building program for district No. 200 to date has included the following projects. These have all been completed or are in the process of being completed since the Hanford impact.

1. A four-room addition and a cafeteria which was added to the Central grade school, at a cost of \$74,925.81.
2. A new general shop at cost, \$36,718.47.
3. Remodeling the senior-high building at three different occasions to enlarge and improve facilities.
4. Adding temporary bus housing for three busses.
5. Construction of a new 10-room elementary building at a cost of \$232,-695.01.
6. Enlarging the high school, at a cost of \$54,816.

The above projects do not include the acquiring of sites, the landscaping of grounds, and the equipping of the new buildings. Most of these expenses have been taken out of the general fund, which at the beginning of 1949-50 is \$8,697.15 overdrawn.

#### SPECIAL LEVIES AND FINANCIAL ASSISTANCE

These building improvements have been financed by special levies, money from the State, money from the general fund, and money from the Atomic Energy Commission.

At the time the Hanford project started, the Grandview schools had building facilities as follows:

1. An 11-room senior high school.
2. A 7-room building used to house the sixth, seventh, and eighth grades (junior high).
3. A 10-room elementary school (Central School).
4. 1 3-stall bus garage.
5. A wooden building used for a manual arts shop.

These facilities were considered more than adequate at the time. In fact the district owned a 4-room school on the east side of town which they sold to the Seventh Day Adventist group for \$1,000, thinking that they would never need it again.

School District No. 200 has voted the following special levies:

	Amount levied	Approximate amount raised
	<i>Mills</i>	
May 12, 1945.....	20	\$20,000
Mar. 2, 1946.....	20	34,500
Mar. 1, 1947.....	30	58,500
Mar. 6, 1948.....	30	75,000
Nov. 2, 1948.....	30	86,000

We have received matching money from the State on two different occasions. A grant of \$31,834.63 was allowed to complete the addition to Central School, and a grant of \$106,235.05 was made to complete the new 10-room grade school building. The Atomic Energy Commission is paying the cost of completing the two wings on the high school, at a cost of \$54,816.

Most of the money used in remodeling the junior high school was taken from the general fund.

#### TEMPORARY HOUSING

Since the Hanford impact we have used the following temporary housing:

1. The music department has been moved to the old wooden building which at one time was used as a manual arts shop. This department is housed there at the present time.
2. When the cafeteria was completed it was partitioned into five classrooms before it was ever used. It is now in use as a cafeteria since the new grade school has been completed.
3. A storage room in the new addition was used as a classroom for a time.
4. The basement of the Presbyterian Church was used for a time.
5. Two grade rooms were crowded into the high school for 1 year.
6. The Government housing project was used to house one class for a year.

## FUTURE BUILDING PLANS

Members of the staff from Washington State Department of Education made a survey of the building facilities of the Grandview schools 2½ years ago at the request of the local school board. One of their recommendations was to use the old junior high school as long as was absolutely necessary, but not to put any more money into it, for it was not an adequate structure. We have had to do some remodeling on a temporary basis.

In view of the needs at the present time the board has projected the following building plans as soon as funds can be made available:

1. A new senior high school to house 400 students. This school to have a gymnasium, auditorium, cafeteria, and music rooms, but not shops, for they are adequate.
2. A new bus garage to house seven busses.
3. A four-room addition to the new grade school building.
4. A new site on which to build the high school building.

This will not take care of the increase in the grade schools due to the high birth rate, which is hitting all schools at the present time. This will necessitate using the old junior high for a grade school for several years. When the new high school is completed, the junior high will move into the old high school building.

The cost of the proposed improvements are estimated as follows:

1. The new high school.....	\$600, 000
2. Bus garage.....	25, 000
3. 4-room addition.....	90, 000
4. New site.....	15, 000
Total.....	730, 000

The members of the local board of education feel that another special levy will be impossible to put across in the community for at least 2 years, on account of having voted five straight. Also it is improbable that the State will not make additional grants until the next session of the legislature. We will have about \$80,000 in our building fund after taxes are paid this year which will be available for this program.

CLARENCE MCCLURE,  
*Superintendent of Schools.*  
 H. L. CROSSLAND,  
*Chairman, Board of Directors.*  
 JOY LEACH,  
*Clerk, Board of Directors.*

## ANNUAL REPORT OF SCHOOL DISTRICT

School district: Grandview, No. 200, Yakima County.

Class of district: Second. Post-office address: Grandview, Wash.

To Superintendent of Public Instruction:

We hereby certify that this report is correct and complete, and that the total attendance and number of educational units reported herein is the correct legal basis for the apportionment of State funds to this school district.

CLARENCE MCCLURE,  
*Superintendent, principal, or teacher.*  
 JOY LEACH,  
*Clerk or secretary of school district.*

Date: June 22, 1949.

I hereby certify that I have examined the report and compared the attendance and listing of certificated personnel with information on file in my office and find this report to be true and correct to the best of my knowledge.

C. M. TURNER,  
County Superintendent.

Date: June 30, 1949.

\* Basis for apportioning State funds for educational units.

Instructions: List only certificated employees. Excludes occasional substitutes and certificated personnel whose salary is paid or reimbursed 80 percent or more from Federal or other funds. List as superintendents all heads of systems with two or more schools who give half time or more to administration. List as principals all who give half time or more to administration. Part-time personnel should be converted to full-time by dividing the total number of hours employed during the school year by 1,080 (6-hour day for 180 days). Express decimals to the nearest hundredth.

The above tabulation of personnel must agree with supplementary personnel listings (Form A-2 supplement). Special service personnel should include only approved special service units, for which a special claim is being made on Form A-6, special service unit report, for extra apportionment credit. If a teacher divides her time between classroom instruction and an approved special service the proper fraction of her time should be credited to the special service and the balance of her time classified as classroom teaching.

Mr. JACKSON. I wonder if we could not ask two or three questions to summarize: I take it that your district, as you have testified, making plans to build a senior high school, that will cost about \$1,800,000—the Pasco School will be making arrangements to replace the grade school lost by fire, is that correct?

Mr. BLACK. Yes, sir.

Mr. JACKSON. Now, as far as Sunnyside is concerned, there are no current plans for immediate construction. They have just completed a grade school or a school building anyway, in that district, is that correct?

Mr. BLACK. They are building now additions, and so on.

Mr. JACKSON. But I mean no new construction?

Mr. BLACK. I think they have an architect planning for other buildings right now.

Mr. JACKSON. At the present time?

Mr. BLACK. Yes.

Mr. JACKSON. What about the balance of the districts?

Mr. BLACK. Well, I would say Benton City is probably the worst of the group. They are operating in temporaries so far worse than even ours that it is questionable whether they can keep heat up at all. They could not keep heat last year, and the health problem was terrific. They had to use the lavatories in another building which did not meet health specifications, to begin with, and they added all the temporaries onto them for lavatory space, and such, and they are having quite a problem continuing on with health orders issued by the health department, because they are not meeting their problem.

Prosser is probably the least concerned for immediate need. However, they are using their home economics and things like that for classrooms, and have cut out those things that are part of a regular high-school system in order to carry on. But it is my understanding that they were not planning any building right at the present time.

Mr. JACKSON. I am wondering if possibly after the adjournment of the meeting this morning we could work out a statement that we could have for the record to include the absolute emergency situations that exist in the area so far as immediate construction is concerned. By that I mean those that they propose to start this fall. How would that be, Mr. Cole, to get a summary? We understand the over-all need, and as included in the report and as outlined in the report, but in order that we have this for the record, I wonder if you may want to consult some of those people out there, and if you could be thinking about that, and we will meet again, either this afternoon or tomorrow, to complete the record.

Mr. BLACK. The first question I think which will be asked me out there, and by my own people out there in my own district, will be, if we accept a preliminary settlement on this, what are we going to look to, to a final settlement based on this formula? That is the thing, how soon and when?

Mr. JACKSON. What you are asking for is over-all contractual authority, although it may not be necessary to have all of the funds immediately. That is your point?

Mr. BLACK. That is right. If we could have that, I am sure, everyone there would be willing to go along and would go along very nicely, to be met, as it would have to be met, for these buildings, but to ask them to do otherwise, I am sure, that there would be quite a rough reaction to it.

Mr. JACKSON. Well, try to think over the over all situation and see what the immediate monetary needs are to deal with the emergency situation, if any, in these districts. Dispensing for the moment with the over-all contractual authority, let us see if we can get some figures as to how much money would have to be divided up, so to speak, if approval should be given to the committee report.

We are confronted with a very realistic and very difficult situation. The appropriation for the Atomic Energy Commission was rather substantially cut by the Senate, and in addition, language was in-

cluded in the report which prevents them from transferring funds from one category of operation to another. I believe that is the situation.

That particular language, together with the cut, as it differed from that of the House, of course, will be settled by the conferees, so, bearing that in mind, the committee would like to get some information as to how much the immediate outlay will be. If you will be checking on that, I think possibly it would be well for the committee to go into executive session now to meet with the Commission.

MR. SMYTH. Mr. Jackson, could we, for the sake of the record, get 5 or 10 minutes of testimony from Mr. Shaw?

MR. JACKSON. Yes. I was going to do it. Do you want to do it now or do you want to do it later?

MR. COLE. I have just two or three questions, before we go to that. Are you in a position to assure the committee and the Commission that if the Alves committee formula is adopted by the Commission that these six school districts will not make any further claims on the Commission for Federal assistance?

MR. BLACK. I believe the Commission could answer that better than we can.

MR. COLE. The Commission cannot answer what the school districts are going to expect.

MR. BLACK. If there is no further influx of people we will continue on—the natural growth in our community is far above the regular 5 percent that a district can carry.

If the percentage of increase does not hit us, like it has now, we will continue to carry on and do all we can. I do not believe we have ever made a demand on the Commission that was not made without being forced to be made, and being forced to carry through on it.

MR. COLE. I mean we can take it that in the absence of any abnormal growth—

MR. BLACK. That is right.

MR. COLE. There will be no further demands from the districts for assistance?

MR. BLACK. That is right.

MR. COLE. Do you have authority as superintendent to deny admission to the public-school system of any of these children whose parents are employed directly by the Commission?

MR. BLACK. Not exactly under the laws of the State, but here is the thing: If you had a big brother coming along and dropping 10 youngsters on you and he said, "I am tired of raising these; you have to raise them," could you do it without a protest? The question with us is, these youngsters are dropped on us. There are no laws in the State for any money to come from, and we are forced to do something with nothing to do it with, and I think if we turned them out and went to court, with a jury within our area, knowing and being immediately close to the problem, that it could be tied up to such an extent that it would work a terrific handicap for all concerned, but we do not want that type of thing to happen.

We are just as anxious to cooperate with the Atomic Energy Commission as anyone else. Their idea that a lot of money being spent in a community solves the problem is not correct. It does not. There are a few businessmen in the community representing less than 5 per-

cent of the area who make a profit, but the only fellow who gets a come-back at them is Uncle Sam through the income tax. There is no law that states that because a man makes a million dollars the school can extract \$900,000 to help us out with. We have our regular rules and regulations.

These children are dropped on us. They say that we have got to do it. Well, if anyone can show us the way whereby we can do it and what to do it with, we are tickled to death, and we are glad to do it. But we just cannot educate two and three and four hundred percent on the basis of funds that are ordinarily granted to us, and while we would like to cooperate, that influx of people has increased their value; it has increased their taxation, and if they want to remain as individuals their produce that they sell has not increased in value accordingly, so it has added to their hardship.

Mr. COLE. All right.

Mr. JACKSON. Mr. Shaw, would you like to sort of summarize what has been commented on here this morning, and then when we meet again later, to make a more detailed statement, if you would like to. You can do it either way. We want to meet with the Commission in executive session, and I want you to know that we are not cutting you off at all. It is just a matter of time here.

**STATEMENT OF DAVID F. SHAW, DEPUTY MANAGER, HANFORD OPERATIONS OFFICE, ATOMIC ENERGY COMMISSION, RICHLAND, WASH.**

Mr. SHAW. Well, the nature of the information that I have is such that perhaps it should be presented, and it can be presented quite tersely, I think, all at once, and rather than in the nature of specific comments on items which have been submitted by Mr. Black. I have rather a comprehensive picture here on two subjects which I feel are important for the record.

The first one is to explain a little bit about the meaning of the three-party agreement that we did arrive at, and which I believe is in your possession.

The other is to summarize the aid which we have already given to the school districts, and to show just how we are in the coming year as compared with how we were last year to shed some light on the nature of whether this is really an emergency that we are talking about now or whether we are talking about a long-range Federal participation in education.

Do you want me to go on and give my information now or later?

Mr. JACKSON. Go right ahead.

Mr. SHAW. Well, the history of our aid to schools started in the fall of 1947, when we entered into these maintenance and operation contracts.

Since that time, and including the past school year, we have made payments to these six districts which have been named, and also the county school of White Swan, to which we made a payment of \$4,400, for a total of \$471,600.

In addition to that we have furnished 27 busses on a loan basis, which we are extending, and intend to extend on a year-to-year basis as long as that is necessary to the school districts to keep them from collapsing, transportationwise.

We intend that this maintenance and operation money will be very small during the coming year, and there will be probably no payments made under that after the middle of the year. The reason for that is that we are paying for seats in these schools, and despite the fact that there may be different students occupying those seats we only pay for the seats for 1 year. That is the period of time until the State picks up.

We recognize the fact that the school districts would be confronted with an emergency housing proposition for these children somewhat later, and we realized the problem that they would have in their maintenance and operation. Accordingly, it was some time later that we entered into the first of our agreements to supply temporary classrooms.

The first such agreement was made with Kennewick, and amounted to 22 classrooms. It was the furnishing of the structures themselves rather than a payment for that purpose. It was the buildings themselves. Those buildings were completed in the early part of the last school year, and the last of them, I think, was in there some time in October.

After that, recognizing that the same condition applied to other school districts, we attempted to apply the same sort of an approach to them, to get them out of their dire difficulties for the immediate problem of this emergency load.

It soon became apparent, and we were approached very seriously by the State department of education as well as the school district, that the districts themselves could make better use of the money which we would spend anyway for such temporary facilities, if they could put those payments or the amount of money represented by the temporary facilities which we might make available to them, with money that they themselves had, and that they could get from the State in the form of matching funds so that they could build more permanent classrooms.

This we acceded to, as being in the long-range best interests of the districts, and in those cases where the school district could show—rather more than showing, it was a matter of their own responsibility—that they could handle the temporary load and still use this temporary money of ours for building permanent buildings, we have entered into contracts with them making available the dollar equivalent of temporary aid which they can use on permanent construction.

Now, the total which we have so made available is \$985,900. This gives a combined total of assistance that we have given to the surrounding school districts of \$1,547,500, and the 27 busses.

To take a look at what they have actually done with that temporary money that we made available to them, the Grandview school district has received from us a grant of \$56,000 for this purpose, and they are adding 4 classrooms to their high school. The final cost of that is going to be \$54,816, so there will be a slight adjustment of our obligation on the subject.

Kennewick, the amount of money available to them, worked out to be \$470,000, of which the value of the 22 temporary classrooms that we furnished amounts to \$117,000. The balance of \$353,000 is the sum which Mr. Black discussed this morning.

It is not obligated by him at the present time. It is available to him. We have it as an obligation of last year's money.

Mr. JACKSON. If I may interrupt at that point, Mr. Shaw, the temporary units to which you have referred and which have been made available to the districts, are they on a loan basis or does title pass to the school districts?

Mr. SHAW. Title remains with us in the case of the Kennewick buildings.

Mr. JACKSON. How about the other areas?

Mr. SHAW. There is only one other area which has actually built temporary structures with our money, and that is Kiona-Benton City.

Mr. JACKSON. No, but I take it that these temporary units that we are talking about that have been made available by the Commission, were they Government buildings that were moved onto the premises?

Mr. SHAW. Only in the case of Kennewick.

Mr. JACKSON. Only in the case of Kennewick?

Mr. SHAW. In the case of Benton City, we actually disposed of some small structures we had to them by sale, and they used this money to buy it so that the title rests with them. All of the other school districts have elected to use the equivalent dollars of temporary construction to build permanent buildings.

The Kiona-Benton City situation is a situation where we compute \$68,347 as being available to them for building six elementary classrooms. They have fallen into the same trouble that Mr. Black did with the State and have been unable to get State matching funds for the money they have had, so they have not made a contract for it. Instead of this they used \$12,500 of that \$68,000 to recondition and purchase from us at a nominal figure some hutments which they have converted into seven temporary classrooms.

Pasco has used a sum of \$171,000 made available by us on the construction program to add 10 rooms into this 18—that is, 10 rooms of the 18-room new elementary school which they built. The money for it comes from this \$174,000.

At Prosser, a grant of \$72,770 has been used, combined with money of the local district, to build 6 of a total of 12 classrooms in that elementary school. It is now completed, and will be used next fall.

Sunnyside has used \$130,000 of ours to add five classrooms to one of their existing schools.

In addition to what we have furnished these schools, they themselves have built considerable in the way of schools, and have more coming in next fall than they had last year.

Grandview has built a new 9-room elementary school, and Sunnyside has built a 21-classroom elementary school, in addition to those which I have already mentioned, so that the total picture now becomes something as follows: Where last fall in October there were 10,242 children of dependents of the Commission who were housed in these 6 school districts, there were then, exclusive of the temporaries furnished to Kennewick, 263 classrooms. That is an average of 39 pupils per classroom.

With the provision of all the classrooms that we have made available, and with the new classrooms which they themselves have built, in this coming fall we will have 341 classrooms. We have assumed that the school population next fall will certainly be no more than what it was at the end of the school year this past year due to reductions in

employment load at Hanford, which information I could furnish you if you wish, but we have projected forward as the next September school enrollment the enrollment as it was at the end of school this past year, or a total of 10,474 pupils. This, divided by the new number of classrooms totally available is 31 pupils per classroom, which indicates that if the school districts use the same unsatisfactory, granted—but they were used last year. If they use all the classrooms they used last year, plus the new ones that have been built, they actually have a much less crowded condition confronting them in the future, next year.

It is recognized that they will probably not operate that way. They will choose to put more pupils into the better rooms that they have, and do away, where they can, with the use of those classrooms which are so very substandard.

Now, the second part of my remarks has to do with the philosophy involved in the committee report, with which you are all familiar. We set at that time to produce some sort of an agreement whereby we could assess the responsibility of the Atomic Energy Commission for permanent classrooms.

As you probably notice, we wound up with an attempt to assess the responsibility of the Federal Government. The reasoning for that is, perhaps so obvious, that it does not need reiteration, but I would like to mention that the reason for that is that we have felt, since we started this program at Hanford, that our responsibility was to keep the school districts from folding up, to just keep their chins above water, as it were, for the emergency period of the impact, and that we did not feel that it was the responsibility of a particular Government agency to enter into a program which would involve the total issue of long-range Federal participation in education, and I think that this over-all picture that I have given indicates that we have coped with the issue of emergency—the crying need has been coped with.

The problem is the long-range matter of bringing the facilities that these districts have up to a decent par so that they can provide adequate education for the children, and I speak both for myself and for the other members of the committee, when I say that we recognize that something very definitely needs to be done in that connection, because the schools themselves are woefully inadequate as far as their physical plants are concerned.

Mr. JACKSON. Mr. Shaw, it has been rather difficult for you up until now to even get around to the point of discussing the permanent school problem in view of the fluctuations that have taken place at Hanford in employment; is that not right?

Mr. SHAW. That is very true. It would have been hard even if we had felt it was our field of activity.

Mr. JACKSON. I mean, even assuming that you have the authority, you would have to almost pick a figure out of a hat, because it was pretty difficult to predict the number of people who would be employed in the area. I mean the construction program has been up and down, and the over-all production program, too, has been somewhat of a problem.

Mr. SHAW. It has changed a great deal, from time to time.

Mr. BLACK. Could I ask one question that might bear upon this and shed a little light on this?

About the time I left the area out there, there was a terrific rumor going on which may have some effect on the impact, that the Arco situation was being transferred back to Hanford, because of lack of water and a few other things.

Now, that, in turn, would have some effect.

(Discussion off the record.)

Mr. COLE. If you were assured that Arco was not coming back to Hanford, would that solve everything?

Mr. BLACK. Up to date, yes, and with no further tremendous influx, we will leave you alone, because it is too much of a job to get it. [Laughter.]

Mr. COLE. You mean that if Arco does not come to Hanford that you are not going to ask anything of the Federal Government?

Mr. BLACK. The report, the recommendation—

Mr. COLE. I mean outside of what you have already asked for?

Mr. BLACK. Yes; that is right.

Mr. JACKSON. Any questions of Mr. Shaw?

I want to say that Mr. Shaw has been very cooperative with me in connection with this matter, and I think that the workings of the committee indicate that you folks got together out there and tried to spell something out under very difficult circumstances.

I certainly do not envy the position that any of the people have been in out there, that is, both ECA and the school district officials. It has been a very troublesome problem, and I want to say that I think that the matter has come along very well, and I want to compliment all of you for trying to get together and working something out on it.

Mr. VOLPE. Mr. Chairman, I wonder if I could ask Mr. Black just one question.

Mr. JACKSON. Yes, Mr. Volpe.

Mr. VOLPE. Realizing, Mr. Black, that the situation in the Hanford area may be somewhat aggravated because of the project there, is it not true, however, that in terms of permanent construction, that is, a long-range program for schooling, and that it is a situation which is quite prevalent throughout the whole State of Washington and, as a matter of fact, probably throughout the country in many areas, that is, that there are woefully deficient permanent school plants, as a general matter?

Mr. BLACK. I would say, due to war troubles and the transferring of people around the country, the State of Washington is one of the worst hit in the United States with respect to the influx of war workers that came during the war and stayed, but the question we are faced with in local districts in the State is that we can levy a bond issue of 5 percent. That is all the funds we can receive toward building. That 5 percent bond issue, placed on a per capita basis, amounts to about \$100 per child. Locally, that is what we can raise. The cost is about \$1,700.

Now, putting yourself in my position, would not that be quite a problem to solve?

Mr. VOLPE. Well, and without any affront to the State of Washington, I suppose the somewhat restrictive system for providing funds for schools is to some extent responsible for the situation.

Mr. JACKSON. I will answer that. I think the honor of the State of Washington is involved in this.

Mr. VOLPE. I meant no affront, Mr. Chairman.

Mr. JACKSON. We understand. [Laughter.]

But to refer to the record, I believe Mr. Alves testified that on the basis of the formula that has been followed generally, the effort that is being made by the 48 States for school construction, the State of Washington is seventeenth. As I recall the record, that is the position.

Mr. COLE. It was one in the middle. [Laughter.]

Mr. JACKSON. We were seventeenth, and I think they figured that on the basis of income in the State, the school construction cost, and the amount of money they make available for school construction.

Mr. COLE. I do not think that was for construction. That was the public funds used for public education.

Mr. JACKSON. For operation and maintenance and construction.

Mr. COLE. Yes.

Mr. JACKSON. Anyway, I think the record will disclose, Mr. Volpe, that the State of Washington is well up on the list so far as educational standards are concerned. There is no question about that, but with respect to the second point, as to the efforts being made by the State with the financial resources available, we are relatively high on the list.

Mr. VOLPE. The only point I wanted to make was that I think the facts indicate that while the addition of the school population because of the Hanford site does aggravate the situation, you would nevertheless still face quite a problem from the standpoint of a long-range program, because of your inability to acquire funds for a long-range permanent construction school program.

Mr. BLACK. Not if it had not been for Hanford.

Mr. VOLPE. If it had not been for Hanford—

Mr. BLACK. We would have been all right. May I say something off the record?

Mr. JACKSON. Yes.

(Discussion off the record.)

Mr. SHAW. Could I ask a further question along the same line as Mr. Volpe's? I thought you said as long ago as 1940 you actually had less adequate facilities than you had pupils, even at that time.

Mr. BLACK. We did not, but with our local availability of funds and State matching we could have far more than solved that problem.

Mr. VOLPE. But you do face a problem now insofar as the State matching funds is concerned. I believe you testified earlier that there is a certain amount due from the State which although due will not be available.

Mr. BLACK. Not until 1950, and I want to commit myself, as one school man, working for it tremendously so that it will be available.

Mr. SHUGG. May I ask one question, Mr. Chairman, with respect to one point?

Mr. JACKSON. Yes.

Mr. SHUGG. As I understood it, Mr. Black, your point was that if this agreement could not be consummated by the end of this month that steps might have to be taken to exclude some children from the coming school year. I am not aware that the consummation of this agreement by any Federal agency would change physically the facilities for this coming fiscal year or would affect your ability to care for the pupils during this coming year, this coming school year.

Mr. BLACK. Mr. Shugg, we have stood on our heads for 4 years, trying to find out where we will place the children. I testified earlier

that if a commitment were made so that we could move in, we would do everything in our power to continue if we could see the end in sight.

Mr. SHUGG. I can see that point, that some decision would give you assurance as to the future, but the decision itself would not affect your physical facilities for the coming school year.

Mr. BLACK. If we had a commitment within 2 or 3 weeks on our high-school building, so we could move into it by midyear, we will continue with all of it, and if the commitment is made on that basis, probably we will be after funds before the end of the year toward the construction of two elementaries, and next summer on the addition of a junior high school, to complete it, and if we get that set up—

Mr. JACKSON. Would the senior high school be completed by mid-year? Can you get it up?

Mr. BLACK. We build faster than on a cost-plus basis. They get so much money, and they do not make so much profit, and the sooner they get it done, the more they make.

Mr. COLE. I want to make certain that I understand Mr. Shaw's position, and that is that the situation in the Hanford area is no more acute for the coming school year than it was for the past school year, taking the area as a whole.

Mr. SHAW. Based upon the data, it will be better.

Mr. COLE. Does that same average situation apply to the Kennewick district?

Mr. SHAW. Yes. The Kennewick district, incidentally, sir, is the worst of all of these districts. In the coming school year, with the use of the 22 classrooms that we did furnish, they will still have a nominal usage per classroom of 35 pupils.

Mr. COLE. But they had those 22 units last year.

Mr. SHAW. Very early last year, yes. The basis of my comparison was made upon the beginning of last year, so their condition in the coming fall, we feel, will be the same as it was at the end of the school district—school semester of the district this past year.

Mr. JACKSON. Mr. Shaw, as I interpret Mr. Black's problem, the difficulty is not so much—if there is an emergency—in connection with a lack of space for the students, but the fact that the facilities that are now being used, particularly these temporary facilities are woefully inadequate. He referred to the temperature during this unusual winter we had where the classroom was down to about 45° or 50°. I mean is that not the real problem that they are concerned with, that the temporary facilities are not the kind that should be continued on indefinitely?

Mr. SHAW. Yes.

Mr. JACKSON. I think that is the nature of the emergency, if any.

Mr. SHAW. Yes, but that is not a new emergency.

Mr. JACKSON. It is a continuing one.

Mr. SHAW. The point I was making was that it was no worse, in any case, in any school district—it should be no worse this coming year than it was this past, and in most of the school districts it is definitely better because of their completion of school facilities during the summer.

Mr. JACKSON. They will not be as crowded, but the condition of the temporary facilities will remain pretty much the same.

Mr. SHAW. They are still pretty poor structures, a lot of them, but I would like to point out—

Mr. JACKSON. What about the danger of fire? That is something I think we ought to think about.

Mr. BLACK. I would like to make one remark regarding our junior-senior high set-up. We have one standard building to operate for 500 people. This last year we had 1,135 enrolled, and at the beginning of the next year we will have 1,350, and, gentlemen, I do not know if you have ever had any experience as a school man, or not, but to operate with 1,300-some young youngsters in a given building for 500 is a problem.

Mr. JACKSON. What is your understanding, Mr. Shaw, of the fire protection and what not of the facilities?

Mr. SHAW. Well, they have all been put in, on the specifications and materials and so forth of the school districts concerned, except for the 22 classrooms put in at Kennewick, and there Mr. Black can tell you better than I. They were acceptable to him, however, as temporary facilities. So, we leave the responsibility for that, of course, with the people who are going to use it.

Mr. JACKSON. There is less danger of these individual classroom Quonset hut type; is that what you mean?

Mr. SHAW. Well, those are old barrack structures which have been remodeled, but they are individual outlets and individual doors.

Mr. JACKSON. But there would be less danger in that type of building than an old building where the school building is on two floors or three floors?

Mr. SHAW. As a matter of engineering judgment, yes.

Mr. JACKSON. I mean, you can get out of a small wooden structure.

Mr. SHAW. One-story building, with individual outlets for classrooms, has a certain element of safety.

Mr. BLACK. Mr. Chairman, I thought I was doing rather nicely with those temporaries until I got the people in them; and we have had three broken legs; and a thrown-out hip by a school teacher trying to use the lavatory. That is why I travel a good share of the time; I do not have to meet them.

Mr. SHAW. Could I also emphasize one point, Mr. Chairman?

Mr. JACKSON. Yes, Mr. Shaw.

Mr. SHAW. In predicting the fact that by next September we will have no more pupils in these districts than we had at the end of the school term this last year, we have made an assumption which is extremely on the conservative side.

We had at the end of this past school term in those school districts slightly more pupils than we had at the beginning of the school term. At the beginning of the last school term we had a total employment at Hanford of 26,000. When school closed in June we were down to 15,000, and we are down now to 13,000.

A lot of those pupils stayed on until the end of the school year, but it is certainly reasonable to assume that with the start up of school again in the fall, a considerable number of those pupils who were present at the end of this past school year will not be there, so that this assumption that I have made in saying that the situation would be better is definitely on the conservative side.

Mr. JACKSON. Any further questions?

If not, we will go into executive session.

Mr. COLE. What is there about what the Commission has to say that requires it to be an executive session? If there is any reason for it, why, all right.

Mr. JACKSON. Well, I will leave that up to the Commission.

Mr. SMYTH. For one thing, I should say that the Commission is in a very informal status at the present time.

Mr. COLE. There is nothing secret about it; is there? That is a public fact.

Mr. SMYTH. There is nothing particularly secret about it.

Mr. COLE. Well, I think it would be helpful, not only for the folks who are interested in this problem would it be fair, but from the school end of it, that they should have some indication of the attitude of the Commission and of the Commission's position with respect to its capacity to give relief.

If Mr. Black and the interested school people can get that understanding from you people otherwise than through this committee hearing, why, well and good. If this is the only opportunity Mr. Black and his people have of finding out how the Commission feels about it, why, then, let us have it on the record so that you can hear it.

I do not know whether you have talked this over with him or not, and he has an understanding of your predicament.

Mr. SMYTH. I certainly have not talked with Mr. Black.

Mr. JACKSON. I certainly do not think there has been any discussion with Mr. Black other than the committee session on it.

Mr. SHAW. Well, since the committee session there have been no conversations at Hanford, but prior to the time of the committee meetings and in the committee meetings, there has never been any lack of understanding on the part of any of the school districts as to what the Atomic Energy Commission was out there at Hanford, and that was temporary, yes; permanent, no.

Mr. JACKSON. I think that is definitely true, because I recall that very statement of yours when we were out there, and I think the rest of them all understood that.

Mr. SHAW. That has been repeated.

Mr. JACKSON. Mr. Smyth, would you like to comment?

Mr. SMYTH. I will try to give the position, as I understand it, subject to correction from my colleagues.

You remember, first of all, that at the end of our session here last week, the suggestion was that after this morning's session, that is, after hearing from Mr. Black, the Commission might have a meeting and might make a recommendation.

Actually, we had a meeting last Friday, and I had to leave a little early, but I will give you what my impression of what our position is in a very informal way.

First of all, this does seem to us to be a question of very general principle, and not peculiar to the Atomic Energy Commission; that is, it seems to us though the situation may be more acute at Hanford than elsewhere in the State of Washington and elsewhere in the Nation, that there is a very serious educational problem, a problem of educational facilities, all over the country.

I might say that the financing of it is not confined to the public schools. I am very well aware of some of the difficulties private institutions are facing.

Therefore, I believe there is a general principle involved.

As far as the immediate position is concerned in terms of what Mr. Shaw has said, we do not see an emergency as of this particular month or as of this particular coming year.

Furthermore, as you have already stated, we have no money, nor have we any item in the budget for expenditures of this kind.

Therefore, we would certainly not be able to undertake this without discussions with the Bureau of the Budget and without, presumably, specific authorization and possibly legislation.

I believe that the position of the Commission is that we are not convinced that the Commission, as apart from the Federal Government at large, should undertake this responsibility, and that we are quite clear that the Commission's position is unable to take this responsibility immediately. That is my understanding of our position, and I will be glad to stand corrected if I am wrong.

Mr. VOLPE. It might be useful to add, Mr. Chairman, as Dr. Smyth has said, the position is an informal one because it is recognized that this is a Government-wide problem.

The Hanford area is not the only area in the country where a Federal activity has had a serious impact, and we have undertaken to discuss this with the Bureau of the Budget, and they have not expressed themselves either one way or the other way on it, but have indicated to us informally that this is a problem which they have been grappling with for some time, and have reminded us once again that it was also a problem which the Congress has been considering for some time, and that there is legislation—as a matter of fact, quite a number of bills pending—which deals with this question of Federal assistance.

Mr. JACKSON. In connection with the discussion that we had previously regarding precedents that have been established, I believe the staff has some bills or references to action taken by the Appropriations Committee. This is a digest of bills.

Mr. COLE. That does not mean so much so far as precedents go.

Mr. BORDEN. It was Mr. Alves who was going to furnish the precedents.

Mr. JACKSON. That is right. He called, and I talked to him this morning, and he advised me that he had located the references in the report on the Interior appropriations bill by both the House and Senate, and in the report funds were included for permanent construction at Grand Coulee Dam, I believe, and for an Indian school and some other items that have been approved by both the House and the Senate committees.

It has been passed by the House, approved by the Senate committee, and the bill comes up today, I believe, in the Senate. That is the only precedent that I know of of my own personal knowledge, I believe, with some degree of familiarity.

Mr. BLACK. Mr. Chairman, I think I can add to that precedent a little bit. The Army engineers at Hermiston, Oreg., at the McNary Dam, due to the laws in Oregon, building the schools entirely in Hermiston for the influx.

Mr. JACKSON. Permanent construction?

Mr. BLACK. Yes, and they are operating the schools there for a period of 2 years, because Oregon is 2 years behind in its appropriation of funds

Then, as a previous precedent during the war, the Navy built a \$2,000,000 high school in Bremerton, and turned it over to them equipped and all, and during the war, having quite a little connection with it, the precedents of the Government at that time were to take everything above a normal increase and aid with it.

Mr. COLE. Well, I can see the Commission's problem on this phase of their responsibilities: First, a general policy with respect to its entire operation, and then, more particularly, with respect to school operations, and then to the particular locality of school operation of which, I assume, Hanford is the most acute, is it not, of all the Commission's school problems?

Mr. SHUGG. That is right.

Mr. COLE. But even at Hanford there is a degree of acuteness. But it seems to me that where a school district is so seriously affected, as Kennewick has been, where a school load of direct Federal students has increased over 200 percent, that that presents a problem where the Commission, in my opinion, ought to feel justified in giving some relief and it would not establish a precedent to guide its activities all over the country or even at Hanford, the Hanford area, generally.

Mr. VOLPE. The question on the relief, Mr. Cole, is whether it should be handled as it has been, on an emergency basis, or whether the Commission should participate in—

Mr. JACKSON. On a temporary basis.

Mr. VOLPE. Well, an emergency and temporary basis.

Mr. JACKSON. Yes.

Mr. VOLPE. Or whether the Commission should participate in a long-range school construction program which, as I understand it, is what is involved here.

Mr. COLE. I do not see how the expenditure of public funds for any purpose, if justified on a temporary basis, can be denied when that temporary situation becomes a permanent situation.

I do not know—if it is logical to use public funds to relieve a temporary situation, when that same situation is acknowledged to be permanent, why, then, it is just as logical to use public funds for that purpose.

Mr. VOLPE. It is this question which the Commission has had some trouble over, because, as a general matter, the policy of the Federal Government has been to provide funds on a temporary, an emergency basis.

Mr. COLE. On the theory that it is going to be temporary?

Mr. VOLPE. Sir?

Mr. COLE. On the theory that it is a temporary situation?

Mr. VOLPE. Well, on the theory that the responsibility of the Federal Government—I assume this has been the theory—was to try to alleviate the immediate impact in that the school districts of the State would in time take over the responsibility. In other words, it ought to be made clear that the Commission realizes the seriousness of the situation. The Commission does not seek to minimize the importance of something being done. That which is troubling the Commission is whether the Commission should embark upon a program which heretofore the Federal Government has not seen fit to do, and particularly since that whole question is being now considered on a Government-wide basis.

You will recall, for example, the report which was made to the Senate Appropriations Committee, in which this whole question was discussed, and in which it was urged that there be a Federal-wide policy adopted. The reason for that is that up to the present time one agency has done one thing; and another agency has done another. Perhaps the Commission ought to break ground here; perhaps the Commission ought to be pioneering, but it is something which troubles the Commission.

Mr. JACKSON. I think that, as a general proposition, there ought to be one agency that would handle all the school problems. That matter is under consideration apparently by at least the Senate Committee on Labor and Public Welfare.

Mr. HOLLIS. I believe Mr. Alves said the other day he had considerable hope or considerable optimism that by the next session of Congress that bill would pass.

Mr. JACKSON. Well, he may be unduly optimistic. We have a bill known as the bill to give Federal aid to education that was almost through, too, but we have some of the same problems involved in permanent construction that may come up. I am not too optimistic about it at the moment.

It seems to me, though, what we have to decide here is whether it is proper for these districts to continue on in the temporary buildings or whether there ought to be some kind of permanent construction.

I agree with Mr. Cole that logically if there is an obligation for temporary facilities, then it follows that if those conditions that were temporary at one time become permanent, a similar obligation, maybe not in the exact proportionate amount in dollars, falls to the Federal Government.

I just do not see how you can avoid that situation. I think eventually this matter should be taken away from the Atomic Energy Commission because it is a Federal responsibility, and they should not be burdened with school problems.

I am sure that is the view of the joint committee, expressed in connection with community facilities. All the other collateral activities are likewise so considered. It is burdensome on the Commission, and I am sure the Commission would not object if by some magic all of those headaches could be removed. But it does seem to me that we should check the question of precedents, and I hope that information will be available very shortly, in order to have some background in connection with permanent school construction, with a program of permanent school construction, and then I think the Commission should try to see what can be done in this specific situation in Kennewick, because I think we can all agree that it is not right that a school district should go on for several years operating in very, very poor temporary facilities.

I am not saying that the people at Hanford have not done a good job. I think they have. They have provided temporary facilities, and they were not intended to be more than that, and in the winter-time it is quite a problem over there. It is a question of how long they can continue in those temporary facilities. Basically, I think that is what it boils down to. Do you not think so, Mr. Cole?

Mr. COLE. Yes.

Mr. JACKSON. What I am wondering about is if there is not something we can do in relation to this very acute situation at Kennewick. I think it is reasonable to consider that it is acute, having these students out in temporary buildings. If they do not build this year, it will be another year, it will be 2 years more on temporary facilities.

If the Hanford project were to terminate and these people were to leave gradually, then the temporary facility would have served its purpose. That has been its purpose in the past, and, speaking of temporary facilities, that device was one followed pretty much by all the Government agencies because they were dealing with wartime conditions, but here we are dealing with a permanent situation, at least, as to part of the attachables.

Mr. SHAW. Could I speak to that issue for just a minute, Mr. Chairman?

Mr. JACKSON. Yes.

Mr. SHAW. It is rather a nicety in the committee findings which I gathered somewhat as being misinterpreted, where it stated that we agreed on the federally incurred load, it is reasonable to suspect that that would be a permanent load to the school district.

Out of the thirty-two-hundred-odd pupils who are on the list as being eligible as a basis of computation on this thing, only about 950 of those are permanent employees at the project.

The fact that the school districts themselves can anticipate a permanent load of thirty-two-hundred-odd pupils or some such number does not mean that those thirty-two hundred will remain employees of the Federal activity, so that is a further nicety, and a thing which makes very difficult the arriving at the point of view that Mr. Cole mentioned of these people, if they are a temporary responsibility they are also a permanent responsibility, if they are permanent. The question is are they permanent employees of ours or are they permanent members of the school district. They are not necessarily both.

Mr. JACKSON. Gentlemen, it is necessary that we adjourn at this time, so we will adjourn, subject to the call of the chairman.

(Whereupon, at 12:35 a. m., the committee stood in recess, subject to the call of the Chair.)

## HANFORD SCHOOL FACILITIES

---

WEDNESDAY, AUGUST 10, 1949

CONGRESS OF THE UNITED STATES,  
SUBCOMMITTEE OF THE  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The subcommittee met, pursuant to call, at 3:25 p. m., in room 1015, New House Office Building, Hon. Henry M. Jackson (chairman) presiding.

Present: Representatives Jackson and Cole.

Also present: Henry D. Smyth, Commissioner; Joseph Volpe, Jr., General Counsel; Carleton Shugg, Deputy General Manager; David F. Shaw, Deputy Manager, Hanford Operations Office, all of the United States Atomic Energy Commission.

H. F. Alves, Director, Division of School Administration, United States Office of Education; E. S. Black, Superintendent of Schools, Kennewick School District; and E. L. Lindman, Deputy State Superintendent of Public Instruction, Washington.

Mr. JACKSON. I think we can start in. The meeting will come to order.

This afternoon, Mr. Lindman, representing the State office of public instruction of the State of Washington is here to submit whatever information the committee may desire regarding the program of the State office of public instruction as it affects the local districts in the State of Washington.

Mr. Lindman, I wonder if you might just explain briefly for the record the law in the State of Washington with reference to funds for operation and maintenance of the public school system, how it works.

### STATEMENT OF E. L. LINDMAN, DEPUTY STATE SUPERINTENDENT OF PUBLIC INSTRUCTION, OLYMPIA, WASH.

Mr. LINDMAN. Mr. Jackson and members of the committee, in the State of Washington all territory in the State is a public school district. That includes territory which was entirely federally owned.

For example, the territory comprised in Richland, a Government reservation—

Mr. JACKSON. Reservation.

Mr. LINDMAN. Is from our standpoint, from the standpoint of our law, a school district, and shares in all of the State school funds.

Now, this year—perhaps Mr. Shugg has the exact figure—but I would estimate that it would be close to over half a million dollars which the State contributes to the operating of the school in Richland every year.

Mr. JACKSON. How much approximately?

Mr. LINDMAN. Over a half million, and the amount is increasing annually as the attendance in Richland increases because the State program just goes ahead and supports the entire attendance.

I mean the more attendance they have, the more State fund they will receive in the town of Richland for the support of the schools.

Mr. JACKSON. How much does it approximate for each child on an annual basis, per capita?

Mr. LINDMAN. In the case of Richland it approximates about \$175 per child.

Mr. JACKSON. There are 4,000?

Mr. LINDMAN. I think it is considerably in excess of 4,000, now in the school at Richland, probably closer to five.

The same thing applies for all Federal projects in the State, and is one of the reasons why the State of Washington is having a difficult financial problem with its schools.

Mr. JACKSON. Do you have an idea of how many children of Federal employees in these areas in which you have somewhat of an impact to the school districts at the present time, what that amounts to, what that is approximately?

Mr. LINDMAN. It will be a little hard for me to give you a figure. At Coulee Dam the State supports the school district in exactly the same way it supports the school district at Richland. It is a Government-owned reservation, but the State supports the school system.

In Bremerton, the navy yard site, again the State carries the bulk of the load for all of the schools there, the rest of it coming from local property and, of course, the Federal property being tax-exempt. Over 40 percent of the area of the State is federally owned, and that does not mean that the 40 percent of the value of the State is Federal, but over 40 percent of the area is federally owned.

In addition to that we have a vast number of Indian children whom the State educates from its State tax sources.

Mr. JACKSON. You get a very small contribution from the Indian Service?

Mr. LINDMAN. Yes. The contribution from the Indian Service does not amount to one-tenth of the amount the State contributes toward the education of those children, so that the State then carries what might be interpreted as partly at least Federal burdens in all of those areas.

Mr. JACKSON. It amounts to over a million dollars a year?

Mr. LINDMAN. Oh, it is considerably in excess of that, if you consider all the Federal reservations on the State. If I were making a very rough guess I would say it was close to \$5,000,000 annually.

Mr. JACKSON. How much do you distribute to the school systems in the State annually? I mean what proportion is that of the total?

Mr. LINDMAN. Total cost?

Mr. JACKSON. Yes.

Mr. LINDMAN. The State pays about 75 percent of the operating costs of the schools in the State in terms of millions.

Mr. JACKSON. I mean, how many million dollars does the State of Washington make available to the local school districts for operation and maintenance?

Mr. LINDMAN. This year, this last legislature appropriated approximately \$120,000,000 for the current support of schools.

Mr. JACKSON. Is that for a biennium?

Mr. LINDMAN. That is biennium, so that would be \$60,000,000 a year.

Mr. JACKSON. And this represents approximately about 5 million of the 60 which goes to the Federal reservations in the State?

Mr. LINDMAN. Yes, because under our State-support structure we give more money to those areas which have lower valuations, and if, in the case of the Indian lands, where there is no valuation, why, they naturally appear as a low valuation, or a poverty-stricken area, and that drain has been very severe on the State funds because here the federally tax-exempt properties showing no local funds, and the State through its, what we call, our equalization program, makes up for that lack of taxable resource locally. So, one of our desperate problems is trying to figure out some way to continue our present support system in the face of these declining local property-tax resources, a substantial part of which is due to removal of our property from the tax rolls and by acquisition of the Federal Government.

Mr. JACKSON. Now, Mr. Lindman, I wonder if you could tell the committee the money appropriated by your last State legislature for school construction, for the school construction program in the State of Washington, and the present status of that fund.

Mr. LINDMAN. The legislature appropriated \$6,500,000 for State aid to local school districts for school-construction purposes, and the legislature also proposed a State-wide bond issue to the people, to be voted upon the next general election for \$40,000,000 to be used as State support for school-construction purposes.

However, that bond issue money, of course, is problematical; it is an election which will be a year away, and it is not really available right now.

The 6½ million dollars have been used—have been spread very thinly—over the State of Washington.

I think it is important for the committee to understand that the entire State has growing pains and severe ones, in connection with trying to provide school plants.

For example, the total increase in attendance this last fall over the year before was 18,000 children.

An increase of 18,000 children on a State-wide basis creates a very severe building problem in just one year. We have been estimating for round numbers that it would take at the very minimum of a thousand-dollar investment per child on a State-wide basis, assuming that some of them can be housed in existing buildings and not all of them will require new plants; if they all required new plants, the cost will be greater, but you see when you consider housing 18,000 new children you have a cost of close to \$20,000,000, because these new children reside in places throughout the State where the schools are already overcrowded.

If they reside in certain places where the schools were not so crowded, it would be easier to handle the problem. It would be easier to handle the problem if that were the situation, but they tend to concentrate in the Columbia Basin area, in Kennewick, Pasco, Richmond, and in the metropolitan areas of Seattle and Tacoma, and so on.

So the 6½ million had to be spread over the entire State.

Just to make a comparison clear, while the State increased 18,000, these 6 school districts increased 2,000; in other words, the 6 school districts under consideration increased 2,000 while the State as a whole, increased 18,000.

Then, in addition to that, we had an earthquake that upset our planning considerably with respect to our school-building program.

It cost approximately \$3,000,000 in construction to replace plants that were destroyed by the earthquake.

Mr. JACKSON. That leaves three and a half million.

Mr. LINDMAN. Yes, approximately that, and that has been spread rather thinly over the entire State, and no action which was taken in Kennewick and—

Mr. JACKSON. Pasco.

Mr. LINDMAN. The Pasco area at the meeting of the board of education.

At that time, however, they gave some thought to an allocation but withheld final action because of the negotiations which were going on here.

Our State board of education, I am sure—and I am the secretary of the board—fully intends to participate in this on the same basis as other schools, but action was delayed pending a clarification of its relationship with the Atomic Energy Commission. These districts will receive exactly the same consideration as any other school district in the State with similar problems and similar local effort for the support of schools.

Mr. JACKSON. Considering all the factors of load growth, the districts involved in this discussion will be treated on an equal basis with other school districts?

Mr. LINDMAN. Yes. It is my understanding that in Oak Ridge and in other places the State does not contribute toward the support of the schools on the project site.

(Discussion off the record.)

Mr. JACKSON. Before asking that question, one more question, Mr. Lindman, I would like to ask of you: Could you state approximately how much money has been contributed by the State of Washington thus far to the Richland school district? If you cannot, if you do not have that information, possibly Mr. Shaw could give a rough estimate, or Mr. Shugg, as to the amount?

(The following was later submitted for the record:)

SUPERINTENDENT OF PUBLIC INSTRUCTION,  
STATE OF WASHINGTON,  
*Olympia, August 15, 1949.*

HON. HENRY M. JACKSON,  
*United States House of Representatives,  
Washington, D. C.*

DEAR CONGRESSMAN JACKSON: I am enclosing two tables containing information which you may wish to insert in the record of the hearings pertaining to the school building needs of the school districts in the Richland area.

Table I shows the amount of State moneys apportioned to the school districts in the Richland area from 1944 to 1949. You will note that annual State apportionments for current expenses purposes to schools in this area have increased from less than half a million dollars to more than \$2,000,000. The Richland school district will receive three-quarters of a million dollars in State aid for current expense purposes for the school year 1949-50.

Table II summarizes school building projects in the Richland area since 1941. You will note that a substantial amount of State and local school funds have been

invested in new school buildings in this area in an effort to keep pace with growing requirements.

I appreciate the opportunity to appear before your committee and submit this information.

Sincerely,

PEARL A. WANAMAKER,  
State Superintendent of Public Instruction.  
E. L. LINDMAN,  
Deputy Superintendent.

TABLE I.—Apportionments to school districts from current school fund and State school equalization fund

School district	1944-45	1945-46	1946-47	1947-48	1948-49	1949-50, estimated
Richland No. 400.....	\$78,670.64	\$405,379.08	\$388,424.27	\$552,403.96	\$536,488.20	\$775,000
Pasco No. 1.....	47,354.80	122,003.20	114,284.51	194,382.82	250,008.91	280,000

Total.....	423,888.82	1,233,775.13	1,154,318.63	1,742,261.79	1,958,460.62	2,327,000

TABLE II.—Summary of school building projects in Richland area since 1941

School district and project	Year built	Number of classrooms	Grade level	Source of funds			
				Local	State	Federal	Total
Kennewick:							
Elementary.....	1944	16	1-6	None	\$35,000.00	\$140,000	\$175,000.00
Do.....	1944-45	16	1-6	\$9,000.00	17,000.00	104,000	130,000.00
Pasco:							
Elementary.....	1945	4	7-8	3,000.00	17,000.00	30,500	50,500.00
Do.....	1948-49	9	K-6	150,719.88	168,000.00	-----	318,719.88
Kiona-Benton: None							
Prosser:							
High school shop.....	1947	4	9-12	37,000.00	23,000.00	-----	60,000.00
Elementary.....	1948-49	6	K-6	212,917.60	110,000.00	-----	322,917.60
Sunnyside:							
Elementary.....	1941	6	4-8	71,000.00	9,000.00	-----	80,000.00
Do.....	1947-48	22	K-6	205,708.06	371,702.93	-----	577,410.99
Grandview:							
Elementary.....	1945	4	1-4	40,706.75	31,834.63	-----	72,541.38
Do.....	1947-48	12	1-6	125,319.80	106,235.08	-----	231,554.88
Total.....				855,372.09	888,772.64	274,500	2,018,644.73

Mr. LINDMAN. I do not have the exact figure. Maybe Mr. Shaw can give a more accurate estimate than I can.

Mr. SHUGG. Do you know what it is, Dave?

Mr. SHAW. I have some figures on which can be based an estimate, which I have not completed computing. It will take me a few minutes. If I can answer to this question of assistance at the other installations first, and if you will give me a minute or two, I can have an order of magnitude estimate on the second question.

Mr. JACKSON. All right. I would like to ask you first, could you explain what the relationship is of the State of Tennessee to the school system at Oak Ridge, operated, I believe, by the Commission, with reference to the contribution of funds either for operation and maintenance or for any other purpose in connection with the school system?

Mr. SHAW. Yes. At Oak Ridge the school district includes the entire county, and is not concurrent with the confines of the reservation, so a reimbursement is made to that school district for all of the expenses of the schools within the reservation proper by the Atomic Energy Commission.

The State, therefore, contributes no money to the operation and maintenance of those schools on the reservation.

On the other hand, the Atomic Energy Commission makes no contribution to the State system for those pupils who live off to the project.

Mr. JACKSON. Spelled out, what does it mean in terms of balancing the costs to the Commission, bearing in mind, of course, that the contribution made by the Commission in the State of Washington covers only the 1-year lag, and then is terminated?

Mr. VOLPE. That is not Richland, is it?

Mr. JACKSON. Yes; it is off project.

Mr. COLE. On, too.

Mr. JACKSON. I understand from Mr. Shaw's testimony that at Oak Ridge the Commission makes no contribution for the 1-year lag and operation and maintenance expense for students of parents who are employed at Oak Ridge, but who live out of the district, is that the fact?

Mr. SHAW. Yes; that is the fact, and I do not know how many pupils would be so involved.

Mr. SHUGG. I believe about 40 percent of the employees at Oak Ridge live off the reservation.

Mr. JACKSON. Off the reservation. But the contribution that the Atomic Energy Commission makes in the case of the State of Washington for operation and maintenance for students on the reservation is only a single contribution that takes place once, and that is the end of it.

In the case of the contribution by the State of Washington to the Richland school system, which is an Atomic Energy reservation, it is an annual appropriation that is made available to the school district, is that correct?

Mr. SHAW. That is correct.

Mr. JACKSON. So that it might be helpful for the purpose of the record if the Commission could supply information showing the amount of money they are now expending at Oak Ridge for operation and maintenance, and then making a comparable offset for the contribution made by a State indirectly for the off-site students. I think that would cover it.

Mr. COLE. I think you would also have to show a comparative size of the student load.

Mr. JACKSON. Yes; spelled out in dollars it would have to show what the per capita allowance was.

Mr. ALVES. Mr. Chairman, may I make a comment? I believe it is correct that until about a year ago two counties, at least, adjoining Oak Ridge, did receive Federal funds for current operations through the Lanham Act and Landis bill from the FWA for current operations.

Mr. SHAW. It could be. I cannot answer that.

Mr. ALVES. Is that correct?

Mr. JACKSON. Mr. Alves, if you could assist in getting that information, of course it should be included because if it came from another

source it has the same indirect effect, to balance whatever the Federal contribution is against the State contribution.

Now, Mr. Shaw, the same questions with reference to Los Alamos' operations in the State of New Mexico.

Mr. SHAW. At Los Alamos the situation in the past has been very comparable to the situation at Oak Ridge in that the State was making no payments whatever to those schools which were located on the reservation, and the Atomic Energy Commission was making all of those payments.

With the recent change in the status of the reservation at Los Alamos, revisions are apparently under way in connection with the methods of distributing State school funds which will result in considering those pupils on the Los Alamos reservation as being entitled to State aid. The exact amount of money I was unable to ascertain, because it is still under negotiation, but it is said to be and expected to estimate the order of \$200,000 per year in a school district of approximately 1,200 pupils.

Mr. JACKSON. And your contribution now is running around about a half million at Richland on 4,000, is that it?

Mr. SHAW. Yes. It is, I believe, a little higher than that. That is, considering all sources of revenue to the school district, exclusive of the AEC allowance—

Mr. JACKSON. Yes.

Mr. SHAW (continuing). For the present school load, it is running close to a half million dollars. Also at Los Alamos, as at Oak Ridge, there is no payment back to the surrounding school districts from the Atomic Energy Commission of any sort whatsoever.

Mr. JACKSON. I believe you submitted a figure for the record at the last meeting in which it was indicated that about \$1,300,000 had been distributed by the Atomic Energy Commission to all the school districts for operation and maintenance, together with temporary construction. Could you give us the distribution of that?

Mr. SHAW. Yes.

Mr. JACKSON. Between temporary construction and operation and maintenance funds.

Mr. SHAW. Do you want this by school district, Mr. Jackson?

Mr. JACKSON. No, just the total, not by school district; just the approximate total.

Mr. SHAW. The total for maintenance and operation at Richland for the off-project, is that your question?

Mr. JACKSON. What I meant is what you have paid to the surrounding school districts for operation and maintenance expense up until now.

Mr. SHAW. Yes. \$471,600.

Mr. JACKSON. For all the school districts?

Mr. SHAW. Yes, sir. Exclusive of the construction money which was \$585,000.

Mr. JACKSON. Yes.

Mr. SHAW. \$471,000.

Mr. JACKSON. You receive more in 1 year than that entire total from the State at the present time?

Mr. SHAW. With our present enrollment—

Mr. LINDMAN. It might be added, Mr. Chairman, that the amount which the Atomic Energy Commission contributed on a 1-year basis

represents the permanent recurring annual burden which the State must pick up as the project moves ahead, because the Atomic Energy contribution is an adjustment payment for 1 year, until such time as the State system can swing in behind those youngsters so the State will absorb that recurring annual amount.

Mr. JACKSON. It is a single payment to take care of that 1-year lag. I believe that information is in the record previously.

Mr. SHAW. Yes; that was in previously, and as we mentioned then, there is the construction money in addition, and the value of the busses, whatever the busses may be. We just call them busses. We do not put a dollar value on them in that connection.

Mr. JACKSON. Off the record.

(Discussion off the record.)

Mr. JACKSON. Mr. Black had a question.

Mr. BLACK. I would like to ask just a couple of questions of Mr. Shaw, if I may. That nine-hundred-some-thousand dollars on construction includes all the \$300 bases?

Mr. SHAW. It includes what you have not spent, as well as what you have already spent. Does that answer the question?

Mr. BLACK. That is right.

Mr. SHAW. It is what we have offered in the form of firm commitments.

Mr. JACKSON. Did you have anything further on that, Mr. Alves?

Mr. ALVES. No.

Mr. BLACK. I might add, Mr. Chairman, that the busses and the temporaries in our community are considered loans. The title still remains with the Atomic Energy Commission.

Mr. JACKSON. Yes. I think that is in the record, too.

I believe Mr. Shaw explained that they were operated by the district, but title, I believe, remains with the Atomic Energy Commission. They are on a lease or loan basis.

Mr. COLE. I might ask, does the State of Tennessee have a State-wide system for aid to local districts for maintenance of the schools?

Mr. ALVES. It does.

Mr. JACKSON. The attorney general of the State of Tennessee made a ruling to the effect that funds could not be expended on the reservation. Was there not some such ruling which provided the basis for—

Mr. ALVES. I understand, Mr. Chairman, that was a ruling not too long after the beginning of the Oak Ridge activities.

Mr. VOLPE. It was not a formal ruling. I think, to round out the picture here on the Tennessee situation, there have been some very informal discussions about State support or partial State support of the school system at Oak Ridge. These discussions have not proceeded to any definitive stage as yet, but there have been discussions along those lines.

Mr. JACKSON. Well, Dr. Smyth, I think this information that will be given in a moment when Mr. Shaw gives us the tabulation of what they received, is a very important consideration and should be balanced with other factors in this over-all problem, and I think at least we get a little better picture of the role of the States in this very difficult problem.

Mr. LINDMAN. I might mention, I spoke to Governor Langlie before I left concerning the problem, and he pointed out that the

small emergency fund which was appropriated to him by the legislature was committed, and he also pointed out a fact which is pretty generally known in the State, and that is that the State appropriations at the present time exceed the revenues by approximately \$60,000,000 for the biennium, and that the State will have some very difficult readjustment problems, due largely to this sudden growth in population.

I do not believe the rest of the Nation has a picture of what it means to double a school system in a few years, to build buildings, faster than they have ever built them before in the history of the country, and that is the kind of a problem these districts are up against.

Mr. JACKSON. Mr. Alves, I wonder if at this point you could make some comment on the policy of other States with reference to making State funds available to local school districts for operation and maintenance, and again with particular reference to students on Federal reservations, such as the Hanford project, and the Bureau of Reclamation project, such as we have in the State of Washington.

Mr. ALVES. A number of States are providing some State funds to school districts for the education of children living on Federal property.

In general, the answer is that where a State program of financial assistance for current expense purposes is based on the average daily attendance, such State moneys are distributed to districts on the school load as measured by average daily attendance without reference to the residence-out children.

Mr. JACKSON. Are the other States as generous in their contribution to the local school districts, first, and second, as to the operation and maintenance of school systems that are on Federal property?

Mr. ALVES. To get an exact answer to that, I think would involve an analysis of the legal provisions for the distribution of State moneys in the States. I think, in part, I can give this kind of an answer: I know that in Texas, for example, because the Federal Government has never had a stated policy of assisting in educating children on Federal Government property, and because of the large number of installations in the State that are federally owned, the legislature years ago authorized the State board of education in that State to create special school districts, including only federally owned property.

As a specific example, when Randolph Field was established, in order that State funds might become available, the State board of education created the Randolph Field special school district. The State funds that go to that district, as far as I know, are only those referred to as the State per capita apportionment, which is about \$55 per pupil. Whether any of the State's equalization money is going to that kind of district, I am not prepared to say.

Mr. JACKSON. Well, Mr. Alves, if it is not too impossible, if you could supply for the record the policy of the States with reference to contribution to local school districts, and more particularly the Federal reservations in the various States.

Mr. ALVES. I will be glad to try to do that.

Mr. JACKSON. If you have that in the Department, that information,

Mr. ALVES. No; because that would involve an analysis of the laws passed at the last legislative sessions this last spring, and we just do not work quite that fast. In fact, we have not all the laws in yet.

Mr. JACKSON. Suppose we go back then.

Mr. ALVES. I can do this: I can provide examples of States. For instance, we know that Illinois has a recurring situation of providing a given amount. I think New Jersey is another instance. We can do that, but to give it across the board for the States, I am afraid, would require more time than you have.

Mr. JACKSON. Well, do the best you can.

Mr. ALVES. I will.

Mr. JACKSON. And if it is not right up to this year's decisions by the legislature, why, it will be the best we can get.

Mr. ALVES. All right.

Mr. JACKSON. Now, Mr. Shaw, do you have a recapitulation of the costs?

Mr. SHAW. Since the Manhattan District purchased the entire—nearly the entire—real estate of which the Richland school district is comprised, and purchased it at the same time that it purchased all of the then existing properties of the school district, an approximation of the amount of money which the State has contributed to the operation and maintenance of that school district which, therefore, includes the school years 1943 up through 1948-49 is in the vicinity of \$2,900,000.

Mr. JACKSON. \$2,900,000, and the contribution to date by the Commission is approximately \$1,300,000 for all purposes, exclusive of the school busses?

Mr. SHAW. For the offsite schools.

Mr. JACKSON. Yes. I am trying to get the off-set.

Mr. SHAW. If there is any relationship between the two.

Mr. JACKSON. I do not know whether there is. I am just trying to get the totals here. Whether there is a relationship is something that has to be determined.

Mr. SHAW. There is also the fact that the physical properties of the school district, the Richland school district, that plant has, of course, been constructed by the Manhattan District and the Atomic Energy Commission, so that represents an investment, on the other hand, of something up to upwards of \$11,000,000.

Mr. JACKSON. What does it amount to?

Mr. SHAW. \$11,000,000.

Mr. VOLPE. Mr. Chairman, if this is to be an offset, you would also want the figures of the Manhattan District, the contribution made from the Manhattan District, from 1943 to 1947, at the time the Commission took over.

Mr. JACKSON. Was there any contribution? I thought the \$1,300,000 represented the contribution.

Mr. VOLPE. It is my understanding that is the AEC figure which does not include the Manhattan District contribution.

Mr. JACKSON. It does not include Manhattan?

Mr. SHAW. That is since January 1947.

Mr. JACKSON. What were the contributions, do you know, Mr. Black, prior to that? Were they very substantial?

Mr. VOLPE. We can get those. We must have some figures.

Mr. JACKSON. I believe they will be and ought to be in the record. I thought that included all.

Mr. VOLPE. I just think we ought to have a complete picture.

Mr. SMYTH. Mr. Jackson, should you not really, if you are going to have a table of this sort—you have got the two groups of things, the

Richland and the off-Richland school districts, and you have got the contributions of the Federal Government both places, of the State both places, and of the local school districts to the outside.

Mr. JACKSON. Yes; we have not included that. That is right, Dr. Smyth. The \$2,200,000 figure, I believe, of Mr. Shaw's total does not include what the State is spending, of course, for the off-site students for operation and maintenance.

Mr. SMYTH. That is correct, but if you are going to make up such table, it seems to me you ought to have what the Federal Government has contributed on-site for operation and building, what the State has contributed on-site for operation, and there is no local contribution on-site. I do not know where it would come from.

Mr. SHAW. There is.

Mr. JACKSON. I mean the State of Washington has contributed on-site to date.

Mr. SMYTH. Oh, yes, I said that the State of Washington, but there is no local contribution, no local taxation so there cannot be any strictly local contribution.

Mr. SHAW. Comparatively nominal. There is some taxable private property in the school district.

Mr. SMYTH. I see.

Mr. JACKSON. Yes.

Mr. SHAW. That would take some time in preparation, and I am unable to give information in that sort of detail. These figures that I am giving now are order of magnitude figures which would require considerable research in just the preparation of data to confirm that.

One additional figure here, since it has been mentioned that this is being compared with the assistance that the Atomic Energy Commission has rendered to the off-site schools, is that about a half of this \$2,900,000 is money which has accrued to the Richland school district since the Atomic Energy Commission took over, just roughly. There have been half as many pupil years of enrollment in the Richland school district since January 1947 than there were before.

Mr. JACKSON. Does the \$2,900,000 figure cover contributions received under the Manhattan project?

Mr. SHAW. Yes, back to the time that this school district was taken out of the normal condition.

Mr. JACKSON. Does the Commission now have anything they want to say regarding what they propose to do on this? I mean, any further comment for the record?

Mr. SMYTH. I have no further comment other than what I said the last time.

Mr. VOLPE. I wonder if the information Mr. Cole asked for the other day has been obtained, that is, how much money is expected that the Federal Government would contribute.

Mr. JACKSON. Contribute immediately?

Mr. VOLPE. The contribution by the State. It may not have been your question—I thought it was.

Mr. COLE. You mean how much the Richland areas might expect to get from the State for—

Mr. VOLPE. How much they expect to get from the State. How much is actually available from the State, as distinguished from what they expect to get and what the Federal Government or what the Atomic Energy Commission would be asked to contribute.

As I recall the other day in a discussion of the Kennewick district there was some question as to how much was expected that the State could actually contribute because of the availability of funds.

Mr. COLE. I understood Mr. Lindman to say that the Kennewick area, the Hanford area, would get its share of any funds that are made available under this \$40,000,000 proposed bond issue.

Mr. LINDMAN. And the \$6,500,000 currently available.

Mr. COLE. Has any of the \$6,500,000 been assigned to any of these districts?

Mr. LINDMAN. No. The Board has not taken action on these grants.

Mr. COLE. But you said the \$6,500,000 have already been allocated.

Mr. LINDMAN. No; I do not say it has been allocated.

Mr. COLE. Well, committed.

Mr. LINDMAN. I do not believe I said that.

Mr. COLE. That is the impression I got.

Mr. LINDMAN. I did not mean to say that. Some of it is being held in reserve. A school building burned in Pasco which we have to replace in some way, and funds are being held to help in Kennewick and Kiona-Benton in small quantities.

Mr. COLE. How much of the \$6,500,000 are these districts going to receive?

Mr. LINDMAN. Again I would have to give an order of magnitude figure because that again requires the approval of the State board, but I guess the total amount that could go into the whole area would be in the neighborhood of \$200,000.

Mr. COLE. How much of the \$40,000,000 would they be entitled to?

Mr. LINDMAN. Well, there again that is a computation which we have not attempted to make and, that, of course, is a year in advance and quite problematical.

Mr. COLE. Mr. Black, did you not give us a figure the other day of the amount of State assistance for building construction which these districts could expect to receive, assuming that they were treated on the same basis as other school districts in the State of Washington, and assuming the \$40,000,000 bond issue were approved?

Mr. BLACK. Mr. Cole, I believe I clarified that for Kennewick and not for the district as a whole. Each district in the State is considered a separate entity with respect to the basis of percentage of apportionment. Kennewick being one of the worst in the State, as was signed up, was signed on a 70-30 basis, with the local funds only, which meant State 70 percent, and the local 30 percent of the moneys available. Kennewick raised \$300,000, that is their limit, which would entitle it under full matching for \$700,000, but that was construed on a basis of the last legislature appropriating \$40,000,000, which they did not, and now it is derogated on the basis of whether this \$40,000,000 bond issue passes or not, so what percentage it will be, if it is divided among the districts, prorated on a 6½ million dollar basis, I do not know what we will be entitled to.

Mr. VOLPE. According to Mr. Lindman it probably will only be a part of \$200,000.

Mr. LINDMAN. That is correct, immediately from the 6½ million, but from the \$40,000,000, from the standpoint of this committee's consideration, it can be assumed that if the \$40,000,000 bond issue

passes, the State would be able to carry out its full matching obligation, which would then be approximately \$700,000 as matched against \$300,000 of local funds in Kennewick.

Mr. JACKSON. It seems to me that this committee in the report that was worked up out there comes about as close to working out a fair and equitable adjustment as anything I have seen proposed here so far, and something can be worked out and some decision made by the Commission on the report, subject to whatever action Congress might subsequently take to lay down a national policy in this matter, and that is about the best that can be done, and bearing in mind, of course, all of the peculiar factors that exist in a given area.

I think that, of course, is quite obvious because it is apparent from the record here that each State has a different approach in making funds available to the schools and the Federal reservations. It is a case with respect to the State of Tennessee in its not contributing as much, obviously—and this is not being critical at all—as what the State of Washington is contributing in the way of support for operation and maintenance, but it is not possible to spell out a formula that is going to be universal throughout the Commission in all of its programs.

It will have to be determined on the basis of local situations. I am just wondering if some agreement cannot be made as to whether this report is going to be accepted or rejected or modified, and if it should be accepted, whether or not those payments that are recommended in the report could be made on some sort of an installment basis. In other words, they are not going ahead on this whole program in 1 year. Part of it could be made available the next 12 or 18 months, and in the meantime, if Congress determines another formula shall apply, well then, that will be written into the agreement. From then on out that is it, but I think we can discuss this thing from now until doomsday and we will not come to a unanimous point of view.

I share with the members of the Commission their desire to get out of the school business. It is not a school business, but a lot of other business, and speaking only for myself, I cannot help but feel that there is a responsibility here and, as Congressman Cole pointed out, I think in an excellent way, if you assume that there is a responsibility for temporary school construction, which I assume is predicated upon the assumption that there is some kind of a temporary emergency, and that emergency becomes permanent, I think it follows that then the next step is in order. I do not see how you can avoid that situation. Maybe I am clear off in jumping to the next point, but logically it certainly follows.

The point for determination is how much that contribution should be unless you are going to forget about it and withdraw your proposal on temporary construction.

I hope, and I would like for this committee to recommend, that there should be, and there would be a Federal determination, and a Federal administration of this whole program outside of the Atomic Energy Commission, and maybe handled through the Office of Education, and that statement is not being made with a desire to be critical of the Commission. It is being made with a desire that it apply to all Federal agencies. The Atomic Energy Commission is just one of the many, and I am sure the other agencies, such as the Bureau of Reclamation, the Corps of Engineers, a multitude of Federal agencies that

are concerned with construction programs are not in a position to go into the school business, and would like to achieve the same result, and I just do not see how this thing can be postponed any further, and I hope that the Commission can make some determination which the committee can act on and get it to a head and get it over with.

Mr. VOLPE. Mr. Chairman, I think that we have stated in, perhaps, a variety of ways the problem we face. You may recall some days ago I called your attention to a debate in the House on the matter of the extension of the Lanham Act in connection with operation and maintenance.

The debate in connection with the extension of that bill makes it, I think, quite obvious that the problem is an obvious problem that the Commission faces. This is unquestionably a problem for the Hanford area, but it is not one iota unusual, not one iota different from the problem which is being faced today by many States and by many local school districts in many sections of the country.

Mr. COLE. Except that—excuse me—I don't think you can point to another instance where the school load is comparable to the one at Kennewick.

Mr. VOLPE. Well, take for example Amarillo, Tex., where the Pantex plant is; as I understand it, there the increase in the school load was approximately 200 percent, and there are other examples of that.

Mr. JACKSON. Wait a minute, though.

Mr. COLE. It was well over that in Kennewick.

Mr. JACKSON. How many of that increase result and relate directly to a Federal activity in Amarillo?

Mr. VOLPE. It is the Federal activity; and an even more desperate situation, for example, is the one that Congressman Lodge stated in this debate where in the State of Connecticut a large Federal activity carried on during the war and then moved, but leaving behind the population which was brought there during the war period where the school district is actually left with the school population but without the means of employment, so that they have a dual problem of taking care of the school population and also the employment problem.

Mr. JACKSON. They are having that problem right at Hanford now. They have got both. I mean they have got a lot of unemployed people hanging around, too.

Mr. VOLPE. Yes.

The only point I am trying to make is this is not an unusual situation, and it is one that both the executive branch and the legislative branch of the Government have been trying to deal with, and it seems to us that the only question here is: Do we try alone to crack what has been a very difficult problem?

Mr. JACKSON. I think two precedents have been mentioned here. You are not alone in that regard. Funds have already been appropriated in Grand Coulee.

Mr. VOLPE. It is not clear whether that is on-project or off-project.

Mr. JACKSON. Well, I can tell you. I think there is no question in the case of Grand Coulee. If you check the hearings on the appropriations bill, the testimony was that the school building, I believe, is on the project, but the school district which embraces a number of students whose parents are not employed in any way by the Federal Government, 90 percent of the school district is publicly owned land,

but it was made on the basis of permanent construction—was approved on the basis of the inability of the local school district to obtain funds for school construction.

Mr. ALVES. Mr. Chairman, I sent over this morning a statement which set forth certain precedents, and this is one of them, the one you are referring to.

Reading from the Senate Committee Report No. 661 accompanying H. R. 3838, filed July 13 of this year, and involving the Interior Department appropriations bill, here is a short statement:

The committee concurs in the statement on page 13 of the House Report No. 324, Eighty-first Congress, first session, that of the funds appropriated for this project—

namely, the Columbia Basin project—

\$225,000 be used for new school construction and \$100,000 be devoted to repair and improvement of existing school facilities at Coulee Dam, Wash., and recommends that proportionate amounts, based on the relative enrollment of the dependents of Reclamation and contractor employees, be expended on school facilities at Grand Coulee, Wash., in accordance with Public Law 835, Eightieth Congress.

I checked, as officially as I knew how, to see whether that included schools at Grand Coulee Dam, which, I understand, is the federally owned part, and schools in the Grand Coulee school district, which is the non-Federal property, and I was advised that both school districts were included in this committee action.

Mr. JACKSON. Do you have any other examples?

Mr. ALVES. Yes, I have.

As I say, this was sent over, and will be part of the record. From the same hearings, from the same committee report, I took this case. True, it relates to one of the Indian schools at Truxton Canyon, Camp Verde, Ariz., where the Camp Verde Indian School burned in 1946, and \$8,000 was appropriated at a later date for rebuilding this school. That \$8,000 has not been used, because arrangements were made with the Camp Verde school district to take the children formerly going to the Indian school.

At the Senate hearing, the committee was advised that the Indian Bureau has a request from the Arizona State Department of Education to transfer to the Camp Verde public school district the \$8,000 to assist the State in a program of enlarging its public schools, and the committee recommends that this request be approved.

I will admit that the purpose here is the education of Indians, and the idea might have been to get the Indian children into schools with other children, but the point to be emphasized is that a Federal appropriation was made available in this instance, or is to be made available to a school district for the construction of a building not located on federally owned property. The assignment I was given was to check on buildings not on Federal property and financed by Federal funds.

I have one other case I would like to mention now. In connection with the authority which the Army engineers have, a representative of the Arkansas State Department of Education provided me with this information, and I quote:

A grant of \$60,000 was made by the Army engineers for use by the local school districts in constructing a new school building to assist in the education of children from the Bull Shoals Reservoir. The local school district supplemented the

\$60,000 grant with \$30,000 of district funds and constructed a permanent one-story building known as the Mountain Home School, which was occupied early in the calendar year 1949 and is used for high-school purposes.

Mr. JACKSON. Is that on a Federal reservation; do you know?

Mr. ALVES. It is in a school district, not on—every case I am referring to is not located on federally owned property.

Mr. JACKSON. Mr. Black made reference to two situations, I believe, at the last hearing: one with funds made available to the Oregon school system in connection with the construction of the McNary Dam—could you enlarge on that, or do you know?

Mr. BLACK. The only thing I have is a verbal report through the Engineers. They construct and operate the school there.

Mr. JACKSON. At McNary?

Mr. BLACK. Yes. They hire the teachers and pay the teachers' salaries, and all.

Mr. JACKSON. Is that on the reservation?

Mr. BLACK. No.

Mr. JACKSON. Well, is it a permanent building?

Mr. BLACK. I would say, from my own point of view, semipermanent.

Mr. JACKSON. Well, it is probably a temporary construction. Where is it located, Mr. Black?

Mr. BLACK. Hermiston, Oreg.

Mr. JACKSON. What about the high school in Bremerton, Wash.? I believe during the war the Navy supplied funds to Bremerton.

Mr. LINDMAN. Those were Lanham Act funds.

Mr. JACKSON. Permanent construction?

Mr. LINDMAN. Oh, yes. That was a joint project. The State contributed 20 percent, I believe, and the school district 5 percent, and the Federal Government 75 percent of total cost.

Mr. JACKSON. At Bremerton?

Mr. LINDMAN. At Bremerton, for a permanent high-school building.

Mr. JACKSON. That was during the war?

Mr. LINDMAN. During the war.

Mr. JACKSON. You do not know how much was involved, how much in the way of funds?

Mr. LINDMAN. Well, it was over a million-dollar project I am sure. It was well over a million dollars.

Mr. BLACK. Mr. Chairman, I would like to call to your attention one other situation in the State of Washington.

Several years back, there was a lumbering company which moved into a certain place and built the town, built all the school system and gave it in its entirety to the district, and I am speaking now of the Long Bell Lumber Co. of Longview, Wash.

Mr. COLE. What is that a precedent for? [Laughter.]

Mr. JACKSON. Is there anything more for the record?

Mr. COLE. Mr. Chairman, I would like to inquire if any progress at all has been made between whatever discussions may have occurred between Mr. Black, representing these people, these districts, and the Commission, in an effort to find some solution.

Mr. SHUGG. We had one discussion, Mr. Cole, Monday evening, and I think two points came up there. The first was as to what the Atomic Energy Commission or Federal funds would be required by the proposed high school itself. I think Mr. Black's method of arriving at

that figure is about as practical as anyone could use. It was to take the total funds and the total State expected funds and the total Federal or AEC expected funds and then, with that grand total, use the same ratio for the high school or any one of the other buildings, for any one of those three contributors as their total funds are to the total amount available.

Mr. BLACK. That type of formula would be difficult in any other district than ours, for the reason that most of them have already spent their money, and in that case you would have to construe them as funds spent back to such a date.

Mr. SHUGG. Yes.

Now, that did bring out one other point, in looking at Mr. Black's figures. The plan itself had \$300,000 available or which could be raised through the local bond issue, and they have the possibility of \$353,000 from the Commission, and as I understand it, Mr. Black's district has four construction projects in mind. One is a high school, two elementary schools, and a junior high school building.

As we go over those figures it did bring out this fact, that is very rough order of magnitude estimate on the costs, the high school is \$1,800,000, unequipped; the two elementary schools are approximately \$600,000 apiece, and the doubling of the junior high school would be approximately a million, so still, with the thought in mind as to how much of an emergency there is in this present situation, we noted the fact that one of those elementaries at \$600,000 is at least covered by funds already in hand. They could go ahead with one elementary, with the present \$353,000 from the Commission, plus their own \$300,000. That would seem to us at least to have some bearing on the degree of emergency situation as regards more adequate space at this moment.

It does not, of course, give the priority to the high school which the school district believes should be given to the high school itself. That was the chief result of our discussions, I think, Mr. Black, is that right?

Mr. BLACK. Well, the situation is this.

Mr. COLE. I do not see where you accomplished anything except to reach a decision that instead of spending any of the Kennewick funds allocated by the Atomic Energy Commission to Kennewick for a high school, to spend it all for one grade school.

Mr. BLACK. Yes.

Mr. SHUGG. Well, at least one school, one of the four schools projected, could be built and could be used immediately with the money at hand. It seemed to us to have some bearing to the extent to which this present situation constitutes an emergency.

Mr. BLACK. Mr. Chairman, the emergency there is not anywhere near in comparison and degree to the lower grades as it is with the high school. The charts will show you this last year that we have 1,135 enrolled in junior and senior high school, and with a move-up in grades, it would be better than 1,300 for this fall with one building to house 500, in which you can carry on a program of junior-senior high school work, and such a program does not lend itself to a temporary situation. That is where the emergency is as far as Kennewick is concerned.

Mr. SMYTH. Mr. Chairman, I am a little puzzled about this Kennewick emergency. Maybe I do not understand this table that, I think, was prepared by Mr. Alves on the original school districts, and the

money they have raised since 1940-41 in terms of the valuation; but, as I read it, the six school districts consisting of Grandview—Grandview has a total valuation of \$2,866,000. They raised \$303,000 in this period through a total millage of 130, and bond issues to make up the difference, which is approximately 11 percent of the valuation.

Kennewick, with a valuation of \$7,000,000, has raised only \$317,000, total millage of 5, as against 130 in Grandview, and \$300,000 of bonds, which is about  $4\frac{1}{2}$  percent, and the others range from  $4\frac{1}{2}$  percent approximately for Prosser—these are very rough percentage figures—up to 13 percent for Sunnyside where, with a total valuation of \$5,000,000 at Sunnyside they raised \$667,000, or twice as much money, more than twice as much, as Kennewick, although with a lower valuation.

I mean the situation has been developing over quite a long period.

Mr. BLACK. Mr. Chairman, I would like to have an answer to that question. It so happens that those millages are true in that sense, but does anyone have a right to ask that due to an overload that the people of that community were trying to eke out a living should pay  $2\frac{1}{2}$  times their ordinary taxation every year to keep up with it?

Now, I might say that for that very taxation you are reading there both the superintendent in Sunnyside and the superintendent at Grandview lost their jobs this year over the deal of putting on such taxation. [Laughter.]

Now, the man at Grandview was fired, and the man at Sunnyside beat them to the draw all over that one question.

Now, to raise that extra taxation there has to be a vote in the State of Washington. Forty percent of those who voted in the last general election must cast a ballot to make it legal, and 60 percent must be in favor, and if you think we have not done the right thing in Kennewick, come out and try to pass a special levy.

Mr. LINDMAN. Mr. Chairman, I am glad you brought that point up because I think we should clarify what has happened in these districts over the past few years. It will, I think, clarify the record.

From the period from 1943 on there has been spent in these six districts \$855,000 of local money, \$888,000 of State money, and \$274,000 of Federal money, which was Lanham Act funds.

Mr. JACKSON. Which was for school construction?

Mr. LINDMAN. School construction in these six districts. Some of them—they are all, of course, trying to keep up with the load, but for the record you ought to know that the State has already contributed \$888,000, the local districts \$855,000, and the Federal Government, through the Lanham Act for those same buildings, \$274,000, and yet those districts, even Sunnyside which is the one that has made the greatest local contribution, as you indicate from your report and has received the greatest State contribution, \$380,000, is on the double shift. In spite of a very excessive taxation, and in spite of liberal State grants they are still unable to house their rapidly increasing school enrollment. You have crystallized the idea that after excessive local effort has been made in the area, and State aid has been provided, as well, they have been unable to keep up with their increasing loads due to this general activity in the area which centers around Richland.

Mr. SMYTH. Well, Mr. Chairman, I was not questioning the difficulties in the whole area there, which, I think, has to be made very clear, but I was asking for an explanation, which I have certainly gotten, of the difference.

Mr. JACKSON. A very practical one.

Mr. SMYTH. Of the difference in the different districts, which seems to be quite striking in this table:

Mr. JACKSON. Even under the formula that has been worked out the funds would be so apportioned, as I understand it, that the districts that have made the larger millages or larger levies, I should say greater levies, I should say, would not be penalized for having done so, but would be given consideration on the basis of the formula that was worked out there.

It is pretty hard to get a uniform situation where you have got five or six districts all making various levies from time to time, and I think it is a point that should be commented on, and it is an indication of what the attitude has been locally, as to what should or should not be done by the local school districts, but I think it can all be taken care of in whatever agreement is worked out, because it is certainly something which relates to the element of the ability which has been made by the district.

Mr. SMYTH. Yes, I am very glad you made that point because that was essentially what I was trying to carry out, that we have to consider those points.

Mr. LINDMAN. I think it should be brought out here that the committee recommendation which was made in Richland was very cognizant of this problem, and the committee was very careful to draft a recommendation that did not either penalize or reward districts for previous happenings. In other words, one district was not to receive more money because they had levied less or to receive less money because they had levied more.

There was a certain load that could be attributable to Federal activities, and was in excess of what the districts could be expected to absorb with ordinary State and local resources, and that load should be the basis for any type of contribution which the Atomic Energy Commission would make. In that way then you would not find yourself in the awkward position of saying that because Sunnyside has taxed itself beyond reasonable limits and now has only 10 classes double-shifted, which is a bad situation, they are not as bad off as another school which did not tax itself.

Mr. VOLPE. Mr. Chairman, I attempted to give before some illustrations of comparable situations throughout the country. I have before me some of these figures, and the reason I stress this is that I feel, and I believe this is probably the Commission's position, that a distinction cannot be made that the Atomic Energy Commission should handle this problem in a manner which is, perhaps, separate and different from the way it has been handled by the Federal Government as a whole.

Let us take, for example, the Cooper River school district, North Charleston, S. C.

Prior to the war the school district enrollment was 3,540. During the war it went to 10,356, an increase of approximately 7,000 due solely to activity of the Federal Government; and since that time the enrollment has leveled off to 8,700, which is still twice the number of enrollment prior and during the prewar period.

The school district—this is a report which was made to the Senate Appropriations Committee—has raised its assessed valuation, and increased its tax levies, to the point where home owners are paying

almost twice the tax rate which was necessary to pay during the war, and still the school district has a deficit each year approximately of \$100,000 for maintenance and operation of its schools.

Another example is the Mad River Township, Ohio. Prior to the war there were 836 children in the school district. In 1947 the enrollment was 2,591 due to the Wright-Patterson Air Force Base.

Again, because of this burden there were 300 elementary-school children who were on half-day sessions, and it was necessary to transport 373 high-school students to an adjoining school district at a tuition of \$170 per child per year; 26 of those 46 classrooms in the district were in leased buildings, and many of them were unsatisfactory for school purposes.

Just prior to the beginning of the 1948-49 school year, a trailer camp, accommodating several hundred trailers, was placed in a school district, again increasing the school enrollment, but adding very little to the assessed valuation.

In Orange, Tex., the Orange school district, there was a school enrollment prior to the war of approximately 2,000. This jumped to 8,300, a 400-percent increase in enrollment.

During the 1947-48 school year, there were 5,500 students, still an increase of 150 percent over the prewar period.

Mr. JACKSON. Do all of these examples involve continuing Federal activities?

Mr. VOLPE. Continuing Federal activities, and attributable solely to a Federal activity.

Mr. COLE. Direct and indirect, both?

Mr. VOLPE. That is right, sir.

Mr. COLE. But they still do not approach the Kennewick figures of direct, except maybe this one out here at the Wright-Patterson Field.

Mr. VOLPE. Yes; certainly the Wright-Patterson approaches it, and these are given as typical illustrations in this report. It is not intended as a comprehensive report, a study of the problem throughout the country.

Mr. ALVES. Mr. Chairman, may I comment? That was the report cited the other day, and the report, as submitted, is for current expense purposes.

I would like to comment with reference to the school building situation.

During the war the Lanham Act program provided funds for constructing school buildings, and it happened that our office served as an assisting agency in determining the need for additional school facilities.

I recognize and remember very well each of the three districts. I personally have been in Orange, Tex. As I recall, there were four or five Lanham Act projects, school buildings built primarily with Federal funds. That similarly is true of North Charleston.

Mr. JACKSON. Permanent construction?

Mr. ALVES. Some permanent, some temporary, primarily permanent in Orange, Tex., I think all permanent, with the exception of one building, as I recall.

Those facts could be obtained directly from the Federal Works Agency, which did that.

Mad River Township, I know, had one or more buildings. Added to that list would be the famous Midwest City case in Oklahoma which, from the standpoint of extremely rapid increase, is probably as bad as any. I would like to make one further comment.

In some of these districts, not only those named here, but some of the list of another hundred more, there are still school building needs attributable to Federal Government activities. The fact that there is such a need in a group of districts, chargeable to Federal activities, is the primary reason for the introduction into the Congress this year of some forty-odd bills on school construction, a good number of which emphasize very distinctly and emphatically the critical emergency need, and a few, such as the present Humphrey bill, Senate 2317, specify emergency school construction needs, because of Federal Government activities.

I think it is very significant that that be here in the record in this fashion. I think the statements submitted to the Senate committee at the time, although they were for current expense purposes, when coupled with the fact that there have been Federal funds spent for school construction located off Federal property, just nails down, in my opinion, very thoroughly, the question that was raised.

Mr. JACKSON. Well, if the facts are as you recited them—and I am sure they are because you were in Orange, Tex., on a trip——

Mr. ALVES. Yes.

Mr. JACKSON. It would seem to me, Mr. Volpe, that they built permanent buildings in Orange in connection with that project, and as I understand it, it applied also in a couple of the others cited, that you have a precedent then for permanent construction.

Mr. VOLPE. It is true that during the war under the Lanham Act funds were used for permanent construction, but that was stopped after the war as a matter of Federal policy.

Mr. COLE. But they did not take the buildings away after they were up.

Mr. VOLPE. That is right.

Mr. BLACK. Well, according to the status, Mr. Chairman, the war is not over yet, is it?

Mr. VOLPE. I wonder if I could ask Mr. Alves one question? Can you reflect the report, the policy of the United States Office of Education on this problem, that is, whether or not it could be handled on an ad hoc basis or whether it should be handled as a Government-wide problem?

Mr. ALVES. I am not sure that your question is clear to me.

Mr. VOLPE. Let me restate it then. Does the United States Office of Education have a policy in connection with Federal assistance to local school districts?

Mr. ALVES. We have never had any funds to administer, so we have no policy as an office.

Mr. VOLPE. Do you advocate one as an office?

Mr. ALVES. Yes; I think the Commissioner of Education at the hearings before the Humphrey subcommittee set forth proposals of the Office of Education and the Federal Security Agency, which could be so cited, and they are, of course, in those hearings. I do not happen to have a copy with me. I will be glad to read a number of principles that came out of that, and be glad to supply the committee with a copy if you want that.

Mr. JACKSON. I think if it is not too long it ought to be included in the record.

Mr. ALVES. You might at least get an excerpt from it if you wanted to.

(The information referred to is as follows:)

[From Report of Proceedings of a Hearing Held for the Subcommittee of the Committee on Labor and Public Welfare, U. S. Senate, on S. 137, et al., June 7, 1949, pp. 117-126]

Mr. McGRATH. \* \* \*

\* \* \* \* \*  
That is, if we take the view that all the children in the United States should have at least a basic fundamental education for citizenship without any fads or frills, it follows logically that the Federal Government must provide Federal aid both for current expenses and for schoolhouse construction.

If you wish, Mr. Senator, I could give you the pretty accurate figures on that matter.

\* \* \* \* \*  
They will show that a State like Mississippi, for example, regardless of the efforts it makes—and it now makes several times the effort a State like New York makes to provide education for its children—cannot do so unless it impairs all other public services. They could take all money they spend for highways and pay school expenses, but that would not be economically sound, as you know.

\* \* \* \* \*  
The differentials in wealth and ability to support schools, so carefully documented as respects the need for Federal aid to the States for "current expenses," are equally relevant as respects the need for Federal aid to the States for "capital outlay" purposes.

Reports on file in our office showing State and local resources in relation to the need for public-school plants indicate that millions of children and youth of the Nation will be denied adequate, safe, and suitable schools unless the Federal Government provides financial assistance.

I might interpolate there that we do not consider any building suitable as a schoolhouse. The argument is sometimes made that buildings are available in which teachers and students can be housed, but the school plant is closely related to what the child gets in the way of education. We talk here of special facilities for educational purposes.

Senator HUMPHREY. Yes.

Mr. McGRATH. Importance of Federal financial assistance.

The Federal Government has participated in the financing of public-school-plant facilities in connection with several temporary and emergency programs. During the depression and prewar periods, the Federal Government provided funds through the FERA, CWA, PWA, WPA, and NYA programs for public works including schools. During the war the Federal Government provided, through the Lanham Act program, all or part of the funds for the construction of school facilities in several communities where the enrollments had materially increased because of Federal activities. For more than 15 years we have had such temporary- and emergency-assistance programs. These programs were based on the then existing emergencies. They emphasized employment for unemployed workers in prewar days. During the war the emphasis shifted to providing school housing for war workers' children. They followed a pattern of Federal-local relationships, and in many cases practically ignored State educational authorities.

It would seem that it is now time for the Federal Government to establish sound policies which recognize the jurisdiction and professional competence of the regularly constituted educational agencies at the Federal and State levels. In this connection I wish to indicate my agreement with the policy statement of the National Council of Chief State School Officers that—

"Federal funds for school planning and construction should be allocated through the United States Office of Education to the legally constituted State educational authorities, and not directly to local educational agencies."

Within each State there is a legally constituted State educational agency and a chief State school officer. The particular form of organization varies with the States, but in each case there is a State agency with State-wide jurisdiction over all public elementary and secondary schools. States have delegated specific educational functions to political subdivisions, constituting the local school administrative units and including cities, towns, counties, or school districts. These subdivisions are creations of the State. The State is the sovereign unit, with

which the Federal Government should deal: Any other procedure would tend to weaken and eventually to break down the traditional State responsibility for education, and open the door to Federal interference and control.

Let me give one illustration of why it is so important for the Federal Government to work through the State educational authorities in this matter of school-construction aids. Many States are now engaged in school district reorganization programs. If the Federal Government, in the operation of providing financial assistance for programs of school construction, does not give full recognition to the responsibilities and functions of State educational authorities, the probable result will be a freezing of obsolete school organizational patterns. School plants erected without relation to State programs or a satisfactory structure of local school units will handicap educational progress for at least a generation. This would largely nullify the efforts of States to develop modern school facilities according to logical patterns of properly located permanent school centers in relation to the distribution of school population. Furthermore, it would increase the cost of providing needed facilities.

It is clear that Federal-aid programs for school housing will be effective only to the extent that such programs facilitate rather than retard the development of sound State-wide plans. It is essential, therefore, that the Federal Government make its agreements with the several State educational authorities and not with individual local school districts.

The supporting public wants adequate school facilities, and is no longer much concerned about district lines established in the horse and buggy days. State educational agencies are aware of these conditions and are planning comprehensive State-wide school facilities programs. These State efforts should be facilitated and encouraged and above all should not be thwarted by Federal programs based on direct Federal dealings and agreements with local school districts.

While most States have made some studies of these problems as related to school plant needs, there is urgent need for more systematic and comprehensive studies in all States. The provisions of pending bills for allocating Federal funds to States for their use in developing sound school-plant programs are timely and consistent with efforts to determine permanent school centers in relation to sound local school units.

What is urgently needed is a program of Federal aid for school housing which will provide the needed funds and assure that they are used for school construction without imposing on the States undesirable controls. The States must be encouraged to plan the type of buildings most suited to their needs and to locate such buildings at permanent centers as determined in accordance with criteria or standards established by the States themselves. The function of the Federal agency is to assist States in their efforts to develop such criteria and to plan and carry out a comprehensive program of school construction that will meet their urgent needs and at the same time facilitate, rather than hinder, needed school-district reorganization.

I have not directed my remarks toward any of the bills now being considered by this committee, but I should like to restate and reemphasize for the committee in somewhat greater detail the principles referred to by the Federal Security Administrator which we believe should be embodied in any legislation providing Federal assistance to the States for school housing construction. Briefly then we believe sound Federal policy would require—

1. That Federal funds be made available to assist States in making surveys necessary for the development of their respective long-range State-wide school-plant programs.

2. That Federal funds for the construction of school-plant facilities be allocated to the respective States, rather than to individual schools or school systems, and that these funds be made available to State educational agencies for use in their respective States in accordance with their State plans.

3. That these funds be allocated on the basis of an objective formula which would provide—

- (a) That there be available for school construction in all States a uniform amount of money (Federal and non-Federal) per school-age population, 5 to 17, inclusive;

- (b) That the ratio of non-Federal to Federal participation in financing the program be based on the ability of the States as measured by "income payments"; and

- (c) That the Federal-participation percentage be calculated on a State-wide basis, rather than project by project.

4. That the Federal Government recognize a special obligation to give immediate emergency assistance in meeting critical school-plant needs occasioned by Federal Government activities; and that for 1 year only the Federal grants-in-aid for this purpose proportionate to the Federal responsibility, be allocated on a project basis after a determination by the Commissioner in cooperation with the State agency, the school district or districts, and the Federal agency involved; and that any critical project be determined to the extent feasible as an integral part of the State's over-all program of school construction.

5. The responsibility and authority for administering the program within the States be assigned to the States; that Federal relations thereto be carried on through the Office of Education, Federal Security Agency; that the Commissioner of Education be assigned the responsibility for reviewing and approving State qualifying plans for the use of Federal funds within the respective States; and that he be given the responsibility for providing consultative services to State educational agencies to assist them in—

(a) Setting up over-all State plans for participating in the Federal assistance program,

(b) Making studies to determine the need for and the location, type, and size of facilities, and,

(c) Developing State standards and regulations for the educational planning, constructing, and equipping of individual projects.

6. That each State designate a single State educational agency to be responsible for administering the school plant program within the State and that Federal funds be made available from the State allotment only for projects for which the locations and drawings and specifications have been approved by such agency.

7. That the State educational agency develop an approved State plan which sets forth—

(a) The manner in which the State proposes to determine its needs for school plant facilities and the priority of construction projects,

(b) The method to be used in determining the relative needs of different areas lacking adequate school plant facilities with consideration for those areas with relatively low financial resources and especially for those areas overburdened with enrollments resulting from war and defense programs and other Federal activities,

(c) Standards for the location, planning, construction, and acquisition of public-school plant facilities,

(d) The method of distributing State and Federal funds for providing public-school plant facilities, and

(e) Functions and responsibilities to be delegated to local units.

Let me close by expressing the hope that this committee will develop and report for favorable action by the Senate school housing legislation embodying the principles I have just enumerated. If the committee has any questions on the provisions of any of the pending bills in relation to these principles, I shall be glad to have Mr. H. F. Alves, who is the Director of the Division of School Administration of the Office of Education, and who is here this morning, to answer them.

\* \* \* \* \*

Mr. JACKSON. I think in that same connection you might state whether or not the committee report that was agreed to had the concurrence of the Commissioner of Education.

Mr. ALVES. It did.

Mr. JACKSON. Therefore, I assume that the committee report does represent the policy of the Office of Education on this subject?

Mr. ALVES. Policy is hardly a good word.

Mr. JACKSON. As to this specific situation, I mean.

Mr. ALVES. Well, certainly it represents a position of the office in that the Commissioner transmitted it. I do not think policy is determined except by Congress.

Mr. JACKSON. Well, I think, to be specific about it, the Bureau of the Budget would have to pass on the policy that the Department or the Office of Education works out, and then it becomes the policy of the executive branch of the Government.

Each department of the Government, I mean the various departments, have different policies, but the last decision is made by the Bureau of the Budget for the President.

Anyway, it seems to me that we have all the information here now, and it is the Commission which should make a decision of what they want to do. I mean, the idea was, as Mr. Cole expressed it at the beginning, that the Commission should make some sort of recommendation regarding this over-all problem, and then submit it to the committee, and I think that something reasonable can be worked out.

The committee will try to be very helpful in working out a recommendation that will make some sense out of this thing. I believe that is it, is it not, Mr. Cole?

Mr. COLE. That is what I suggested a week ago, but I find that we are right at the same place as we were when I made the suggestion. We have not moved off home plate, except to fill the record with a lot of figures. We have not accomplished anything.

Mr. JACKSON. I think if the Commission wants to say "No" they ought to say "No" and just decide, because there is no use of our going on any more. I mean it is up to the Commission, and then whatever happens will happen, whosever responsibility it is supposed to be, because the committee wants to do everything it can.

I realize the Commission has a tough problem, but I think it should make a decision.

Unless there is anything further there is no use in just having a long dialogue on the record here.

Mr. BLACK. From our point of view, representing the six schools, we feel that the committee which was formed at your insistence, worked out a fair and equitable situation. However, I realize the tremendous problem of funds, and the way they are incurred, but if the committee report could be accepted as an obligation, and funds supplied only as needed in a fair way, these schools could get rolling, stay with it, and they would all appreciate the opportunity of working with their neighbors. It will not take the total at one time or at the beginning of the funds worked out by that report by any means to get started, and should any Federal legislation take place during the period of formulation, then we would be glad to swing under that legislation, provided we did not have to change in the middle of one project, which would make that practically impossible.

Mr. JACKSON. Is there anything further for the record? If not, we will conclude the record at this point, subject to any other information that should be included in it.

(Whereupon, at 4:45 p. m., the committee adjourned.)

# RECOMMENDATIONS ON LABOR RELATIONS POLICY IN ATOMIC ENERGY INSTALLATIONS

**TUESDAY, MAY 3, 1949**

CONGRESS OF THE UNITED STATES,  
SUBCOMMITTEE OF THE  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The subcommittee met at 10 a. m., pursuant to call, in room 1501, New House Office Building, Hon. Chet Holifield (chairman of the subcommittee), presiding.

Present: Representatives Holifield and Jackson.

Also present: William H. Davis, Presidential appointee to the chairmanship of the Atomic Energy Labor Relations Panel; William L. Borden, executive director; Harold Bergman, deputy director; and E. L. Heller, staff member, Joint Committee on Atomic Energy.

Representative HOLIFIELD. The meeting will come to order, please.

This is a subcommittee of the Joint Committee on Atomic Energy, composed of Congressman Jackson of Washington, Chairman Holifield of California, and Senator Knowland of California. Senator Knowland is unable to be present because of a conflicting committee engagement this morning. We have tried to obtain another member to take his place from the Republican side of the committee, and hope that we will have him here as the meeting progresses.

We are highly honored this morning to have with us one of the outstanding men of national repute in the field of labor, Mr. William Davis. We are going to ask Mr. Davis to proceed in his own fashion to give this subcommittee a report on his recommendations for the setting up of policy in labor relations to be used by the atomic energy plants and their contractors, the reasoning behind that set of recommendations, and the reasons for not carrying them into the field of compulsory arbitration.

Also, we are going to ask Mr. Davis to testify, within the bounds of his own discretion, as to recommendations which he has made to the Atomic Energy Commission regarding their duties and responsibilities under this very complicated arrangement upon which we are operating a quasi-Government, quasi-free-enterprise group of plants in the interest of national defense.

Mr. Davis, we will ask you to proceed in your own way, sir.

## **STATEMENT OF WILLIAM H. DAVIS, ATTORNEY, NEW YORK CITY, PRESIDENTIAL APPOINTEE TO THE CHAIRMANSHIP OF THE ATOMIC ENERGY LABOR RELATIONS PANEL**

Mr. DAVIS. Thank you, Mr. Holifield.

As you know, the President appointed this Commission on September 3, 1948, and the members were Mr. Aaron Horvitz of New York, Mr. Edwin Witte of Wisconsin, and myself as Chairman.

The appointment referred to the President's message to the Congress of June 18, 1948. That was the message in which the President reported to the Congress the existence of a dispute in the laboratory at Oak Ridge, making the report under the provisions of the Taft-Hartley Act. In that message to Congress he said that he was going to appoint a Commission and the Commission was to do certain things.

One of them was to "explore the question whether any special legislation should be enacted to protect the national interests without depriving management or labor organizations of the initiative and freedom necessary for the progress of our atomic energy program."

The second one, using his words, was "the Commission should study ways and means of adapting to the atomic energy program the best of our experience in the complex field of labor relations."

He specifically requested us, as we took it, to apply our knowledge of procedures that had been successful and apply them, or consider their application, to the field of atomic energy. Then he said:

The Commission should concern itself also with special aspects of the problem, such as questions of bargaining representation, uniformity of working conditions, and wages, and procedures for grievance handling.

So that was our first charter of instructions.

He wound up by saying:

The Commission should concern itself, in short, with the broad code of conduct which should be observed \* \* \*.

We had a second directive, in a sense, derived from the announcement of policy of the Atomic Energy Commission, made in a report to the Congress in January of 1948, in which they laid down certain principles. These are embodied in our report. They emphasized the importance of continuity of production in vital installations, the wholehearted acceptance by the contractors and labor and its representatives of the responsibility incident to that, and they emphasized the matter of security in the sense in which that word is used in the atomic energy field; that is, secrecy and also safety, which has special aspects because of the nature of the material to be handled. Then they said that "consistent with the Commission's responsibility under the law" they wanted "the least possible governmental interference with the efficient management expected from the AEC contractors" and "minimum interference with the traditional rights and privileges of American labor."

Those were directives, too, and it made a pretty tough job on the whole. However, there was no doubt in our minds, and we quite fully accepted the basic idea expressed by the Atomic Energy Commission, which I believe was also expressed in the Atomic Energy Act by the Congress: the desire to carry on this program within the framework of free enterprise as we understand it in this country, and hence the desire to protect what may perhaps be called the normal relations of management and labor as far as collective bargaining is concerned.

Yet that has to be done within a framework in which the Government is the owner of the property, the contractor is the hired man, the money is paid by the Government, and most of the contracts are cost-plus contracts and for some time to come probably must be, with the consequence that the AEC has the responsibility for approv-

ing disbursements or reimbursements and really holds the purse strings.

Well, that made a very interesting situation.

I may say, gentlemen, that the atomic energy program is not the only place in our rather complex society in which the conditions which exist are such that production must go on and must not be interrupted.

So although the AEC in some of its work typified the situation where you cannot have interruption of production, it was not unique in that respect at all. But when you add to that the fact that the Government held the purse strings, and still was trying to get free collective bargaining, and the values of collective bargaining, you have quite a problem.

Those were the directives, so to speak, under which we started to work.

I do not know how much time you want me to take.

Representative HOLIFIELD. We have until 12 o'clock, Mr. Davis, so we would like to have this developed fully. It is a very important question, and it is a very difficult question.

Mr. DAVIS. Well, I think you would be interested, perhaps, if I gave a little time to telling how we proceeded with our job.

We almost immediately had meetings in New York with the officers of two of the biggest contractors, the Carbide & Carbon Chemicals Corp., and the General Electric Co.—separately, I mean—and we also had, almost immediately, here in Washington meetings with the representatives of the A. F. of L. and the CIO, both of which organizations have contracts in one or another of the plants. And, of course, we immediately had conferences with the staff of the AEC and with the Commission itself.

We then decided that we had better go out in the field and see what things looked like locally. We went first to Oak Ridge. Our procedure there was quite "on the table"; I mean, we had a conference with the AEC representatives, of course, and then we had a series of conferences with the local management, and with the local labor people. We, from the beginning, tried to develop our thinking quite openly, so that everybody concerned would know how we were thinking and correct our mistakes.

Then—I can't remember just when, but as I remember it, it was after we came to Oak Ridge—we drew up a rough draft of a report, at that time quite conscious that we didn't know the answer, but really just to set down topics. Then we went out to Hanford in Washington and went through the same procedure there. We saw the plants, of course, in both places, and conferred with everybody involved.

We went from there down to Los Alamos, and went through that installation. Then Mr. Horvitz and Mr. Witte went out to the Argonne Laboratories at the University of Chicago. I had a conference, together with Mr. Horvitz, with this association of associated universities that is running the plant on Long Island. We had talks with about everyone else that is involved in the program.

We then drew up a draft, which was marked "Draft No. 2," and of which, I think, the members of your committee had copies at that time. We circulated these drafts to everybody concerned, and got their comments and, after considering all the comments, we drew up the final draft.

I don't want to convey the impression that the final report was a collectively bargained report, because it wasn't. I mean, having received the suggestions of these people, we took them into account and gave them what weight we thought we should give them, and we finished the thing up and issued it. Nobody agreed to it in exactly its present form, and yet everybody concerned had seen it in the process of manufacture, so to speak, and had had the fullest opportunity to make any objections to it or make any suggestions that they wanted. That was the procedure.

When it comes to the nature of our thinking, which you spoke about, that is, the thinking which underlies the report, it is a little hard to define except from the report itself. I think that each of the members of the Commission would say, in different words, that the basic thinking underlying the report is that there are in fact creative values in what has come to be known as collective bargaining; that these differences of opinion which exist between the two sides are not horrible things that should be shied away from but are the expressions of the reality of the situation as it affects the people who are involved in it; and that every time they have a dispute and resolve that dispute by agreement, they make progress toward the real purpose of collective bargaining, and indeed the purpose of industry in my opinion, it being my opinion that in this society of ours industry is not in existence to produce washing machines or even atomic bombs, but to produce citizens.

The process of dispute and reconciliation that goes around the bargaining table is the opportunity that the citizen has to express himself down the line, to get the feeling that he is participating in his own destiny.

So all three of us had certainly a deep sense of the values of free collective bargaining, if it can be preserved.

Representative HOLIFIELD. You had the feeling that this thing which you call the creative factor was more important to the eventual success of the operation than certain factors of duress or coercion would be?

Mr. DAVIS. Yes; very much so.

I do not want to appear starry-eyed about this subject. I don't think I am. I am speaking from practical experience. And the fact is that what you want are willing workers on both sides of the fence, both managers and wage earners. The human race is a difficult institution, as you know, but there are great possibilities of release of human energy in these relationships, if they are properly conducted—and if we are not afraid to have a disagreement now and then. We used to say, on the War Labor Board, "If you don't have a disagreement, you can't have an agreement." That is really the way you make progress; the fact of the matter being that in industrial relations there are certain things that are necessary, unavoidable.

Dr. Baake at Yale, for instance, refers to "the necessities of survival of management and the labor union," created perhaps, in our society, by the basic acceptance by both sides of the idea of so-called free enterprise, private enterprise.

If you are going to have private enterprise, then certain things are essential to the survival of both groups. The trouble is that at the moment each side has, or may have, very exaggerated and prejudiced

opinions about what this necessity is for them. They think things are essential which are not.

Well, it is the job of bringing this erroneous opinion closer to the true necessities, you see, that is taken on by collective bargaining. Every time you do that, you make progress in the relationship.

While all three of us recognized that there are in the atomic energy program certain operations that cannot be interrupted, we also recognized that there are certain operations which can be interrupted.

For instance, we took a hypothetical case. I remember in our discussions with the parties, we said, "Suppose at Oak Ridge management decides to paint all the porches in Oak Ridge, and management says 'That is a maintenance job; we are going to have it done by the maintenance men,' and the union says, 'Oh, no, that is a contractors' job, and you ought to let out a contract for that,' and they disagree about that."

It is a subject which they often disagree about. Well, there is no reason why they shouldn't settle that the way they settle it in ordinary industry, in my opinion. If they want to have a strike about it, why not? Nobody dies if he doesn't get his porch painted this week. And if a strike is "available" in that sense, they certainly should be left to strike; the strike or lock-out being almost essential to free collective bargaining.

It is the possibility, gentlemen, of a strike or lock-out that puts a limit on unreason at the bargaining table—about the only thing that does. That is the thing that quiets passion and brings in the still, small voice of reason at the bargaining table, when people finally get up to the point: "Are we going to have a strike or not?" And without that control, you have an extremely difficult time to get the values of collective bargaining.

So, as I say, we realized that there were things in atomic energy that couldn't be interrupted. And so did everybody else, the management and the workers. And, as I say, we also realized that there were other things that there was no reason why we shouldn't interrupt.

Representative HOLIFIELD. In other words, there were two distinctly different fields—the operation of atomic production facilities, which could not be interrupted; and the construction of plant, housing, the maintenance and the janitorial type of work.

Mr. DAVIS. Yes.

Representative HOLIFIELD. And in this latter field you had no compunction against applying the ordinary methods of collective bargaining.

Mr. DAVIS. That is right.

Representative HOLIFIELD. But in the operational field where atomic energy machinery of production must be continuous in its operation, both from the standpoint of the needs of national defense and from the standpoint of the technological phase, where interruption would do great damage to the whole program, you realized that there must be continuity of operation.

Mr. DAVIS. Yes sir. That is exactly right.

Representative HOLIFIELD. And that put it almost, you might say, completely out of the field of normal labor-management relations.

Mr. DAVIS. That is right; out of the field of normal labor-management relations—but not absolutely unique.

Now, I was a member of the Board of Transportation in New York. I was supposed to be in charge of labor relations. I didn't do very well, and had to get out, but I did my best. But I said there, and I said to the union people, "We are not going to have any strike on the subways. You can't shut down the subways in New York." Trying to be humorous about it, I said, "All you have to do is look at the map of the city, of Manhattan Island. If you shut down the subway transportation system, you might as well give the island back to the Indians. You would be lucky to get your \$24 back. You just couldn't live."

And it was understood.

There are other instances of that, such as public service, the police. After all, a police strike elected Mr. Coolidge President. It was quite an event in American history. So it is not unique. In fact, there is a great mass of history in this country and abroad on such situations.

But now a strange thing developed, a thing I am sure you will be interested in, in our discussions. That is that both of the labor organizations recognized that there were things in the program that couldn't be interrupted, and they both proposed to us compulsory arbitration.

Representative HOLIFIELD. Let me understand this. Who proposed that?

Mr. DAVIS. The A. F. of L. and the CIO officially proposed to us that they would like to see compulsory arbitration agreed to beforehand with respect to all these operations that I referred to as vital operations.

Representative HOLIFIELD. What was the attitude of management on that?

Mr. DAVIS. The attitude of management, among the big concerns, Carbide & Carbon, and General Electric and Westinghouse, for instance, was opposed to compulsory arbitration. They said, "Let them strike."

And there was the small Zia Co. out in Los Alamos, which operates the town facilities, which wanted compulsory arbitration.

Representative HOLIFIELD. Now let me ask you, there, Mr. Davis: The opposition of these big companies to compulsory arbitration was on what basis? Was it on the general principle of being against compulsory arbitration, or was it because they thought they had the advantage in negotiations with labor because of public opinion demanding that the continuity of operation be maintained?

Mr. DAVIS. Well, Mr. Holifield, I can tell you what they said. It wasn't exactly the same. One of the concerns said, "We stand with the American workingman, and we believe he has an inalienable right to strike. He shouldn't be deprived of it." However, upon closer examination—because, after all, none of us involved in the discussion were born yesterday—it developed pretty soon that there were situations in which they couldn't strike. They had just been through, for instance, the affair at the laboratory in Oak Ridge, a situation in which the Taft-Hartley Act had done all its stuff. The injunction had been issued. It had been in existence for 80 days. The 80-day period terminated. The injunction was withdrawn. The judges walked off the scene, and all the imperiled American citizens saw of them was their backsides—and the men were free to strike.

Representative HOLIFIELD. In other words, the Taft-Hartley Act had not prevented the strike.

Mr. DAVIS. No. The men were free to strike, and they were very bitter locally about the situation. The top officials of the American Federation of Labor—I am not trying to pin any rose on them about it, but for good, sound, practical trade-union reasons, they came in there and said, "You can't strike. You have got to keep this thing running." Because Mr. Lillienthal had told them that he would keep it running if they didn't.

Well, that had just happened. Everybody knew that situations like that could develop, in which the men could not interrupt production. Whether you say it is because they are loyal citizens, or whether you say it is because they are loyal trade-unionists, or whether you say it is because they are subject to control by the higher officials in the organization, or whether you say, the fact is that they couldn't strike.

So there wasn't very much reality about that.

Another one of these concerns, with what I thought was more understanding, or perhaps sincerity, said, "Yes, we recognize that there are conditions under which the men cannot strike, and we recognize that so fully that we have taken it into consideration in the offers we have made." They told us that in their latest offer, after negotiating with the union and not being able to come to an agreement, they had withdrawn the offer, and improved it. And the top man, a very sincere fellow, said, "We improved it because we knew that the men could not interrupt production, and we felt a special responsibility to make our position fair and equitable." And he was perfectly sincere.

Representative HOLIFIELD. In other words, he, as management, recognized this creative factor, the value of it.

Mr. DAVIS. Yes, and he recognized that there were conditions where the men could not strike; although he was saying that he was opposed to compulsory arbitration. I said, "Why are you, when they can't strike?"

"Well," he said, sincerely, too, "because we feel that responsibility, and we feel that we can do what is fair and reasonable under those special circumstances.

He was an old friend of mine, and I had sat with him on boards in New York State, and so forth, for years, and I said to him, "Well, now, you are using adjectives of judgment value, 'fair' and 'reasonable'."

He said, "Yes."

I said, "Well, do you think human beings being what they are, that you can ask one person to take the value judgment of another fellow about what the other fellow does, which affects him?"

He looked at me a minute, and he said, "Yes, I do think so, in these special circumstances."

"Well," I said, "now, look: We have known each other for a long while and we have generalized a good deal. I will give you a definition of 'freedom'."

He said, "All right."

"Well," I said, "freedom consists in preserving to the individual the opportunity to challenge the value judgment of the other fellow about things that affect him." I looked at him and said, "Will you take that?"

He hesitated a minute, and he said, "Yes, I will take it."

From that time on, we didn't have any further trouble with that particular contractor as to this question of compulsory arbitration.

We turned down compulsory arbitration because Ed Witte and I had been members of the War Labor Board and Horvitz had been very closely associated with us during that period, and we knew the evil effects of compulsory arbitration. So it was we who turned it down. The unions were willing to take it. The big contractors were opposed to it. And we turned it down because we know it spoils collective bargaining.

That was the basic thinking, which left us in this position: that we have got to work out something that "preserves the risk," if you want to put it that way; or that takes the risk of human relations, and preserves this possibility of agreement.

There were three elements in our thinking, reflected in the report. In the first place, we recognized, as the Commission did, as everybody does, that there were special responsibilities because of the nature of the program, and that therefore on these situations where interruption is not possible, there was a special responsibility on both sides to come to an agreement, to stick to it until they worked it out. We put that down. Then, the President had asked us, as I pointed out, to consider the application to the atomic energy program of the best of our experience in the complex field of labor relations. So we made a survey from our own knowledge, and so forth, of things which had proved successful in the general field. And that led to section 4 of the report.

I will go back a little bit, if I may. The second item in the report almost settled itself. That had to do with security. And we found that there was a good deal of what we thought was unnecessary or unavoidable difficulty at the local plants arising out of the security rules. Because the Commission itself has the absolute responsibility for security, and they can't shift it. They make the security rules. They have to be administered from day to day by the management.

Well, the result was that some man who thought that he had been discriminated against, or had a grouch about the security rule might go to his employer, the contractor—it was being done—and build up a bitterness between the two of them; when the responsibility was not the contractor's at all, and he was just carrying out an order that he had to carry out.

So we emphasized, in a second item of the report, that in all matters of security the absolute responsibility is with the AEC and is not a matter of collective bargaining between management and labor.

Representative JACKSON. At this point, Mr. Davis, I would like to raise this question of security. It may not be in the same vein in which you have been discussing it.

Who should determine whether or not a given union is Communist-dominated: the AEC, or some other body? or the NLRB? What is your opinion on that? I am using "security" in a collective sense.

Mr. DAVIS. That is security, all right. But I would like to say this: Our Commission was not consulted on that subject at all by the AEC in the action up at Schenectady. We were informed about it, but we were not set up to solve a particular problem like that. We were just starting, and Mr. Lilienthal didn't ask us for advice about it. I want to make that clear.

Representative JACKSON. Yes, I assumed that had taken place prior.

Mr. DAVIS. As to my answer to your question, I think the personal answer would be, I should say, that the AEC has the responsibility and can't pass it to anyone else.

Representative JACKSON. In that situation?

Mr. DAVIS. Yes.

Representative JACKSON. In other words, in the field of security, AEC would be the final word both as to individual situations of security, where an employee was under question or being questioned, and as to the union entity itself that is attempting to make a collective bargaining agreement.

Mr. DAVIS. I think so. Of course, subject to the Congress. The Commission is a creature of the Congress. But I wouldn't think that they would dare to pass it on to anyone else, because there are problems that would have to be decided affecting these questions of security that involve top secrecy. And you have got to trust somebody, and it is the person you are entrusting with the secrecy, I think.

Representative JACKSON. I assume the precedent has been more or less established in that connection, in the Schenectady case and the UEW, has it?

Mr. DAVIS. The UEW, yes. They took the responsibility there. Were you going to ask something, Mr. Holifield?

Representative HOLIFIELD. That was about the same question I was going to ask you, sir.

Mr. DAVIS. The third item of the report was a reemphasis on the thing desired by the AEC; that is, that so far as possible, and subject only to the limitations contained in the rest of our plan, "the normal and typical aspects of wages, hours, and working conditions, which are the substance of collective bargaining between private employers and nongovernmental employees shall, in Government-owned, privately operated atomic energy installations be left to collective bargaining between management and labor free from governmental interference."

That is what everybody wanted, the Government, the contractors, and the labor unions. And it is hard to get. And we emphasized that in a separate document to the Commission. We weren't getting paid very much, so we gave some free advice to the AEC on the subject.

Representative HOLIFIELD. Before we get to that, I want to ask you a question or two on this point. You asked that the normal and typical aspects of wages, hours, and working conditions which are the substance of collective bargaining between private employers and nongovernmental employees be maintained in these plants. Yet you have a different situation there than you have in a privately owned plant, because most of these large contractors are operating on a fixed-fee-plus-cost cost of operation. Do you think that, in the bargaining, management would be inclined to say, "Well, the profit motive is not involved here. The easiest thing for us to do is go along with the union in its demands for higher wages. After all, Uncle Sam is paying for it. It is reimbursable." And have you found that they are willing to bargain as vigorously as they would if the profit motive was involved?

Mr. DAVIS. Now you are asking really two questions. One of them is: Is that a motive? Well, of course, they are human beings, and it is

a possible motive. The other side of it is to assume that they are honorable men, and would resist that. There is another resistance, and that is that most of these contractors, in fact all of them, even the universities, have their own private pay rolls. And they evidence very definitely a desire to protect those pay rolls. If they make an increase at Oak Ridge, for instance, how is it going to affect the private plants of C. & C.? In fact, in all the contacts we had with them, there was much more pressure, much more resistance, based on the fear of doing something in these AEC installations that would reflect adversely on their private relations, than there was evidence of inclination to spend the Government's money freely. We met one very interesting situation, too, where one of the contractors had made concessions to their private plants, and they proposed to put this concession into effect in the Government plant. Well, it was a fairly reasonable idea in general, but it happened that to do it in this particular plant would have been destructive of a wage structure that had just been set up, after great effort, you see. So the AEC came in and said, "You can't do it." They interfered to that extent.

I wouldn't think—well, I don't know what might result. But those are the pressures,

Representative HOLIFIELD. Your experience has been that these large contractors, because of their national operations in private industry, guard zealously the wage rate structure in the Government plants, and because of their own private fear that such adjustments might be demanded in their private industries if the wage went too high in the Government plant?

Mr. DAVIS. That is right. That is what has happened. But my prediction is that it won't happen forever. Because as a matter of fact, these wage rate changes in the atomic energy plants are not reflected back into their private plants. Actually there are differences in both directions. There are cases where the same company pays more in the AEC than in its private plants. There are others that pay less.

So that is going to weaken in time.

Representative HOLIFIELD. What have you set up, then, to take the place of that factor? Have you set up certain rules in your recommendations regarding comparable rates in the area, and comparable rates between two different unions in the same facility?

Mr. DAVIS. Let me put in an explanation, before I answer that directly. The basic protection is, of course, the final responsibility of the AEC to approve the reimbursement. And they certainly are going to have to assume that responsibility. If the wage rate is unreasonable, they are going to have to say so.

Representative HOLIFIELD. All right. Do you mean to say, then, that they should sit in with management and labor on these negotiations?

Mr. DAVIS. No, they can't do that. If they are going to sit in on them at all, they have to run them. There is no question about that. You can't be halfway in and halfway out.

Representative HOLIFIELD. That is what I want you to explain.

Mr. DAVIS. It can't be done.

Now, assuming the honest discharge of their responsibilities, what they have got to do is to take a chance on the whole package of the negotiations; not come in and say, "We will fix this rate, and that

rate," but look at the whole package after the negotiations are over. And there are going to be times, in my judgment, unless we have much more luck than we have in other places, where they are going to have to turn down a negotiated agreement. That is going to be pretty tough.

Representative HOLIFIELD. Does that not destroy the enthusiasm of management and labor to sit around the board, if they know that there is a possible veto awaiting them?

Mr. DAVIS. No, I think just the opposite, Mr. Holifield, because I think the way it is going to work is this, but let me add the rest of the answer to your first question, there.

So we recommended in a tentative way in this second paper that the AEC proceed to set up limits in the way of standards, like area rates, for instance; limits which still left room for bargaining.

Representative HOLIFIELD. You mean they set up the principle of complying with area rates, but not the specific ceiling of area rates?

Mr. DAVIS. That is right. What we were recommending was that they say to the contractors, and to the unions: "When you come to us with a negotiated contract and ask us to approve the disbursements, you have got to give us sound reasons. You have to support your agreement by reasons. We will indicate to you in general terms the conditions."

For instance, it can be said that the rate can be related in some reasonable way to the going rate in the area. If that is made too close, you see, the bargain is destroyed. Some risk has to be taken there. And if they are made too loose, the Commission would not be discharging its responsibilities.

I can understand that almost anybody would say, "Well that is not a realistic solution of the problem." But I say it is the only solution. The AEC has got to keep away from the bargaining table.

To come back to your second proposition, I think it is going to work this way. The unions and the management are going to come to the point where they will say: "Now, look. We have to give these guys downstairs reasonable cause for this wage increase. You say you ought to have a dime, and we think a nickel is right. What are we going to say? We would like to go along with you, but what are we going to say to the AEC folks?"

And they will be putting their heads together to justify the change jointly.

Representative HOLIFIELD. In other words, they have got to justify their agreement to, you might say, a higher authority.

Mr. DAVIS. A higher authority.

Representative HOLIFIELD. On the basis of reason.

Mr. DAVIS. Yes. And there is nothing that brings people together, you know, like ganging up on the boss. I think there will be a tendency there to make the collective bargaining more agreeable.

Representative HOLIFIELD. I want to explore one more point in that area. You definitely come out with a statement that the Atomic Energy Commission must outline certain over-all broad principles of labor policy. And I might say, as a member of the committee, that I think that conclusion is a good conclusion. I cannot see how the Commission can justify an aloof stand-off attitude all the way through and still want to maintain power given it under the McMahon Act, of final veto.

So unless it sets wide policy areas for management and labor to follow, it isn't assuming, in my opinion, its full responsibilities.

I want to know if, in this paper No. 2 which you have mentioned, which I assume contains certain recommendations which you have gratuitously offered to the Commission, you treated of the differences in wages for the same type of work performed by different unions.

Mr. DAVIS. Well, in one sense we did, but I think maybe not in the sense in which you are asking the question. I will explain that a little.

There is a situation which is illustrative, you get a better answer by illustration, down at Los Alamos. There is a situation at the moment down there in which this Zia Corp. is paying maintenance men practically the same rates as construction men. Maybe that isn't exactly correct, but let's assume it is correct.

Representative HOLIFIELD. I happen to know that it is substantially correct.

Mr. DAVIS. That can't go on forever. It is an outgrowth of the way the thing was built up down there. It is a construction job turned into a production plant and a city.

Representative HOLIFIELD. And it is also an isolated area, where the labor market is not full.

Mr. DAVIS. Yes, that is right.

Representative HOLIFIELD. They have to bid, in some instances.

Mr. DAVIS. And they can't live on the place. There is not half enough room for them. There are a lot of tough conditions there.

But that is an unnatural condition. In general industry a maintenance man gets a lower hourly rate than a construction worker. That is something they can lay down general rules about, if they are wise enough. And as to this area rate, for instance, there is nothing that I can see in the atomic energy program that makes any sense out of treating wage rates as an industry problem, or considering this situation as if it were like the case of a big company that had plants all over the country and employees who wanted to have the same wages in all the plants. There is nothing in the atomic energy program of that kind. And because of the very remoteness of these plants, and all the things which are tied in with that, they have got to fix wages on the basis of area rates, primarily, just on account of the law of supply and demand. They are buying their labor in the local market, and they won't get it if they don't do that.

As for our idea in this paper No. 2, I want to emphasize, gentlemen, that it was, as you say, gratuitous advice.

Representative HOLIFIELD. I did not mean to depreciate it by using that term, because I think you probably should be awarded a medal for proceeding above and beyond the call of duty.

Mr. DAVIS. Some of us got the habit of sticking our necks out down here in Washington, so we kept it up.

We were trying, in that paper, to outline a broad code of conduct, which the President had asked us to do. We felt that what we said would not make any sense at all, would just be glittering generalities, or even generalities that didn't glitter, if we didn't make them specific. So we said, "We are going to put down here, paragraph by paragraph, the kind of orders that we think might be issued; but they are not to be taken as direct advice on that specific form of order, but just as examples of the kind of thing we recommend."

So we did, in that document, put down a number of paragraphs, which would be bricks; so to speak, in the structure of the labor policy of the AEC. And my advice to them would be not to try to do it all at once, but to proceed step by step in building up these limits. They might be different for different areas, and so forth. In fact, I think that is the way they are proposing to do it; and in consultation with the parties, too.

Representative HOLIFIELD. You see, one of the labor difficulties we had at Oak Ridge at one time was that there was a wage differential between members of two unions doing the same type of work. It naturally caused a great deal of dissatisfaction among the members of the union with the lower wage. Management, on the other hand, would have been willing to have raised that differential to the level; but the argument was used that it would affect wage structures outside of atomic energy plants, and that was used as the excuse for not raising the wage up to the level of the competitive union in the same area.

Mr. DAVIS. Let me answer that, Mr. Holifield; because you are touching on a very important problem, although its importance may decrease.

What has been happening down there at Oak Ridge and at other plants, is rapid change of contractors. Every contractor had his own ideas of what he wanted to do in his labor contracts.

Also, at Oak Ridge, you have one part of the plant operated by one contractor and another by another contractor. That is not so any more, really. At the same time, you had rival unions in the two plants.

I said, when we looked into that Oak Ridge situation, that if the devil had come around and hired the best advice he could get for making a bad mess for labor relations, he couldn't have done any better. There was nothing that was left out at Oak Ridge. Everything that could mess up labor relations was there; and among them were different wage rates for the same kind of work paid to rival unions, and unions that were not only rivals but very close rivals, cases where the elections had been won by just about 51 to 49, and the defeated union was trying to reverse it, you see.

But they got through. They didn't have any interruption.

On the other hand, it is not impossible to have different wage rates in the same community for the same job. That may happen in the same atomic energy plant.

But take Detroit, for instance, where you have Ford, Chrysler, and General Motors. They don't pay the same wage rates. And the jobs are identical, many of them. Well, you say "Why?" Somebody says, "I like to work for Chrysler," or "I like to work for Ford." There are other things in the picture than wage rates.

Representative JACKSON. Mr. Chairman, may I develop a point with a few questions here?

Representative HOLIFIELD. Go right ahead.

Representative JACKSON. Mr. Davis, I assume it is important in determining your rules or suggested recommendations, and so on, in connection with this matter, first of all to find out what the state of mind of the employees is. Do they think they are working for a private company, or do they think they are working for the Government? Would you say that is reasonably important?

Mr. DAVIS. It is awfully important. And we were struck by that.

Representative JACKSON. It follows, then, that it is likewise important to determine whether management feel that they are acting as true managers in the sense of the thinking of a private entrepreneur. I think that is basic in this.

Now, to get back to the first: Do you think that the employees really feel that they are working for a private contractor? Or do they feel basically that they are working for Uncle Sam?

Mr. DAVIS. They feel, Mr. Jackson, that they are working for the project. We had a lot of talks, and my conclusion was that by and large the workers are interested, that their imagination is captured, by the kind of enterprise it is. It is quite certain that they don't give a damn who the employer is. Several of them said so in just those words.

Take the fellows in the laboratory at Oak Ridge, young scientists, you see. They said, "We don't care who the employer here is. We want to run this laboratory." And in the more general skills we found a definite, very definite feeling of devotion to the job.

Representative JACKSON. Which is inherent in scientific undertakings.

Mr. DAVIS. Yes, it is a big thing, this atomic energy. The men feel, "By God, I am working for the atomic energy program." There is a very definite feeling of that kind.

Representative JACKSON. In the Office of Naval Research they are working for Uncle Sam. Now, should we apply the same principles in this kind of situation? I mean, should we apply the same principles as far as our relationship with the employees is concerned in the case of the Office of Naval Research as we would apply to scientists at Oak Ridge?

Mr. DAVIS. Well, I really don't know. I don't know how they treat them at the Office of Naval Research.

Representative JACKSON. What I am getting to, and what concerns me in this, you see, is that I just have a feeling that the rank and file employees, not the scientists, are in effect working for Uncle Sam. I am talking about the rank and file of production people and not the scientific or creative personnel.

Mr. DAVIS. Yes.

Representative JACKSON. Following that through, if you assume there is that attitude, should our policy be the same, then, as it is in the arsenals and navy yards, where you have wage boards set up, that in effect do not set a wage pattern, but merely follow it? Is that a fair statement? In other words, should the contractor set the wage pattern, or should the contractor follow the wage pattern locally? I am wondering if we are not dealing with some fictions, here.

Mr. DAVIS. You have your finger on something. I have quite a lot of experience in connection with the arsenal wage-fixing, and some years ago, way back in the NRA days, I had quite a lot of contact with the navy yard wage fixing. Both of them are conventionalized procedures, which satisfy the desire for collective bargaining. They are very different.

John Frye, for instance, who was on the Wage Board in the Navy and represented labor, was always perfectly satisfied, and they didn't have much trouble in the navy yards. Yet, as you say, the law framed them in pretty much.

Another illustration is the people who are under the Bacon-Davis Act. The Bacon-Davis Act seems to say in rather strict words, "You shall pay, for this kind of a Government job, the prevailing rate of wages." And you would think, if you didn't know about it, that all you had to do was to go and ask somebody, "What is the prevailing rate of wages?" The fact is that there is enough uncertainty about the prevailing rate of wages to leave room for bargaining. Everybody gets along beautifully.

Now, in the arsenals they are supposed to follow rather than lead. But we had, during the war, a situation in which we had the War Labor Board controlling wages, more or less. I mean, we were administering the wage ceiling law, and we had the Little Steel formula and the fringe issues, and so forth, which again left room for bargaining. We had to work out with the Army a special plan for the arsenals, and we had a fellow named Abersol, John Abersol, who was assigned to that job and with the Army worked out the arsenal rates. They established again a lot of rules that left room for bargaining. I don't know whether that answers your question, Mr. Jackson.

Representative JACKSON. Do you not think there is a lot of merit in the idea that we ought to determine definitely whether the people who are working for all these installations are really employees of the Government or truly employees of the contractor? In other words, under present provisions of the law, or regulations, AEC in effect exercises certain regulatory control over wages, inasmuch as they have a veto over whatever is agreed to by the contractor. I mean, I wonder if that is not basic in reaching a sound decision in this whole business that we are talking about this morning? That seems to me to be the heart of it. And as I gather from your statement, if I may try to summarize it, though I do not like summarizations, what you are trying to do is to create an atmosphere of normal collective bargaining, and you are trying to do that by setting up balances through procedures as outlined in your report. Is that it? Are you trying to do that?

Mr. DAVIS. You are going one step further; and I would like to go with you.

Representative JACKSON. I am not trying to be critical.

Mr. DAVIS. I know you are not.

Representative JACKSON. I am now just trying to explore.

Mr. DAVIS. But at least the thing that came into our minds was: Is there any reality in the thought that these atomic energy plants can be run by private contractors and have the conditions of private industry, or is it just make-believe, and are they really Government employees?

So we asked ourselves: Why is this the policy of the Commission and of the Congress? The answer, to me, was: Here is a growing thing. Nobody knows what sector of our total social fabric and industrial fabric will be occupied by atomic energy and its outgrowth 20 years from now. So the Congress said, "We want to do this thing in a way that preserves private enterprise." And the Commission certainly has that same view; looking forward, I think, to an expanding use.

Frankly, my own view is that that is quite right. I am involved in the patent end of the thing, too. My specialty is patent law, and I am on the patent panel of the Commission. And it affects the

patent law very greatly. But I believe that 20 years from now what we now call atomic energy, the outgrowth of the scientific control of the structure of the atom, will be so spread through our whole industrial fabric that it will no longer be a Government enterprise alone. And that is certainly, I suppose, what most of us desire.

I think it was that thought, Mr. Jackson, that led to this emphasis. It would be a whole lot easier to say, "These folks are Government employees. Put them in the civil service. You can get along with them."

The arsenals do it, the navy yards do it. It is not an impossible thing to do at all. So it would be a lot easier to say, "Make them straight-out Government enterprise."

Representative JACKSON. But do you not have one clash? Do you have the idea of trying to carry out the theme of private enterprise, on the one hand; and over here on the other side you have the demand for continuity of production.

The time may come when this business over on the other side, continuity of production, might bring about a situation in which the veil of fiction will be removed.

Mr. DAVIS. That is just as likely to happen in coal mining as it is in atomic energy.

Representative JACKSON. Yes, that may be true. But by experience, which is what we have to go by, we know that there has been no interruption in the navy yards, arsenals, and so on. Is that a fair statement?

Mr. DAVIS. Pretty fair. There have been some interruptions, though.

Representative JACKSON. Is it not true that you are going to have a challenge here at some time?

Mr. DAVIS. Let me tell you something, as one man to another. This talk about the country being endangered by interruption of production is mostly bull. This country can stand a lot of interruption of production. And in the areas where it can't stand them, there isn't any interruption of production.

I have been in this field now, as an amateur, part of the time, since the NRA days. And there isn't any considerable amount of revolutionary spirit in this country in the labor movement or out of it.

Representative JACKSON. I want to assure you that I have a lot of faith in your judgment, and I respect you, and I would not want to convey the idea that I have any such thought at all. I am quite liberal in these things.

Mr. DAVIS. I am in an unfortunate position. I am out on a limb. The Commission proposed this plan. You know what happens to a guy who makes a motion to set up a committee. He is always made the chairman. So I not only proposed the plan, but I was made chairman of the panel to carry it out. That put me on the spot. But I am not worrying about it. I hope this panel never has to do anything.

Representative HOLIFIELD. Is it not true, Mr. Davis, that this point that Mr. Jackson brought up is a fact that we all recognized in setting up the McMahon Act? We recognized the fact that business, on the one hand, was not to be trusted by Government with the full control of atomic energy. On the other hand, business did not want to trust Government completely with it, because of the inherent power-

in the development of atomic energy. Therefore, we met, as we do in a democracy, on a compromise basis, and we said, "We will have Government in to a certain extent, and we will have private enterprise in to a certain extent."

Now, we are forced to work in this compromise arrangement because of the fears of both men in Government and men in business. And as long as we do not want to go over to either side, we must set up procedures in the half-way land by which we can operate. And that is what your panel suggestion and your formula tends to do. We are developing orderly procedure in this half-way land.

Mr. DAVIS. That is true.

I think Mr. Jackson's thought is very sound. It may well be that in this field there would come a situation which would face the Nation directly with this basic question: Are you going to run things by the Government, or are you going to run them by private industry? But I am all in favor of pegging along and, being a Jeffersonian Democrat. I think that the more we can do by self-control, the better off we are.

Representative JACKSON. Well, I raised the question for purposes of discussion in connection with your report. I think it is very important that we cut through fictions and determine the state of mind, the thinking, of both management and labor, in order to determine whether the procedures are sound. Is that important?

Mr. DAVIS. You are quite right about that.

Representative JACKSON. That is why I raised this question. If the man who is working in an AEC plant feels he is working for the Government, then you do get back to precedents. I mean, we do learn from the past. And you get back to this: How do we treat the people in the arsenals, navy yards, and so on? Are we entering into some new approach here? Should the contractor set the pace, such as is the case in private industry, or should the contractor follow the wage pattern in the area?

In other words, it is a case of following one and leading the other. I was bringing that thought up, because you do run into it.

Mr. DAVIS. I think you ought to let it work itself out. Right now, as I say, the contractors are inclined to say, "We won't do so and so, because it would affect our outside plants." My prediction is that 5 years from now you won't hear any more of that, as there is very little reality in it. And there are other reasons, of course, for getting contractors in. The job that they had to do when they started the thing could not have been done by any conceivable governmental organization.

Representative JACKSON. But the AEC still stands in the background. And, in effect, I am wondering if the bargaining representative of the union does not feel, "Well, AEC is an agent. They are not the real employer here. AEC can veto it."

Mr. DAVIS. They certainly do; and that is the trouble. It is a very real one, but—

Representative JACKSON. I wanted to ask one or two other questions, and then I will be through.

In connection with compulsory arbitration, do you not in effect place labor over a barrel of public opinion, to which management is ordinarily not subjected, and deprive them of their effective right to strike in that situation? I mean, if you do not have it? In other

words, management takes the position in this situation, in your atomic energy operations, that they will not go along on compulsory arbitrations, because in the long run they will maybe stand to lose more than they will gain. I assume that is the reasoning.

Mr. DAVIS. No. Generally, the American contractor is not in favor of compulsory arbitration by a governmental organization. That goes without saying. In one case, they say they are.

Representative JACKSON. Well, the unions favor it; but, as I understand it, management refused, in the abstract.

Mr. DAVIS. That is right. But neither was labor ordinarily in favor of it.

Representative JACKSON. No. That is true.

Mr. DAVIS. But here industry keeps on with the opposition, even in the cases where they agree that there can't be interruption. When you say, "What are you going to put in the case of the right to strike?" they say, "Well, we can be fair about it. Don't arbitrate."

In other words, what I should have said, Mr. Jackson, is that whereas we pretty generally find American citizens who are not well informed in the situation are displaying a great longing for an absolute solution of this problem in these critical emergency cases—and I will refer to the discussion in the editorial in the New York Times favoring an absolute solution in an emergency case—yet, in this atomic energy situation, the industry people have said: "We are not in favor of an absolute solution, even in these critical situations, because we can take care of it ourselves."

Representative JACKSON. Well, it seems to me the unions enter the collective-bargaining room at a disadvantage.

Mr. DAVIS. In such circumstances?

Representative JACKSON. In a general situation such as an atomic energy operation.

Mr. DAVIS. Where they can't strike?

Representative JACKSON. Yes.

Mr. DAVIS. Of course. And that is the basic reason that the other side, being human beings—I mean no reflection on them; they are all good people, that I have dealt with—say: "Well, these fellows can't strike. We know that. But we will be good to them. We will satisfy them. We will discharge our responsibility."

Now, that is unrealistic. Because the other fellows don't believe it. And, of course, the worker is at a disadvantage in a situation where interruption by strike is impossible.

Representative JACKSON. You feel the procedure set up here provides a proper balance?

Mr. DAVIS. Well, it comes as close to it as we could. Here, in our report to the AEC, we have in the main set up carefully considered procedures.

Those who know most about the subject from experience know that, if you can put these things into a well-defined procedure, you have the continuous opportunity and possibility of finding a settlement. So, in a sense, we drag it out. This panel is not supposed to come in until the Conciliation Service has failed and everything else has failed. Then we come in and we have some more discussion about it.

Then, in the end, we make recommendations, which nobody is bound by, not the AEC or the contractor or the union. In my

opinion, those recommendations come so close to being compulsory that it would be very difficult to tell the difference between them. I just don't see the AEC or the contractor or the union turning down such a recommendation unless some terrific emotional question were involved. And, if that happens, the panel ought to have too much sense to make a recommendation.

So, in that sense, you substituted this panel's judgment mediation for the much better thing of a strike, because you can't have the strike. That is the best you can do.

Representative HOLIFIELD. Mr. Davis, I want to ask you a question. Should the Atomic Energy Commission, in its relations with the contractors, have a definite understanding with them that they will cooperate with the Atomic Energy Commission along the broad lines of labor policy which they set forth?

Mr. DAVIS. Which the Commission sets forth?

Representative HOLIFIELD. Yes. Should that be part of the contract with the contractor?

Mr. DAVIS. Well, it should be part of the relationship.

Representative HOLIFIELD. Of the relationship?

Mr. DAVIS. If you are saying that the contractor ought to sign a contract beforehand and say, "I will be bound during the life of this contract to abide by any policy decisions on labor that the Commission may make, that is a little different question.

Representative HOLIFIELD. No; I am asking if he should be required, when he takes a contract from the AEC, to practice the formula which you have recommended.

Mr. DAVIS. Well, certainly. There is one thing that our recommendation requires of the parties, and only one, and that is that paragraph 5 requires that both sides agree that there will not be any interruption of production or disturbance until this panel has come in and had its chance to do its work and retire. That is the one thing that has to be agreed to by both sides.

I understand the Commission will proceed to get that agreement from the parties.

There are other recommendations in this part 4 which we regard as well-established practices. I don't know how the Commission is going to handle that, whether they are going to ask the contractors and the unions to agree to those and put them in the contracts, or just press for them, or what. I don't know.

Representative HOLIFIELD. I think that is very important, now. Your Commission, now, by order of the President, has come forth now with a formula. It seems to me that that formula should be an obligation on the part of both management and labor, because it is the best thinking that we have been able to get on this very complicated problem. Now, the question I am asking is:

Assume that this formula, or most of it, is adopted by the Atomic Energy Commission. Should it be made part of the contractual relation between the AEC and the contractor and between the union and the contractor?

Mr. DAVIS. If I were doing it, if I were the AEC, I would certainly try to bring that situation about. I would try to get all contractors and all unions to say, "We adhere to all of this, from start to finish."

Representative HOLIFIELD. All right. Now, at this time, can you tell the subcommittee what the attitude of management and labor

has been to this? You have worked along with them, I suppose, in developing it. What has their attitude been? One of cooperation?

Mr. DAVIS. Yes; it has been.

We had a rather amusing experience. The principal objection of the labor people to the original draft was that this panel had no time limits on it. Labor people are always afraid of stalling. They said, "Why, you can hold this thing up forever." So, we put in the time limits, and they were satisfied. And I think I can say to you that the labor organizations are satisfied.

I can't exactly answer, though, Mr. Holifield, because what happened was that we got letters from contractors after we had discussed the whole thing, saying, "We think this paragraph ought to be so and so." And most of those changes we embodied in substance. We never asked them if that satisfied them, you see. But I got from Winans of Carbide & Carbon a very cordial letter the other day, in which he thanked the Commission for the opportunity to discuss the thing with him. I think they will go along. That is my guess.

That is up to the Commission, and I don't think you will have to use any strong-arm methods in it. I don't believe in forcing people to agree with you if you can help it. And my guess is that we won't have any trouble about that.

Representative JACKSON. The fair judgment of management is at the heart of this thing; is it not? I mean, basically, in trying to work out the solution?

Mr. DAVIS. Yes.

Representative JACKSON. From your past experience, do you think that there is reasonable hope that management will be fair and act in good faith?

Mr. DAVIS. Mr. Jackson, I will answer that in the words of David Harum: "There is just about as much human nature in one man as there is in another—if not more." And I think, and know, that you will find among them men of responsibility as well as troublemakers. You will find both.

You see, the American people are bad people—they are bad people to try to push around. That is true of both sides, in my experience. They always think they are right. They justify their conduct by what they call rationalization, and so forth. And I don't think it is any more so or any less so on the side of management than it is on the side of labor. This is a tremendous program.

I was speaking to the President the other day, and I am not sure that he knew what I was talking about, but I said, "One significant thing to me in the atomic energy program is not that they succeeded in tearing down the uranium atom and producing a lot of heat, but that they have succeeded in building up the uranium atom to produce plutonium, the first time in the history of man that science has been able to build up a more complex structure from a less complex one. That is the significant thing."

Well, that is a little idealized. But I do think that, in this thing, the atomic bomb is the small end of it. In the first place, it gives a tool of observation to science that is many, many times more exact than they have ever had before. The whole history of science, which I have had occasion to follow in my lifetime, is this: that every time you get a better measuring instrument, you discover entire new worlds, almost, of scientific information. That is what is going to happen.

So that the penetration of this thing into our living in every direction is going to be tremendous. It isn't going to be all Government, unless we change our system of Government. And, to get back to your point on that, which I almost lost, you find these industry people saying, some of them: "Why, we don't want this job. We are doing it for nothing, at a dollar for our services, and we are only doing it from patriotic motives. We are called upon by the Government to do it, and we do it."

Well, I don't think so. I don't think so. I don't think the big companies that are in it are going to get out of it. I don't think the General Electric Co. is going to give up the \$30,000,000 laboratory, and the direct contact with this system.

Representative JACKSON. With all these technological improvements, and so on, it is hard to measure in dollars and cents. At least, there is no income tax paid on it right away.

Mr. DAVIS. That is right. That applies to these laboratory men also, Mr. Jackson. For instance we talked to one or two of these men at Oak Ridge. These men at Oak Ridge say, "We don't care who runs this thing. We want to run the laboratory."

Well, why should they care? They have the most beautiful laboratory the world has ever seen. They are working on a field of knowledge that is new. They are right on the frontier of it, and they are making discoveries all the time. Well, that is a tremendous temptation to anybody, and it is just as big a temptation to Carbide & Carbon as it is to the men in the laboratory, in my opinion. I don't think they are going to get out.

Representative HOLIFIELD. And Uncle Sam is paying the bill for them to exercise their ingenuity and their brains in the field that they have chosen. The scientists are getting the benefit of financial support which they never in their wildest dreams hoped to get, through this atomic energy program.

Mr. DAVIS. That is right. It is a field in which every day something new is put in that pile at Oak Ridge, and nobody knows what is going to happen to it. And they have not been able to do that in science for generations. You see, there has been no such new field.

Representative HOLIFIELD. Outside of the scientific field, it may be that we are leading the way in some human-relations advancement by developing and applying some procedures here that are based on reason rather than on emotion and economic force.

Mr. DAVIS. That may be. I had just spoken of the contractors, and I think the same thing I said as to them is true of the men involved, is true of the men right down at the bottom. We saw in these plants—and I am quite sure we were not deceived—an extraordinary devotion to the job. I think that can be made use of in developing this thing.

Representative JACKSON. There is a lot of trial and error in all of this. You are in a new field, just like the scientists are in a new field. I presume we will learn a little bit as we go along.

Mr. DAVIS. Let me say something there, Mr. Jackson. As Mr. Holifield has suggested, this may be sort of a bellwether effort. I don't know. But this field of industrial relations is the thing that is going to cause us either to succeed or to fail in trying to maintain the peculiar social system which we have in this country, and which is pretty well going out of existence everywhere else in the world. If we can make the so-called private enterprise or free enterprise system

work, it will only be through this collective bargaining as a substitute for socialism or communism or what have you. The question is, Can you get enough self-control to keep the machine running? The only way you can get self-control in a free society is by this process of agreement.

Representative JACKSON. Which comes from maturity.

Mr. DAVIS. Yes. This is an old subject with me. I saw in the Sunday Times that they quoted to me—I don't know whether Louis Stark was responsible for that or not—but they quoted a remark I made on the War Labor Board, you know, when I started out by saying, "Creation is the product of persuasion, a well-tested thing." Then the boys began making fun of me, because, they said, "The old man goes around with this benign appearance and this remark about creation being the product of persuasion, and he has a big club behind his back which he doesn't hesitate to pull out every now and then."

'So they pressed me so that I finally said one day, "Well, boys, you have got me down, and I have got to modify Mr. Plato's aphorism, so I will say that 'Creation is the product of persuasion—except in cases of rape'."

Representative HOLIFIELD. Mr. Davis, we are going to have to conclude our hearing. The House is now in session.

We certainly want to extend to you the thanks of this subcommittee and of the main committee for your time and your explanation of this recommendation of yours. You have given us a great deal of good thinking and a great deal of good philosophy, we feel, this morning. We certainly thank you for your appearance here.

Mr. DAVIS. I thank you, Mr. Holifield. I was very glad to be here.

Representative HOLIFIELD. Unless there is an objection, the Report of the President's Commission on Labor Relations in the Atomic Energy Installations will be included as part of the record.

(The document referred to, entitled "Report of the President's Commission on Labor Relations in the Atomic Energy Installations," is as follows:)

#### REPORT OF THE PRESIDENT'S COMMISSION ON LABOR RELATIONS IN THE ATOMIC ENERGY INSTALLATIONS

This Commission was appointed by the President on September 3, 1948, "to make a special study of the problem of peaceful and orderly settlement of labor disputes in Government-owned, privately operated atomic energy installations so as to carry out the objectives of my message of June 18, 1948, to the Congress."

In his message to the Congress of June 18, 1948, the President stated what he expected of the Commission in the following words:

"The Commission should explore the question whether any special legislation should be enacted to protect the national interest without depriving management or labor organizations of the initiative and freedom necessary for the progress of our atomic energy program. The Commission should study ways and means of adapting to the atomic energy program the best of our experience in the complex field of labor relations. The Commission should concern itself also with special aspects of the problem, such as questions of bargaining representation, uniformity of working conditions and wages, and procedures for grievance handling.

"The Commission should concern itself, in short, with the broad code of conduct which should be observed by management and labor in their relations with each other in this vital program."

In January 1948 the Joint Congressional Committee on Atomic Energy requested the Atomic Energy Commission to advise it as to labor problems relating to continuity of production in the AEC program. In response to that request, the Commission on January 16 transmitted to the committee a report on labor problems relating to continuity of production in the Atomic Energy Commission

program.<sup>1</sup> In that report the aims of the Atomic Energy Commission were stated as follows:

"(a) Wholehearted acceptance by contractors and by labor and its representatives of the moral responsibility inherent in participation in the atomic energy program;

"(b) Development of procedures to assure (1) that all participants in the program are loyal to the United States, including those whose participation involves the exercise of negotiating and disciplinary authority over bargaining units, and (2) that determination of unit, jurisdiction, and similar questions will not breach security;

"(c) Continuity of production at vital AEC installations;

"(d) Consistent with the Commission's responsibility under the law, the least possible governmental interference with the efficient management expected from the AEC contractors;

"(e) Minimum interference with the traditional rights and privileges of American labor."

(1) In our study of the subject, we have coupled the moral responsibility emphasized in item (a) above with the continuity of production called for by item (c). The necessity for continuity of production at vital Atomic Energy Commission installations is apparent. We therefore recommend—

1. That management and labor in all Government-owned privately operated atomic energy installations, recognizing that the atomic energy program includes vital operations which must not be interrupted, wholeheartedly accept a special responsibility to seek in every way by voluntary procedures and mutual agreement peaceful and orderly settlement of disputes affecting such vital operations and, within the limits defined by paragraph 5 below, to forego all resort to strikes, lock-outs, or other interruptions of any such operations.

With mutual acceptance of this special responsibility, differences of opinion between management and labor at vital AEC installations should be settled without interruption of production by free collective bargaining initiated at the local level and carried, if necessary, to the highest levels of management and labor.

(2) Item (b) above deals with questions of security, including secrecy and safety. The Atomic Energy Commission must have absolute and final authority in these matters. We therefore recommend—

2. That on all matters of security at all Government-owned, privately operated atomic energy installations the Atomic Energy Commission has absolute and final authority, and neither the security rules nor their administration are matters for collective bargaining between management and labor.

We assume that in formulating security rules and regulations the Commission will want to consult with the representatives of management and labor affected by such rules. Both management and labor will, of course, be called upon to apply the security rules in day-to-day operations, but it should be understood that all unresolved disputes arising out of the administration of security rules are to be referred to representatives of the Commission. Neither the security rules nor their administration should be regarded as matters for collective bargaining between management and labor.

(3) Paragraphs (d) and (e) above call for the least possible governmental interference with "the efficient management expected from the Atomic Energy Commission contractors" and with "the traditional rights and privileges of American labor." They express in the field of management-labor relations the basic national policy declared by the Atomic Energy Act of 1946 that "the development and utilization of atomic energy shall, so far as practicable, be directed toward \* \* \* strengthening free competition in private enterprise." We recommend—

3. That, subject to the Commission's responsibility under the law and to the limitations specified in other paragraphs of these recommendations, the normal and typical aspects of wages, hours, and working conditions which are the substance of collective bargaining between private employers, and nongovernmental employees shall in Government-owned, privately operated atomic energy installations be left to collective bargaining between management and labor free from governmental interference.

Because interruption by strikes or lock-outs of production or services vital to the atomic energy program cannot be tolerated, the processes of collective bargaining

<sup>1</sup> Exhibit No. 1 (p. 117 ff.) of the hearings before the Joint Committee on Atomic Energy, Congress of the United States, 80th Cong., 2d sess., on labor policy in the atomic energy plants, pt. I, Mar. 9, 10, 12, 15, and 16, 1948.

at these installations differ from the normal conditions of collective bargaining between private employers and non-Government employees, in which the possibility of a strike or lock-out is an ever-present pressure toward agreement.

There are many other areas of private employment in which a strike or lock-out is not useful or practically available because, unlike ordinary industrial operations in which interruption of production puts the pressure on the management and labor involved in the dispute, the pressure in areas of essential service falls more heavily upon the public than upon the parties to the dispute. There is available for study a great mass of practical experience with specialized collective-bargaining procedures in such areas of private employment where interruption of production is intolerable. The object of all these specialized procedures has been to assure continuity of operation and yet to preserve to each of the parties full opportunity to challenge those decisions of the other party which affect its interest, to the end that a final resolution of the dispute may be reached by agreement or acceptance under all the pressures and responsibilities that exist when the public welfare is at stake.

We have attempted to take into account, in our consideration of management-labor relations in atomic energy installations, this vast body of experience in areas of private employment where interruption is intolerable. Later on in this report we present our recommendations as to the special procedures which, in our judgment, should be tried out in the field of atomic energy.

(4) Before proceeding to those recommendations, we address ourselves to that part of the President's message which directed us to "study ways and means of adapting to the atomic energy program the best of our experience in the complex field of labor relations."

We assume, in the first place, that the Atomic Energy Commission itself will follow in letter and spirit that policy in management-labor relations which, since 1935, has been the declared policy of the Nation "by encouraging" at atomic energy installations, subject only to security requirements, "the practice and procedure of collective bargaining and by protecting the exercise by workers of full freedom of association, self-organization, and designation of representatives of their own choosing, for the purpose of negotiating the terms and conditions of their employment or other mutual aid or protection"; and that management and labor at Government-owned, privately operated atomic energy installations will likewise adhere to that policy.

(a) A great body of experience in the field of labor relations in private industry has established the wisdom of including in the labor-management contract adequate grievance machinery terminating in final and binding arbitration of all disputes involving the interpretation or application of the contract, thereby assuring settlement of all such disputes without interruption of normal operations. We, therefore, recommend—

**4. a.** That all collective-bargaining agreements at Government-owned, privately operated atomic energy installations provide that grievances and disputes involving the interpretation or application of the agreement will be settled without resort to strikes, lock-outs, or other interruptions to normal operations by an effective grievance procedure with arbitration as its final step unless the parties mutually agreed upon some other method of assuring continuity of operations throughout the term of their agreement.

The details of the effective grievance procedure are matters for collective bargaining between management and labor at the installation, but we commend to the Commission and to management and labor the report of Committee 6 unanimously adopted by the President's National Management-Labor Conference of 1945.<sup>2</sup>

(b) Another labor-management technique of proven value in private industry is a well-planned procedure which brings the experience and the responsibility of the very highest levels of management and labor to bear upon the settlement of all critical disputes. Procedure to this end needs to be carefully planned, so as to leave with local representatives primary responsibility for good relations at each particular installation and yet make available in crises whatever wider experience and heightened responsibility may exist at the higher levels of management and labor, as well as the relatively detached judgment of individuals who have not themselves been directly involved in the earlier stages of the dispute. All of these considerations are made especially important in the field of atomic energy by the overwhelming responsibility to maintain continuity of production. We therefore recommend—

<sup>2</sup> U. S. Department of Labor, Division of Labor Standards, 1946, Bull. 77, pp. 44-47.

b. That, fully recognizing and safeguarding the primary responsibility of local representatives for sound and stable relations at each Government-owned, privately operated atomic energy installation, provision be made for bringing to bear upon the settlement of critical disputes all available experience and responsibility of individuals at the very highest levels of management and labor.

(c) An outstandingly significant aspect of labor-management relations in private industry emerges from first contacts and initial attitudes with their enduring effect upon subsequent collective bargaining. As is well known, it is when a labor organization has only partially established itself as the representative of a group of workers that latent grievances are brought to the forefront and present the greatest difficulty. It is during that period also that the union has the least control of the union members, who have not yet learned from experience the limits of what organization can and cannot do for them. And that period when mutual confidence between management and union leaders is most difficult to obtain is the very time where it is most valuable. There is any amount of practical experience to show that relations which get off to a good start usually proceed quickly through the initial period of organizational troubles and develop more rapidly those elements of understanding and responsibility upon which good in-plant relations ultimately depend. It is peculiarly important, therefore, in these early stages to avoid attitudes and acts which give rise to hatreds and leave a residue of bitterness. Militant aggressiveness on the part of union representatives and concealed or partially concealed opposition on the part of management to the self-organization of the workers and their free choice of representatives are among such disruptive attitudes.

While we do not hesitate to recommend in general avoidance of such trouble-making attitudes and actions, the very nature of things makes specific recommendations of particular procedures in this area of relations almost impossible. There is, however, one point at which a procedural recommendation seems appropriate, and well within the limits of our best experience in industrial relations in private industry. The Labor-Management Relations Act in its provisions for determining bargaining units and for designating representatives in contested cases gives the National Labor Relations Board the power to decide, subject to judicial review. It also provides, however, for consent elections in bargaining units agreed to by the parties and approved by the Board. Experience shows, as we have pointed out, that avoidance or minimizing of controversy at this stage of the relationship is of lasting importance, and this is particularly true in the case of atomic energy installations because in consenting to the opening up of representation proceedings in the field of atomic energy, the Commission has felt that security considerations require that it should be continuously informed of the progress of controversial proceedings before the Board in order that it may effectively intervene to prevent violation of security rules and regulations. This difficulty is avoided, of course, if the question of representation is settled by agreement as to the bargaining unit followed by a consent election. We therefore recommend:

c. That, subject to the security provisions of paragraph 2 above, management and labor at Government-owned, privately operated atomic energy installations make every endeavor to determine bargaining units and representatives by agreement and consent election in preference to contested proceedings before the National Labor Relations Board.

If questions of security arise at this point, as at any other point in management-labor relations, they should be referred to the Atomic Energy Commission in accordance with recommendation (2) above and with the policy of the Atomic Energy Commission announced in its communication to the National Labor Relations Board of September 27, 1948.

(d) Finally, there is an overwhelming body of evidence in the history of industrial relations in this country over the last 10 years to show the value of a sincere purpose by both sides, once collective bargaining representatives have been designated, to make the union an integral and responsible element of the plant organization by training management's supervisors and union officers to recognize the function and responsibility of the union and to have an accurate understanding of the provisions of the collectively bargained contract under which they work. We therefore recommend:

d. That in all Government-owned privately operated atomic energy installations in which representatives have been chosen by the workers and lawfully designated, or recognized by management, management and union cooperate to integrate the union into the plant organization as a two-way channel of communication and a medium of understanding between management and workers.

(5) We now come to our recommendations as to the introduction of mediation and conciliation to aid in the voluntary settlement of disputes at Government-owned, privately operated atomic energy installations.

It will be understood, of course, that the provisions of the Federal laws as to conciliation and as to national emergencies are as fully applicable to Government-owned, privately operated atomic energy installations as they are to other operations of private industry. It is desirable in any industry, however, to develop by collective bargaining individual procedures suited to the particular industry; and this is peculiarly important in atomic energy installations where interruption of vital operations is intolerable.

We outline below our recommendations for such procedures with the precautionary remarks (a) that the mediation agency and its procedures should protect to the utmost all possibilities of uninterfered-with voluntary agreement, and (b) that the mediation agency have absolute discretion as to the means and procedures of conciliation it will recommend or employ. We suggest, furthermore, that if our recommendations are approved, the adoption of the plan should be for a trial period of 2 or possibly 3 years, subject however to termination at the discretion of the Atomic Energy Commission in the discharge of its responsibilities under the Atomic Energy Act. With these precautions, we recommend:

5. a. That the Atomic Energy Commission establish a labor-relations panel of three impartial members appointed by the President from nominations submitted to him by the Commission.

We suggest that the members of the panel be compensated for their services on a per diem basis. Full-time employment will not be necessary or desirable. We assume that the Atomic Energy Commission will supply the panel with necessary advisers and assistants and will make provisions for all necessary supplies, facilities, and services.

b. That the panel be empowered to take jurisdiction of any management-labor dispute which collective bargaining and the normal processes of conciliation have failed to resolve and which threatens to interfere with an essential part of the atomic energy program.

c. That at Government-owned, privately operated atomic energy installations every recognized union and every contractor be required to agree that there shall be no interruption of production or services or changes without agreement in the terms and conditions of employment existing when the dispute arose before the panel takes jurisdiction and that after the panel takes jurisdiction in a dispute, existing terms and conditions of employment will be maintained without change and no action will be taken to impede production or services in any way so long as the panel retains jurisdiction and for an additional period of 30 days if in any case the dispute remains unsettled and the panel makes final recommendations, as in e below; provided, however, that the obligation of the parties under the agreement shall end as to any particular dispute (1) if the panel does not take jurisdiction of the dispute within 15 days after either party requests the panel to do so; or (2) if, at any time more than 30 days after the panel takes jurisdiction of the dispute, either party notifies the panel of its desire to terminate as to that dispute its obligation under the agreement and within 20 days thereafter the dispute is not disposed of by mutual agreement or the panel has not made recommendations as in e below; or (3) whenever the panel announces that it does not intend to take jurisdiction of the dispute or that it has terminated its jurisdiction; and

d. That the panel have full discretion in the use of all voluntary procedures to end the dispute by mutual agreement and as to when and how it will terminate its jurisdiction of the dispute; provided only that if the panel finds that the subject matter of the dispute or any part of it is within the scope of any procedure mutually agreed to by the parties for adjustment of disputes without interruption of production, then the panel shall return the dispute or such part thereof to the parties for settlement under the agreed procedure.

While the power of the panel to take jurisdiction has been broadly expressed above, and broad discretion should be left with the panel as to when and in what cases it will take jurisdiction, yet it is a basic purpose of the proposed plan that resort to the panel is not to be thought of as a customary or an easily available part of the management-labor relationships. The creative possibilities of responsible collective bargaining should always be jealously preserved. The parties should not be encouraged or allowed to evade their own primary responsibility to meet their own problems and to settle them by mutual agreement.

It is, however, of critical importance to avoid in such proceedings all aggravating delays or neglect, all "stalling" either in fact or in appearance. It is obviously

correct for the panel to keep out of—to have no power to proceed with—a dispute in which the agreed procedures for settlement have not been fully used. And if, upon taking jurisdiction of a dispute the panel should find that the parties have not already made use of the Conciliation Service, or of other available means of conciliation, then, even after the panel takes jurisdiction, it should have the power to insist that the possibilities of settlement by such agencies of conciliation should be fully explored. Since the parties will be bound by the foregoing provisions to continue operations under existing terms and conditions of employment until the panel takes jurisdiction or announces that it is not going to do so, and after the panel takes jurisdiction until the dispute is (1) finally disposed of by agreement, or (2) the panel announces termination of its jurisdiction, or (3) the recommendations of the panel under e below are rejected, it is necessary to provide as above for reasonable time limits for panel action. Such time limits, which may be resorted to by a party who feels that the panel is neglecting the dispute or unduly delaying consideration of it, are not to be taken, however, as easily available avenues of approach in conflict with the basic purpose stated in the foregoing paragraph.

All experience with labor-management relations in private industry emphasizes the importance of leaving mediators and conciliators wholly free to devise, to recommend, and to employ all applicable means for inducing a meeting of minds, and the need for such full freedom of action is emphasized in these Government-owned, privately operated atomic energy installations where the obligations to effect a settlement of the dispute by agreement without interruption of production will necessarily impress itself upon the panel as well as upon the parties. We do not want, even by implication, to suggest any limitation on the full discretion of the panel, but for illustration, and without limitation, we make the following remarks to indicate some of the available procedures: It may be that upon examination of the dispute the panel would find that the operations affected by the dispute are not vital, that they do not critically affect the health or safety of the public so that the dispute may safely be left to the ordinary processes of collective bargaining without restrictions; or the panel may find that available agencies of conciliation have not been made use of to an adequate extent; or it may find that substantial parts of the dispute arise out of questions of fact which can be removed from the areas of dispute by further examination with or without the aid of the panel, leaving, perhaps, a residue of dispute which can be settled by further negotiation between the parties on their own account. It has come to be recognized also, in the field of voluntary settlement of disputes with the aid of mediation, that agreement can often be facilitated by putting down in writing a precise definition of the points of controversy with a view not only to make sure that the parties can at least agree upon what they are disagreeing about, but also looking to the possibility of submitting one or more points of controversy to voluntary arbitration limited by explicit stipulation and before a known arbitrator in whom the parties have confidence.

This procedure is likely to be particularly fruitful where, as in critical atomic energy installations, interruption of production is intolerable and failure to come to a voluntary settlement may lead to Government intervention. A careful statement of the area of dispute, particularly when it is coupled with a foreknowledge that the arbitrator will be someone in whom both sides have confidence, often leads to a voluntary agreement to arbitrate a part or the whole of the dispute. The panel should not be denied the power to act in its discretion as arbitrator if both sides desire that, although we think it is probable that such an agency would not want to act as arbitrator except possibly in very exceptional cases. It may be that under some circumstances disputing parties who have agreed to submit all or any part of the dispute to voluntary arbitration will also be able to agree upon some criteria of decision for the guidance of the arbitrator, thereby further defining the limits of the voluntary arbitration and avoiding the risk that is likely to accompany so-called open-end arbitration. Another important avenue of voluntary settlement lies in the possibility that the panel may be able to work out with the parties other voluntary procedures for settlement of the particular disputes under consideration and for avoiding like critical disputes in the future.

The principal thing is, however, that the panel have full freedom of action to make whatever suggestions and take whatever steps may seem appropriate at the particular time in view of the particular situation.

Our final recommendation is:

e. That, if the panel is unable to effect a settlement of the dispute by voluntary agreement, then it may in its discretion proceed to recommend such terms and

conditions of settlement as the panel may deem appropriate, and for 30 days thereafter the status quo shall be maintained as in c above.

The foregoing recommendations could be put into effect within the provisions of existing legislation. We make no recommendation for enactment of special legislation at this time, believing that the recommendations or something substantially equivalent to them should be given a trial for a period of 2 or 3 years. If they failed to secure continuity of production at any vital Government-owned, privately operated atomic energy installation, the effect would be to throw the full responsibility back into the hands of the Atomic Energy Commission. If this responsibility then seemed to make any special legislation necessary, the Commission would, in recommending legislation, have the benefit of the practical experience gained by the work of the panel and the Congress would have the benefit of that experience in considering such special legislation.

In conclusion we want to emphasize, Mr. President, this thought: That the foregoing recommendations are no more than the bare bones of a skeleton structure upon which the flesh and blood of a vital organism may be built up by sincere people fully conscious of their tremendous responsibility for the general welfare. To get the maximum productive efficiency demanded by the overwhelming importance of the atomic energy program calls for sound and creative labor-management relations at all atomic energy installations. The best of formulas could not do more than create a favorable environment within which such relations may be built up in time under the stimulus of sincerity and good-will.

Respectfully submitted.

WILLIAM H. DAVIS, *Chairman.*  
AARON HORVITZ, *Member.*  
EDWIN E. WITTE, *Member.*

JOHN T. DUNLOP, *Consultant.*

DONALD B. STRAUS, *Executive Secretary.*

Representative HOLIFIELD. There will also be included in the record a press release from the Atomic Energy Commission, dated May 3.

(The press release referred to, entitled "AEC Announces Action to Assure Continuity of Essential Operations," dated May 3, 1949, is as follows:)

#### UNITED STATES ATOMIC ENERGY COMMISSION

WASHINGTON 25, D. C.

(No. 170—Information for the press—for immediate release)

#### AEC ANNOUNCES MOVES TO ASSURE CONTINUITY OF ESSENTIAL OPERATIONS

The United States Atomic Energy Commission announced today it is taking steps designed to prevent stoppages in its essential operations and to assure maximum freedom for labor and management to bargain collectively in AEC's Government-owned, privately operated plants.

These steps were recommended in the report recently sent to President Truman by his special Commission which investigated labor relations problems in the atomic energy industry. The report also proposed appointment by the President of an atomic energy labor relations panel. The President has named William H. Davis as chairman of the panel.

The Commission moved to:

1. Obtain agreements from prime contractors and recognized unions which, in the event of labor disputes, would serve to maintain operations and existing terms and conditions of employment until the labor relations panel has an opportunity, if it feels such action is necessary, to intervene and take action;

2. Begin discussions with national leaders of recognized unions in the industry and with management to formulate a permanent policy that will permit normal negotiations between labor and management on wages, hours, and working conditions without AEC intervention except where it is necessary for the Commission to discharge its responsibility under the McMahon Act; and

3. Establish the principle in matters of labor expense on cost-plus-fixed-fee contracts that employment conditions be established with reference to conditions in a reasonable segment of comparable industry in the area. The application of this principle will be worked out in the discussions with labor and management.

The Commission is communicating with contractors and recognized unions in the atomic energy industry to obtain agreements assuring continuity of operations and employment conditions while disputes are before the labor relations panel.

The Commission also approved an initial statement of its role in labor management relations. The statement follows:

"The report to the President submitted by the President's Commission on Labor Relations in Atomic Energy Installations proposes that 'the aspects of wages, hours, and working conditions which are the substance of collective bargaining be left to management and labor' without AEC intervention except as is necessary to discharge its over-all responsibility for the atomic energy program.

"This over-all responsibility requires Commission review and approval of matters of security, including access to plants and to information.

"This responsibility extends also to review of labor expenses under the cost-reimbursement contracts used in many AEC operations. Such matters are at the very heart of any collective bargaining between the contractors and their organized employees. To keep government supervision and the resulting effect on free collective bargaining to the minimum consistent with a full discharge of its over-all responsibilities, the Atomic Energy Commission has decided to issue a statement defining its role in labor-management relations at atomic energy installations and the principles it will be guided by in the exercise of this role. These principles will be designed to provide an outer framework within which representatives of contractors and employees may meet and exchange proposals and counterproposals based upon reason, and reach agreements molded to fit their special problems.

"In carrying out the Commission's responsibilities under such established principles, its staff will refrain from either direct or indirect participation in negotiation between the parties. Cost reimbursement will be predicated upon whether a negotiated labor contract, when considered as a whole, is within the established principles. Participating contractors and recognized unions will be consulted in the initial formulation of these principles and in such subsequent modifications as experience warrants.

"Pending establishment of these proposed principles, the general policy in matters of labor expense is that employment conditions be established with reference to conditions in a reasonable segment of comparable industry in the area."

The initial statement is being transmitted to prime contractors and to national officials of recognized labor unions at Commission facilities.

Representative HOLIFIELD. If there are no further questions, the meeting stands adjourned.

(Whereupon, at 11:55 a. m., the committee recessed, subject to the call of the Chair.)

# LOS ALAMOS RETROCESSION BILL AND AEC CONTRACT POLICY

---

THURSDAY, FEBRUARY 17, 1949

CONGRESS OF THE UNITED STATES,  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The committee met at 2 p. m., pursuant to call, in room 457, Senate Office Building, Senator Brien McMahon (chairman) presiding.

Present: Senators McMahon (chairman), Connally, Tydings, and Hickenlooper; Representatives Durham (vice chairman), Price, Kilday, Cole, Elston, and Hinshaw.

Also present: Senator Clinton P. Anderson; David E. Lilienthal, Chairman; Adrian S. Fisher, General Counsel; Joseph Volpe, Deputy General Counsel, Atomic Energy Commission; and Capt. Carroll Tyler, Manager, Santa Fe Operations Office, Atomic Energy Commission.

The CHAIRMAN. Gentlemen, we will come to order. Mr. Lilienthal.

## LOS ALAMOS RETROCESSION BILL

### STATEMENT OF DAVID E. LILIENTHAL, CHAIRMAN, ATOMIC ENERGY COMMISSION

The CHAIRMAN. Now, Mr. Lilienthal, you want to direct your attention first to the Los Alamos proposition, as I understand it.

Mr. LILIENTHAL. Yes, Mr. Chairman, to the bills S. 152 and S. 210, both providing for the retrocession and jurisdiction over Los Alamos in the State of New Mexico. The purpose of my appearance is to state very briefly the Commission's hearty approval of the purposes and form of these bills, preliminary to introducing Mr. Carroll Tyler, who, as you know, is the Commission's manager at Los Alamos, and who will go into the legislation in much greater detail as he is able to by reason of his managership there.

Senator HICKENLOOPER. Mr. Chairman, there is a House bill filed identical to these, is there not, too?

The CHAIRMAN. That was referred to the House Committee on Public Lands.

Senator HICKENLOOPER. The only thing, for the record I thought they all ought to be before us.

Mr. LILIENTHAL. It is my understanding that the House bill passed the House this morning. If I may proceed with this brief statement, then.

One of the most time-consuming, difficult problems the Commission has concerns the management and operations of the communities at Oak Ridge, in Tennessee; Richland, in Washington; and Los Alamos,

in New Mexico. These communities are operated and are maintained as an integral part of the national atomic energy program.

Maintaining adequate living conditions in these communities is, of course, not a technological problem; nor is it very dramatic, but it is unquestionably a vital and a difficult one. Unless living conditions are adequate in these communities, it is impossible to attract and to hold people to operate the plants and laboratories essential to carrying out the substance of the atomic energy program.

The Commission would like to emphasize that the proposed legislation under consideration by the Joint Committee on Atomic Energy is viewed by the Commission as necessary to remove a very unsettling and disturbing situation at Los Alamos which, in our opinion, if left uncorrected, will doubtless impede the operations of the program being carried on at Los Alamos.

In brief, this situation arises from the fact that a large portion of the land at Los Alamos is jurisdictionally part of the State of New Mexico, while a few scattered plots throughout the area are under the exclusive jurisdiction of the United States of America.

As a result, persons residing in the exclusive jurisdiction territory, these scattered plots, are not permitted to vote and are not considered residents of the State of New Mexico for the purpose of voting, obtaining divorces, probating wills, adopting children, et cetera.

In passing, I should like also to point out that this problem does not arise in either of the Commission's other communities at Oak Ridge or at Richland. Those communities are located on lands owned by the United States Government which are, however, for jurisdictional purposes, considered to be lands within the jurisdiction respectively of the State of Tennessee and the State of Washington.

The purpose of these bills is simply to turn back to the State of New Mexico normal State jurisdiction over the scattered plots acquired by the United States and thus to make all of Los Alamos part of the State of New Mexico. In this way, the Commission feels that the unsettling situation now prevailing at Los Alamos can be corrected, and what might be a serious handicap to pushing ahead in the program at Los Alamos will thereby be eliminated.

Thank you, sir.

The CHAIRMAN. Are there any questions?

Senator HICKENLOOPER. Chairman Lilienthal, I have some historical familiarity with this problem. One of these bills that has been filed was filed by me at the request of the Commission last year.

The CHAIRMAN. That is the one we are now considering.

Senator HICKENLOOPER. I thought you were considering both. It does not make any difference to me which one you are considering.

Senator TYDINGS. What is the number of the bill?

The CHAIRMAN. S. 152.

Senator HICKENLOOPER. There is only one thing. While I introduced the bill at the request of the Commission, and I am here to tell the committee the various departments apparently that are interested who have O. K.'d this bill, that is, the Department of the Interior, and I think the Attorney General and various other groups, I have not been fully satisfied in my own mind as to whether the Commission has resolved the question of criminal and law-enforcement areas in connection with the restricted areas on top of the hill there in Los Alamos.

In other words, what is your view on whether or not the county sheriff can come through your barricades there if he says that a crime has been committed inside that fence? And what is the situation so far as the National Guard of New Mexico is concerned when ordered out by the Governor?

I say those questions have been raised before, but I have never had an adequate or satisfactory answer to that question of criminal jurisdiction.

Mr. LILIENTHAL. If I may, Senator Hickenlooper, I would like to have our general counsel speak on those questions as to the legal situation. I am not sufficiently familiar with it to answer the question.

The CHAIRMAN. Mr. Fisher, do you want to answer that question?

### STATEMENT OF ADRIAN S. FISHER, GENERAL COUNSEL, ATOMIC ENERGY COMMISSION

Mr. FISHER. Senator Hickenlooper, the answer to that is that the bill places 5 percent of Los Alamos in the same position as the other 95 percent now is. I could not with candor before this committee state that every possible inter-governmental problem can be resolved in advance; but I think I can tell the committee that this does not in any way restrict the security authority of the Commission granted by the Atomic Energy Act.

Senator HICKENLOOPER. My question goes into this point: What is the jurisdiction of that county over alleged crimes or suspected crimes committed within the confines of the restricted area at Los Alamos where restricted work is being done? And what is the limitation or the power of the Governor of New Mexico with regard to the National Guard going in there and taking over in times of emergency? That is my question.

Mr. FISHER. The answer to that is this: With reference to crimes committed in the 5 percent, which would be taken out by this bill, the jurisdiction is in the State courts; but the State courts would have no authority, or the State officials would have no authority, to execute their prosecution of those crimes, their State-enforcement activities, in any way which interfered with the authority of the Commission to retain restricted data and to control it.

In other words, on the hypothetical case that a murder had been committed in a highly classified area, it is not our position that State officials could immediately break in on the grounds that that was essential. Appropriate arrangements would have to be worked out, and I am confident that with good will on both sides, the necessary arrangements could be worked out to handle that.

Senator HICKENLOOPER. I am merely trying to clarify this. I understand you have to work in comity with the people down there; but that is a matter of comity and agreement. What is the status of the jurisdiction?

Let us go into one of your highly restricted areas on top of the mesa at Los Alamos. Now then, assume that murder was suspected up there. A dead man was found within that area; and assume that the Atomic Energy Commission for some reason said, "We do not want anybody in here at this time." That is a rather broad assumption, I admit.

Would not the sheriff have the right in any event to break through your barriers and go in and do what he conceived to be his duty under the law in New Mexico? Or could you stop him? Do you exercise the control over the law-enforcement agencies in that area if this legislation should go through?

Mr. FISHER. Senator, may I first point out that that situation exists today at Los Alamos. The very question you put is not raised by this bill because some 95 percent of the land on the area——

Senator HICKENLOOPER. Just answer my question. Is it or is it not?

Mr. FISHER. I would say it depends on the arrangements he attempted to make. I think it would be up to us to work out arrangements with him whereby he could carry out his duty without at the same time compromising the security of our program on that.

If you put to me the hypothetical case of a situation where that would be impossible, I think there is no such case. I think we would tell the sheriff, "Sheriff, you cannot come in until we have worked our arrangements under which this can be done without in any way compromising the security of restricted data." As long as I am connected with the Commission, I hope we would be able to do that and work it out right, but without in any way compromising restricted data because the situation that exists today, as you know, sir——

Senator HICKENLOOPER. Again let me say that I have the most complete faith in your ability to work out arrangements between the Atomic Energy Commission and the law-enforcement authorities. I take that on faith. What I am asking you: What is the actual legal situation? What is the ultimate answer?

There is either a right or there is not a right.

Mr. FISHER. Senator, my answer to that is this: The right of Federal ownership means the right to issue all essential and necessary regulations to carry out the purposes for which the Federal Government owns this land. Now, I cannot at this stage predict every possible conflict that might arise, and say whether that right would or would not exist.

I am confident that we have all the power that we need without the authority of exclusive jurisdiction on 5 percent of the area, to issue the regulations under which we could prohibit him from coming in until the arrangements could be worked out. If we reached an impasse, that presents, I believe, a hypothetical question; but I do think we have the right to restrain him until the appropriate arrangements can be worked out.

Senator HICKENLOOPER. Mr. Chairman, if you will excuse me for pursuing this point rather strenuously, I may say parenthetically I have been trying to get an answer to this thing for the last 6 months almost, and I have yet failed to get a specific answer.

May I put it another way. In this case of a direct conflict of authority or conflict of intention or program between the Atomic Energy Commission in a restricted area at Los Alamos and a determination of the local law-enforcement officials, either the county sheriff or similar officials or the National Guard of New Mexico, who has the power to prevail under the law? Who is superior?

Mr. FISHER. It is my understanding of the law, sir, that in any case where it is necessary to carry out the Federal function for which this property is owned and held, that the Federal authority is superior.

Whether or not a particular decision of the Federal officials in carrying out their authority is a justified one may, of course, become a matter for the courts to decide.

But if the courts were to decide that we were justified in any particular action in carrying out the authority to control restricted data and to run reservations of this kind granted us by the Atomic Energy Act of 1946, that is the finding that must be made. If that finding is made, it is my understanding, and we will be prepared for this committee, if the committee would like, to document that further, that if the act is consistent with the Federal purposes and the purposes for which the Federal Government owns the land, the Federal Government prevails.

Senator HICKENLOOPER. All right. Let us suppose the sheriff is knocking at the wire gate down there and he says, "There has been a crime committed here, or I have every reason to believe there has." And suppose that the manager of the atomic energy program down there, for some reason that may be difficult to imagine at the moment, says: "It is not to our interest or it is not in accordance with our program or under our responsibility to let you in right now. Things are going on in here that we have to guard very carefully."

Under those circumstances, let us assume that the manager or whoever is responsible there believes that he is properly carrying out his duties. Then, is it your opinion that the Atomic Energy Commission or the Government, acting through it, has the right to supersede the authority believed to be possessed and normally possessed by the State law-enforcement authorities of New Mexico if this retrocession goes through?

Mr. FISHER. Senator Hickenlooper, in order to complete that question, I would have to understand the reason, because the reason why we are acting is the whole crux of the problem you are posing.

We have the authority, by virtue of the ownership of this land, to issue all necessary rules and regulations consistent with the purposes for which we own this land, those purposes being set out in the Atomic Energy Act of 1946.

When you say "for some reason or other," to my mind you eliminate the part of the question which is essential for its intelligent answer.

Senator HICKENLOOPER. Let me put it this way, then. Generally speaking, under State law, and I think this is universal, if the law-enforcement officials have reason to believe that a crime has been committed on certain premises, they can, under some circumstances, invade those premises without a warrant. Usually, they have to go and get a warrant to search the premises.

Let us suppose that the sheriff of that county showed up with a search warrant for your restricted area, under the allegation, upon which the warrant was based, that a crime had been committed to the best of his knowledge and belief. He showed up at the gate and said he had a search warrant and he wanted to search those premises; but the Commission believed that it was to the best interests of the Commission and the program and perhaps even the United States not to allow a search of those premises at that moment.

Who would prevail? Would the search warrant prevail, or would the order of restriction of the General Manager or whoever operated it prevail?

Mr. FISHER. If the reasons which the Commission believed that no one should be permitted to enter those premises for appropriate reasons in carrying out the Commission's responsibility to maintain the security of restricted data under the Atomic Energy Act of 1946, if those were the reasons—and I have to add to your question because I believe you said for some reason—if those were the reasons, I think the Commission would prevail.

May I add to this statement by saying as follows: We recognize that when you say "work it out," you say, "Maybe he will not be able to work it out; then who will win?" I think there may be a thousand to one or a million to one—

Senator HICKENLOOPER. I think you can work out a gentlemen's agreement or a working arrangement. I am not disputing that. But I am talking about where is the root of the authority.

Mr. FISHER. The root of the authority depends on whether the reasons under the act are consistent with the purposes of maintaining the security of restricted data under the Atomic Energy Act of 1946, or any other purposes set up under that act.

If they are, we have the authority. If they are not, if they are capricious or for any other reason inappropriate, we have not.

Senator HICKENLOOPER. Do you believe that it will take an act of consent on the part of the New Mexico Legislature in order to confirm or assure the maintenance of jurisdiction and under proper conditions in restricted areas at Los Alamos?

Mr. FISHER. No; I do not, sir.

Senator HICKENLOOPER. Senator Tydings asked me to yield to him.

Senator TYDINGS. What court has jurisdiction over the criminal offenses committed on the area we are talking about now?

Mr. FISHER. Right now that is in a state of lamentable confusion. As to 95 percent of the area—

Senator TYDINGS. I mean the restricted area.

Mr. FISHER. Federal courts.

Senator TYDINGS. Federal courts exclusively?

Mr. FISHER. Yes, sir.

Senator TYDINGS. Have the State courts any right at all in the highly restricted area?

Mr. FISHER. When you say "the highly restricted area," due to the historical—

Senator TYDINGS. I do not want to call for names, but you know what I mean.

Mr. FISHER. But the point I make is just to that point, that there is no correlation between the highly restricted area and the area of Federal jurisdiction. If this were a situation in which you had Federal jurisdiction over one part and the State over another—

Senator TYDINGS. I am talking about what is. I am asking you whether the State courts have jurisdiction over the highly restricted area for crimes committed thereon.

Mr. FISHER. Today, yes; some portions of them, sir.

Senator TYDINGS. Who owns the land?

Mr. FISHER. The Federal Government, sir.

Senator TYDINGS. Can the people who live on it vote in New Mexico?

Mr. FISHER. No, sir; they cannot.

Senator TYDINGS. Why not?

Mr. FISHER. They can on some, and on some others they cannot. It is a provision of the laws of the State of New Mexico, which we will be glad to introduce for the record.

Senator TYDINGS. I am not going to be too specific. You know what I have in mind. Are the guards there civilian or military?

Mr. FISHER. They are civilian, sir.

Senator TYDINGS. If you had military guards there at this particular area, then there would be no question about the military authorities having the primary right to enforce breaches of the law; is that right?

Mr. FISHER. Well, sir—

Senator TYDINGS. They would be military personnel. Would they be subject to court martial or would they be subject to the civilian procedure?

Mr. FISHER. There are very few military personnel on the area.

Senator TYDINGS. I say, if you had military personnel guarding this highly restricted area, which of the two people would have jurisdiction, the military authorities or the civilian authorities?

Mr. FISHER. The military authorities, sir, I understand have jurisdiction over military personnel in uniform.

Senator TYDINGS. So if you had military authorities at this highly restricted place and there was a breach of the law, the military would have the right to deal with it at once and they would have jurisdiction, unless they waived it to the Federal courts?

Mr. FISHER. That is a breach of the law with respect to military personnel or with respect to civilian personnel?

Senator TYDINGS. I am talking about any breach of the law that occurs there that involves the military. So as to put the question more specifically, let us assume that one soldier shot another soldier, and they were both military.

Mr. FISHER. They would be subject to the Articles of War.

Senator TYDINGS. All right. Let us suppose the soldier shoots a civilian.

Mr. FISHER. Subject to the Articles of War, I assume, sir.

Senator TYDINGS. In case you had a civilian guard and a civilian shoots a civilian, who has jurisdiction over the crime committed, assuming it is murder? A civilian guard shoots another civilian.

Mr. FISHER. It would depend on where he shot him, sir.

Senator TYDINGS. Suppose he shot him in the esophagus. Or suppose he shot him in a highly restricted area, without any camouflage.

Mr. FISHER. Portions of the highly restricted area are under the Federal jurisdiction. Portions of the highly restricted area are under the State jurisdiction.

Senator TYDINGS. Then your answer to Senator Hickenlooper is this: Theoretically, from your subsequent testimony, as I take it, you intend to work out an arrangement so there will be no conflict, and if a situation as he envisioned were to occur, you would deal with it with diplomacy and so on.

The real truth of the matter is that the Federal authorities have the right and jurisdiction in the matters in the highly restricted areas we are discussing.

Mr. FISHER. When you say jurisdiction in the matters, sir, that is what troubles me. The Federal authorities would not have jurisdiction in the sense of territorial jurisdiction over this area.

Senator TYDINGS. I am talking from the standpoint of crime.

Mr. FISHER. In this area, if this bill were passed, it would as to 5 percent —

Senator TYDINGS. I am talking about the highly restricted area where that crime occurs.

Mr. FISHER. In the highly restricted area, at the present time portions of it are in State jurisdiction and portions of it are in exclusive Federal jurisdiction. I wanted to make that point clear.

Senator TYDINGS. I am talking about the part that is under the Federal jurisdiction. Have I married the issue enough?

Mr. FISHER. Yes, sir; you have. If the part of the highly restricted area —

Senator TYDINGS. I am only trying to get an agreement between what I believe is your obvious view and mine. You stated that the Federal courts and not the State courts would have jurisdiction over the federally owned, highly restricted area. Therefore, the sheriff would come to the place without jurisdiction, would he not? If his court does not have jurisdiction, he would certainly have no power that the court conferred on him.

Mr. FISHER. Senator, I am afraid I have not made a good explanation of this. If this bill were to pass, the sheriff would have jurisdiction over the crime of murder if a civilian shot a civilian.

Senator TYDINGS. On what area?

Mr. FISHER. On the entire area, sir. What he would not have is the right to come barging into a restricted area without the approval of the authorities charged with the responsibility for maintaining security.

Senator TYDINGS. So, in the absence of any regulations, he would have the authority to come barging in?

Mr. FISHER. Yes, sir; as he does now, in much of the highly restricted area.

Senator TYDINGS. In the event he did come in, which would have jurisdiction over the offense committed, State or Federal courts?

Mr. FISHER. If this bill were to pass, sir, the State court.

Senator TYDINGS. In the highly restricted area which is still retained by the Government, the State would have jurisdiction?

Mr. FISHER. There are some Federal offenses, as such, of course, straight murder.

Senator TYDINGS. In the federally owned, highly restricted area, you say that the State courts would have jurisdiction for crimes committed in the federally owned, highly restricted area?

Mr. FISHER. That is correct, sir. May I show you a map to define this?

Senator TYDINGS. No; I am only interested in this for this reason. I have not probed it thoroughly, but it seems to me that if that is a correct statement, and I am not saying it is not, that this highly restricted area, and particularly the part that you know I have in mind, ought not to be subject to the control of anybody under the sun except the Government of the United States for anything that is committed there.

Do you agree with that or not?

Mr. FISHER. No, sir; I do not.

Senator TYDINGS. You do not?

Mr. FISHER. No, sir.

Senator TYDINGS. Why not?

Mr. FISHER. Because I believe the authority of the United States—I do not believe we are interested in prosecuting murder cases as murder cases. I think our interest in it is to carry out the purposes of the act and the purposes of the act are——

Senator TYDINGS. I am thinking from the standpoint of security, not of the theory of law.

Mr. FISHER. But we have authority to maintain the issue of security regulations, and we have authority to tell the sheriff, "You cannot come in until we make proper arrangements," so that security will not be compromised.

Senator HICKENLOOPER. Where do you get that authority?

Mr. FISHER. From the Atomic Energy Act, sir.

Senator TYDINGS. Do you mean to say that until you issue a regulation, he has the authority?

Mr. FISHER. Sir, the regulation——

Senator TYDINGS. Answer me "Yes" or "No." He either has or he has not.

Mr. FISHER. He has, but the regulation is already in effect. May I add to that, Senator. I believe it would help you if I showed you this map.

Senator TYDINGS. I have one before me.

Mr. FISHER. As you observe, the areas of exclusive Federal jurisdiction, as I understand it, are the areas in black, which are affected by this bill. You will observe that they are rather spotted across the area.

Senator TYDINGS. Let me tell you what I am driving at. There are certain parts of the atomic energy activity that you and I and everybody else connected directly or indirectly with this want to have guarded over and above any other phase of it. That is obvious.

Mr. FISHER. Yes, sir.

Senator TYDINGS. Do you think it is wise to allow a situation of such vital importance to our own security to roam around into the realm of where a regulation is proposed by the Atomic Energy Commission of the United States to deal with the matter? And do you not think that in order that we do not leave it to any hazard whatsoever that we should make sure that that is as tight as we can make it for security reasons as against almost any agency or branch of the Government of which you can conceive?

Mr. FISHER. We think this is extremely tight, sir. I may add that Oak Ridge and Hanford are presently, and have been, through the entire operations of the Manhattan District, in the same situation.

Senator TYDINGS. I am not thinking of Oak Ridge and Hanford. I am thinking of something else.

Mr. FISHER. They are quite important.

Senator TYDINGS. I am thinking of something else, and I don't want to be too specific, but assuming that a situation exists which was super, super, super secret——

The CHAIRMAN. Senator, I might interrupt. Everybody knows and has known for years, that is where most of the bomb making is done, uranium at Oak Ridge and plutonium at Hanford.

Senator TYDINGS. Yes; but I am dealing with a very small area of ground, theoretically, in this particular estimation of the matter. It seems to me there is a twilight zone there of indecision where it is not

perfectly clear what the Federal rights are, and that in the absence of the enforcement of those rights as a means of regulation the thing is left to somewhat of a dispute that could conceivably be costly. In other words, the sheriff may not be the sheriff who appeared. The sheriff might be a man with a badge on who is not the sheriff. The sheriff might have a phony search warrant, and after one Pearl Harbor, I don't want to see another one.

Believe me, I cannot imagine any situation that would be easier if it was not well taken care of. How do we know the sheriff is a sheriff? How do we know that his search warrant or his bench warrant, or whatever it may be, is authentic?

Mr. FISHER. We will not let him in until we find out, sir, until we are sure.

Senator TYDINGS. You mean you won't?

Mr. FISHER. That is right.

Senator TYDINGS. But how do you know that the man on guard there won't let him on? Your regulations say if the sheriff comes you think you could work it out. But have you used all the precautions to make sure that a fifth columnist, for example, does not impersonate the sheriff and get in there and do a lot of damage?

Mr. FISHER. This situation existed, the type—

Senator TYDINGS. Of course, the time to do that is before Pearl Harbor, and not after.

Mr. FISHER. I agree with you 100 percent.

Senator TYDINGS. There are thousands of Americans who could not believe that Pearl Harbor was possible until after our fleet was on the bottom, but it is history, and we can have another one unless we make this pretty tight. I do not like to be hit twice on the head before I get wise.

Mr. FISHER. I do not like to get hit once, sir, but this situation exists at Oak Ridge and Hanford; the split situation which existed at Los Alamos existed throughout the entire war under the Manhattan District, as well as the AEC, and the experience of the last 5 years has shown that it is perfectly possible to work out security arrangements under which the Federal Government has the final say on security arrangements, without involving the Federal Government in a variety of other items, such as miscellaneous petty crimes. We have enough to do to run the program and run it well without getting too far into the Federal divorce law to handle divorces of people that live in this area, and a variety of other things which would be essential.

Senator TYDINGS. Nobody is contending that you should handle them. But I would be interested in knowing, if I could not get a good ingenious man, say, from the FBI, that had some training, and put him in the guise of a sheriff with a badge on and with a warrant, and if he could not, with ingenuity worm his way into the place where he had not ought to be? That is my proposition. The time to close the door is before the situation can happen.

Mr. FISHER. Sir, if that were to happen, I would be very much surprised; before he could do that he would have to go through the clearance procedure set up in the Atomic Energy Act.

Senator TYDINGS. Yes; but we were surprised at Pearl Harbor. They told us they had radar; they told us they had all these things.

Mr. FISHER. The FBI would have investigated.

Senator TYDINGS. But it didn't work.

Mr. FISHER. The clearance procedure would require that the FBI itself investigate this man. It is difficult for me to see how, with the entire clearance procedure which operates now, for which we have the entire resources of the FBI placed by law at the disposal of the Commission for just this sort of thing, that this particular area would in any way decrease the national security if it were made available to normal State processes in this way.

Senator TYDINGS. Well, I am glad we have had this discussion, because if it will result in the security part of the Commission taking appropriate action so that nobody can get in that thing without your knowing all the if's, and and's, and but's, and all the other angles to the proposition, without your permission, that is one thing.

But I do not want to leave the door open, and particularly with the situation which you know I am discussing——

Mr. FISHER. Yes, sir; I do.

Senator TYDINGS. So that somebody can make another sneak attack on us like was once made, which everybody, including our highest military people, pooh-poohed until it actually happened and then they had very, very red faces.

Mr. FISHER. Senator Tydings, if this bill were to pass with the highly restricted areas, no local sheriff could get in there without a pass.

Senator TYDINGS. I don't like that pass business.

Mr. FISHER. That would require the clearance procedure and the FBI investigation. In most cases, if it could be worked out our security police would serve the warrant for him, and not let him in at all. That is the normal arrangement.

Mr. HINSHAW. Are they authorized to do that?

Mr. FISHER. I beg your pardon?

Mr. HINSHAW. Are they authorized to do that for the State courts?

Mr. FISHER. I think so.

Mr. HINSHAW. In other words, they are deputized by the State?

Mr. FISHER. I am not sure of the present arrangement. That has been done in the past and there has been no indication otherwise. They do it at Hanford I know, sir.

Mr. HINSHAW. Excuse me, Senator, for interrupting.

Senator TYDINGS. That is all right, sir. Anybody can interrupt me, because we are all trying to reach one purpose, and that is to close the door on it.

Mr. KILDAY. Will the Senator yield?

Senator TYDINGS. Yes, I would.

Mr. FISHER. We have two deputies just for that purpose now.

Mr. KILDAY. On that point, I take it for many years the law has reserved to the sovereign state when it cedes jurisdiction, the right to execute civil and criminal processes.

Does the State of New Mexico reserve that right in this instance?

Mr. FISHER. Yes, they do.

Mr. KILDAY. Then the situation now is that an officer of the State of New Mexico armed with a legal warrant would have the legal right to enter, so that the——

Mr. FISHER. Well——

Mr. KILDAY. Wait a minute. I have been through this many times as a prosecutor on Government reservations. It has always worked out as you say. But as far as the legal right is concerned, the State of New Mexico having been sovereign over this land at the time

it ceded its jurisdiction to the Federal Government, if it retained the right to execute civil and criminal process it retains sovereignty to the extent that it did reserve the right?

Mr. FISHER. That is right.

Mr. KILDAY. Therefore, strictly technically, a sheriff armed with a legal right would have the right to enter—he would not, I grant you, but the point is that by passing this law as to the things which Senator Hickenlooper fears, we do not change the legal situation as it now exists.

Mr. FISHER. That is correct, sir.

Senator HICKENLOOPER. Mr. Chairman.

The CHAIRMAN. Senator Hickenlooper.

Senator HICKENLOOPER. Jurisdiction over this land was exclusive when it was ceded to the Atomic Energy Commission. Do I understand there was a reservation in the cession that retained to the State of New Mexico the right to serve processes on this land?

Mr. FISHER. That is my understanding, sir.

Mr. KILDAY. All States do that.

Mr. FISHER. That is right, but of course there is a difference as to the sort of things on which processes might be served.

Senator HICKENLOOPER. But let's get this clear.

You are assuring this committee that in the cession of authority and jurisdiction over this land originally from the State of New Mexico to the Atomic Energy Commission, or the Government in this program, that the State of New Mexico specifically reserved the right to the service of process in the ceded lands, or ceded jurisdiction less the right to serve process, is that correct?

Mr. FISHER. That is correct; yes, sir.

Senator TYDINGS. Then the sheriff would have the right to go any place in this reservation and serve the process as a matter of legal right. I am not saying that he would do it, or that you would allow him to do it.

Mr. FISHER. No, sir.

Senator TYDINGS. I am talking about his right.

Mr. FISHER. But that right is subject to the superior right of the Federal Government.

Senator TYDINGS. Then if they reserve the right in the act by which they ceded jurisdiction with certain reservations, it is not subject to anything that is not ceded?

Mr. FISHER. May I respectfully disagree and explain my reasons for it?

Senator TYDINGS. Yes.

Mr. FISHER. As to an area which was under State jurisdiction all along, which the Atomic Energy Commission took over under the authority granted by the Atomic Energy Act of 1946, and where there has been no cession of rights at all, the authority of the sheriff to come in is subject to the authority prescribed by Congress, since it is in pursuance of a Federal purpose, of a Federal act superior.

Senator TYDINGS. Let me get this straight. Are you talking now about a piece of land that has never been ceded?

Mr. FISHER. Yes, sir; I am.

Senator TYDINGS. I am talking about a piece of land that has been ceded, and it has been ceded with the reservation that the sheriff and other enforcement agencies of the local court, or the State courts, let

us say, of the State of New Mexico, reserve the right at all times to enter upon said premises for the purpose of civil, or criminal, or whatever the reservations are. I am not asking whether they would do it, I am not asking you whether you couldn't deal with them, I am asking you under those reservations don't they have the right to do it?

Mr. FISHER. They have no greater right, sir, than they had before the cession itself.

Senator TYDINGS. I agree with that.

Mr. FISHER. May I carry on one further point. That is the reason I got to unceded land.

Federal proprietorship of land covers the authority to issue the necessary regulations for the purpose for which the Government owns the land. One of these purposes is the authority to control restricted data. That implies the authority to keep unauthorized persons, of any size, shape, or description, out of areas where the national defense and security would be impeded if they were permitted to come, whether there is State jurisdiction or not.

Senator TYDINGS. I see your argument. Now, let us put the question this way—

Mr. FISHER. Yes, sir.

Senator TYDINGS. Then you are telling me that on land which New Mexico ceded to the United States of America, with the reservation that it had the right to send its local officer, clothed with the proper authority from the State courts, into that area, that nevertheless they could not come?

Mr. FISHER. Where a proper and appropriate superior Federal right set up by constitutional law intervened, as I believe is to be the case here.

Senator TYDINGS. All right, I get your point of view. I do not agree with it.

Mr. FISHER. I would like to submit some authority on that, sir, if you would like.

Senator TYDINGS. Yes, I know there is a wide area of conflicting law between the State and the Federal Government, and I am not familiar with the decisions, but I am sure when certain plants are located in certain places, in a highly restricted category, it never was conceived as a matter of theory—not dealing with the practice—that the Federal Government would accept a reservation which at least in color would give the State the right to go on to that. I would assume your answer would be accurate in the absence of any reservation, but if New Mexico reserved that, you only got what she gave you.

Mr. FISHER. No, sir. There are two things. Not only the Federal Government got what was given by New Mexico, but on the question of the authority to retain restrictions, that the Federal Government got the authority given it by the Constitution of the United States, and by duly enacted constitutional and Federal law, and appropriate regulations issued under the authority granted by that law.

I would be delighted, sir, to submit some further authorities on that.

Senator TYDINGS. This is being taken down. I would like to see your authorities, and I don't think they will all be on one side. I would like to have them on both sides because you can find any amount of authority on the conflict of law between the States and the Federal Government, as long as from here to that door, on both sides of every part of the conflict. You know that is so.

(The information submitted by the General Counsel of the Atomic Energy Commission is as follows:)

#### MEMORANDUM ON FEDERAL AUTHORITY OVER LOS ALAMOS

This memorandum is directed to the question of whether the proposed retrocession of jurisdiction over part of the Los Alamos site will give local officials the right to enter upon the part retroceded in a manner, at a time, or in a place which might compromise the security safeguards of the project.

It has been consistently held by the United States Supreme Court that the Federal Government, in the performance of duties and exercise of powers imposed and bestowed upon it by the Constitution and by Congress legislating thereunder, enjoys immunity from interference by the States. See, for example, *Van Brocklin v. Anderson* (117 U. S. 151, 6 S. Ct. 670 (1886)); *Johnson v. State of Maryland* (254 U. S. 51, 41 S. Ct. 16 (1920)) and cases cited therein; *Mayo v. United States* (319 U. S. 441, 63 S. Ct. 1137 (1943)).

It follows from this that the right of the Federal Government to exercise control over lands acquired by it in the performance of a Federal function does not depend upon whether the Federal Government has acquired or retains political jurisdiction. It has been universally held, regardless of the jurisdictional status of the land in question, that the United States Government, as owner of land acquired in the performance of a Federal function, has full power to control its use, and that State action which conflicts with the Federal purpose for which the land is held has no force or effect. *State of Ohio v. Thomas* (173 U. S. 276, 19 S. Ct. 453 (1899)); *Hunt v. United States* (278 U. S. 96, 49 S. Ct. 38 (1928)); *State of Arizona v. State of California* (283 U. S. 423, 51 S. Ct. 522 (1930)).

There follows an analysis of the more significant cases in which the Supreme Court of the United States has considered the question of whether a particular State measure does conflict with the purposes for which the Federal Government holds lands. It should be noted that, while the results of these cases depend upon the facts of the particular case, all of them accept the principle that, in the event of conflict, the Federal purposes must prevail.

*State of Ohio v. Thomas* (173 U. S. 276, 19 S. Ct. 453 (1899)): The United States, by act of Congress (act of Jan. 21, 1871, 16 Stat. 399) had retroceded political jurisdiction over a soldiers' home to the State of Ohio. Ohio law required the display of prominent signs in places where oleomargarine was sold or served. Oleomargarine was served at the soldiers' home, and no signs were displayed. The State began criminal proceedings against the governor of the home. The Supreme Court held that the governor was not amenable to State criminal process, saying:

"We are of the opinion that the governor was not subject to that law, and the court had no jurisdiction to hear or determine the criminal prosecution in question, because the act complained of was performed as part of the duty of the governor, as a Federal officer, in and by virtue of valid authority, and in the performance of that duty he was not subject to the direction or control of the legislature of Ohio."

*Hunt v. United States* (278 U. S. 96, 49 S. Ct. 38 (1928)): Agents of the Federal Government found it necessary to kill deer to protect trees and plants on United States-owned land within the State of Arizona. This was done in violation of State game laws. The United States Supreme Court sustained the contention of the Government that the power of the United States to protect its property was free of any limitation by State police power. The court stated that " \* \* \* the power of the United States to thus protect its land and property does not admit of doubt \* \* \* the game laws or any other statute of the State to the contrary notwithstanding." The result of this case did not depend upon political jurisdiction over the land, which was held by the State.

*State of Arizona v. State of California* (283 U. S. 423, 51 S. Ct. 522 (1930)): A statute of Arizona forbade construction of any dam within the State without the prior written approval of the State engineer. The statute made it clear that Federal dams were intended to be included. Pursuant to the Boulder Canyon Project Act (45 Stat. 1057), the Secretary of the Interior commenced construction of a dam at Black Canyon, half of which was in the State of Arizona, without obtaining the approval required by Arizona law. Jurisdiction over the site was in the State. Arizona sought to enjoin construction and subsequent appropriation of water. The Supreme Court vindicated the authority of the Secretary, as following from a Federal statute enacted within the constitutional power to improve navigation.

*Penn Dairies v. Milk Control Commission of Pennsylvania* (318 U. S. 261, 63 S. Ct. 617 (1943)), involved a milk distributor selling milk to an Army camp in Pennsylvania. The Federal Government had acquired no political jurisdiction over the camp. Penn Dairies had landed a low-bid contract with the War Department, but at the cost of violating the minimum price provision of the State milk-control law. As a result, the Pennsylvania authorities refused to renew the Penn Dairies' license. The Supreme Court held the Pennsylvania milk-control law applicable to sales of milk to the Army post, and sustained State action.

This case does not represent any departure from the basic principle that on United States-owned reservations Federal policies prevail. The court expressly stated that: "Congress \* \* \* could declare State regulations like the present inapplicable to sales to the Government." The decision of the court was based on a finding that the State enactment was not inconsistent with Federal policies, and the opinion relied upon Federal statutes, such as the 8-hour law, Davis-Bacon Act, and Walsh-Healey Act, which were thought to be consistent with the spirit of the Pennsylvania enactment. In a companion case, similar State action was held inapplicable where the Army post involved (Moffett Field, Calif.) was under the exclusive jurisdiction of the Federal Government. *Pacific Coast Dairy v. Department of Agriculture of California* (318 U. S. 285, 63 S. Ct. 628 (1943)). While a comparison of these two cases does show that the status of jurisdiction may be a controlling factor in determining the application of some State laws, comparison also shows that jurisdiction is controlling only when State action is not regarded as conflicting with the policies and functions of the Federal Government.

It can thus be seen that the Federal Government as owner of land acquired for the performance of a Federal function is not bound by any State measure which conflicts with the purpose for which the Federal Government holds the land. The question which must be decided in each case is what those Federal purposes are and whether the proposed State action is in conflict with them. In the case of land, such as that at Los Alamos, held by the Atomic Energy Commission, the purposes and functions are those set out by the Atomic Energy Act of 1946.

Two of the purposes set forth in the Atomic Energy Act of 1946 are of primary significance on this question. The first is that set forth in sec. 1 (b), which lists as one of the major programs relating to atomic energy, "A program for Government control of the production, ownership, and use of fissionable material to assure the common defense and security, and to insure the broadest possible exploitation of the fields." The second is that set forth in section 10 (a), which states: "It shall be the policy of the Commission to control the dissemination of restricted data in such a manner as to assure the common defense and security."

These two purposes are carried out by a variety of specific provisions of the act. By section 4 the Commission is required to "be the exclusive owner of all facilities for the production of fissionable material" and is charged to "produce or to provide for the production of fissionable material." By section 5 the Commission is made the exclusive owner of all fissionable material. By section 6 the Commission is directed "to engage in the production of atomic bombs" and to develop the military application of atomic energy. All persons engaged in production activities are required to comply with the security regulations issued by the Commission (sec. 3). Furthermore, section 10 (b) (5) (B) (1) provides that: "No arrangement shall be made under section 3, no contract shall be made or continued in effect under section 4, and no license shall be issued under section 4 (e) or 7, unless the person with whom such arrangement is made, the contractor or prospective contractor, or the prospective licensee agrees in writing not to permit any individual to have access to restricted data until the Federal Bureau of Investigation shall have made an investigation and report to the Commission on the character, associations, and loyalty of such individual and the Commission shall have determined that permitting such person to have access to restricted data will not endanger the common defense or security."

Further indication of the importance which the Congress gave to the Commission's authority to control restricted data can be gathered from section 10 (b) (6), which provides that: "This section shall not exclude the applicable provisions of any other laws, except that no Government agency shall take any action under such other laws inconsistent with the provisions of this section."

Thus, the Atomic Energy Act and its legislative history indicate that Congress intended to grant sufficiently broad authority to the Commission to enable the latter to discharge novel and far-reaching responsibilities. Security of restricted data, continuity of operation, and assured obedience to Federal policies were among the considerations that led Congress to place atomic energy development

under the type of Government control provided by the act. In these circumstances it is clear that the Atomic Energy Commission must have and has, in fact, ample power to conduct its operations without heed to the demands of a State which are inconsistent with the policies of Congress or with the actions of the Commission taken under these policies.

The authority vested in the Commission under these decisions and the Atomic Energy Act is presently the basis for the Commission's visitor-control program at the great majority of the land which it uses. It is the entire basis of the Commission's program at Oak Ridge and Hanford, over which the State has jurisdiction, and over that 95 percent of the Los Alamos area under State jurisdiction. Even as to the remaining 5 percent, the Commission would rely on this authority if a question were to arise under section 8-203 of the New Mexico Statutes, under which the State reserved the same jurisdiction for the service of civil and criminal process that would have existed had the State retained all political jurisdiction.

ADRIAN S. FISHER,  
*General Counsel, Atomic Energy Commission.*

Mr. FISHER. Well, I think on this point, sir, it is pretty clear in terms of superior Federal right, where it is for an appropriate federal purpose.

The CHAIRMAN. Mr. Fisher, there is one thing I want to clear up very definitely. It is my understanding that this retrocession bill returns to the State of New Mexico only such jurisdiction as the Federal Government acquired under the New Mexico cession statute, is that not true?

Mr. FISHER. That is correct, sir.

The CHAIRMAN. It is further my understanding that the Atomic Energy Act, and all other Federal statutes, such as the Espionage Act, which would normally be applicable, will continue to apply, just as they do in other portions of New Mexico and the other States of the Union?

Mr. FISHER. That is correct, sir.

The CHAIRMAN. In other words, the situation as to this particular area will be the same as that throughout remainder of the Los Alamos area?

Mr. FISHER. Tha is correct, sir.

The CHAIRMAN. In other words, by passing this bill we do not want to wipe out our authority to try somebody that you should catch down there stealing some restricted data?

Mr. FISHER. This does not do that in any way, sir. It puts it on the same basis as the rest of Los Alamos, Oak Ridge, and Hanford.

The CHAIRMAN. I wanted to have that legislative history so that there is no doubt in our minds about it.

Mr. FISHER. Yes, sir.

The CHAIRMAN. Now, I have a telegram here from the Governor of New Mexico, which I would like to read. It is quite short. He addresses it to me as chairman of the Joint Committee, and he says:

I am advised that Joint Congressional Committee on Atomic Energy to hold open hearing on bill to retrocede exclusive jurisdiction over certain areas around Los Alamos to the State of New Mexico on February 17. Would like to see jurisdiction returned to State. We will offer all facilities available toward guaranteeing security for that area.

THOMAS J. MABRY,  
*Governor, State of New Mexico.*

I think the Governor should be advised that we are glad to have his assurances of help in maintaining security, but we feel the primary duty and responsibility is upon the part of the Federal Government, as operated in this instance by the Atomic Energy Commission. Isn't that your feeling in the matter?

Mr. FISHER. That is my feeling, sir.

The CHAIRMAN. I do not mean to be discourteous to the Governor, but I think he ought to know that we want to take care of our own.

Mr. FISHER. That is correct, sir.

The CHAIRMAN. Senator Anderson is here.

Senator HICKENLOOPER. I want to ask a question.

The CHAIRMAN. Pardon me, I didn't mean to interrupt.

Senator HICKENLOOPER. Just one more question.

The whole purpose of my inquiry, Mr. Fisher, is not that you are not going to get along with the State of New Mexico. I think your relations will be cordial and cooperative, as a general rule, and probably always. But between two individuals it is not necessary to draw a written contract, except as against a contingency when you might have to use it. And the question of who has the ultimate, final, controlling jurisdiction over the areas in which restricted operations are performed, where that ultimate authority rests, I think is a very vital question, and I do not think it should be left in the nebulous atmosphere of "we will make proper arrangements, because we always have."

I have walked down the street and driven an automobile for a good many years, and I have never had an accident, but that is no sign that my past record and my past history will automatically prevent and insure me against an automobile accident this afternoon or tomorrow or in the future.

Mr. FISHER. Senator, I would just like to add this one point. If it is a matter that relates to security the authority is ours. It is ours now despite this reservation in the cession legislation, and it will be ours after the passage of this bill; I mean, if this bill were to be passed it would be ours. It would in no way affect the authority of security.

The CHAIRMAN. Any further questions of this witness?

Mr. COLE. I should like to inquire.

What is the situation with respect to Hanford and Oak Ridge on this point of jurisdiction?

Mr. FISHER. They are in State jurisdiction, sir, Federal ownership. They are the same as all of Los Alamos will be if this bill were to be passed, as opposed to 95 percent of it now.

The CHAIRMAN. All right, Mr. Fisher, thank you.

Senator Anderson wanted to make a brief statement.

## STATEMENT OF HON. CLINTON P. ANDERSON, UNITED STATES SENATOR FROM THE STATE OF NEW MEXICO

Senator ANDERSON. Mr. Chairman and members of the committee, I only want to suggest that time in this is of extreme importance. The State of New Mexico would appreciate early action upon it.

The legislature is now in session and will conclude its session in the early days of March. If this bill is to be passed——

The CHAIRMAN. Pardon me, Senator Anderson.

Mr. Fisher, Senator Hickenlooper has a couple of questions he wants to ask you after we finish with Senator Anderson.

Senator HICKENLOOPER. Wait until we finish with Senator Anderson and then I would like to ask you one or two more questions.

Mr. FISHER. Yes, sir.

Senator ANDERSON. Because of this time element, the legislature is soon to adjourn and the State would like a chance to pass upon some legislation involved in this, but cannot do it unless the law is passed.

Now, the community at Los Alamos would like to have some sort of community organization. It is now operated more or less by the Federal Government, the manager of the project. They would like to set up some type of community organization or form into some sort of a municipality. They can do it under State law if this law is passed, and the legislature is anxious to make possible the things that the folks in that community desire if this legislation can be enacted.

We were glad that the House of Representatives passed a bill permitting it this morning, and I hope that this committee can give an opportunity for the Senate to act upon it also.

It is a pretty hard situation in which some of those people find themselves. The Government has asked some extremely distinguished scientists and very fine people to come out there and work in a location far removed, perhaps, from their old home ties. They land in the community and suddenly find that they are not residents of that State, although people who live next door to them may be residents of the State. The line cuts through residential sections, it cuts through dormitories, cuts through residences themselves.

I do not vouch for the correctness of this, but in one of the letters I was advised that a family living where the husband and wife occupied adjoining bedrooms, if they desired to adopt children, the husband can and the wife cannot. The law does not permit the wife to participate, and yet the consent of both is required.

In the other areas, they are not able to go through the formalities for the adoption of children. They are permitted to be married in the community, but they cannot acquire divorce. They are not allowed to vote in some areas, and are allowed to vote in others.

It does make a conflicting and complex situation.

I think all they are asking in this bill is to place these people on about a parity with what is at Oak Ridge and what is at Hanford.

I am quite sure there is no one in the State of New Mexico, whether he be the Governor, the sheriff, or anyone else, who questions the security rights of the Federal Government.

Although if this bill should pass, these areas to which we are referring will then be in the shape that the other areas were. In those other areas which were involved in highly restricted matters there was never an attempt on the part of the State or any county officer to exercise jurisdiction in that locality.

The relationships between the State officials and the people in charge at Los Alamos have been extremely proper and cordial and at no time has there been the slightest disposition on the part of the State to question the authority of the Federal Government to maintain all proper security in that area. Some of us who tried to go in and out of that area realize how careful that security is.

I illustrated to the chairman just a moment ago that I went up to Los Alamos to speak at the invitation of the people in Los Alamos. I was given a pass through the gate, stuck it in my pocket, finished my speech, and went back to the gate and could not get out.

Mr. KILDAY. When you went there you did not know they couldn't vote, though?

Senator ANDERSON. Oh, yes. This was before I was a candidate for public office. But a great many of the people there do vote now, others do not vote. Some people are permitted to get game licenses,

other people cannot. It depends upon which particular street they happen to live in. We think that is a bad situation.

Senator TYDINGS. Senator Anderson, I would like to say that I had no reference to the land in this bill in my questions. You understood that?

Senator ANDERSON. Yes.

Senator TYDINGS. This land is not involved in the series of questions I was directing to Mr. Fisher.

Senator ANDERSON. Yes, sir.

Senator HICKENLOOPER. Mr. Chairman, can I ask the Senator a question?

The CHAIRMAN. Senator Hickenlooper.

Senator HICKENLOOPER. Mr. Anderson, I think you know that generally I am in sympathy with the purposes in this bill. I think there should be a retrocession there so that this question of jurisdiction which has been troublesome, I assure you, not only in Los Alamos, but it has been troublesome in Oak Ridge, and it has been troublesome at Hanford, and there are questions that have not yet been solved on jurisdiction, even though those two places are supposedly under State jurisdiction. I happen to know about some of those instances.

But let me pose you this question: Suppose that a strike or an internal disturbance of some kind should occur on the hill at Los Alamos. I am speaking of the small mesa where the restricted area is located.

Suppose that physical violence of substantial size should break out there, and just suppose someone should really begin to take over up there. Would it be your judgment, after the passage of this bill, that the State of New Mexico could send a couple of companies of the National Guard up there and walk in and take over that thing without the consent of the proper authorities, if there were disturbances going on there that normally come from riot or similar occasions?

Senator ANDERSON. Well, I will say you, Senator that I am not a lawyer. In the conduct of my own business I have always engaged lawyers to tell me what the law is, and I would want to do that in this instance.

But I am quite sure it would not be the theory of the State of New Mexico that they could send a couple of companies of National Guard in. There was a strike at Los Alamos on one of the projects. It was a rather serious occasion. The people of Los Alamos handled it perfectly without ever any request for help from the State of New Mexico.

Senator HICKENLOOPER. I think most disturbances of that kind are handled without the calling out of troops, but occasionally in this country—and too frequently, so far as I am concerned—there have been occasions when the State has called upon the Governor to call out the National Guard to preserve order.

I am not talking about normal disturbances or work stoppages, I am talking about the emergency conditions at the plant. I am not asking you to pass a legal opinion on that, I thought you were a lawyer, as a matter of fact.

Senator ANDERSON. I could only say this, Senator, whatever that hazard is it now exists. The passage of this bill does not change it. This bill only applies to a very few acres out of the total acreage and whatever that disturbance was it would take place on ground

probably to which this bill does not apply. It would be pretty hard to pick out little isolated sections.

Senator HICKENLOOPER. There are some of those areas that are pretty important, pretty vital.

Senator ANDERSON. I do not know. It just so happens I have never gone to Los Alamos trying to find out anything about it, even when I was a member of the National Security Resources Board I declined the invitations to go in there, because I didn't think I had any business in there.

The CHAIRMAN. Why not, if you were a member of the National Security Resources Board, why did you feel that way, Senator?

Senator ANDERSON. I did not think it was important that I understood anything about the atomic processes. I was engaged in the production of food. I thought it was none of my business, and the less I knew about the other man's business the better off I was. I could not talk about what I did not know.

The CHAIRMAN. Any further questions?

Mr. COLE. Mr. Chairman, may I inquire if the Senator knows the reasons why this jurisdiction was ceded to the Federal Government in the first instance?

Senator ANDERSON. I have no knowledge of that.

Mr. COLE. With respect to Los Alamos where it was not done, and with respect to the other areas?

Senator ANDERSON. I do not know. As you know, Mr. Cole, we had a very curious situation when Los Alamos was being set up. No one in the State knew what it was all about, and most people in the Army did not know what it was all about. It was carried as a very separate project.

The very nature of the work, the very secrecy of the work made it essential that the people of New Mexico did whatever the Federal Government indicated was desirable, and not ask any questions about it. All we knew was that the school was suddenly abandoned and people began moving in; heavy machinery began to arrive, and that the less we asked about it the better everyone would feel. So I do not know why they did not do it.

Mr. COLE. Maybe Mr. Fisher can tell me very quickly. I do not want to delay the Senator.

Mr. FISHER. I was not connected with the project at the time, but my investigations have led me to believe that at Oak Ridge and Hanford they were unable to procure the necessary State consents. In Los Alamos it depended on the way the land was acquired. The Army went out and got it, they acquired it under the State consent statute and then got exclusive jurisdiction. If it was owned by other Federal agencies and transferred, it had not been acquired under that statute. So the present patchwork which you see on the map before you is largely historical accident. The difference, even in the black spots on this map, and Hanford and Oak Ridge, is the fact that the legislators in Washington and Tennessee took different views than that of New Mexico, even in a smaller part.

Mr. DURHAM. Setting up under this legislation, did that give them the authority to set up a municipal government and assess taxes?

Mr. FISHER. No, sir. Further legislation would be required on that. There was no authority under this bill to tax any Federal lands.

This would give the legislature or the State of New Mexico, if it were to desire it, authority to impose types of taxes which would not interfere with Federal operations. That is, subsequent legislation could do that by New Mexico.

Senator ANDERSON. May I just say right there, if I may, please, Mr. Durham. The very reason I am here today is because of that situation. The Legislature of New Mexico is now in session. As Los Alamos continues to grow it may be a town of 10,000 people or 20,000 people before long. A town of 20,000 people needs to have some sort of municipal government. The legislature is anxious to pass whatever type of legislation the community of Los Alamos thinks it would like to have.

Mr. DURHAM. I agree with you on that.

Senator ANDERSON. Even though they do not have municipal government.

Mr. DURHAM. Does the same status exist here that exists at Hanford and the other places?

Mr. FISHER. Yes; and it exists now by existing under Federal consent on taxation under the Buck Act, but that is by virtue of Federal consent as given in the Buck Act.

Mr. HINSHAW. Mr. Chairman. When I visited Los Alamos I gathered the impression that certain of these lands were Indian lands, is that correct?

Senator ANDERSON. I think more of them come from the Forest Service.

Mr. HINSHAW. Well, I say, is any of this land Indian land?

Senator ANDERSON. A small portion, perhaps, is Indian land.

Mr. HINSHAW. What effect does this legislation have on the Indian land?

Mr. FISHER. It is my understanding, sir, that none of the land involved in this cession is Indian land.

Mr. HINSHAW. But there is land in the Los Alamos tract which is Indian land?

Senator ANDERSON. But it is land acquired as other lands were acquired, and not as this forest land was acquired by transfer.

Mr. HINSHAW. It is my understanding that there are certain complications which exist now with respect to the Indian lands, because of the jurisdiction that is involved.

Senator ANDERSON. I do not know about it.

Mr. FISHER. It is not my understanding, sir, that the portion of land protected by this bill, the 5 percent, that any of it was Indian land.

Senator ANDERSON. It is all Forest Service.

Mr. HINSHAW. I am still asking the question. We do have Indian lands that are connected with the Los Alamos project. Now, what is the status of those lands with respect to its jurisdiction in the State of New Mexico?

Mr. FISHER. These lands affected by this bill——

Mr. HINSHAW. I am not talking about those lands. I am talking about the lands that are in the Los Alamos project area. They are Indian lands. What is their status under the present conditions?

Mr. FISHER. It is my understanding, sir, that while there were some Indian lands originally when they were acquired they were transferred and ceased to have their status as such; they no longer

have them at this time, and this bill does not affect them. I can give you further detail on that, if you would like.

Mr. HINSHAW. Mr. Chairman, the only reason I bring that subject up is because I believe the manager of the project at Los Alamos was considerably concerned last summer over the fact that certain portions of the land were under the jurisdiction of the Indian Bureau.

Mr. FISHER. The manager is right here, and he would be prepared to testify on that, sir.

Mr. HINSHAW. Is that correct?

The CHAIRMAN. Can you clarify that, Mr. Tyler?

Mr. TYLER. I think I can clarify the situation somewhat on that, Mr. Chairman.

A portion of the property which is owned by the Federal Government is designated as sacred Indian land. It was never part of an Indian reservation. It is sacred by tradition. The Indians do not occupy it. It is not within a fence. We have an agreement with the local pueblo whereby they may conduct certain sacred ceremonies on that land at the proper times.

They themselves, even by their own tribal rules, are not allowed to occupy it either. We have no particular trouble there at the moment with that situation. It is working itself out very smoothly.

It is actually Federal property. It is not actually a part of any reservation, but by tradition it is sacred and we authorize them to conduct their ceremonies.

Mr. HINSHAW. That is the same sort of situation that we have, I suppose, in another part of New Mexico where a dam is proposed to be built which will submerge certain sacred Indian lands, and all kinds of hullabaloo has been raised around the Congress about the submerging of those lands. Just why, I do not know.

But I wanted to bring this up because it is part of the consideration I presume.

The CHAIRMAN. Mr. Fisher, has the Commission presented everything you want to on this subject?

Mr. FISHER. Would you like to say something?

Mr. TYLER. I am agreeable to questioning, if you have any questions, sir.

The CHAIRMAN. I want to find out from Senator Anderson: Do you have anything further to add?

Senator ANDERSON. No, thank you.

The CHAIRMAN. Thank you very much.

Mr. Tyler, did you say you had anything to add?

Mr. TYLER. Yes; I have one or two remarks I would like to get in the record.

The CHAIRMAN. All right, go ahead.

Mr. TYLER. I have a prepared statement which I do not think is worth reading, in that it covers in general the background of the situation and what it concerns. That has been more or less belabored here to some extent, but I think this should go in the record, so as to be available to the committee.

The CHAIRMAN. Yes, certainly.

Mr. TYLER. All right, I will put that in the record.

**STATEMENT OF CARROLL L. TYLER, MANAGER, SANTA FE OPERATIONS OFFICE, ATOMIC ENERGY COMMISSION**

Mr. TYLER. My name is Carroll L. Tyler. I am manager of the Santa Fe Operations Office (which is that part of the Commission immediately concerned with development and production of atomic weapons). Carrying out this program is largely a function of the Commission's Los Alamos project which is located approximately 35 miles from Santa Fe, N. Mex. The project occupies an area of approximately 69,000 acres. Included in this area are the living quarters, and community facilities for the 9,000 people who reside at Los Alamos.

As you know it has been the policy of the Commission to work to develop as nearly normal a community at Los Alamos as the special circumstances permit. This policy reflects far more than consideration of the personal convenience of the residents. It relates directly to a major requirement of the atomic energy program, that of developing communities in which the top-notch personnel we must have will be willing to work and live.

A serious obstacle in the path of such development at Los Alamos has been the very complex status of jurisdiction that prevails in this area. Of the total project area of 69,000 acres, all of which is owned by the Federal Government, normal State jurisdiction over approximately 65,000 acres is vested in the State of New Mexico.

The remainder of this area consists of some 3,600 acres in 35 separate parcels acquired from private owners through condemnation proceedings instituted by the Manhattan District. Pursuant to provisions of the United States Constitution and State cession statutes, exclusive jurisdiction over these areas was ceded by the State and accepted by the United States.

The boundaries between the two jurisdiction areas conform to no natural boundaries in the project. Part of the laboratory area is on State jurisdiction land and part is on Federal jurisdiction land. The same is true of the residential and commercial area. In some instances, the dividing line cuts right through houses and dormitories.

Of great importance to the residents are the rights that accompany citizenship in a State. These include the rights to vote, to probate wills, to adopt children, to obtain divorces, and to produce resident hunting and fishing licenses. Two recent cases in the New Mexico Supreme Court have held that residents of those areas under exclusive Federal jurisdiction are not residents of the State of New Mexico either for the purposes of voting or for the purposes of obtaining divorce. The State attorney general has ruled that such residents may not adopt children or obtain resident licenses for hunting and fishing. State statutes do not provide for the administration of estates for decedents who did not reside in, die in, or leave property within the State.

(Two cases decided in the Supreme Court of the State of New Mexico regarding the rights of residents of Los Alamos are marked "Exhibit Nos. 1 and 2" and appear in the appendix at p. 95 and p. 97, respectively.)

The confusion that arises in law enforcement is obvious. For example, in the case of crimes, the particular spot where the offense is committed may determine whether the case will be tried before State courts on one hand, and United States courts on the other. In fact, local police officers frequently carry maps in order to determine which laws apply.

We are, therefore, placed in a situation where, because of the nature of the jurisdiction over 5 percent of the total area, a great many of the inhabitants are deprived of those rights possessed by Americans in any normal community, and there is confusion, lack of uniformity, and duplication of effort with respect to law enforcement.

The proposed legislation before this committee would retrocede to the State of New Mexico the exclusive jurisdiction which the United States presently holds over the 35 parcels of land within the boundaries of the Los Alamos project. Thus, the State of New Mexico would reacquire that jurisdiction which it ceded to the United States at the time the property was acquired by the Federal Government, and uniformity of jurisdiction would be established at Los Alamos.

This retrocession of jurisdiction would not vest exclusive jurisdiction in New Mexico; Federal laws would apply to this area as they would to any area under normal State jurisdiction. Moreover, this retrocession would in no way take from the Federal Government its authority under the constitution, over the lands to which it has title. This authority exists independently of the type of jurisdiction over the area. In the case of lands acquired by the United States for governmental purposes the State cannot exercise any jurisdiction which would interfere with the use of the land by the Federal Government. Thus, in the case of the other 95 percent of the lands within the Los Alamos project, and in the case of all the lands within the Hanford and Oak Ridge projects, the Commission has been able to work out adequate arrangements for the solution of all essential problems of law enforcement without in any way compromising security.

In conclusion, I would like to emphasize that this bill would give to the people of Los Alamos the important rights of State citizenship without which they will never regard Los Alamos as a satisfactory place in which to live. It would eliminate confusion in law enforcement and in no way compromise security. I urge that it receive your favorable consideration.

I would like to ask the indulgence of the committee to this extent: We have, as Senator Anderson outlined, a rather difficult social position there, political position, and so forth, in trying to maintain a community of something over 8,000 people, and a growing community, in the sense of self-government without any authority. They have difficulty passing ordinances and enforcing them, and so forth.

These things will all be resolved by this particular legislation, which I appreciate you understand.

I would ask your indulgence to this extent: That while the question which Senator Hickenlooper has raised, which is a very important question and should have consideration, I would feel very unhappy if the committee saw fit to resolve this very difficult question of Federal control over vital atomic areas, in considering this particular bill which concerns a very small part of my area—5 percent—and will not resolve anything in the other 95 percent at this time.

I would suggest, and would be pleased, if the committee is in favor of the bill, that they not divert the bill in order to resolve another equally important or very important question. I concede the importance of that question, but let that stand on its own merits, and change this 5 percent back with the other 95 percent. Then, if the situation warrants, swing the whole 100 percent back the other way.

I think the community requires this type of legislation at this time; and I think, if the committee is in accord with it, it will be a very useful thing.

If later on it is decided to revert everything back to complete Federal control with fences around it, an ironclad control, that will be fine; that will be a different action which I do not feel should hang on this particular item of legislation.

The CHAIRMAN. Any questions?

Senator HICKENLOOPER. Mr. Chairman, yes; I want to question him on one point to clear up this record.

The CHAIRMAN. Senator Hickenlooper.

Senator HICKENLOOPER. I do not think there has been any discussion here about any areas, except the restricted areas. I do not know the full extent of the restricted areas out there, but I am talking about the areas where vital installations are operated and vital activities of the Commission are carried on. I do not think it can just be pushed aside for later consideration, if it can be resolved and the jurisdiction can be well understood at this time.

So far as the residential areas there are concerned, I think that can be worked out very easily and probably can be resolved very easily under this act. I have no dispute about the jurisdiction there.

May I ask you, do you expect, if this act is passed, that there will be established a municipal organization under the laws of New Mexico, for the residents?

Mr. TYLER. Under the laws of New Mexico, we hope to petition for and obtain a charter.

Senator HICKENLOOPER. Do you expect to do that?

Mr. TYLER. We expect to do that; yes, sir.

Senator HICKENLOOPER. And do you anticipate a self-governing municipal community there with a mayor, council, and the power to pass ordinances?

Mr. TYLER. We expect something similar to that, sir. It has been my understanding since I have been there, and it is the agreement of the community, that any charter which they choose and have legal authority to get from the State will be acceptable to the Commission—I have discussed this with the Commission—subject to the veto power of the manager, but only in such items as concern security and the business of the Commission. But, as far as traffic rules and local ordinances are concerned, I would prefer and I think it is more healthy that they run their own lives.

Senator HICKENLOOPER. There is just one point in pursuing this, and I am perhaps laboring the point a little bit. That is, that the same thing is going to come up at Hanford and at Oak Ridge.

Mr. TYLER. It is going on now, sir.

Senator HICKENLOOPER. And they have not solved the situation there. I had hoped for some time we would have a settlement of the jurisdictional matter so that those people could either be citizens of their own sovereign community or so that they would be complete wards of the Government and stop being neither fish, flesh, nor fowl.

Mr. TYLER. That is what we are endeavoring to do.

Senator HICKENLOOPER. I am trying to find out, if this retrocession bill is passed, is it the purpose of the people of that community and the Commission to see that a municipality is set up there—I do not know whether they call them incorporated villages or towns, or what reference they make to them—so that they can have a duly elected mayor or any other municipal organization to be responsible for personal property, taxes, and things of that kind that come under the laws of New Mexico.

Now, your statement that they must set up such a municipal organization as will meet the approval of the Commission indicates the Commission is still going to run the show out there and that an independent municipal organization will not come into being.

Mr. TYLER. May I amplify that a little bit, sir?

The situation at Oak Ridge, Hanford, and so forth, is necessarily different. As you know, since you are thoroughly familiar with the situation, our restricted areas are within the town. They are not separated and cannot be separated until such time as we accomplish a new laboratory area, which is in process of study.

As long as that situation exists, the town is a closed town and the Government has control as to who is allowed in and out of the town. As long as we have that situation, I am responsible for security in the town, and I must have certain authority over that town to insure security.

When and as we have moved the so-called laboratory area over to another mesa which is in the process of study—and some construction is under way—when that happens and the town can be an open town, then possibly they can have full autonomy. They cannot have full autonomy as long as it is a closed town under one jurisdiction. It will have to depend on a sense of proportion that they have the fullest possible autonomy.

The Commission cannot yield its jurisdiction as long as it is responsible for the security of a closed area, which includes a town of necessity, as long as the laboratory areas are within the town.

Does that answer it, sir?

Senator HICKENLOOPER. Yes.

Mr. TYLER. We are studying the situation.

Senator HICKENLOOPER. It merely continues the situation where these people will be independent people and they will not be independent people. I do not think that resolves the problem at all.

Mr. TYLER. It resolves it about 98 percent, sir. They are independent up until such time as they choose—

Senator HICKENLOOPER. They are independent up until such time as the discretion of an individual out there, who is representing the Commission—

Mr. TYLER. That is quite right, sir.

Senator HICKENLOOPER. Representing the Commission tries to put his thumb down.

Mr. TYLER. That is quite right, sir.

Senator HICKENLOOPER. Of course, that is contrary to our general conception of municipal authority and municipal responsibility.

Now, I am hopeful we will get a situation there where people can run their own businesses independently.

Mr. TYLER. I think we will, sir.

Senator HICKENLOOPER. Let them run the municipality's activities and let the Commission run its factory over there free from these municipal worries.

Mr. TYLER. I think we are approaching that, sir, in this manner. I think it is better to have three-fourths or nine-tenths of this autonomy than none at all, with the idea that the rest of it will come when and as the security requirements of the Commission will permit it. I think the community feels the same way. They are definitely studying the methods of doing it.

They have not arrived at the methods yet. There is a charter commission working, people in Washington are working and we are working and everybody is trying to arrive at a good, sound solution which will give the most autonomy that can be accomplished without presently prejudicing the requirement of the Commission to maintain security.

The CHAIRMAN. If there are no further questions, we will excuse you.

Senator HICKENLOOPER. I just want to ask Mr. Fisher what the program is, or what the intention of the Commission is on the question of personal-property taxes, the maintenance of facilities, waterworks, and the like; what is their intention on those things when they get this autonomy?

Mr. TYLER. Those are all going to have to drop for this reason: We are now subject to State personal-property taxes under the Buck Act, and they are paid. So far as real estate, and so forth, is concerned, all real estate, all roads, all waterworks, and so forth, are owned by the United States Government. The people do not own them and cannot own them.

Senator CONNALLY. Just a minute, sir, I cannot hear you.

Mr. TYLER. Excuse me, sir.

All the real estate in the whole area is the property of the Government. The homes are the property of the Government; the roads are the property of the Government; the waterworks, the power plant, and so forth, are all Government property at the present time. They will probably remain as Government property until, as I say, we are able to move the technical part of the town to another mesa, and then we may have to get special legislation to permit us to dispose of this property to private citizens.

Senator HICKENLOOPER. And at the present time the Government owns all of the real estate, furnishes all of the facilities, water to houses, the electricity, the police protection, the pavement, the garbage disposal, the fire protection, schools and recreational facilities—that is all paid for by the Government and is included in the rental?

Mr. TYLER. That is correct.

Senator HICKENLOOPER. That is, that goes into the rental of the house paid by the occupant?

Mr. TYLER. That is correct, sir. However, particularly in regard to the schools—to indicate our attempt to get autonomy for the people—we have a school board which is elected by the people and which determines the policies for the schools. As long as they are spending Government money—in other words, they submit a budget and it has to be approved by the Government because it is our money—as long as that is ours, we permit them to determine school policy and leave them alone.

Senator HICKENLOOPER. But that school board operates at the sufferance of the Commission?

Mr. TYLER. Yes, sir, it does; there is no question about it.

Senator HICKENLOOPER. Is it your policy—that is, as manager in conjunction with the Commission's policies—to eventually set up a system whereby taxes will be levied and administered for these public services, such as are levied in ordinary communities and municipalities?

Mr. TYLER. I think, sir, that to some extent taxes will be levied as progress goes on. However, there are restrictive rules in the State of New Mexico which do not permit communities to levy unusual taxes. School taxes, for instance, in New Mexico are paid through a State-wide sales tax which is devoted wholly to schools.

It would be improper to levy a special tax in Los Alamos for those schools.

Senator HICKENLOOPER. Will you collect a State sales tax on the facilities such as stores and other facilities operated in the Los Alamos area?

Mr. TYLER. We have discussed this with the State authorities and the State school authorities. When and as this jurisdiction is retroceded, we may have a claim on our share of the State school tax. At the present time we do not touch it.

Senator HICKENLOOPER. Do you collect a sales tax in the stores?

Mr. TYLER. Yes, sir.

Senator HICKENLOOPER. On the mesa?

Mr. TYLER. Yes, sir.

Senator HICKENLOOPER. And that is turned over to the State?

Mr. TYLER. Yes, sir, that is turned over to the State for the State schools.

Senator HICKENLOOPER. Does the State of New Mexico return any of that tax back to the Government to be used for schools maintained by the Government?

Mr. TYLER. At the present time they do not; no, sir. We have never required it. Since we were on Federal land, and so forth, it was one of those confusing things which neither the State nor ourselves knew just exactly how to approach until we get this jurisdiction straightened out.

Senator HICKENLOOPER. Do you believe if this act is passed as it is now that the Atomic Energy Commission will have a definite right to demand and secure from the State of New Mexico its proportionate share of the sales tax collected?

Mr. TYLER. Yes, sir.

Mr. ELSTON. I would like to ask a question.

The CHAIRMAN. Mr. Elston.

Mr. ELSTON. Would the schools be under any jurisdiction of the State at all?

Mr. TYLER. No, sir; they would not. You see, the cost of the schools in relation to our small share of the school tax is rather high. They would have the status, as we understand it from the State school authorities, they would have the status of private schools within the State of New Mexico, to which the State will contribute from their sales tax a certain sum. They will have some authority to advise us as to how that money may be spent. Its relation to our whole school cost is so low that we can easily spend it for school

salaries which they feel is proper, without any hampering of our school system whatsoever.

Mr. ELSTON. They would be under no legal obligation at all to give you any part of the tax?

Mr. TYLER. Yes, they would be, according to the laws of the State of New Mexico. We could claim it on the ground that we had so many students in school. The community deserves its share of the school tax.

The tax is distributed by counties and by cities, in accordance with the number of students they have at school. If they can show evidence that they have so many students in school the tax is then distributed to the city or to the city and county, or to the city-county, as the case may be. They then run and operate their own schools, usually adding money to it.

Mr. ELSTON. But for all other purposes the schools would be under the jurisdiction of the Atomic Energy Commission?

Mr. TYLER. Yes, sir.

Mr. ELSTON. They could indicate the courses of study?

Mr. TYLER. Yes, sir.

Mr. ELSTON. And fix any other requirements they saw fit?

Mr. TYLER. Yes, sir. That is the understanding with the State school authorities with whom we have discussed this at some length. I mean, we have discussed it to see whether that was possible and correct and they have agreed that that is correct.

There is no agreement that they will let us do it or that we have the right to do it.

(Additional statement of Carroll L. Tyler concerning school financing in New Mexico is marked "Exhibit No. 3," and will be found in the appendix at p. 107.)

Mr. ELSTON. Does the Atomic Energy Commission provide the police, the housing, the fire protection and everything else in this city?

Mr. TYLER. We do; yes, sir. The fire protection is a natural thing for us. We own all the real estate and it is up to us to make sure it does not burn down. It is insurance, in effect. As you know, the Government does not pay insurance. It insures itself by providing adequate protection for its property.

Mr. ELSTON. Is there any other city in the United States that operates in that fashion?

Mr. TYLER. Not to my knowledge; no, sir, other than Government installations. I am aware of two Government installations, with which I have been connected which operate in that fashion, the town of Indian Head in Maryland, under Senator Tydings jurisdiction—I was on duty there—owns its own property and provides its own property protection and its own police.

Mr. ELSTON. Well, the Atomic Energy Commission could indicate the form of government the city would have, whether it would have the managerial form or whether it would elect a mayor and council, or just what form they would have.

Mr. TYLER. Possibly it could; yes, sir, but it is not the desire of the Commission to do that. It is the desire of the Commission, insofar as possible, to let people run their own political and social lives, without having this heavy hand of the Government hanging over them all the time. Insofar as that is possible and does not interfere with the objectives of the Commission, which is, after all, the development of atomic

energy and not running towns—insofar as it does not interfere with the objectives of the Commission it is the desire of the Commission that they live as nearly a normal life as possible under Government supervision.

Mr. ELSTON. Provided they do not do anything to cross the Commission.

Mr. TYLER. That is correct, sir.

It is a rather unique situation which has a lot of knots in it that we are trying to work out. I do not think there is any precedent for it.

Mr. ELSTON. I do not know just how you are going to straighten it out with the State because the State has certain laws with respect to cities.

Mr. TYLER. That is correct, sir.

Mr. ELSTON. And with respect to schools.

Mr. TYLER. Yes, sir.

Mr. ELSTON. And the like, which would certainly seem to be in conflict with the plan that you have outlined.

Mr. TYLER. Well, there are definitely knots in this thing. We are working with the State authorities and have had complete cooperation from the State legislature, the Governor, and from the State authorities, as well as the county authorities. They are all working toward a solution of this.

It is going to be difficult to come by, but I think it is not impossible. It certainly is going to keep the people busy and interested in trying to work out their own salvation.

Mr. ELSTON. I do not know of anything in the Atomic Energy Act that permits the Commission to set up a municipal government.

Mr. TYLER. No, sir.

Mr. ELSTON. Do you know of any authority in the act which permits that?

Mr. TYLER. No, sir. The Commission would not set up a government. It could designate what the government would be on its own property but it could not set up, that is by itself, a municipal government, as I understand the act.

Mr. ELSTON. Well, it could because it could indicate the form of government, it could indicate the territory they would occupy, it could indicate the amount of Federal assistance that would be given, it could indicate everything.

Mr. TYLER. Well, I agree with you, sir, it could.

Mr. ELSTON. So, therefore, the Atomic Energy Commission would be setting up a municipal government.

Mr. TYLER. They could also say that there will be no government. They could say, "We will run it."

Mr. ELSTON. Of course, that is true, there is no government unless they set it up. I am not concerned with what they cannot do, I am concerned with what they are going to do.

Mr. TYLER. They are charged with the administration of the communities which come under their jurisdiction, insofar as is necessary to properly conduct their program.

Mr. ELSTON. What size city would this be?

Mr. TYLER. This would be a city, I imagine, in about 2 years, of around 12,000. It is something over 8,000 now.

The CHAIRMAN. Any other questions?

Senator HICKENLOOPER. Well, a few minutes ago it was developed that probably the authority of the Atomic Energy Commission for certain law enforcement and process-serving jurisdiction over this area that is restricted, comes from the act itself, which gives them the power to regulate security and take care of it.

I am interested in the question Mr. Elston just asked. I am not at all convinced that there is any authority in the Federal Government outside of the activities that may be absolutely necessary to safeguard vital installations, to operate and dictate the operation of municipalities by independent citizens in the State of New Mexico, except when they are actually engaged in the areas or territories where vital activities are being carried out.

In other words, I seriously wonder whether the Atomic Energy Commission has any right, once this act is passed, to prevent those people from setting up their own type of municipal government under the law of New Mexico, in accordance with the municipal laws of New Mexico. I wonder if we would have any right to prevent them from levying taxes or building buildings on land they might incorporate outside of Government-owned lands, or anything of that kind.

I seriously question the authority of the Commission to go into such regulations in municipalities.

Mr. TYLER. Well, Senator, along with Senator Anderson I am not a member of the bar. I have not studied law and these are points that sometimes get beyond me as to whether this is legal or that is legal, or not. I would ask Mr. Fisher to assist in answering that question.

But that again is in line with the request—and I asked for the committee's indulgence on this. That condition, although it exists in 95 percent of that territory, by adding 5 percent to it you have not changed the situation one way or the other.

Senator HICKENLOOPER. That is right, Mr. Tyler. This exact area of jurisdiction has been the subject for considerable inquiry between you and the Commission and the Legal Department back and forth for some time.

Mr. TYLER. Yes, sir.

Senator HICKENLOOPER. It has been a matter that has bothered you and the Commission, just as a matter of fact. It has been, I believe, a very troublesome problem.

My only interest is to try to stimulate some final and reliable definition of authority as to where these people will, what their authority is, what type of government they will have, and where we are going.

These Government installations under the Atomic Energy Commission are new. It is a novel operation by the Federal Government. I am not necessarily trying to be critical because a lot of these new problems have not been finally solved. But I am bound to say that I think too much time has gone by without finding the solution to them, and without clarifying the thing so that there is a well-defined area, and so that we know where we are going. I sincerely hope we can become certain before too long as to what the areas of authority are, what the rights of these people are, and what the jurisdiction of the Federal Government and of the local agencies may be. That is the whole purpose of my discussion.

I merely want to emphasize the seriousness of this thing, the real need for some final and authoritative determination in these matters.

Mr. ELSTON. Will the Senator yield?

Senator HICKENLOOPER. Yes, Congressman.

Mr. ELSTON. Would it not seem to follow that if the Atomic Energy Commission no longer needs territory they should give it up? When a place is used as a city and is no longer used in connection with the development of atomic energy, it would seem to be no longer necessary to the operation of the Atomic Energy Commission.

Now, if they could just go out and buy an unlimited amount of land, and there is not one bit of limitation in the law at the present time, they can go out and buy a whole State if they want to—if they have money enough to do it. They can set up schools, cities, they can set up anything they see fit.

Now, it seems to me that Congress never had any idea the Atomic Energy Commission should branch out to that extent.

Mr. DURHAM. Will the gentleman yield?

Mr. ELSTON. Yes.

Mr. DURHAM. The problem was not here, probably, when the act came along. The problem first appeared when we went out there and sat down at Los Alamos. It is just something recent which came about since the end of the war. All of these problems face us because of what we did during the emergency. We could not go out there and throw it away. There was too much of an investment to give it away or throw it away. It was too important from the national standpoint.

Mr. TYLER. In accordance with your other remarks, sir, I agree with the Senator.

I think I did not extend far enough my own earlier remark. When and as we can pull the fence down, open the gate and let the people freely circulate through that town, which will be when and as we have moved our vital installations to another mesa—which, as I say, is in the process and may take us 5 or 6 years to do it—when that happens and the town becomes an open town, then I will concede your point, sir, I will agree with you, that probably the Atomic Energy Commission should get out of the town business in that particular community.

However, in order to do that we may have to come to the Congress and obtain special legislation which will permit us to turn over this town installation of roads, and sewers, and disposal plants, and so forth, to a town government, if one exists. We cannot just walk out and leave it.

Furthermore, we have to have a town. There is no town in that vicinity. When the laboratory was built the town grew up with it. Without the town there would not be any laboratory there either. So it is one of the absolute necessities. It is just as if you went out on an island and decided to build a rubber factory. You would have to build a town to go with it, because there is nothing else there.

Mr. ELSTON. I grant that is true, but now you are getting to the place where the Atomic Energy Commission is going to set up a municipality and participate in municipal government and direct municipal government, indicate the type of government they shall have, the type of instruction in the schools, the extent to which the State shall control the schools, and in fact have final word about the operation of the entire city, a city of 12,000 people. It may increase. If they can do it with a city of 12,000, they can do it with a city of

50,000 or 100,000, and there certainly should be some limitation somewhere on the activities of the Atomic Energy Commisison when they go that far.

Certainly Congress never intended that they should go that far.

Mr. TYLER. Yes, sir. That is a general question, however, and does not affect either this fact nor does it affect the setting up of the charter, the municipal government, or anything in that line. As a matter of fact, that of course, is under study and we do not know what it is going to do.

But at the present time we are running the town arbitrarily. In fact, we are complete authority in the town, and that is bad. We are trying our best to give the town back to the people as much as we can, and we are shooting in that direction.

Mr. DURHAM. That is the objective of this Commission?

Mr. TYLER. That is our objective; yes, sir.

Senator HICKENLOOPER. But after this legislation is passed you will still be running the town arbitrarily.

Mr. TYLER. To a limited extent; yes, sir. We still have the final word. If we want to, we can put the hammer down and say, "That is it."

Senator HICKENLOOPER. Of course there is a limit on that, if you still have the final word. There is no limitation. You still run the town.

Mr. TYLER. In effect, yes, sir.

Senator HICKENLOOPER. In the same way as you were running it before?

Mr. TYLER. Yes, sir.

Senator HICKENLOOPER. In effect, what you are doing by this legislation is giving the people the right to get married, to get divorced, and to get a hunting license?

Mr. TYLER. Yes, sir. In other words, we are trying to solve this thing piece by piece, but we cannot let go of it as long as we have this security problem.

Senator HICKENLOOPER. Again I am not in sympathy with your objectives for investing certain authority, but when we get all down to it after this legislation is passed the Atomic Energy Commission will still be dictating to the people how to run their town and what they can do and what they cannot do.

Mr. TYLER. That is right.

Senator HICKENLOOPER. And we will be letting the people get married and divorced and hunting licenses.

Mr. TYLER. Yes, sir. I have appreciated for some time your interest in this problem. I know you have been aware of it and have taken considerable interest in it. I certainly cannot disagree with you.

Senator HICKENLOOPER. I just want to make it clear that this is not the millennium for the people on the mesa out there, and that in a way it is only a minor step in a few particulars that may eventually contribute to the solution of this problem. But the major problem is still in existence.

Mr. TYLER. Yes, sir.

Senator HICKENLOOPER. As far as the Federal Government is concerned.

Mr. TYLER. Yes, sir.

The CHAIRMAN. Mr. Tyler, who manages that town for you?

Mr. TYLER. The town council is an elected town council. They do the government end of the town, such as it is. They enact or pass such ordinances as seem to be necessary.

The CHAIRMAN. Don't you have a contractor?

Mr. TYLER. We have a contractor there for maintenance and operation.

The CHAIRMAN. That is what I meant.

Mr. TYLER. Yes, sir.

The CHAIRMAN. How much is he getting?

Mr. TYLER. He gets \$17,000 a month.

The CHAIRMAN. Is that a management fee alone?

Mr. TYLER. That is for the whole operation. That is his fee for the contract, which includes operation and management of the town, but also the maintenance and operation and management of all of the physical facilities in the laboratory area, and the maintenance of all our facilities and our surrounding 65,000 acres.

The CHAIRMAN. What does he do, does he collect the garbage?

Mr. TYLER. He collects the garbage. He runs the water system, he pumps the water from down in the Rio Grande Valley, runs the water system. He runs all the power plants, both for the town and for the laboratory. He collects the garbage. He runs the schools, he runs the hospitals.

The CHAIRMAN. Does he select the school teachers?

Mr. TYLER. The school teachers are under contract to him, but subject to my approval.

The CHAIRMAN. What is the name of this contractor?

Mr. TYLER. It is known as the Zia Corp.

The CHAIRMAN. Who are they?

Mr. TYLER. The Zia Corp. is an artificial corporation. It was set up at the request of the then Manhattan District. When the Manhattan District saw that they were going out of business——

The CHAIRMAN. Did they get their contract by bid?

Mr. TYLER. No, sir.

The CHAIRMAN. Was it a negotiated contract?

Mr. TYLER. It was a negotiated contract.

The CHAIRMAN. Had you invited any bids on that?

Mr. TYLER. No, sir; we have not. I would not know where to send another bid. I do not know of any comparable company.

The CHAIRMAN. Are they the only ones in the United States that are in that business?

Mr. TYLER. No, Roane-Anderson is in the business at Oak Ridge.

The CHAIRMAN. Well, who is Zia?

Mr. TYLER. Zia, as I say, was an artificial set-up, made at the request of the then Army engineers at Los Alamos. When they saw they were going to move out and stop doing all this work and that there had to be a civilian organization to do it, as I understand it, sir, they cast around trying to find an organization which existed. None existed. It is not a thing which anybody sits around and does for a living, I mean, as a group.

The CHAIRMAN. Well, \$17,000 a month is a considerable sum.

Mr. TYLER. Yes, it is very reasonable.

Mr. ELSTON. Is it a corporation for profit?

Mr. TYLER. The corporation is for profit, yes, sir.

Mr. ELSTON. Organized under the laws of what State?

Mr. TYLER. Under the laws of New Mexico. They have stock and pass out dividends.

Senator HICKENLOOPER. Mr. Chairman, I think the operations of the Zia Corp. will furnish an interesting field for inquiry at some time. I am not prepared to go into the matter today. I did not know we were going into operation of management activities at Los Alamos, but I will suggest to the committee that in my opinion we can very profitably look into the Zia Corp. and its management operations.

May I just ask Mr. Tyler one question?

The CHAIRMAN. Surely.

Senator HICKENLOOPER. The McKee Co. has done most or practically all of the construction at Los Alamos up until recently, is that true?

Mr. TYLER. They did practically all the construction up until, I would say, the middle of 1947.

Senator HICKENLOOPER. Yes. Since that time some other group has done it?

Mr. TYLER. Since that time all construction has been on lump sum bids.

Now, instead of one contractor up there I believe we have 26 prime contractors in that area.

Senator HICKENLOOPER. Yes, sir, I think we can inquire about that at a later date.

Now, the Zia Corp. is really a subsidiary of the McKee group, is it not?

Mr. TYLER. Well, it is, in effect. Legally it is not.

Senator HICKENLOOPER. But the stock ownership in the McKee Corp. is very much interlocked with stock ownership in the Zia Corp., which is the operating company?

Mr. TYLER. Well, there is no stock in McKee. McKee is a one-man company, and he owns the majority of stock in the Zia Corp.

Senator HICKENLOOPER. Yes, that is what I wanted to find out.

Mr. TYLER. The corporation was set up by McKee at the request of the Manhattan District.

Senator HICKENLOOPER. So McKee has built most of the installations out there, and his corporation, the Zia Corp., has had the contract for the operation?

Mr. TYLER. For the operation; yes.

Senator HICKENLOOPER. And the installation?

Mr. TYLER. That is correct.

Senator HICKENLOOPER. I think, Mr. Chairman, that the committee would be interested in going into that at some time when we have more time.

## ATOMIC ENERGY COMMISSION CONTRACT POLICY

The CHAIRMAN. I thoroughly agree with you. I think we should go into these management contracts.

Are you through, Senator?

Senator HICKENLOOPER. Yes.

The CHAIRMAN. Gentlemen, I had in mind that this sort of leads into a general subject, but I thought we might inquire into it generally. I do not think we have gone into it, at least publicly, and it seems to me that we should.

The Commission in the budget has a request for \$427,000,000 for the fiscal year 1950. There are several questions which occurred to me as to how they negotiated their contracts, and the nature of those contracts, so far as they can be discussed at this time within security restrictions.

So I have asked Mr. Wilson to come up here, as General Manager of the Commission, and tell us about your contract procedure.

Before you start, Mr. Wilson, I would like to ask you this question: In the manual of the Commission I find there are certain limitations, certain authorizations to the managers of your branch installations, of certain amounts which they cannot exceed.

As I have it, the Hanford office in its operations, the director there, can make a \$5,000,000 contract without reference to the Commission or to you as General Manager, except that it would be in the nature of a new type of contract.

In other words, am I correct in understanding that the director at Hanford could buy \$5,000,000 worth of houses without reference to the Commission, for the Commission to pass on it?

MR. WILSON. No, Mr. Chairman. The authority to execute contracts, which, as you state, has a \$5,000,000 delegation to the manager at Hanford, is authority for him to execute a contract to carry out a project approved by the Commission, in terms of its scope, its magnitude in dollars, its other characteristics.

In other words, the Commission in developing its budget takes the various programs of work to be done under production, weapons, and the like. These are broken down into subprojects and estimates made of the cost of each of these subprojects.

This is the program of the Commission for a year when approved by Congress, and the money appropriated for it.

Let us take up Hanford. This provides for certain projects authorized by the Commission. The authority and the manager at Hanford is to execute contracts for carrying out that work, in the conduct of that project, within the terms and scope and funds authorized. He is required to refer to Washington new or different forms and types of contracts, whatever their amounts.

Is that distinction made clear?

The CHAIRMAN. Somewhat. But I would like to ask you this: How many houses are you building at Hanford now?

MR. WILSON. How many houses are we building at Hanford now?

The CHAIRMAN. Yes.

MR. WILSON. I would like Mr. Schlemmer, the manager at Hanford, to answer that directly, if I may.

#### **STATEMENT OF FRED C. SCHLEMMER, MANAGER, HANFORD OPERATIONS OFFICE, ATOMIC ENERGY COMMISSION**

MR. SCHLEMMER. Mr. Chairman, we are now completing the construction of a thousand houses.

The CHAIRMAN. Did you make a contract for those houses?

MR. SCHLEMMER. The contract was made, as Mr. Wilson has indicated, on the authority of the Commission.

The CHAIRMAN. I assume you would not sign a contract without the authority of the Commission. Did you sign the contract?

MR. SCHLEMMER. I did not happen to, personally, because I was not then the manager.

The CHAIRMAN. That was your predecessor?

Mr. SCHLEMMER. However, the actual contract was approved by the manager at that time.

The CHAIRMAN. Now, the type of houses that were to be built, the type of home, was that determined by your predecessor?

Mr. SCHLEMMER. In general; yes, sir.

The CHAIRMAN. That was not referred to the Commission to pass upon it?

Mr. SCHLEMMER. Well, the Commission staff at the Washington office participated with the field office staff at Hanford.

The CHAIRMAN. How much is that contract for, for those thousand houses?

Mr. SCHLEMMER. That contract is approximately \$9,000,000, I believe, if my memory serves me correctly.

The CHAIRMAN. Was that put out to bid?

Mr. SCHLEMMER. Yes, sir, that was put out to bid. Perhaps I can give you—

The CHAIRMAN. Is that contract between the Commission and the builder, or is that General Electric?

Mr. SCHLEMMER. No, sir, that is a prime contract through the General Electric.

The CHAIRMAN. Did they select the successful bidder?

Mr. SCHLEMMER. They selected the successful bidder, with the approval of the Commission, that is right.

The CHAIRMAN. While they are looking for that, Mr. Wilson, what type of contract do you have with General Electric?

Mr. WILSON. Pardon me, Mr. Chairman, Mr. Schlemmer has it.

Mr. SCHLEMMER. I have it now, Mr. Chairman. There were invitations sent to 21 bidders in connection with that particular contract. The contract was awarded to the successful bidder at a lump-sum price of \$9,792,350.

The CHAIRMAN. That was a flat bid?

Mr. SCHLEMMER. Yes, sir; a lump-sum competitive bid.

The CHAIRMAN. What is in those houses? Are they completely ready for furniture, and utilities?

Mr. SCHLEMMER. Yes, sir; they are ordinary houses in the sense that they are equipped with a varying number of bedrooms, some having three and some having four bedrooms. They are what is known as a ranch-type house. They are equipped and ready for occupancy, exclusive, of course, of household furniture and the like.

The CHAIRMAN. The plumbing is in?

Mr. SCHLEMMER. Yes, sir.

The CHAIRMAN. And the sidewalks are in front of the houses?

Mr. SCHLEMMER. Yes, sir.

The CHAIRMAN. Is that included in the contract, the sidewalks?

Mr. SCHLEMMER. No sir; that is not included in the contract, to the best of my knowledge.

The CHAIRMAN. Is refrigeration included?

Mr. SCHLEMMER. That is correct.

The CHAIRMAN. What kind of cooking facilities do they have?

Mr. SCHLEMMER. The cooking is electric cooking.

The CHAIRMAN. That is \$9,000 a unit, is it not?

Mr. SCHLEMMER. Approximately, yes, sir.

Mr. HINSHAW. \$9,792.

The CHAIRMAN. That is without sidewalks, without connections to the sewers, simply the house with refrigeration and cooking facilities?

Mr. SCHLEMMER. That is correct.

The CHAIRMAN. Is it of permanent construction?

Mr. SCHLEMMER. It is permanent construction, yes, sir.

Mr. DURHAM. Is there any limitation, at the present time, placed on you by any act of Congress, as to the amount you may spend for housing, that is, the cost per unit?

Mr. SCHLEMMER. Not that I am aware of, sir.

Mr. DURHAM. If it exists, it must be with another agency.

Mr. SCHLEMMER. I am aware of nothing of that sort, sir.

The CHAIRMAN. Would you give us the floor space, the number of square feet?

Mr. SCHLEMMER. There are two types of those houses. Nine hundred and fifty of them have three bedrooms, have coal-fire heat, consist of a floor area of 1,182 square feet. Fifty of them are four bedrooms, one-story, coal heating, with a floor area of 1,332 square feet.

The CHAIRMAN. You had 22 bids?

Mr. SCHLEMMER. I believe it was 21 bids. I beg [your pardon. There were 21 invitations to bid.

The CHAIRMAN. And how many bid?

Mr. SCHLEMMER. There were 10 bids.

The CHAIRMAN. What was the high bid, please?

Mr. SCHLEMMER. The high was \$12,504,208.

The CHAIRMAN. Who was the successful bidder?

Mr. SCHLEMMER. The successful bidder was the Nettleton-Baldwin-Anderson, Inc., and Sound Construction & Engineering Co.

The CHAIRMAN. Was this a concern put together just to bid on this job?

Mr. SCHLEMMER. That I could not say, sir.

The CHAIRMAN. It sounds that way.

Mr. PRICE. Located where?

The CHAIRMAN. Where are they located?

Mr. SCHLEMMER. My records do not indicate that, sir. I believe that the offices of some portion of this organization, at least, are in San Francisco. However, I could not be certain of that.

Mr. WILSON. We could submit that.

The CHAIRMAN. How many more houses are you going to build?

Mr. SCHLEMMER. That completes the authorized construction for the present. However, due to an urgent need we anticipate seeking authority for the construction of additional housing, probably in the form of apartment houses.

The CHAIRMAN. Do you have that request in this budget?

Mr. SCHLEMMER. A portion of that is in this budget.

The CHAIRMAN. Apartment houses?

Mr. SCHLEMMER. Yes, sir.

The CHAIRMAN. Not steel construction?

Mr. SCHLEMMER. Oh, no, we mean units, combination units, perhaps six units in a block.

The CHAIRMAN. Multiple-family houses?

Mr. SCHLEMMER. Multiple-family houses, of the possible single- or two-story type.

The CHAIRMAN. You only have one-story houses erected?

Mr. SCHLEMMER. Well, all of those presently required are so erected; yes, sir.

Senator HICKENLOOPER. Well, you are in the process of completing, or you have completed some apartment units there, have you not?

Mr. SCHLEMMER. We have completed some apartment units; yes, sir. We have 64 apartment units which have been completed and have been occupied for some time.

Senator HICKENLOOPER. How many apartments would those 64 contain?

Mr. SCHLEMMER. I believe, sir, those are in eight-apartment units.

Senator HICKENLOOPER. Excuse me, I did not mean to interrupt.

The CHAIRMAN. That is perfectly all right.

Senator HICKENLOOPER. Mr. Schlemmer, this figure of \$9,792 per house, which I understand is the average, that is, for the three- and four-bedroom houses—

Mr. SCHLEMMER. Yes, sir.

Senator HICKENLOOPER. That includes the house completed in all its particulars, that is, painting, plastering, plumbing, a stove in the house for cooking, and all of your plumbing installations in the house ready for occupancy when you hook up the water and the electricity; is that true?

Mr. SCHLEMMER. That is correct. More specifically, I think perhaps we might say it includes the house and the land on which the house is constructed, to the 5-foot line, that is, 5 feet outside the extremity of the house.

Senator HICKENLOOPER. Well, you do not include the price of the land in this \$9,000, do you?

Mr. SCHLEMMER. No, sir; we do not.

Senator HICKENLOOPER. So whatever the cost of the land is on top of that?

Mr. SCHLEMMER. That is correct; yes, sir.

Senator HICKENLOOPER. Do these houses have basements?

Mr. SCHLEMMER. These particular houses do not have basements; no, sir.

Senator HICKENLOOPER. These thousand houses?

Mr. SCHLEMMER. That is correct.

Senator HICKENLOOPER. Do you have any substantial number of houses at Los Alamos on the hill there that do have basements?

Mr. SCHLEMMER. I believe you mean to refer to Hanford, do you not?

Senator HICKENLOOPER. Oh, we are talking about Hanford?

Mr. SCHLEMMER. Yes, sir.

Mr. TYLER. We have none at Los Alamos that have basements at all, sir.

Mr. SCHLEMMER. Do you wish to have that question answered with respect to Hanford, Senator Hickenlooper?

Senator HICKENLOOPER. Yes.

Mr. SCHLEMMER. I should say we have approximately 2,500 houses at Hanford which do have basements.

Mr. HINSHAW. Mr. Schlemmer, if there are 2,500 with basements, how many houses are there altogether?

Mr. SCHLEMMER. At present there are a total of 5,777.

Mr. HINSHAW. That includes the present contract that has been let?

Mr. SCHLEMMER. That includes the present 1,000 houses now being completed, yes, sir.

Senator HICKENLOOPER. Mr. Schlemmer, what do the three-bedroom houses rent for, these 1,000 you are building?

Mr. SCHLEMMER. The thousand three-bedroom houses at present rent for \$52.50, per month.

Senator HICKENLOOPER. What do the four-bedroom houses rent for?

Mr. SCHLEMMER. The four-bedroom houses rent for \$57.50 per month.

Mr. ELSTON. Does that include gas and electricity?

Mr. SCHLEMMER. That includes electricity and fuel. We have no gas there.

Mr. HINSHAW. By fuel, do you mean coal?

Mr. SCHLEMMER. In this case coal, yes, sir.

Senator HICKENLOOPER. You get \$5 a month more for a four-bedroom house than a three?

Mr. SCHLEMMER. That is true in this case, yes, sir.

Senator HICKENLOOPER. Does that include garage? Are there garages on these properties?

Mr. SCHLEMMER. No, sir, there are no garages in Richland or with any of the houses.

Senator HICKENLOOPER. Do you have any roof construction under which a garage could be set up?

Mr. SCHLEMMER. We do not, sir.

Senator HICKENLOOPER. Now, under this rental the tenant gets his heat furnished—that is, his coal.

Mr. SCHLEMMER. He gets his fuel, yes, sir.

Senator HICKENLOOPER. He gets his electricity?

Mr. SCHLEMMER. That is correct.

Senator HICKENLOOPER. He gets his water?

Mr. SCHLEMMER. That is correct.

Senator HICKENLOOPER. He gets his garbage—

Mr. SCHLEMMER. Yes.

Senator HICKENLOOPER (continuing). Collected? [Laughter.]

Mr. SCHLEMMER. That is correct.

Senator HICKENLOOPER. Then the Commission takes care of all, or the prime contractor takes care of all repairs on the house?

Mr. SCHLEMMER. That is correct, yes, sir.

Senator HICKENLOOPER. And all normal services that go with the house, so that when he pays his rent he has no other obligations which he has to pay for the services of water, heat, light, and municipal services such as trash collection, and garbage collection?

Mr. SCHLEMMER. At present that is correct. However, if I may take a moment to advise the committee of something which it may already know, the Commission has established a definite policy with respect to rental of resident facilities at its Hanford and Oak Ridge communities.

The policy which it has adopted will result in an adjustment of the rental structure, based on evaluation appraisals by private appraisers, and having in mind the elimination from the rental structure those items now furnished within the structure, such as the provision of electricity, the provision of fuel. It will include within the adjusted rental structure the normal amenities provided to an occupant of a house in the average city.

Senator HICKENLOOPER. Would it include water?

Mr. SCHLEMMER. The rental would include water. However, it will be separately identified from the actual amount allocated to shelter rent.

Senator HICKENLOOPER. At the present time do you have electrical meters in the houses?

Mr. SCHLEMMER. We do not, sir; no, sir.

Senator HICKENLOOPER. So there is no check on the amount of electricity that the tenant can use?

Mr. SCHLEMMER. Well, I would not say that completely, sir. There are checks made.

Senator HICKENLOOPER. But there is no restriction on it at the present time?

Mr. SCHLEMMER. That is correct.

Senator HICKENLOOPER. Do you have any water meters in these houses?

Mr. SCHLEMMER. We do not, sir.

Senator HICKENLOOPER. To check on the amount of water used?

Mr. SCHLEMMER. No, sir. With respect to electric meters, if I may advise the committee, Senator, it is our intention to install electric meters within some reasonable period, in order that they will have an adequate means of determining what a fair return for usage may be.

Senator HICKENLOOPER. Now, with respect to the coal supply to each tenant, do you have any rigid limitation on the amount of coal each house burns, or do they just call up and say, "I need a load of coal," and it is delivered?

Mr. SCHLEMMER. Well, as I am sure you can understand, sir, the use of fuel varies with the tenant, in Richland, as it does in any other community in the country. Some tenants are economical in the use of such things, and others are not. Attention is paid to the quantity of fuel used. Those who appear to be using an excessive amount are advised of that, and in fact on occasion instructed with respect to proper methods in the use of fuel, in order to properly conserve it.

Senator HICKENLOOPER. But the fact is that in the installation at Hanford there is actually no specific limitation prescribed for the use of coal for a house of a certain size?

Mr. SCHLEMMER. Well, I think that is a correct statement. However, I think it would have to include, within reasonable limitations—certainly it would not extend to a very extravagant amount. It would be within a certain reasonable quantity.

Senator HICKENLOOPER. Is the total contract of \$9,792,000 for these 1,000 houses, does that include landscaping, and seeding of the property, or is that done by other contract?

Mr. SCHLEMMER. That is a separate item, yes, sir.

Senator HICKENLOOPER. So that is an addition to the \$9,972,000?

Mr. SCHLEMMER. That is correct; yes, sir.

Senator HICKENLOOPER. Do you have the figure on how much it costs to landscape these houses?

Mr. SCHLEMMER. I don't happen to have that, Senator, by reason of the fact that my presence in Washington at this time was not for the purpose of attending this committee session. However, that information can be made available to the committee.

Senator HICKENLOOPER. Is it done by separate contract, landscaping contract, or is it done by the current personnel of the prime contractor, or by whom?

Mr. SCHLEMMER. Heretofore certain portions of landscaping were performed by contract or by contractors, and the balance by the individual tenant. The present policy with respect to seeding—which is a very necessary thing, as I believe you recognize, having been to Hanford—as a result of the high winds, and the like. Seed is furnished to the tenant. The tenant is responsible for its planting, its care, its upkeep, and so forth. Does that answer your question?

Senator HICKENLOOPER. Yes, that is, so far as the method of operation is concerned. But I would still like to know how much it costs on the average to landscape each piece of property. My information is that it adds very materially to the cost of that unit.

The customary method of landscaping after a house is built in Hanford is to bring in dirt from someplace else, put a top soil on, seed it, and try to get some grass to grow there?

Mr. SCHLEMMER. That is correct.

Senator HICKENLOOPER. I think you have been very successful in several places that I have seen there. But it is a little more costly operation than where you have soil which does not have to be brought in from outside?

Mr. SCHLEMMER. That is indeed correct. However, as you indicate, nothing will grow in the desert sands unless the proper type of soil is placed on the surface, and then only if properly irrigated.

Senator HICKENLOOPER. Do you recall at the moment approximately how many kilowatt-hours of electricity the average house or average residence in Hanford burns per month, or per year?

Mr. SCHLEMMER. I do not recall, Senator.

Senator HICKENLOOPER. Do you recall approximately the average number of tons of coal burned by the average house in Hanford during the year?

Mr. SCHLEMMER. I do not recall the figure. However, I believe it is in the neighborhood of approximately five tons per year.

Senator HICKENLOOPER. Five tons per year?

Mr. SCHLEMMER. Yes, sir.

Senator HICKENLOOPER. I do not want to embarrass you on these questions, because I do not think you are prepared to answer them in detail, not coming here knowing that you were going to testify.

Mr. SCHLEMMER. Well, I will be very happy to give you what I can.

Senator HICKENLOOPER. I thought perhaps you might have some of those figures in your mind.

I believe that is all I have.

Mr. DURHAM. What obligation do we assume regarding housing for these contractors brought in there? You have a problem there of their housing. Does that cost the Commission anything or are they required to assume all the expense?

Mr. SCHLEMMER. The prime contractor working in the interest of the Commission does not of himself supply any facilities. The Commission supplies all living facilities in the community, for the operators of the plant.

Mr. DURHAM. At the present time, how many employees are there operating under contract?

Mr. SCHLEMMER. Well, under the prime General Electric contract there are approximately 8,300 employees of the General Electric Co.

Mr. DURHAM. I wish you would separate your contractors who do work for the Commission from the personnel employed there.

Mr. SCHLEMMER. The Commission's staff itself, sir?

Mr. DURHAM. No, the contractors.

Mr. SCHLEMMER. If I may explain our method of activity.

The prime contractor is the General Electric Co.

Mr. DURHAM. Yes, but you have a contractor there at the present time building houses, and things like that. That is what I want to know about.

Mr. SCHLEMMER. That is correct. The housing provision for all construction employees is in a separate community. There are two communities in Hanford. Richland, the permanent community, is for operators of the permanent plant. North Richland, a temporary community, is for construction workers.

Mr. DURHAM. Now, did the contractor build those houses himself?

Mr. SCHLEMMER. He did not, sir.

Mr. DURHAM. At his own expense?

Mr. SCHLEMMER. They were built at the expense of the Atomic Energy Commission, yes, sir.

Mr. DURHAM. That is temporary housing, as I get it?

Mr. SCHLEMMER. That is principally in the form of dormitories for people in single occupancy or in a single state, and in trailer spaces for families. There are at present approximately 2,300 trailer spaces. The individuals supply the trailers themselves.

There is a nominal number of temporary houses for key construction supervisors in North Richland, also supplied by the Commission.

Mr. DURHAM. Do you furnish all the facilities for that, electricity, heat, and everything else?

Mr. SCHLEMMER. That is correct. Not heat, no, sir. The individual trailer owners furnish their own heat.

Mr. DURHAM. You do not get any reimbursement from the contractor back to the Commission for that service?

Mr. SCHLEMMER. We get no reimbursement from the contractor. We do, however, secure rental returns from the occupants of the house and the trailers.

Mr. DURHAM. You do charge rental?

Mr. SCHLEMMER. Oh, yes, sir; yes, indeed.

The CHAIRMAN. Mr. Hinshaw.

Mr. HINSHAW. Mr. Chairman, I think it would be an interesting thing for the committee to learn the cost of preparing the lots for building, including the grading, the streets, the sidewalks, sewers, lights, and utilities, and other things that would go into the cost of making up a subdivision of 1,000 houses. Of, course, the land, I presume, is part of the Federal land, and hence it would not be included in the cost, although an estimate could be made of its value as a going concern. I realize that the gentleman is probably unprepared to present those facts to the committee. But I do think in addition to that the committee should have a statement of, let us call it, the municipal cost, because after all, these people are not assessed any special amount for lights, electricity, coal, water, garbage disposal, trucking, and all the rest of the things that go along with the operation of the city, so that we can find out what the net rent is after deducting the cost of operations that are incidental to the operation of the city.

I presume that material can be gotten together and furnished to the committee, by mail, or otherwise.

The CHAIRMAN. Might I suggest one thing more that we might have, and that would be the comparable cost of military and naval installations. That must be available to you. I would like to see a chart showing how much the Commission has spent, as compared with the branches of the armed services for similar facilities. Wouldn't that be of some interest?

Mr. HINSHAW. I think that would be somewhat fairer as an analogous situation. Except, of course, the military salary. These items are all considered to be a part of the net income of the person.

(A comparison of the costs of housing constructed for the Atomic Energy Commission with costs incurred by the armed services, submitted for the record by the General Manager of the Atomic Energy Commission is marked "Exhibit No. 4," and will be found in the appendix at p. 107.)

The CHAIRMAN. You are talking now about the rent that is charged. I am talking now about the capital expense in a given area for occupancy. I also would like to know who fixed this figure of \$52, and how it was arrived at.

Mr. HINSHAW. Yes.

Then another question I would like to ask, and I think it can be answered here, is: Whose employees live in these houses, the employees of the Commission or the employees of the general contractor?

Mr. SCHLEMMER. Both, Congressman. The houses in the community of Richland are provided principally and essentially for the plant operators. Certain additional personnel required in connection with such operations, also reside there, including certain Commission employees.

I am sure you gentlemen will be interested to know that we have very extensive waiting lists for those houses, indicating a present inadequacy of supply for the requirements of plant operation.

Mr. HINSHAW. Mr. Chairman, I am sure if they had houses of that size at that rent in Washington there would be a waiting list also, especially at \$52 per month.

The CHAIRMAN. I think I would go for one myself.

Mr. HINSHAW. I would, myself.

Mr. SCHLEMMER. That is, however, an isolated locality which requires the provision of reasonable facilities for the people who are paying that rent.

Mr. HINSHAW. Are there other facilities such as stores, picture theaters, and so forth?

Mr. SCHLEMMER. There are.

Mr. HINSHAW. But they are privately owned?

Mr. SCHLEMMER. Which is that, sir?

Mr. HINSHAW. The theaters, store buildings, and so forth.

Mr. SCHLEMMER. Well, originally the structures were Government-owned. Those which now exist, having been built in the original Manhattan Engineer District program, remain so. Income from them to the Commission is on the basis of percentages of gross revenue.

However, it will interest the committee, I am sure, to know that the present policy is in the expansion of commercial facilities within these communities; that the commercial facility operators, who are selected on the basis of competitive bidding, are required to furnish and pay for their own structures on land which the Commission leases to them.

Mr. HINSHAW. Yes, I know of one such concern which was encouraged to build its own structure and equip it there, then found itself out on a limb because the work it was given to understand it was supposed to do was taken over by the general contractor himself, and consequently they have no business at all, after investing \$45,000 in building and equipment.

They have no assurance that they will continue in business, do they?

Mr. SCHLEMMER. I happen to be familiar with that particular situation, Congressman. I might indicate to you, at least, that in a discussion I had within the last month with the principals in that situation, they indicated that they were completely satisfied on the basis of the Commission's intentions with respect to the rental adjustment program, which will make it necessary for tenants to provide their own maintenance and their own repairs, and consequently will carry out their original intention.

The CHAIRMAN. Where did you work prior to coming with the Commission?

Mr. SCHLEMMER. Immediately prior to coming with the Commission I was in private industry.

The CHAIRMAN. What type of industry?

Mr. SCHLEMMER. I was in the textile industry for a 2-year period.

The CHAIRMAN. And prior to that?

Mr. SCHLEMMER. Prior to that my experience over a period of 30 years was in major construction activity, both governmental, as well as private.

The CHAIRMAN. What did you do in the textile business?

Mr. SCHLEMMER. I was general manager of one of the large textile companies in the South.

The CHAIRMAN. Whereabouts?

Mr. SCHLEMMER. At Rossville, Ga.

The CHAIRMAN. What is your salary now?

Mr. SCHLEMMER. My salary is \$18,000 a year.

The CHAIRMAN. What was your salary in the textile business?

Mr. SCHLEMMER. My salary was \$25,000 a year.

The CHAIRMAN. Are there any other questions?

Senator HICKENLOOPER. Mr. Chairman, would you like to pursue that just one more moment?

The CHAIRMAN. I would like to recess at 4:30. I think we would open up another subject that is going to take a good deal of the time of the committee. It is the Chairman's intention, with the consent of the committee, to pretty well go through these contracts and examine these contracts and the reason for using a lot of money. In the public interest we have got to have a record for the public, as much as we can, within the reasonable bounds of security.

Mr. HINSHAW. My question, Mr. Chairman, related to the question I was asking before, namely, in relation to coal. I assume coal is the customary fuel used in the vicinity of Richland, is it?

Mr. SCHLEMMER. Coal and oil are both used. However, oil has been under restriction, recently removed.

The particular houses we have been speaking of were initially designed for the use of oil fuel. As a result of the restriction they had to be redesigned in order to permit the use of coal as a fuel.

Mr. HINSHAW. I presume the coal comes from Colorado and Utah?

Mr. SCHLEMMER. That is correct.

Mr. HINSHAW. It has to be shipped in and then trucked to the house?

Mr. SCHLEMMER. Yes, sir.

Mr. HINSHAW. And a part of the municipal cost is in the trucking cost?

Mr. SCHLEMMER. That is correct.

Mr. HINSHAW. And the rest of it is in the coal itself, the price of delivery, plus the delivery charges?

Mr. SCHLEMMER. That is correct.

Mr. HINSHAW. That would be included in the municipal budget?

Mr. SCHLEMMER. That is correct.

Mr. HINSHAW. That is all.

Senator HICKENLOOPER. Mr. Chairman.

The CHAIRMAN. Senator Hickenlooper.

Senator HICKENLOOPER. Before you were with the textile industry, where were you employed, Mr. Schlemmer?

Mr. SCHLEMMER. I was employed by the Tennessee Valley Authority for a period of 13 years.

Senator HICKENLOOPER. What was your salary when you left there?

Mr. SCHLEMMER. My salary when I left there was approximately \$9,500.

Senator HICKENLOOPER. With the TVA, what was your responsibility?

Mr. SCHLEMMER. I was the project manager of numerous of its major construction projects, notably Norris Dam, Chickamauga Dam, Fontana Dam, and others. As you know, the statutory salary limitation of a TVA employee was \$10,000 a year.

Senator HICKENLOOPER. Yes, but I understood you to say you were in private industry. It was my information you had been with TVA, and I wanted to find out whether it was before your TVA connection that you were with private industry.

Mr. SCHLEMMER. That is correct.

The CHAIRMAN. Just to refresh my recollection, you appeared I believe, in connection with the hearings on the confirmation of these Commissioners, did you not?

Mr. SCHLEMMER. That is correct, sir.

The CHAIRMAN. And at that time this textile concern was brought in?

Mr. SCHLEMMER. That is correct.

The CHAIRMAN. Your face is vaguely familiar.

Mr. Wilson, I intended to get a lot further. I am sure the other gentlemen have many more questions to ask about the contract procedures, such as the cost-plus contracts, how you determine fees, and so on. But we have a lot of work back in our offices to do, unfortunately, and I suppose you have some. So we are going to have to postpone it until the next meeting of the committee, of which you will be advised. I presume it will be around the first of the week.

Mr. WILSON. Mr. Chairman, I had prepared a brief statement which I intended to present to the committee at the beginning of this discussion of our contract procedure. With your permission I would like to submit it for the record.

The CHAIRMAN. Yes; you may do that. That is perfectly all right. We would like to have it. I dare say that would be a fine thing to do,

and then we could examine you on that at the next meeting of the committee.

(The statement of Mr. Wilson is as follows:)

STATEMENT SUBMITTED BY CARROLL L. WILSON, GENERAL MANAGER, ATOMIC ENERGY COMMISSION

The joint committee has requested that a part of this afternoon's hearing be devoted to a discussion of the Commission's contract procedures and practices. The Commission welcomes this opportunity for such a discussion. As you know, we have from time to time, in our reports to the Congress as well as in other published statements, referred to the central role which contractors occupy in the atomic energy program. We believe that it is important for the public generally and for American business to know and to understand the policies which we are following.

It will be helpful, I think, to begin by stating in somewhat general terms the Commission's views on the manner in which a major part of its business should be conducted.

The Atomic Energy Act of 1946 left it to the Commission to determine, in the light of experience and prevailing circumstances in each case, whether its installations should be directly operated by the Commission or whether they should be operated by private contractors or organizations in accordance with the practice which had been initiated by the Manhattan District.

The Commission has been of the view—and we believe this view is amply supported by our 2 years of experience since we succeeded to the responsibility of the atomic energy enterprise—that we should develop as fully as possible the method of operating through contractual relations with private organizations. We have recognized that the high relative significance of weapon production and the necessary secrecy of large parts of the atomic energy program involve the danger that only limited scientific, technical, and managerial resource will be available to this most urgent new atomic energy enterprise. Such handicaps must be minimized and overcome if this country's rapid progress in the field of atomic energy is to be assured. Accordingly the Commission has looked to the basic policy of contractor operation as a means of developing wide and alert participation in the program by a growing number of private organizations, both academic and industrial.

By pursuing a basic policy of obtaining contractor-operators the Commission has been able to draw upon the technical and administrative talents of a broad sector of the American economy. Operation of our plants and laboratories through established independent contractors not only gives to the atomic energy program substantial benefits from accumulated experience and established facilities; it also enlists the interest and the support of industry and universities for future private development. It has been our conviction that if atomic energy is to become a generic part of the American scene it should have its roots deep in the institutions which are so productive a part of American progress in science and technology.

To make full use of this industrial and university talent and know-how and to encourage the wide participation which is so necessary, the Commission believes that it must give the contractors a real job to do, and keep an appropriate balance with respect to such activities of the Government as are necessary to assure proper accountability and results.

These are general objectives of the Commission's program.

The identities of the contractor-operators at the Commission's major facilities are of course well known to the members of the joint committee. At Oak Ridge the production and the laboratory facilities are operated by the Carbide & Chemicals Corp., while the Roane-Anderson Co. is the principal contractor for town operations. Up on Long Island, the contractor-operator for the Brookhaven National Laboratory is Associated Universities, Inc., a nonprofit corporation organized by nine of the leading universities in northeastern United States. In Chicago area the Argonne National Laboratory, operated under contract by the University of Chicago, is made up of 30 participating universities from the Middle West. At Hanford and at Schenectady, critical production and research operations are carried on pursuant to a contract with the General Electric Co. At Los Alamos our contractor for the laboratory and its weapon work is the University of California, while a number of town and services functions are performed by Zia Co. The Mound Laboratory at Miamisburg, Ohio, is operated by Monsanto Chemical Co. You will recall that many of the activities carried on at these

major installations are described in some detail in the unclassified fifth semiannual report which the Commission made to the whole Congress on January 31.

The contracts covering each of these operations are cost-type contracts under which the Government reimburses the contractor for its actual costs and expenses of operations, plus in some cases a fixed fee. Because of the complexities of the operations, and the many uncertainties as to what the actual costs will turn out to be over an annual period no matter how carefully plans are made in advance, it has not been feasible for the work to be done except under a cost-type contract. Contracts provide for programs of work established by the Commission pursuant to its general budgetary programs. These work programs are reviewed by the Commission from time to time, and altered and changed in the light of changing circumstances, by the Commission at specified intervals, so that the work to be done by the contractor can be mapped out and planned in advance. Subject to controls, such as in the fields of costs and security, it is the desire and intention of the Commission to give encouragement to the exercise by the contractor of its own initiative and ingenuity, so that the atomic energy program will really have the full benefits of high caliber management and know-how.

For the successful conduct of the plant operations carried on at the Commission's major installations, there is required a very large amount of supporting contract activity, both through prime contracts and subcontracts. Continued conduct of research programs must be assured. Necessary raw materials must be obtained for both research and production purposes. Plants and laboratories must be built. Machinery must be installed, some of it of a high order of complexity. Supplies and materials (off-the-shelf items, as well as items especially adapted to the atomic energy program) must be procured. Public utility services, such as gas and electricity, and rail, truck, and air transportation, must be contracted for. Necessary community and housing facilities must be provided.

Day-by-day supervision and guidance of these activities is essentially the responsibility of the field offices of the Commission. The Commission has felt that the atomic energy enterprise requires broad delegation of responsibilities and authority to the managers of its field offices, who work closely with the organizations carrying on important work and who are responsive to the every-day realities of the operation. Five offices of operations have been established. One is at New York, which has as its primary function the preparation of feed materials for the plants, but in addition administers other types of contracts, including the contract with Associated Universities, Inc., for operation of the Brookhaven National Laboratory. The second office is at Hanford, where the major task is the production of plutonium. The third office was set up at Los Alamos, which, as you know, is the center of weapons work. The fourth is at Chicago to administer the contract for the Argonne National Laboratory and to serve likewise for the research activities at Ames, Iowa, and Berkeley, Calif. The fifth is Oak Ridge.

Each of these five offices has become a fully integrated organization, with considerable self-sufficiency for handling the extensive business operations, and for providing technical supervision of the activities in its area. Under our reorganization placed in effect last September, each of these five field offices reports directly to the director of one of the program divisions in Washington. The basic programs are developed and reviewed by the program divisions in Washington, subject to the review of the Commission. Within the scope of the approved programs it is the job of the field offices to enter into the contracts necessary to give these programs effective implementation. The extent of the contractual authority delegated to the five field managers varies because of differing situations; it is \$2,000,000 for New York and Chicago, \$3,000,000 for Los Alamos, and \$5,000,000 for Hanford and Oak Ridge. Naturally, the local manager is required to bring to the attention of Washington for review and approval all new or unusual types of contractual transactions. Moreover, in actual experience there is a broad and very wholesome practice of consultation and interchange of views between the staff in Washington and the staffs in the field offices on problems which arise in connection with the execution and administration of contracts.

In addition to determining the general scope of the programs, it is our objective to provide from Washington the standards and the policies, and in some cases the procedures, which will form the bases for action to be taken by the field offices. For example, we have recently adopted a contract manual to cover the letting of contracts for engineering and construction services. A copy of this manual has previously been furnished to the joint committee, and our director of production, Mr. Walter J. Williams, will later discuss in more detail its objectives and its provisions. I mention it now because it is illustrative of the kind of guidance which, on the basis of experience, we think the Washington office of the Commission can properly furnish to the field offices.

A large proportion of the Commission's prime contracts, especially those relating to the procurement of supplies and special materials, are executed and administered by our New York office. To the extent that it is practicable and is consistent with security requirements, such contracts are let by competitive bidding on a lump-sum or unit-price basis. At the same time, as I am sure you will understand, there are situations where it is necessary for the contract to be entered into on some other basis. Mr. Wilbur E. Kelley, the manager of New York operations, will describe for you in some detail the contract practices and procedures followed in that office. In many ways these practices and procedures will be illustrative of those followed at our other field offices.

It will also be helpful, I think to have a description of our procedures and practices with respect to research contracts. You will recall that by the Atomic Energy Act the Commission is directed to exercise its powers in such manner as to assure the continued conduct of research and development activities of private or public institutions or persons, and also to assist in the acquisition of an ever expanding fund of theoretical and practical knowledge in such fields. Our research program, both in the physical sciences and biology and medicine, is on a country-wide basis. Some of the fundamental research is carried out through contracts supported jointly by the Commission and the office of Naval Research. Our Deputy Director of Research, Dr. Ralph P. Johnson, is prepared to describe to you the methods of selection of research projects and the objectives which the Commission hopes to attain through its contract-research program.

In connection with our research program, I should like to stress the fact that at our three national laboratories—Argonne, Brookhaven, and Oak Ridge—we have made arrangements which assure a very broad degree of regional participation by the institutions located in the areas. Moreover, in the case of the Knolls Atomic Power Laboratory, now under construction at Schenectady, our contract with the General Electric Co. contains provisions which will permit other industrial participation at the laboratory when it is completed.

Indeed, as I indicated at the outset, much of our planning is directed to broadening the basis of participation of industrial and educational institutions in the atomic energy program. The Commission is convinced that the vigorous progress of the program depends on the sustained interest, the participation and the contributions of the large number of persons, corporations, and institutions whose joint effort has in the past given America her scientific and industrial strength. It was for that reason that the Commission, in October 1947, appointed the Industrial Advisory Group, from which we requested advice on the most effective means of increasing the extent to which American industry might participate in atomic energy development. The report of the Industrial Advisory Group, you will recall, was submitted to the Commission in December 1948. It contained many helpful suggestions, and exemplified the extraordinary cooperation which the Commission is receiving from groups of leaders and experts in a variety of fields who are anxious to help in making possible the speedy progress of the Nation's atomic energy program.

It has been a source of great encouragement to note that in recent months more firms have entered atomic energy work on a straight investment and risk basis. This is true in several fields—first, the manufacture of compounds containing radioisotopes for use in research and processing work; second, the mining, milling, and processing of uranium ores into high-grade concentrates; and third, the manufacture of instruments for detecting radiation.

The Du Pont company, which performed the great feat of the wartime construction and operation of the Hanford installation, has recently undertaken to make a complete survey of chemical-process problems involved in plutonium manufacture—a field in which there will already be found working several major industrial concerns, such as Blaw-Knox, Dow Chemical, General Electric, Kellogg, Monsanto, and Standard Oil Development Corp. Also, within the past 2 months, the Westinghouse Electric Corp. has undertaken the construction of test models on reactors for driving ships.

As the atomic energy program expands, we are utilizing an increased number of organizations, both large and small. The number of our prime contractors is in the hundreds, and the Commission is making every effort to make industrial and scientific participation on as widespread a basis as possible.

The CHAIRMAN. Now, gentlemen, what is your pleasure on this Los Alamos bill?

Mr. PRICE. Mr. Chairman, that is the bill that passed the House this morning?

The CHAIRMAN. Yes; it is.

Mr. PRICE. I just wondered.

The CHAIRMAN. It is the same bill. So we could report it to the Senate immediately.

If that is satisfactory, will all those in favor say "Aye."

(Chorus of "ayes.")

The CHAIRMAN. Opposed, "No".

(There were no "noes.")

Senator HICKENLOOPER. May I ask just one question as long as Mr. Schlemmer is here, Mr. Chairman?

The CHAIRMAN. Yes, certainly.

Senator HICKENLOOPER. How many businesses are now being operated under private investment, under this private investment philosophy at Hanford—that is, as compared to the businesses that have been operated under a rental proposition where the contractor rents the facilities to an operator? Do I make myself clear?

Mr. SCHLEMMER. I think so, sir.

Senator HICKENLOOPER. Where private capital comes in and invests its own money in the construction of the property, and the operation of the business.

Mr. SCHLEMMER. On the basis of competitive bidding in the development of the commercial area known as the North Commercial area, we have consummated 67—I believe that is the figure—contracts. I would like to have the opportunity of checking that figure for its accuracy, but I think it is 67 contracts under which operators will provide structures at their own expense.

Senator HICKENLOOPER. They will build their own buildings?

Mr. SCHLEMMER. That is correct.

Senator HICKENLOOPER. And do they buy the land?

Mr. SCHLEMMER. No, sir. The Government owns the land and leases it.

Senator HICKENLOOPER. What control does the Government have over the continuity of the operation of that business after it has built its own structures?

Mr. SCHLEMMER. Well, that is a monetary control inasmuch as revenue is concerned, which is a part of the bid.

Senator HICKENLOOPER. Do you mean he cannot sell his goods over a certain competitive price?

Mr. SCHLEMMER. No; I did not mean that. However, the contractor agrees to sell his goods at reasonable prices comparable to those existing in the area.

Senator HICKENLOOPER. You charge him a flat rent, or a percentage of his profit, or a percentage of his gross?

Mr. SCHLEMMER. We charge a percentage of his gross; that is correct.

Senator HICKENLOOPER. For how long do you make those leases, customarily?

Mr. SCHLEMMER. Those leases vary. I believe most of them are for 25 years. I do not want to indicate that as being a fully accurate statement.

Senator HICKENLOOPER. Will you be here next week, Mr. Schlemmer?

Mr. SCHLEMMER. I do not expect to.

Senator HICKENLOOPER. That is the only reason I want to ask you these things at the present moment, unless there will be somebody else here from the Commission who knows the answer to these things.

Do you know, Mr. Wilson?

Mr. WILSON. We know some of them. Mr. Schlemmer knows more than we do, obviously.

Senator HICKENLOOPER. Under what conditions can you deprive a man, or discontinue his operations, short of the period for which he contracts to operate, say, a 25-year period, or 15-year period, or whatever the contract period is? Under what conditions can you stop him from operating?

Mr. SCHLEMMER. I am unable to answer that question, Senator. I just do not have the answer in my mind.

Senator HICKENLOOPER. Next week, when we go into this, can we get the answer to that?

Mr. SCHLEMMER. I am sure we can; yes, sir.

Senator HICKENLOOPER. In other words, I am trying to find out what sort of risk a private operator has to take when he goes in to invest his money there in an enterprise.

Mr. SCHLEMMER. Yes, sir.

Senator HICKENLOOPER. Now, does the Commission—or is it the policy of Hanford to restrict the number of good competitive businesses of a particular type; that is, do you say there shall only be so many barber shops, or there shall only be so many grocery stores, or that there shall only be so many clothing stores or theaters, or anything of that kind, or do you say that anybody who wants to come in and risk his capital shall have the right to do so?

Mr. SCHLEMMER. It is not only not merely a policy of not restricting the number of commercial entities which may come into Richland if they so desire, but, contrariwise, it is a policy of the Commission—and, consequently, one of the Hanford field office—to encourage the development of that community to the highest possible state of normalcy, comparable with other American communities, as conditions will permit.

Now, there are many difficulties attendant on that, most of which we recognize and some of which will probably crop up because they are not now evident.

But our objective is to bring the highest possible degree of normalcy to the community.

Senator HICKENLOOPER. In other words, if a grocery store was operating under this private-enterprise system, and you, as the manager—I mean, assuming your authority as the manager—believe that was adequately serving the community, and somebody wanted to put up a competitive grocery store across the street where the land was available and he was willing to put his own money into it for a period of time, is it your policy to say, no, we have adequate service here in this particular field, and we do not need the additional facilities?

Mr. SCHLEMMER. At present, it is not our policy to do that, sir. However, as you will of course recognize, we must approach the situation, the objective, from the standpoint of trying to provide first things first at this particular stage.

Senator HICKENLOOPER. Yes.

Mr. SCHLEMMER. Therefore, we are encouraging the development of merchandise stores, food stores, various forms of recreational services, motion-picture houses, and things of that particular nature.

Senator HICKENLOOPER. Now, there is one other field that you may not be prepared to discuss at this moment, but I merely mention it because I would like to pursue it at a later date. You have a newspaper operating out there; do you not? In other words, it is paid for by the Government?

Mr. SCHLEMMER. Oh, indeed not, sir; no, sir.

Senator HICKENLOOPER. Isn't there a newspaper operated by the general contractor there, or through subsidy of one kind or another?

Mr. SCHLEMMER. Do you refer to the Villager?

Senator HICKENLOOPER. Yes.

Mr. SCHLEMMER. A weekly newspaper?

Senator HICKENLOOPER. Yes.

Mr. SCHLEMMER. No, sir; that is not operated by the contractor, nor by the Commission.

Senator HICKENLOOPER. Is that completely operated by private capital?

Mr. SCHLEMMER. It is operated by non-Commission or noncontractor capital. It is operated by an organization known as Villagers, Inc., which is a group of citizens. It originally developed into this organization for the purpose of developing funds through which certain forms of recreation and the like would become available to the total community.

Senator HICKENLOOPER. Is there any subsidy paid directly or indirectly by the contractor or reimbursed to the Government?

Mr. SCHLEMMER. There is no such.

Senator HICKENLOOPER. Has there been in the past that you know of?

Mr. SCHLEMMER. The only thing I know of in the past, Senator, is—I cannot identify the date, but it is a considerable period back—at which time there was no opportunity for this so-called altruistic organization to secure newsprint. Some was secured—the amount of which I am unable to say at the moment; I just do not recall—through the Federal Bureau of Supply. That covered, I believe, only a period of a few months.

Subsequent to that, the officers of the General Electric Co. were called upon by Villagers, Inc., to assist in the procurement of the necessary paper stock. The records of the contractor and those of the Commission indicate that the Villagers, Inc., paid for that newsprint.

Senator HICKENLOOPER. The paper was distributed free; was it not?

Mr. SCHLEMMER. It may have been initially. It has not been since I have been there. It is distributed on a subscription basis.

Senator HICKENLOOPER. I do not know about this, so I am not making any positive assertions; but I understand that those they collect from they collect from, but otherwise it is distributed free.

Mr. SCHLEMMER. I do not think that is the correct impression, sir.

Senator HICKENLOOPER. As I say, I cannot verify that one way or the other. It is contemplated that that paper will become a daily paper soon?

Mr. SCHLEMMER. It is not, sir; no, sir.

Senator HICKENLOOPER. Do you know anything about the accusation that in one way or another, through whatever means may be used,

this paper was able to secure newsprint on the basis of—what would it be, \$90 a ton, or something of that kind—whereas the competitive newspapers that would like to operate in that area are having to buy newsprint on the black market at, say, \$180 or \$210 a ton?

Mr. SCHLEMMER. I am aware of that accusation; yes, sir. However, whether it is a correct one or not, I do not know.

Senator HICKENLOOPER. Have there been some efforts made for competing newspapers to come into that area?

Mr. SCHLEMMER. It was decided by the Commission representatives at Hanford at the time that at such time as the need for a daily newspaper within the Richland community itself became evident, invitations to submit bids would be made to all interested parties. That is the policy of the present management at Hanford.

Senator HICKENLOOPER. But in this case the question of newspaper competition—the Commission does have the right to say whether there is need in the community for it, and does not leave it up to the hazards of free competition if somebody wants to invest his money?

Mr. SCHLEMMER. I do not know that I can answer that question specifically, Senator. A business entity is the basis on which we generally view that situation at the moment. There seems to have been over a period of time a considerable interest on the part of numerous newspapers to establish a daily newspaper in Richland. Therefore, a choice by the contractor or by the Commission of anyone would certainly not seem to be the correct approach.

If that is true, therefore, the proper approach would be to permit open competition in the choice of daily newspapers.

Senator HICKENLOOPER. I do not think this is a positive statement, because I am merely repeating what has been said to me. It may not have any basis in fact.

But it has been repeatedly told to me, both from people in Richland, in Hanford, and otherwise, that the Villager is in the nature of a house organ, and it is the fair-haired boy or the fair-haired child of the operation; and that great discouragement is placed in the way of anyone who wants to come in there and start an independent daily newspaper.

Now, again let me make clear, I am not saying that is the case. I am merely saying that is what has been told to me on several occasions.

I have also been told this: As long as we are taking our hair down we might as well talk about it.

Mr. SCHLEMMER. Surely.

Senator HICKENLOOPER. That any other newspaper that attempts to get news items in the operational area in Hanford, finds almost a closed door, but the Villager seems to be able to get news items with great freedom and very voluminously. In other words, indicating, according to these reports or statements to me, that the Villager occupies the favored position and that there is very little free and open competition in the collection of news at Hanford. I know nothing about it. I have had no personal experience with it, and I do not assert that that is true at all, but as I say, as long as we are taking our hair down, those are the things that have been told to me about the newspaper situation out there.

Mr. SCHLEMMER. Yes, sir.

Senator HICKENLOOPER. And that it is practically a closed corporation.

Mr. SCHLEMMER. The same facts have been told to me, Senator, from a single source. To the best of my knowledge and belief, as a result of careful inquiry into the situation on my part, I do not consider them to be factual. That is based on the information available to me up to this time.

Senator HICKENLOOPER. I have no independent judgment on it at all.

The CHAIRMAN. We will have that gone into later.

Senator HICKENLOOPER. Except that it has come to me more than one time from more than one source.

Mr. SCHLEMMER. Yes, sir.

The CHAIRMAN. I think this all indicates the need for a further meeting.

Mr. WILSON. Mr. Chairman, can you give us any idea when this further meeting may be?

The CHAIRMAN. The first of the week.

The committee will now adjourn.

(Whereupon, at 5 p. m., the committee adjourned.)

# ATOMIC ENERGY COMMISSION CONTRACT POLICY

MONDAY, FEBRUARY 21, 1949

CONGRESS OF THE UNITED STATES,  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The committee met at 10:30 a. m., pursuant to call, in room 457, Senate Office Building, Senator Brien McMahon (chairman), presiding.

Present: Senator McMahon (chairman), and Representatives Durham (vice chairman), and Holifield.

Also present: Lewis L. Strauss, Commissioner; Carroll L. Wilson, General Manager; Walter J. Williams, Director, Division of Production, Atomic Energy Commission, and Wilbur E. Kelley, Manager, New York Operations Office, Atomic Energy Commission.

The CHAIRMAN. The committee will come to order. Mr. Wilson, I think you were to give us a general description when we adjourned.

**STATEMENTS OF CARROLL L. WILSON, GENERAL MANAGER, LEWIS L. STRAUSS, COMMISSIONER, WALTER J. WILLIAMS, DIRECTOR, DIVISION OF PRODUCTION, AND WILBUR E. KELLEY, MANAGER, NEW YORK OPERATIONS OFFICE, ATOMIC ENERGY COMMISSION**

Mr. WILSON. Mr. Chairman, on last Thursday when the first discussion of our contract procedure occurred before this committee, we discussed largely the Richland operations. I indicated at that time that I had a general statement to submit for the record which described our contracting policy and the general policy of the Commission in connection with the conduct of its research, development, production, operations through contractors.

This statement I think we submitted at that time and you indicated that this might be useful because the committee, on the basis of this, might raise certain questions at this hearing. I wonder what you would like to do; shall we proceed from that point?

The CHAIRMAN. Why don't you do that?

Mr. WILSON. Shall I read this statement, then, of our general contracting policy? The Commission welcomes this opportunity for such a discussion. As you know, we have from time to time in our reports to the Congress as well as in other published statements referred to the central role which contractors occupy in the atomic

energy program. We believe that it is important for the public generally and for American business to know and to understand the policies which we are following.

The Atomic Energy Act of 1946 left it to the Commission to determine, in the light of experience and prevailing circumstances in each case, whether its installations should be directly operated by the Commission or whether they should be operated by private contractors or organizations in accordance with the practice which had been initiated by the Manhattan District.

The Commission has been of the view—and we believe this view is amply supported by our 2 years of experience since we succeeded to the responsibility of the atomic energy enterprise—that we should develop as fully as possible the method of operating through contractual relations with private organizations. We have recognized that the high relative significance of weapon production and the necessary secrecy of large parts of the atomic energy program involve the danger that only limited scientific, technical, and managerial resources will be available to this most urgent new atomic energy enterprise. Such handicaps must be minimized and overcome if this country's rapid progress in the field of atomic energy is to be assured. Accordingly the Commission has looked to the basic policy of contractor operation as a means of developing wide and alert participation in the program by a growing number of private organizations, both academic and industrial.

By pursuing a basic policy of obtaining contractor operators the Commission has been able to draw upon the technical and administrative talents of a broad sector of the American economy. Operation of our plants and laboratories through established independent contractors not only gives to the atomic energy program substantial benefits from accumulated experience and established facilities; it also enlists the interest and the support of industry and universities for future private development. It has been our conviction that if atomic energy is to become a generic part of the American scene it should have its roots deep in the institutions which are so productive a part of American progress in science and technology.

To make full use of this industrial and university talent and know-how and to encourage the wide participation which is so necessary, the Commission believes that it must give the contractors a real job to do, and keep an appropriate balance with respect to such activities of the Government as are necessary to assure proper accountability and results.

These are general objectives of the Commission's program.

The identities of the contractor operators at the Commission's major facilities are of course well known to the members of the joint committee. At Oak Ridge the production and the laboratory facilities are operated by the Carbide & Chemicals Corp., while the Roane-Anderson Co. is the principal contractor for town operations. Up on Long Island, the contractor operator for the Brookhaven National Laboratory is Associated Universities, Inc., a nonprofit corporation organized by nine of the leading universities in northeastern United States. In the Chicago area the Argonne National Laboratory, operated under contract by the University of Chicago, is made up of 30 participating universities from the Middle West. At Hanford and at Schenectady, critical production and research operations are

carried on pursuant to a contract with the General Electric Co. At Los Alamos our contractor for the laboratory and its weapon work is the University of California, while a number of town and services functions are performed by Zia Co. The Mound Laboratory at Miamisburg, Ohio, is operated by Monsanto Chemical Co. You will recall that many of the activities carried on at these major installations are described in some detail in the unclassified fifth semi-annual report which the Commission made to the whole Congress on January 31.

The contracts covering each of these operations are cost-type contracts under which the Government reimburses the contractor for its actual costs and expenses of operations, plus, in some cases, a fixed fee. Because of the complexities of the operations, and the many uncertainties as to what the actual costs will turn out to be over an annual period no matter how carefully plans are made in advance, it has not been feasible for the work to be done except under a cost-type contract. Contracts provide for programs of work established by the Commission pursuant to its general budgetary programs. These work programs are reviewed by the Commission from time to time, and altered and changed in the light of changing circumstances, so that the work to be done by the contractor can be mapped out and planned in advance. Subject to controls, such as in the fields of costs and security, it is the desire and intention of the Commission to give encouragement to the exercise by the contractor of its own initiative and ingenuity, so that the atomic energy program will really have the full benefits of high-caliber management and know-how.

For the successful conduct of the plant operations carried on at the Commission's major installations, there is required a very large amount of supporting contract activity, both through prime contracts and subcontracts. Continued conduct of research programs must be assured. Necessary raw materials must be obtained for both research and production purposes. Plants and laboratories must be built. Machinery must be installed, some of it of a high order of complexity. Supplies and materials (off-the-shelf items, as well as items especially adapted to the atomic energy program) must be procured. Public utility services, such as gas and electricity, and rail, truck and air transportation, must be contracted for. Necessary community and housing facilities must be provided.

Day-by-day supervision and guidance of these activities is essentially the responsibility of the field offices of the Commission. The Commission has felt that the atomic energy enterprise requires broad delegation of responsibilities and authority to the managers of its field offices, who work closely with the organizations carrying on important work and who are responsive to the everyday realities of the operation. Five offices of operations have been established. One is at New York, which has as its primary function the preparation of feed materials for the plants, but in addition administers other types of contracts, including the contract with Associated Universities, Inc., for operation of the Brookhaven National Laboratory. The second office is at Hanford, where the major task is the production of plutonium. The third office was set up at Los Alamos, which, as you know, is the center of weapons work. The fourth is at Chicago to administer the contract for the Argonne National Laboratory and to serve likewise for the research activities at Ames, Iowa, and Berkeley, Calif. The fifth is Oak Ridge.

Each of these five offices has become a fully integrated organization, with considerable self-sufficiency for handling the extensive business operations, and for providing technical supervision of the activities in its area. Under our reorganization placed in effect last September, each of these five field offices reports directly to the director of one of the program divisions in Washington. The basic programs are developed and reviewed by the program divisions in Washington, subject to the review of the Commission. Within the scope of the approved programs it is the job of the field offices to enter into the contracts necessary to give these programs effective implementation. The extent of the contractual authority delegated to the five field managers varies because of differing situations; it is \$2,000,000 for New York and Chicago, \$3,000,000 for Los Alamos, and \$5,000,000 for Hanford and Oak Ridge.

The CHAIRMAN. Will you define what you mean by those limitations?

Mr. WILSON. As I stated, the programs, the activities to be undertaken, are reviewed and approved by the Commission following the preparation of these plans by these divisions, program divisions, in Washington.

In carrying out the work called for in executing the actual contract instruments under which the work is to be performed, the delegations of authority to the managers of operations are in the amounts I have indicated.

That is to say, the manager at Los Alamos in carrying out work approved by the Commission for which funds have been established and its scope defined in some detail, the manager at Los Alamos is delegated authority to enter into contracts, no one of which can exceed in amount of \$3,000,000 without full review by Washington. Many smaller contracts than this are submitted to the Washington office for review where they involve new and different provisions from those contracts we have used before.

The CHAIRMAN. In other words, if you wanted to build \$3,000,000 worth of houses, he would select the contractor, but the specifications would be written where?

Mr. WILSON. The initial preparation of the specifications would be at Los Alamos. The general project for the building of, let us say, 500 houses and the estimated cost of that and the utilities and site development necessary would be prepared as a part of the proposed budget for Los Alamos for the coming year.

This would be submitted to the Director of Military Applications in Washington first for his review, for review by the construction group of Mr. Walter Williams as to the nature of the houses, the degree of economy shown in the plans, et cetera.

Then, the project as such would be approved subject to the availability of funds. When the budget has been defended and the appropriation made and amount allocated for this purpose, it is then the responsibility of the manager of operations to, in this case, advertise or send out invitations to bid on the construction of these X-hundred houses. These bids are then opened in the procedure which Mr. Williams can describe in detail, the contract is awarded on the basis of the lowest bid, and on this type of job we would certainly expect a lump-sum contract.

The CHAIRMAN. In other words, not a cost plus?

Mr. WILSON. Not cost plus.

Mr. DURHAM. Mr. Wilson, why did you select this figure of \$3,000,000? Did you have any reason for selecting that as the top level?

Mr. WILSON. I think it is inevitably somewhat arbitrary, but it is based on the scale and character of the operations at Los Alamos.

Mr. DURHAM. Do you know of any other Government agency at the present time operating on a limit like that?

Mr. WILSON. No.

Mr. DURHAM. As I recall, we don't have any such contractual operation by any other department in the Federal Government. I think I am correct.

Mr. WILSON. I could not say as to whether others do. I think it is correct to say that the pattern of operation through these five field managers is novel in terms of a Government organization, and we have felt that it was appropriate, and our experience thus far, we believe, bears it out that authority to actually execute these contracts in these amounts—

Mr. DURHAM. Is the reason a saving of funds or is it some other reason? The Army or Navy doesn't do that.

Mr. WILSON. It is for the purpose of placing responsibility on the manager of operations for the full review and evaluation and determination as to how a given part of the program is carried out.

Mr. DURHAM. The manager of the operation has to direct it to you?

Mr. WILSON. The managers of operations at New York, Oak Ridge, and Hanford report to Mr. Williams, the Director of Production. The manager of production at Los Alamos reports to General McCormack. The manager at Chicago reports to Dr. Hafstad.

Mr. DURHAM. You have had that in operation how long, that procedure? It has been a year and a half or two years?

Mr. WILSON. It was about a year and a half since it was made fully effective. I think the last operations office was set up as an integrated business operation, set up in September 1947.

Mr. DURHAM. Do you feel that by now you can evaluate it as to whether it is saving the Federal Government or not?

It is a little bit different contract procedure from anything else we have run into.

Mr. WILSON. We believe that the results of this manner of conducting our major contracting business are very satisfactory. As to savings, I think it is hard to show a direct comparison of what the cost might have been if all of these contracts and the details and the responsibility had come into Washington for review and approval as contrasted with holding the manager of operations responsible for doing these things; but I am sure that considerable time has been saved; I am sure that there has been better supervision and decision on the award of these contracts, because the responsibility was in the hands of the manager, who was thoroughly familiar with the local situation.

Mr. DURHAM. If you give a contract for \$3,000,000 and another contract for \$3,000,000, and probably you have given him authority to contract for a billion dollars on such a procedure, because the contracts are different.

If he contracted for \$3,000,000 worth of houses, \$3,000,000 worth of something else, that would be a separate contract, and he wouldn't be limited by anything but the \$3,000,000.

Mr. WILSON. There is an over-all limitation in terms of dollars that are laid down and approved for carrying out these programs. There are so many dollars allowed for the building of houses, a project for X-hundred houses. His authority is to send out the invitations for bids, carry out the review procedure on the receipt of those bids, to determine the contractor, the lowest bidder to be awarded the job and the authority for the \$3,000,000 contract is for him to execute the contract instrument with the successful bidder.

Mr. DURHAM. You understand, I am not criticizing, I just wanted to get it clear.

Mr. WILSON. We believe that the fact the manager is responsible for this insures first a better organization in the field, because the responsibility is there, and the most careful kind of consideration there of the elements that go into a given contract.

It certainly minimizes the tendency, which often characterizes field establishments who do not have authority of passing all of the tough and major decisions up the line to Washington. We think that we get a better job, and we believe that it is more economical, although that is hard to demonstrate in quantitative terms.

The CHAIRMAN. Now, is it \$5,000,000 in the case of Oak Ridge and New York?

Mr. WILSON. Hanford.

The CHAIRMAN. Oak Ridge and Hanford? Do you know of any industrial concern in the country that gives its branch managers a \$5,000,000 authority, to select contractors up to \$5,000,000? United States Steel or General Motors or any of the larger corporations in the country.

Commissioner STRAUSS. Might I answer that?

The CHAIRMAN. Yes.

Commissioner STRAUSS. It is fair to say there is an analogy between these branch managers and, let us say, the president of Chevrolet or the president of Buick in the General Motors organization. There is certainly that authority, and it is at a higher figure. I think that is the nearest that you can come to an analogy here.

The CHAIRMAN. I think that is a good observation, but it is, however, as Mr. Durham pointed out, a Government innovation; is it not?

Commissioner STRAUSS. Yes, it is an innovation, and, as the General Manager testified a moment ago, when he mentioned the fact that an important element was the fact that these contracts could be entered into and completed more quickly, expedition is one of our major aims for reasons with which the joint committee is well acquainted.

The CHAIRMAN. Does the branch manager fix the amount of the fee that is paid?

Mr. WILSON. Where it is a cost-plus-fixed-fee, contract he negotiates that fee within general limits, which are provided to him by the Washington headquarters. There is a curve of fees and the factors which go into making up these fees, which is provided by Washington, and that is his guide as to the ceiling.

Now, we do not make this schedule of fees public, it is confidential for our managers, for the reason that in general if the limits were published, there wouldn't be much room for negotiation.

The CHAIRMAN. I appreciate that. Now, I won't ask you publicly what your limitation is, but I would like to ask you what factors you consider in making that.

Mr. WILSON. The actual fee curve is in the manual which I think has been sent to your office. Might I ask Mr. Williams to describe the factors which go into the determination of the fee? Mr. Williams is Director of the Division of Production.

The CHAIRMAN. I would also like to have the amount of fees that are being paid to the major contractors.

Mr. WILLIAMS. I don't know if I have the answer to the last question here, but we can furnish it. The manual, which we have sent the chairman, describes the fixed-fee contracts and the method of selecting the contractors and the items that go to make up the fee.

Now, first, we have to consider the job to be done, whether it is a complex job or whether it is an ordinary run-of-the-mine job. If it is a job like building a cantonment or building an ordinary warehouse building where there is no complexity, that would call for one factor in the fee.

The CHAIRMAN. I thought those kinds of contracts were on a lump-sum basis where there wasn't any complexity.

Mr. WILLIAMS. I would say in some instances we have to let an over-all contract in which this type of work is a very small factor but is included in the over-all contract. Where we have specific jobs consisting of houses or warehouses where we can separate it, then we treat it as lump sum, but if in connection with the over-all operation as at Hanford there is a powerhouse or small operating building, that is lumped in and we separate those items to determine what portion of the over-all that amounts to and make a deduction.

If the process is very complicated, like a complicated chemical process, then we give them the whole fee. Ranging from the most complicated down to the buildings I have just described we make certain deductions from the fee curve we have determined.

We also consider other factors of the contract. That is, how much we have to pay personnel, are they furnishing to us a top executive, maybe a corporate member of the firm, to supervise the work? If they are and that is not included in the reimbursable cost, and as a rule we don't permit it to be included, then that is considered in the fee.

The number of such people that might be furnished on a given job would be considered. One, two, and three might be giving part time to the job.

We also consider the items going to make up the labor relations part of the contract as to what is the custom of the contractor for paying people who have to be moved on the job, that is, per diem for a certain length of time. If those charges run high, the fee, of course, will get some reduction. If it is normal, we don't deduct.

The amount of equipment that the contractor will furnish on the job is also considered. The amount of subcontracting that the contractor will do. If we does all the work himself and furnishes the key people, then he will get a given fee. If he subcontracts 20 or 30 percent of it, his fee is reduced because that means that we will be paying a profit somewhere else for that work.

All these items go to make up the fee.

The CHAIRMAN. How do you determine the overhead allowances?

Mr. WILLIAMS. Overhead allowances on construction, which I have been discussing here, we just haven't allowed. To my knowledge, we do not permit them.

On operating contracts where an operation is such that there is a considerable effort required from the main office—that is, we might require a certain amount of work by the top labor-relations personnel or by some of the vice presidents in charge of research or design or something like that—and where there is a considerable amount of paper work that might go on in the head office due to the nature of the work, we have tried before the negotiation and during the negotiation to have our auditors to actually check into the claims of the contractor as to what these services would amount to and arrive at a formula so we could give a lump sum which would cover, not completely but equitably, the charge which they claim will have to be made for that type service.

We don't take their word for it. We make a check. We have our auditors make a check, and sometimes some of the legal department will go over their books and records to see what it has been costing for the type of work which they claim they will be doing in their office, and we arrive at the lump sum usually on that basis.

Mr. WILSON. I might say that the sum which is set up is a portion of the audited contract. This is an estimate in advance of what, let us say, the overhead of the home office on an operation away from the headquarters of the home office may be.

This is subject to audit and an actual determination of what the overhead was, so that I think, Mr. Chairman, you asked the other day, or you referred to the General Electric contract—I might mention that very briefly here because it illustrates a type of contract which we have very recently discussed with the General Electric and believe that we can and should work out a more satisfactory way of accounting for both fee and overhead.

You will recall that the Du Pont Co. designed, built, and operated the Hanford works, and after the war they indicated that they would like to exercise the provision in their contract which would allow them to get out after the war was over.

The Manhattan District, we understand, then looked around for a contractor-operator for the Hanford works and decided that the General Electric Co. would be qualified and negotiated a contract with them whereby they took over the operation of the Hanford works, and also undertook to build the Knolls Laboratory in Schenectady.

There was one contract with GE for the total job it did operating the plants at Hanford, operating and managing the community at Hanford, at Richland, supervising the construction of new plant at Hanford; design, construction, and operation of the laboratory and reactor at Schenectady. This was one total contract which was a cost reimbursable contract with a fixed fee of purely nominal amount, \$1, but with an overhead allowance of \$200,000 a month toward their home-office overhead on this total job.

The contract provided that at the termination of this contract the overhead allowance and the items chargeable against that would be audited by an independent firm of auditors and according to what was sound accounting practice in terms of charges against overhead with

a provision that the remainder in excess of what actually turned out to be correct overhead charges would be returnable to the Government.

On the other hand, if the amount charged had exceeded that, then there was no claim against the Government. We feel that, first of all, it is desirable to try to work out an arrangement whereby the several parts of the job which the General Electric Co. is doing be made the subject of separate contracts, to be sure, with common provisions in many respects, but the operation of the plant at Hanford is a quite different type of thing from the design, construction, and operation of a laboratory in Schenectady.

We had a meeting with the General Electric officers on Saturday, this past Saturday, and have a meeting set for March 18, at which we are going to review this whole contractual arrangement and at the same time consider what would be appropriate or more appropriate as a fee and overhead arrangements. We believe for certain types of operations it is appropriate and right to pay the contractor a definite fee, not a nominal fee.

Mr. DURHAM. Suppose you let a contract and, of course, you have some form of binding contract, and it is drawn up. When the General Manager thinks there should be some change in it, does the General Manager have authority to change that contract?

Mr. WILSON. No. First of all, any changes or amendments in the contract must be approved by the man who executed the contract at the outset, and that is, in the case of the GE contract, myself; and in the case of contracts not in excess of the limit we have discussed, it would be the manager of operations.

Mr. DURMAN. That has happened in contracts for service, that you have had to change them from time to time?

Mr. WILSON. Yes; we have had to amend them.

Mr. DURHAM. That is done by the Commission?

Mr. WILSON. That is right.

Mr. HOLIFIELD. Mr. Wilson, what authority does Mr. Williams have over these managers of the different projects? Maybe I should say what responsibility, also, does he have?

Mr. WILSON. Mr. Williams, as Director of the Division of Production, has responsibility for supervising the managers of raw materials. He happens to be in Washington; the New York office, that is Mr. Kelley; Oak Ridge, Mr. Franklin; and Hanford, Mr. Schlemmer. And they report to him. His delegation to them is broad, but he is responsible for the programs carried out at each establishment, for the budget of funds, for the general supervision of the financial operations and accounts at each establishment, and for review and approval of changes in those plans and programs.

Mr. HOLIFIELD. Of course, he consults with you on the progress of the work and such changes as may be desired?

Mr. WILSON. Yes.

Mr. HOLIFIELD. In other words, although this authority is given to the manager up to \$3,000,000, \$5,000,000, in such as Mr. Williams you have a constant supervision at the site and a constant report to the Commission on the progress and on any necessary changes.

Mr. WILSON. Mr. Williams is on my staff in Washington; and Mr. Kelley and Mr. Franklin at Oak Ridge, and Mr. Schlemmer, they are the managers of operations in the field, reporting to Mr. Williams.

So, there is constant supervision from Washington and daily consultation between Mr. Williams and Mr. Shugg, the Deputy Manager, and myself.

Mr. HOLIFIELD. Are those persons you mention at the different sites authorized to sit in with the resident manager on his negotiation of contracts?

Mr. WILSON. Oh, yes.

Mr. HOLIFIELD. There is the constant knowledge of the procedure involved in negotiating contracts?

Mr. WILSON. That is correct.

Mr. HOLIFIELD. On the part of the actions of the manager?

Mr. WILSON. Yes; I think it is certainly true; whereas, no contract for any substantial project is signed which hasn't informally at least been discussed with various people in the Washington office and does not conform to the funds and scope of the job which has been approved in the Commission's program and budget.

Mr. HOLIFIELD. There is no danger of the local manager arriving at independent decisions which are out of line with the general approved budget limitations, then?

Mr. WILSON. No; I think there is not. I think it is correct to say that in delegating responsibility to the manager of operations, he does not do everything precisely as Mr. Williams would do it or as I would do it, but he certainly has the guide lines of policy, of program, and of the budget and the very considerable fabric of contract provisions and policies which guide his action.

It might be of some interest to the committee for Mr. Kelley, whose office has the largest number of contracts of any office of operations, to describe how he actually handles the selection of the contractors, the negotiation of contracts, and assures the conformance of what he does to the budget and to the policy of the Commission.

Mr. Chairman, I was inquiring whether it might be of interest to the committee if Mr. Kelley, whose office handles the largest number of contracts of any operations office, were to describe, as a manager of operations, the manner in which contractors are selected, contracts negotiated and executed, and how conformance to the policies and budgets and programs of the Commission is assured by these actions.

The CHAIRMAN. It would be, but I have several questions, Mr. Wilson. I note in your statement there is mention that the AEC is staffed for technical supervision of the work. In regard to the technical staffs of the contract organizations, does that lead to duplication?

Mr. WILSON. I think not. Technical supervision on the staff of the manager of operations varies considerably from one office to another.

Let's take the Chicago office. I believe the manager there has two technical people on his staff who, in a sense, service and handle reports and serve liaison between the Divisions of Research and Biology and Reactor Development in Washington and the contractor.

Take another example. On the staff of Mr. Kelley in New York he has a group of people experienced and knowledgeable in the field of production of feed materials, because, as you remember, the actual production of feed materials is carried on at a number of different places between New York and the Middle West, and his people in that case provide technical production supervision of the operations at various places in terms of coordinating them, seeing that production of one plant meets the specifications of the next plant.

The technical staffs at the offices of the managers of operations are very small and I think in no sense duplicate the work of the contractors.

The CHAIRMAN. How does your set-up compare with the ones employed by the Navy and the Air Corps with plane manufacturers and shipbuilders? Did you refer to the procedures of the Navy and Air Force before you went into this decentralization program?

Of course, I realize they are contracting for billions of dollars' worth of material and a good deal of research, too. They have something of a comparable operation. I wonder how closely you coincide with their operation.

Mr. WILSON. I think that I am familiar with certain parts of the Navy and Air Force contracting procedure and authority delegated to their field establishments like Wright Field and other places. I think other members of my organization are perhaps more familiar than I am.

I believe that the plan which the Commission has worked out for these offices of operations involves much greater delegation of authority to the field than exists in either the Air Force or the Navy. I think perhaps in part this is illustrated by the relative size of the personnel in these various operations. There are in total somewhat less than 700 people in the Washington headquarters. Now, there are in some cases considerably larger numbers of people at some of the Commission's offices, at Oak Ridge and Los Alamos.

The CHAIRMAN. Larger number, did you say?

Mr. WILSON. There is a larger number at Oak Ridge than there is in Washington. As to the total personnel of the Commission, about 80 percent are not in Washington. This is, I think, quite different from the ratio of personnel in either the Air Force or the Navy contracting procedures. I believe that Commissioner Strauss knows very much more than I do about how the Navy contracting procedure is handled, particularly through the Bureau of Ordnance and the shipyards and navy yards.

The CHAIRMAN. Seven hundred in Washington? Does that include the security force?

Mr. WILSON. It includes our own directly employed security forces, but not the Public Building Administration guards, which we obtain on a reimbursable basis from PBA.

The CHAIRMAN. There was a report from the industrial advisory group in which it seems they made some criticism of the fact that the Commission wasn't getting out enough industrial information. Are you familiar with that report, Mr. Wilson?

Mr. WILSON. Yes, I am, Mr. Chairman.

The CHAIRMAN. Have you done anything about it?

Mr. WILSON. I can describe several things which we have under study at the present time designed, we hope, in part to build upon the very good recommendations in many respects which are contained in the report you refer to. I think it is true that in the information which has been declassified the preponderance of that information is basic scientific information, as compared with information of an industrial technological kind.

In the past we have done some things which have not been very fruitful thus far. Last year we invited a number of the technical editors of the engineering and industrial trade journals and professional

society journals to visit Oak Ridge and to examine some of the work there, which was largely unclassified.

It seems to us now that there is merit in an idea which we are presently considering of inviting the engineering and professional and technical journals to designate certain of their membership to be cleared by us to review the classified and unclassified information in our general technical library at Oak Ridge to determine what items would be of particular value in various industries.

We feel that the editors and people who are closely associated with the technical journals like *Metals Progress* and the *Electrical Engineering Journal* and metallurgical journals will be aware of the items of technology in our volume of information which would be useful to industry at this time. The first need is to identify those items. We can then consider whether they can be declassified at this time, and we would hope in this way to provide for review of information on industrial technology, which has not been declassified, which might be very useful to industry if we knew that fact and which, knowing of its value to industry, we could then have something more to weigh in the balance of whether it can be declassified.

We have also been studying proposals in regard to industrial advisory committees or liaison groups with certain industries under which we would invite groups to visit our production plants and laboratories and perhaps provide training courses for people there so that they would have a fairly deep understanding of what the nature of this operation is and could advise and suggest ways in which further bonds with industry could be built up.

We also think that perhaps one of the most valuable ways of broadening industrial participation is through actual doing and a step in that direction which has been announced recently was bringing in the Westinghouse Co. in the engineering, design, and construction of this Navy-type reactor power plant.

The CHAIRMAN. Have you published the size of that contract?

Mr. WILSON. I don't think we have.

The CHAIRMAN. That is all right.

Mr. DURHAM. You are subject to the General Procurement Act?

Mr. WILSON. Yes, sir. As far as the AEC is concerned; and our prime contractors make a number of purchases, and they are subject to the general policies which we provide for them, but AEC purchases are generally subject to the Federal Procurement Act.

The CHAIRMAN. You mention that private enterprise is beginning to come into the field and risk some of its own capital. Can you give me an idea as to how extensive that is and give specific examples?

Mr. WILSON. There are three areas. This is very small. It is a hopeful beginning but it is not large in money yet.

One area is in the production of radiation instruments, radiation detection instruments. There are now over 40 companies in the country which make radiation detection instruments of various kinds, and their market is users of isotopes throughout the country, our various laboratories and plants, and this has grown from a very small group of companies whose development work was in large measure financed during the war by the Manhattan District into this group of 40 pretty self-sufficient, highly competitive industrial concerns.

The CHAIRMAN. They manufacture Geiger counters?

Mr. WILSON. Geiger counters, scalars—the whole gamut of modifications and variations of those two fundamental instruments.

Perhaps Mr. Williams knows the size of the investment this represents. Do you have any figures, or the size of the business they do?

Mr. WILLIAMS. We have been purchasing from two to four million dollars of these instruments. Now, the contractors, on the other hand, purchase in addition to that, and I don't know the figures on that, but there are a number of small units. In some cases they were scientific personnel who worked in developing original meters and then started in one room with their own business. They have produced very fine instruments, have grown to small companies now, and are continuing the work.

We have tried by centralizing the control of the radiation detection instruments in the beginning to develop industries throughout the country to do this type of work and also try to coordinate with the Army and Navy and Air Force, et cetera, to see that we were not in competition with each other and that developments which the Atomic Energy Commission, for instance, had made were available to the other agencies, and vice versa.

This we have done, but at the present time we feel that we have developed enough companies now, small though they are, to decentralize this procurement and a certain amount of the development to our various area offices and let them carry it on, still having a central office that receives the orders which they place, a copy of those orders, sufficiently in advance to be able to advise the office making the purchase if there is already a contract for that type of instrument that might be more favorable.

Mr. DURHAM. Do you know whether or not they are meeting the over-all demand at the present time?

Mr. WILLIAMS. So far as we are concerned, they are meeting the demand.

Mr. DURHAM. Have the armed forces asked you to standardize this equipment?

Mr. WILLIAMS. After a committee composed of representatives from the armed forces and AEC that met frequently to discuss and go over designs and developments in this field, in some cases we have done some work for the Navy. I believe in the future that they are going to coordinate their development and design very closely with us, but they will probably go out more than they have in the past in letting their own orders.

Mr. DURHAM. Are they making them in the Army plants at the present time?

Mr. WILLIAMS. I could not answer that offhand. The radiation detection instrument is something you can make one or two of in any corner if you have someone that knows the principle, and I would suspect they are doing that.

Mr. DURHAM. This is an important instrument to national defense. Do you feel like we have reached a point in this where we can standardize it?

Mr. WILLIAMS. We have reached the point where we can standardize on certain types of instruments, but we have not reached the point in the over-all problem of atomic energy where we can say that we don't need any additional instruments, because every day, you might say, we are learning of additional requirements.

Mr. DURHAM. I understand that, but what about detection instruments?

Mr. WILLIAMS. For detection we do have standards. The citizens feel that we have reached the point where we have standardized for commercial purposes.

Mr. WILSON. May I comment on that, Mr. Durham? I feel that a good deal of progress has been made in developing fairly simple, rugged, reliable instruments. I think that there is work yet to do in developing an instrument which is capable of very large mass production and usable by a relatively untrained person.

This is an important project. We have some work on it, and more must be done, because we must, in terms of the civil-defense picture, have instruments of this type designed and developed so that they can be procured in large quantities and made widely available to various parts of the country and used by people who will not have a physics degree.

Mr. DURHAM. Do you require all these universities that ship this fission material to you to have these instruments?

Mr. WILSON. Yes, sir.

Mr. DURHAM. That is a requirement?

Mr. WILSON. That is a requirement. No one can purchase isotopes, for example, unless he has the necessary instruments for measuring the level and handling them safely.

Mr. HOLIFIELD. Mr. Wilson, is there any educational program being developed on the part of the Atomic Energy Commission to acquaint the civilians in potential target areas as to how to use these radiation detection instruments?

Mr. WILSON. I do not know that I can answer that specific question. Mr. Williams?

Mr. WILLIAMS. We have been working on a plan which has not been placed in operation yet, because there is some question as to the responsibility of the armed services for some of this work. But we have been working on a plan whereby there would be at each area operations office—that is, each office like Oak Ridge, Hanford, Chicago, Los Alamos—gathered together a stock pile of instruments which could be rushed to a danger area very readily, and we have been drawing up a plan whereby we would have approximately 100 people, a good force at each installation, thoroughly trained in the handling of these instruments and in the interpretation of the reading that they might get on the instrument, so that they could be rushed to an area that might need them. That would be the first start.

We have conferred with the National Military Establishment on this, and I am quite certain they will want to take some part in it also. But this plan is being worked up at the present time.

We do have, at Oak Ridge, a certain stock pile of various types of instruments. I could not tell you offhand how many of each. But we do have a stock pile that can be distributed immediately in case they were needed.

Mr. HOLIFIELD. We have certain strategic defense installations in this country which might be the target of an enemy attack, such as the Norfolk Naval-Hampton Roads installation. In case a bomb should be exploded in the Hampton Roads Naval District are there any protective plans at this time for the civilians in that area to offset such an attack?

Mr. WILSON. Mr. Holifield, I believe in the report which Mr. Hopley made to the Secretary of National Defense and which was issued late last fall, there is reference to some of the measures of civil defense in relation to atomic warfare which should be observed when the pattern of how civil defense is going to be organized in this country is set up.

I believe as far as the Commission has participated, or is aware, there is no plan in existence today, other than one that may have been developed by the Navy Department in relation to that Hampton Roads area which would provide the kind of local instruction and education as to what can be done in the event of an atomic bombing attack.

We are collaborating with the National Military Establishment now in the preparation of a handbook, so-called, on the radiological and blast effects of weapons, which represents the kind of data in regard to radiation levels and blast and the like, and effects on structures, which is necessary information for local planning to deal with the consequences of atomic attack.

This is in preparation now. Perhaps Mr. Lilienthal mentioned it at the time of our hearing a couple of weeks ago. It will probably take 3 or 4 months before it is completed and ready for issue.

Mr. HOLIFIELD. I am glad to hear that you are taking some steps to transfer some knowledge of how to protect civilian populations to the people themselves. I would like to know what type of distribution you plan on this information.

Mr. WILSON. This is planned as a published report. Presumably it will be printed by the Government Printing Office. It will be a publication jointly by the Atomic Energy Commission and the National Military Establishment.

It is the kind of a document which, in our judgment, if it turns out as we hope it will, is information which almost every community should have in studying its own local problem, because we hope that it will contain sufficient factual information rather than conclusions or prescriptions as to what to do, so that local study and action can be taken.

Mr. HOLIFIELD. I am glad you are thinking about this problem because many of us who have had an opportunity to see these bombs exploded at Bikini are somewhat concerned at the lack of information on the part of the general public and the lack of awareness of the danger that might be involved in an atomic bomb attack.

We think that the taxpayers who are going to pay half a billion dollars a year to develop atomic energy weapons should know something about the extent of their destructive capacity, and also something about how they can protect themselves, if they can protect themselves.

I think it is an important educational feature, and I hope your Commission is proceeding along the line of really giving some serious attention to this.

Mr. WILSON. We are. As I stated, it is the purpose of this report, which I described, to provide the factual information which will allow judgments to be made by medical people and structural engineers and other people in various localities as to the effects and the usefulness of various measures of protection or diminishing their vulnerability.

Mr. DURHAM. It should be in every community in the United States.

The CHAIRMAN. On the other hand, it will tell the other people how to protect themselves; will it not?

Mr. WILSON. That is true, Mr. Chairman. And the review of this document from the standpoint of determining the right balance between the disclosure of information not disclosed hitherto, which would be useful to other nations, and the disclosure of information to our own people so that they will at least have the knowledge as to what to prepare for, will take some time and will not be easy.

The CHAIRMAN. In other words, the difficulty is to give enough information to protect yourself without giving too much information so the other fellow can protect himself. Is that it?

Mr. WILSON. That is true, Mr. Chairman.

The CHAIRMAN. That is a most difficult task.

Mr. WILSON. It is a question that comes up in connection with the declassification of any item of information. It is particularly tough here.

Mr. STRAUSS. As an aside, the best protection will still be to be somewhere else when the bomb goes off.

The CHAIRMAN. That is prevention.

Mr. HOLIFIELD. I do not think the Commission will take the position that if there are protective measures that can be taken they will deny the knowledge of those protective measures to the American people just in order to protect our country from disseminating that information to some potential enemy.

Mr. WILSON. I believe there is, fortunately, a general mandate in the Atomic Energy Act which instructs us in relation to the control of information and other matters to so handle things as to serve the paramount consideration of the common defense and security.

It seems to me clear that the preservation of this country, the development of abilities to meet and cope with, in the light of knowledge rather than hysteria or mystery, attacks on this country, is of the essence in serving the common defense and security. This is not going to be an easy judgment, but what you state certainly has great force in weighing the judgments that have to be weighed here.

Mr. HOLIFIELD. As a matter of fact, referring to the comment that Admiral Strauss just made, the amount of protective information that you have at this time in relation to the destructiveness of the bomb, is so infinitesimal that you would not be revealing many secrets, would you?

Mr. WILSON. Not very many.

The CHAIRMAN. To go back to a more mundane matter: It has been testified to time and time again here that these operations are very unusual. I am talking about town operations. We have many company towns in this country, such as the Hershey town, in Pennsylvania; one at Climax, Colo.; one of the zinc company's towns at Palmerton, Pa.; the Reclamation Bureau, at Boulder City, Colo.; and the Pure Oil Co., in Venezuela; also the American Oil Co. in Arabia.

It seems to me that there ought to be some precedent to be useful for the Commission to look into the operations of these towns. I can see that the need for security in some of these towns at least is great. But I wonder whether the Commission has made any inquiry into other company towns to find out procedures and methods. Have they done so?

Mr. WILSON. We have had the advice of several consultants in city management and have reviewed the experience of certain other Government agencies which have towns. For example, Inyokern, Calif., is a Government owned, built, and operated town.

The CHAIRMAN. Which agency is that?

Mr. WILSON. That is the Naval Ordnance Department.

We have obtained some information—I think perhaps there is more information that we might obtain—from some of the industrial concerns which have operated company towns. I am sure you recognize that we are not in the business of operating towns because we like to. Unhappily it is one of the things that we inherited along with the rest of the operation, and the continued operation of plants and laboratories at Oak Ridge, Hanford, and Los Alamos is dependent upon the existence and continuity of the community, which is the housing, stores, schools, and the rest of it.

Our objective in relation to these communities has been first of all to develop an accounting system which would identify the charges, the costs, which were normal municipal costs, those which were the costs of real-estate management, and those that were county costs, and the remainder of which are properly chargeable against the plants.

Such an accounting system, an identical one, was set up and put into operation in each of the communities last July 1. We are beginning to get useful information from it. This has enabled us to identify the nature of the cost to the United States Government of these various parts of the operation. Our general objective is to try to move in the direction of making these communities less abnormal, more financially responsible, and, along with that, more responsible in terms of providing their own self-government.

The CHAIRMAN. Why have you not put up a management contract for building? There are many large real-estate management contractors in the country, such as Zia and Roane-Anderson, which have a monopoly on this thing. They have no opposition for management contracts; is that true?

Mr. WILSON. That is true. They were selected, as you know, at the end of the war to provide all sorts of services. These services have been gradually reduced.

At the present time at Oak Ridge, for example, we have taken steps so that the organization in our staff and in Roane-Anderson is divided along these lines of the normal municipal services, and the real estate management services, and the county services.

We have not, at the present time, considered seeking other contractors for these functions because we believe that the step to which we should go is to diminish the element of subsidy. In this connection we have made studies at Oak Ridge and Richland of rentals and have recently considered the results of this and the Commission has approved increasing the rentals fairly substantially to a level which will still be somewhat below the prevailing area rentals.

This will get the real estate in a form where it can perhaps be less of a drain, certainly less of a net loss at the end of the year.

As to the other things that Zia and Roane-Anderson and General Electric now do, we think that some of them can perhaps be better done directly by the Atomic Energy Commission when we know more about their costs and what the alternatives are.

At Richland, for example, we believe it is desirable to separate the operation of the plant from the operation of the town, and have discussed this with the General Electric Co. and are seeking to work out a plan there for dividing the town from the plant.

As to how it is best to handle the town there seem to be several alternatives. One would be merely to try to find another contractor to do all that General Electric is doing. We do not think that is the answer. Rather, we believe that an alternative which looks somewhat more attractive would be to take the municipal functions—which some day it is hoped the town, through its own government, will provide—do those directly by the Atomic Energy Commission, take the real estate management functions and consider whether those can better be done by hiring a real estate management firm.

We are working at this, Mr. Chairman. I do not claim we have gotten the best solution, or that we have gone perhaps as fast as we should. But our objective is to arrive at a point where, as nearly as possible—and this will still be only an approximation—these communities, at least I speak of Oak Ridge, Richland, and Los Alamos for a long time will be in a different category—but at least for Oak Ridge and Richland they will be reasonably comparable with communities in their region in terms of their own government, in terms of their financial responsibility, and in terms of their cost to the Federal Government.

The CHAIRMAN. I have been invited to go down to Oak Ridge on the 19th of March to participate in a ceremony marking the opening of the town. What are you going to do down there that day?

Mr. WILSON. I am glad you raised that, Mr. Chairman, because it relates to what I was just talking about. At Richland, when the place was originally built, the fence went around the plant, and the town of Richland had no fence around it.

The CHAIRMAN. You are talking about Richland?

Mr. WILSON. Richland, Wash. There was no fence around the town. At Oak Ridge a fence was put around the whole reservation, town and plants, all together. Obviously there were fences around the individual plants. But once within the town, or within the county area, people drove around on the various roads and there was relatively free movement.

In reviewing the security aspects of this, as well as the prospects of getting private investment in the town, it seemed to us at Oak Ridge that security would better be served by having a fence around the plant area in total, and not around the plant area and town as well. We have therefore arranged, or rearranged the fences, and on the 19th of March we will open the gates so that it will not require any pass or special privilege to get into the town, which will then be fenced from the plant area.

This, we think, will serve the security as well, and we also believe it is an essential first step in getting the town into something like normal.

First of all get the fence off; then people will consider making investments of private capital in commercial facilities.

At Richland, for example—I think Mr. Schlemmer mentioned this the other day—there are 64 organizations that are coming in with their own capital to build everything from gas stations to furniture stores.

We believe the same thing will occur at Oak Ridge and there are signs of it. But the first need is to get the fence off.

The CHAIRMAN. Will you, Mr. Wilson, give us a list of the major contracts, together with the management fees that have been paid in the last year? I am interested in the 64 that have come in there with their own capital. Who made the deals? How have they been made? What percentage of rents? And just what is the situation?

Mr. WILSON. Yes, sir. I will furnish that.

(The information to be furnished by Mr. Wilson is marked "Exhibit No. 5," and will be found in the appendix on p. 111.)

The CHAIRMAN. We will have to adjourn now, because we have a session. We will meet at the call of the Chair.

(Thereupon, at 12 noon, the committee adjourned, subject to the call of the Chair.)

# ATOMIC ENERGY COMMISSION CONTRACT POLICY

---

THURSDAY, FEBRUARY 24, 1949

CONGRESS OF THE UNITED STATES,  
JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The committee met at 10:30 a. m., pursuant to call, in room 457, Senate Office Building, Senator Brien McMahon (chairman) presiding.

Present: Senators McMahon (chairman) and Hickenlooper; Representatives Durham (vice chairman) and Price.

Also present: Sumner T. Pike, Commissioner; Carroll L. Wilson, General Manager; Walter J. Williams, Director, Division of Production, Atomic Energy Commission; and Wilbur E. Kelley, Manager, New York Operations Office, Atomic Energy Commission.

The CHAIRMAN. The committee will come to order.

I believe we are to hear from Mr. Kelley in regard to Brookhaven and the kinds of contract arrangements the New York Operations Office has for operation of that project.

## STATEMENTS OF CARROLL L. WILSON, GENERAL MANAGER, AND WILBUR E. KELLEY, MANAGER, NEW YORK OPERATIONS OFFICE, OF THE ATOMIC ENERGY COMMISSION

Mr. WILSON. Mr. Chairman, may I make a request before you begin? With reference to some remarks that Mr. Williams and I made on Monday concerning the position of the Atomic Energy Commission in relation to measures or facts concerning defense of civilian population against atomic attack, may I make a very brief statement which I think will clear up the misunderstanding?

The CHAIRMAN. Of course.

Mr. WILSON. I think under three brief headings, I can make clear the position of the Commission in relation to this subject.

First the Commission has a responsibility for making publicly available the facts about the effects of atomic weapons which can be made available with due regard to national security. Such knowledge is essential for making sound plans and carrying on effective operations in case of attack with atomic weapons. As we stated on Monday, we are gathering such information together in a Weapon Effects Handbook, and whatever parts of it may be generally issued without harm to security will be issued.

Second, the Commission is responsible for making plans for protection of people and property at the atomic energy installations in case of attack with atomic weapons. We have radiation detection instruments, and we have people trained to use them at these establishments. Of course, at the present time such instruments and people might be

able to give help to nearby communities. At a later time, a more extensive program now under study might be undertaken.

Third, the Commission is giving assistance to the civilian defense planning groups set up within the National Military Establishment last year to study the problems of civil defense and frame recommendations for organizing and operating civil defense programs. The Commission will assist the permanent civil defense agency in every possible way when it is established.

Thank you. That is all.

The CHAIRMAN. If I recollect what you said previously, this statement here doesn't contradict anything you said.

Mr. WILSON. I believe that is correct, but I believe there was perhaps some misunderstanding as to the extent of the responsibility of the Commission for general civil defense against atomic attack, and I thought perhaps this statement might clear that up.

The CHAIRMAN. I didn't so understand, when Mr. Holifield asked you that question, but that implication might be possible. I do not think anybody familiar with the subject believes the Commission is charged with the duty of actually carrying on the defense.

That, of course, is for the Military Establishment, the National Defense Establishment.

Mr. WILSON. That is correct. Thank you, Mr. Chairman. I just wanted to put this in the record.

The CHAIRMAN. It is probably just as well to be in the record. Do you have anything else?

Mr. WILSON. No; I have nothing else.

Mr. KELLEY. Mr. Chairman, I had not intended to restrict my comments to Brookhaven, since that is only one of the 250 contracts that we handle from the New York office, but I will be glad to start on Brookhaven.

The CHAIRMAN. I don't intend to restrict my inquiries to Brookhaven, either; but I assumed that is the largest contract you have, at least in the continental United States.

Mr. KELLEY. Dollarwise, that is correct, Mr. Chairman.

The CHAIRMAN. Yes.

Mr. KELLEY. As you know, at the end of the war, although 75 percent of the people trained in nuclear science were in the Northeast, there was no laboratory available for them, and, therefore, we couldn't take advantage of their special talents. For that reason the Brookhaven Laboratory was conceived and started.

We are using the site of the old Camp Upton, the Army camp out on Long Island. We have converted a lot of the buildings from their original purpose into chemical laboratories and metallurgical laboratories, et cetera.

The contract is an arrangement between the Atomic Energy Commission and a corporation that was formed especially for the purpose of operating that laboratory. The corporation is composed of nine of the large eastern universities: Harvard, Johns Hopkins, Columbia, Cornell, Massachusetts Institute of Technology, Princeton, Pennsylvania, Rochester, and Yale.

They formed a nonprofit corporation for the sole purpose of operating that laboratory. Since the formation of that corporation they have been engaged in the staffing of the laboratory and the planning of the operation.

As a part of the planning they have devised the major unit that we are installing out there. We are building a nuclear reactor, using normal materials similar to those we used at Oak Ridge during the war. This will give to us in the Northeast area a piece of research equipment that would not be available in any other way.

First of all, it is too expensive for any of these universities, which are among the largest, or any other university, to build, but we will make it available to all universities in the country really, but especially those in the Northeast that might have problems that they can solve only by the use of one of these nuclear reactors.

In addition to the reactor, we are building several pieces of auxiliary equipment. In years past they would have been special projects in themselves, but they are now auxiliaries to this principal unit. We are building a 60-inch cyclotron, a Van de Graff machine, which is another type of accelerator, and we hope within the next couple of years to complete the design and construction on what we are calling a cosmotron. That is our own name for a very large cyclotron type of instrument.

Those are the major instruments we are building.

Along with that, we are staffing——

Senator HICKENLOOPER. Is there a cosmotron being built at the University of California, at Berkeley?

Mr. KELLEY. Yes, sir; there is a similar device but in an entirely different energy range. We do not overlap in our energy output. The device at Brookhaven will be designed to reach an energy of approximately  $3\frac{1}{2}$  billion electron volts and the device at Berkeley will go up to 10 billion. They will be complementary, but will not duplicate in their fields of activity.

The staff of the laboratory at present is approximately 1,500 people. That is made up of about 1,100 administrative people or service people, and the remainder are scientists.

We are working in the fields of physics, electronics, chemistry, biology, medicine, but all in the nuclear field with specific application in these other general fields.

Our operating budget is approximately \$10,000,000 per year. That covers the salaries and equipment required for these scientists. We are trying a new, and I think a very interesting plan in insisting that the staff of the laboratory be made up of both visiting and permanent members. We want to avoid the pitfall of having a stagnant staff, and by insisting on the division of the staff between on-leave people from universities, we hope to work into the laboratory new ideas and new thoughts on a continuing basis.

The CHAIRMAN. Do the universities participate equally?

Mr. KELLEY. Yes, sir; there is no limit to the participation, and I should say with emphasis that we are not limiting the participation to these nine big schools that form the corporation. They did that to help us, really. It is a nonprofit arrangement. Their administrative people and their top scientists have devoted a lot of time.

The CHAIRMAN. How does another college in the area participate?

Mr. KELLEY. We have approached all of the schools in the Northeast, both by letter and by visit, and have invited them to take part. We asked them to send scientists to Brookhaven for training. We have invited them to send people there for periods of 2 to 3 years, if they can do it.

The CHAIRMAN. What kind of response have you gotten from that invitation?

Mr. KELLEY. Very good. We are at somewhat of a disadvantage because we have not completed these tools that the scientists will need. I am sure that when those tools are available we will have a waiting list. Even now, for our open conferences, we have had a very fine response. During the summer, last year, we held several open meetings, one devoted exclusively to biology, and there were several hundred that came to the laboratory and spent, I believe, 2 weeks discussing among themselves and learning this new subject. Part of it is new; the nuclear part is new.

I feel that this is a particularly good investment in that it is from such places as Brookhaven that we will get advances in fundamental science.

The CHAIRMAN. Basic research?

Mr. KELLEY. Basic research. Although we will carry out some directed research at Brookhaven, our emphasis will certainly be on basic research, and, as you know, during the war that is the part of our science that suffered most. We neglected it, because we had certain specific jobs to do. We directed our research toward the solution of specific problems, so there was little time for the kind of basic thought that is really needed to make real progress.

Now, we have recruited a good staff. The senior men are outstanding in their fields. The junior staff is enthusiastic, and I think they will pay off with a few years of training.

We are also making the laboratory available to graduate students.

The CHAIRMAN. What salaries do you pay your scientists?

Mr. KELLEY. Well, they are comparable to the university salaries in the area. That is the way we determined them. The universities making up the corporation discussed the salary scales among themselves, with our participation, and we arrived at a salary scale that is comparable to the university scale. It is not as high as industry would pay, but it is equal to the salaries that would be paid to comparable people in universities.

The CHAIRMAN. What do your top scientists get?

Mr. KELLEY. The Director's salary is \$14,000 a year, and the other staff salaries range downward from that. Senior scientists would get from \$6,000 to \$8,000, depending upon their responsibilities.

We, of course, have numbers of assistants in the laboratories that are skilled in one trade or another. We have sheet-metal workers, electronics men, machinists, tinsmiths, glassblowers, and those salaries are set in keeping with the prevailing wage in the area.

Senator HICKENLOOPER. Mr. Chairman, may I ask Mr. Kelley this: Does the Government furnish the housing there for rental to these people at Brookhaven?

Mr. KELLEY. We are not building housing on the area. We do not intend to get into the headaches of operating a town. We have encouraged the purchase of houses by the staff in the surrounding small towns. So far, we have been very lucky.

Senator HICKENLOOPER. Do you have any housing facilities at Brookhaven?

Mr. KELLEY. Yes, sir. I think we have 70 apartments that were built by modification of existing barracks buildings on the site. Those apartments, though, are for transient use only. They are not for permanent staff.

Senator HICKENLOOPER. The point is you are not going into a housing or town program at Brookhaven; is that right?

Mr. KELLEY. No, sir. We have contemplated the construction of a few houses off the area for transient scientists, but we do not expect to get into any kind of town operation. We have not constructed any facilities on the area for that purpose.

Senator HICKENLOOPER. You say "on the area." You haven't constructed any facilities any place else for that purpose, have you?

Mr. KELLEY. I wanted to explain more in detail these houses we proposed off the area. At present we have planned, and they will soon be under construction, 25 houses at Bellport, Long Island. Those houses will be for the use of scientists that are stationed at the laboratory, but in a leave status.

We didn't think it fair to insist that a scientist that knew he was to be there only 2 years should buy a house, so we will rent him one. This will not be a large operation, though.

Senator HICKENLOOPER. Those will be Government-owned?

Mr. KELLEY. Well, through Associated Universities, the corporation that is operating the laboratories.

Senator HICKENLOOPER. The Government pays for building the houses?

Mr. KELLEY. We pay the ultimate bill.

Senator HICKENLOOPER. It doesn't make much difference whose hands it goes through; does it?

Mr. KELLEY. Associated Universities will collect the rents and see that the houses are maintained.

Senator HICKENLOOPER. Where will the title of those houses be? In Associated Universities or in the Commission?

Mr. KELLEY. I am not a lawyer, but I believe the ultimate title is certainly ours, the Government's.

Senator HICKENLOOPER. These converted barracks apartments, how many did you say you had?

Mr. KELLEY. Seventy.

Senator HICKENLOOPER. Seventy apartments?

Mr. KELLEY. Yes, sir.

Senator HICKENLOOPER. Thank you.

The CHAIRMAN. How many did you say you had in mind?

Mr. KELLEY. We have these 70 apartments on the area.

The CHAIRMAN. I understand that.

Mr. KELLEY. Twenty-five houses off the area.

The CHAIRMAN. Are they in this budget?

Mr. KELLEY. They were in the 1949 budget.

The CHAIRMAN. The contract has not been let for them?

Mr. KELLEY. It is being let this week, I believe.

The CHAIRMAN. What kind of houses are they?

Mr. KELLEY. They will be three-bedroom houses and built as cheaply as we can build them. I don't believe the bids have been received yet.

The construction work on the main units is progressing well. We expect to have the nuclear reactor in operation in the spring. That is our major unit.

I would like, Mr. Chairman, if you are interested, to describe some of the other contract work we do in New York.

The CHAIRMAN. Let me ask you this: Mr. Kelley, what did you do before you became Manager there?

Mr. KELLEY. I was with the Manhattan District as one of General Groves' assistants. I was assigned to the Manhattan District in 1942 from the Panama Canal.

The CHAIRMAN. You were Regular Army?

Mr. KELLEY. No, sir; I was a Reserve officer.

The CHAIRMAN. How many people do you have in your New York office?

Mr. KELLEY. About 500.

The CHAIRMAN. That is the largest establishment outside of Washington, is it not?

Mr. KELLEY. No, sir. I think the staffs at Oak Ridge and Richland and Los Alamos are larger.

The CHAIRMAN. That is right.

Mr. KELLEY. Besides the Brookhaven contract we have 250 other contracts handled from the New York office. We are used as a procurement office by the other offices of the Commission. We handle the processing of the feed materials for Oak Ridge and Richland and some special procurement for the laboratories at Los Alamos and Sandia.

It has been our mission to get for the project any new material or new equipment that was not available on the open market, and this work in dollar value runs approximately \$100,000,000 a year. We have numerous purchase orders which we process in the normal way. I have some statistics here that might interest you.

We handled about 315 requisitions per month for other offices of the Commission, and then adding in our own, that amounts to about 360. Of those, we are able to handle 97 percent by normal procurement methods. That is under the rules of section 3709.

The CHAIRMAN. When you say \$100,000,000 a year, are you the contracting officer for that \$100,000,000?

Mr. KELLEY. Yes, sir.

The CHAIRMAN. What is the largest contract you personally—I am not asking you who it is—what is the largest contract in dollar amount?

Mr. KELLEY. I think the Associated Universities contract is the largest in dollar amount.

The CHAIRMAN. That is \$10,000,000?

Mr. KELLEY. \$10,000,000 in operating costs. The construction costs have totaled about \$25,000,000 to date.

The CHAIRMAN. Have you referred these contracts to the—

Mr. KELLEY. I would like to explain how I operate under that authority of \$2,000,000, discussed by Mr. Wilson the other day.

The CHAIRMAN. \$2,000,000, or \$5,000,000?

Mr. KELLEY. Mine is \$2,000,000.

The CHAIRMAN. You are just a little fellow.

Mr. KELLEY. That is right. As Mr. Wilson explained, we, in the field, do not take this delegation of authority as blanket permission to go out and make contracts. We limit ourselves first of all to the program that has been discussed and approved by the staff here in Washington and we also discuss on a day-to-day basis the details of our operation. I report to Mr. Williams. I try to keep him informed of what we propose to do in the future, tell him what we plan to do next week, and that gives him an opportunity to question me on just how I plan to do it, and gives me a chance to explain why we are doing things.

By the time the contract document is completed and ready for signature, the Washington staff is well informed on what is in it, and when I forward it to Washington for their approval they are already familiar with the terms, so that I have not operated over in a void in making this contract but have kept up a day-to-day contact with the people here.

Now, there is a very good reason, though, for me to have the authority to sign the bulk of the contracts. First of all, it short circuits a lot of unnecessary paper work. I say unnecessary, so long as they are informed on what is going on.

It notifies the contractor that the man with whom he should deal in asking questions and in getting advice is me, the contracting officer, and I am the nearest person to him. I know what the problems are, and I can work with him in solving them.

The CHAIRMAN. How many are negotiated contracts and how many of your 250 are put out for bid?

Mr. KELLEY. Well, sir, of the 250, 151 involve classified work, and, of course, all of those are negotiated. They are not negotiated, though, without competition. We can select a representative group from an industry or if it is a development job we want to place with a university, we might talk with several before making final arrangements.

Senator HICKENLOOPER. What is your habit? Do you talk to them?

Mr. KELLEY. We do, definitely, sir. I could give as an example the method of placing the contract with the H. K. Ferguson Co. at Brookhaven for the construction work. I worked with Associated Universities in meeting with several companies. We talked to the Austin Co., Stone & Webster, Sanderson & Porter, Walsh Construction Co., H. K. Ferguson, and others.

Senator HICKENLOOPER. In your classified contracts, the contracts in classified areas, what you do practically is that you select a certain number of people that you believe can do the work and whose backgrounds ought to be all right, and who are trustworthy, and among those you attempt to negotiate a contract?

Mr. KELLEY. Yes, sir; that is correct, and we do not make that determination alone. We ask for advice on whom we might contact. We ask the Engineering Society, say, if it is a research job. We might ask the construction magazine services to give us lists of people that have handled comparable jobs from a money point of view, or in accordance with the type.

The CHAIRMAN. Where is Ferguson from?

Mr. KELLEY. Cleveland, Ohio, is their home office.

The CHAIRMAN. Have they done other work for you?

Mr. KELLEY. During the war they constructed one of the plants at Oak Ridge, but this is a new type of job for them at Brookhaven.

The CHAIRMAN. That is classified work?

Mr. KELLEY. Yes, sir.

The CHAIRMAN. How about these 99 contracts that are unclassified? Were they let out to bid?

Mr. KELLEY. Many of them were. I have some figures here I think would explain how we handled the remainder. Of those not involving classified work, 28 of them were with public utilities and consultants and nonprofit institutions, and other Government agencies.

Then, of the remainder still there, we advertised 30. Now, that covers most of our construction work.

The CHAIRMAN. That covers 58 of your contracts. That leaves 41 unclassified contracts that were not put out to bid. Why didn't you put those 41 out to bid?

Mr. KELLEY. Here are some of the reasons. Often it is necessary to place unclassified work that relates to classified work, and we are forced to go to the firm handling the related part. For instance, on some of the work that I do for Los Alamos and Sandia we can separate from a piece of equipment a small piece that we could handle on an unclassified basis, but if that has to fit into the classified device——

The CHAIRMAN. It seems to me then it really is classified.

Mr. KELLEY. It cannot be advertised. We cannot handle it that way. Sometimes we are asked to procure things by brand name for test purposes. It is often necessary in development and research work in looking for a device that will do a specific thing to canvass the market and get all of these devices in the laboratory and test them under the severe conditions that we have to meet. So I could not advertise all of that kind of procurement.

The CHAIRMAN. You do try to advertise what you feel you can and give everybody a chance?

Mr. KELLEY. We certainly do. And I think that in the near future we will be able to expand the participation by industry in some of this work.

The CHAIRMAN. Certainly there shouldn't be any negotiated contracts for housing.

Mr. KELLEY. We don't intend to do any such thing as that. Wherever we know what we want and can reduce it to some explanation and specifications, we advertise.

The CHAIRMAN. How many people are actually at your establishment at Brookhaven? You told me you had 1,500 people on the pay roll.

Mr. KELLEY. That is on the Associated Universities' pay roll. My own staff there is 35, I believe. If I could just have a moment, I will check that—35 is a good figure, Mr. Chairman.

The CHAIRMAN. Is it necessary to have that many people to check up on the execution of your contracts with these universities?

Mr. KELLEY. There are five of those people involved in security work.

The CHAIRMAN. You do handle the security?

Mr. KELLEY. Yes, sir; our office in New York is responsible for the physical security of some 400 locations.

The CHAIRMAN. Now, there has been some mention made of a picture of the establishment that is in the fifth semiannual report.

Mr. KELLEY. Yes, sir.

The CHAIRMAN. Did you forward that picture to the Commission for inclusion?

Mr. KELLEY. I am not sure of the mechanics as to how it reached the report, but in our opinion it certainly did not disclose any classified information. It merely shows the barracks and other buildings that were there when the place was an open Army camp.

The CHAIRMAN. Would it have been possible to keep secret the existence of this project?

Mr. KELLEY. In peacetime I do not think it would have been possible, Mr. Chairman. We have to buy so many things, we have to have so many people come in the area to help us such as carpenters, plumbers, pipefitters. I think it would have been almost impossible to have kept the existence of the laboratory secret, and, of course, our primary purpose in establishing it was to make it an open establishment so we could get scientists to come there and work, so we had to advertise it among the universities.

The CHAIRMAN. But you do have security there?

Mr. KELLEY. We have a restricted area within the general area, and the persons going into that restricted area are cleared in the same fashion they would be cleared to go into the plant at Oak Ridge.

The CHAIRMAN. Is there any picture of the restricted area in the report?

Mr. KELLEY. No, sir; there is not.

The CHAIRMAN. What is your opinion, Mr. Wilson? Could the existence of this have been kept secret?

Mr. WILSON. Mr. Chairman, I don't see how it could have been. The existence of Camp Upton was known widely as an establishment covering several thousand acres on Long Island. The proposal to convert it into a laboratory was discussed long ago, and the purpose of this laboratory is one for basic research primarily, as you state.

Within the total establishment there are certain restricted areas, as Mr. Kelley pointed out, but much of it is unrestricted, and inasmuch as there are 1,500 people working there in total, they live in various parts of Long Island and Long Island is traversed by air lines, and so on, it seems to me it would have been impossible to conceal the existence of the laboratory, and our effort, therefore, has been devoted to walling off and keeping separate those parts of the project on the area which involve restricted data and providing adequate measures so that only people who are cleared can enter those or have access to the information in them.

Senator HICKENLOOPER. The fact of the matter is, is it not, Mr. Wilson, that this matter was pretty generally discussed and announced when the Army had control of this thing, the Brookhaven situation and the proposal to use the grounds of Camp Upton as a place to build this experimental laboratory?

Mr. WILSON. That is correct.

Senator HICKENLOOPER. And your basic intention is to leave this as pretty much an open experimental laboratory with a minimum of classified work going on there as compared to some other installations?

Mr. WILSON. That is correct; a minimum. The bulk of it is unclassified.

The CHAIRMAN. You are confident of your security measures for the classified work?

Mr. WILSON. Yes; we are.

The CHAIRMAN. I am interested. Senator Hickenlooper's recollection is better than mine; he refreshes my recollection, and I now remember that was started in the Manhattan Engineer days. When did it get under operation?

Mr. WILSON. Mr. Kelley can describe when it really took form. I believe Associated Universities was formed in the latter part of 1946.

Mr. KELLEY. That is correct, 1946. The Manhattan District took the camp from the Army in the fall of 1945, shortly after the war.

It was declared surplus by the Army, and we looked at several available sites and finally selected Upton as being the best equipped.

We believe that we have saved about \$30,000,000 of construction cost by taking this surplus Army site, and I am sure that we have saved a year in construction time by having the utilities, the roads, and sewage-treatment plant, and so forth, available.

Senator HICKENLOOPER. So, as a matter of fact, the Brookhaven installation is a continuation of the program laid out by the Manhattan District and announced shortly after the close of the war as a laboratory area for these purposes?

Mr. KELLEY. The general purpose was announced; yes, sir.

The CHAIRMAN. You came over from the Manhattan Engineer District?

Mr. KELLEY. Yes, sir.

The CHAIRMAN. Were you engaged in security for the Manhattan Engineer District?

Mr. KELLEY. No, sir; I was what was called a unit chief. General Groves divided the job into four principal parts. One was the operation at Richland; there were two at Oak Ridge and one at Los Alamos, and I was one of the four unit chiefs. My principal assignment was the electromagnetic plant at Oak Ridge.

The CHAIRMAN. Now, you have looked at this picture; have you not?

Mr. KELLEY. Yes, sir; I have it in front of me. The picture does not show the restricted area. The restricted area is off the picture to the top.

The CHAIRMAN. Is that the one that shows the chimney?

Mr. KELLEY. This chimney is not the chimney connected with the restricted area but is the chimney for the main heating plant.

Senator HICKENLOOPER. It would seem to me that if there is anything desirable about not giving information, you have just told where the restricted area is with reference to that picture.

Mr. KELLEY. Well, sir, I have certainly not described it in detail or given any other advice beyond what can be seen by any person flying over the area.

The CHAIRMAN. Is that restricted at all for air travel?

Mr. KELLEY. No, sir; and this device shown on page 73 is not a classified device.

The CHAIRMAN. Who declassified it?

Mr. KELLEY. We have defined certain areas of research as being unclassified, and work on particle accelerators is not classified. This is a particle accelerator.

The CHAIRMAN. Thank you. I think it should be emphasized that this whole project is one which you classify, as I get it, Mr. Wilson; one where you feel you must have the greatest freedom, shall we say, the least classified material, and it is so designed?

Mr. WILSON. That is correct, Mr. Chairman.

The CHAIRMAN. This is not a place where you manufacture materials?

Mr. WILSON. No, sir.

The CHAIRMAN. This is an experimental laboratory for basic research?

Mr. WILSON. That is correct.

Mr. KELLEY. Mr. Chairman, would you be interested in our manner of administration on these contracts?

The CHAIRMAN. Definitely.

Mr. KELLEY. Once the contract is made and consummated it is our routine in the office—first, during the negotiation we assign a number to the contract. Then, a technical representative on the staff is selected and made responsible for this particular contract.

If it is in the field of chemistry, naturally we select one of our chemists or chemical engineers to handle it. He is the principal contact between the Atomic Energy Commission and the contractor; regardless of the subject, if the contractor has a question to ask about security, he calls his contact man, who is the technical representative and the technical representative then has available to him specialists in security, and they will work as a group in solving the problem. We maintain a current list of all contracts. Naturally, with 250 active ones, aside from the procurement orders, we have to have some red tape. We try to get by with a minimum amount, but there must be some. We maintain this list, and on the list there will be shown the name of the technical representative, the name of the principal property representative for the Commission, the contracting officer, the classification of the contract, whether it is unclassified or secret, the principal finance man responsible for that contract.

That means that we can have some order within our own office in handling the problems that come up every day on a contract. We have control over subcontracting under our prime contracts. We write into our prime contracts limits on the authority of the subcontractor.

We review the subcontractors to determine whether the subcontracting of the work is in the best interests of the Commission. It might be wiser for us to go out and make another prime contract.

Senator HICKENLOOPER. How many of these contracts are cost-plus-fixed-fee?

Mr. KELLEY. I have the number here. I think the number is six, but could I take the time to verify that?

Senator HICKENLOOPER. Yes; and the total amount of the contracts in that category in dollars, if you have it there.

Mr. KELLEY. I think it would save the committee's time, Senator Hickenlooper, if I could turn that in for the record. I don't have it tabulated.

Senator HICKENLOOPER. Can you give us an estimate?

Mr. KELLEY. My number of six, I think, is good. That would amount, in dollars, to current value of about \$35,000,000. That includes the largest contract, which is the Ferguson construction job at Brookhaven.

Senator HICKENLOOPER. What is your fixed fee on those contracts?

Mr. KELLEY. The Ferguson contract is approximately \$21,000,000, and the fixed fee is \$500,000. That is a negotiated fee.

The CHAIRMAN. Isn't that a little high?

Mr. KELLEY. No, sir. This is an extremely complicated job. It required the translation of an idea by a scientist into a nuclear reactor. I think it involved some of the most difficult mechanical and electrical design that we could throw at any contractor. I approved this fee. I thought it was reasonable for the work.

The CHAIRMAN. Twenty-five percent?

Mr. KELLEY. Two and one-half percent.

The CHAIRMAN. Yes; that is right. My decimal point was off.

Senator HICKENLOOPER. Under that contract, the Commission reimburses all costs and adds 2½ percent fixed fee?

Mr. KELLEY. Yes, sir.

The CHAIRMAN. I was wrong on my comment about it being pretty high.

Mr. KELLEY. Frankly, I tried to negotiate a lower one and was unsuccessful.

The CHAIRMAN. I can see that.

Senator HICKENLOOPER. Did you attempt it with any other company besides the Ferguson Co?

Mr. KELLEY. Yes, sir; I named several, Senator Hickenlooper. We discussed this job with the Stone & Webster Co., Austin Co., Walsh Construction Co., and Sanderson & Porter. None of the others had the qualified staff available at that time. We selected Ferguson on the basis of the availability of a high-caliber staff for immediate construction.

Senator HICKENLOOPER. How do your other fixed-fee contracts run, the other \$14,000,000?

Mr. KELLEY. All of these are classified.

Senator HICKENLOOPER. Dollars are not classified, are they?

Mr. KELLEY. No; the dollars are not, but the description of the work should be.

Senator HICKENLOOPER. I am asking about the cost; not for a description of the work.

Mr. KELLEY. We have a contract with the firm of Singmaster & Breyer. They are consulting design engineers in New York. That is for a new structure to be built at St. Louis.

Senator HICKENLOOPER. I am not particularly concerned at the moment with the name of the company.

Mr. KELLEY. You are more concerned in the dollar value?

Senator HICKENLOOPER. I am more interested in the contract and how much is the contract and the amount of the fixed fee. I don't think it is necessary, at least for my purposes at the moment. I would just as soon not have you name the contractor.

Mr. KELLEY. The contract value is \$2,650,000. The fixed fee is \$100,000.

Senator HICKENLOOPER. The fee is \$100,000?

Mr. KELLEY. Yes, sir. That involves first design, engineering, supervision of construction, and some procurement. I might add that the type of plant being designed is entirely new.

I have another one for the design, engineering, and supervision of construction of another building, value of \$900,000; fee of \$17,000.

I have another one for research, development, and planning of construction for \$8,600,000 with a fee of \$598,000. That again is in new field of endeavor. It involves a lot of development work and the most intricate kind of design for handling highly radioactive materials.

I gave you the Ferguson job.

I have another one that was placed as a subcontract under Associated Universities. It provides for the design, manufacture, testing, and supervision of installation of one of these particle accelerators. The cost was estimated at \$379,000; the fee \$22,000.

(Supplementary statement by Mr. Wilbur E. Kelley, Manager, New York Operations Office, regarding fixed-fee contracts being administered by the New York Operations Office:)

In reviewing the transcript of the hearings before the Joint Committee on Atomic Energy on February 24, 1949, I find that I omitted mention of two additional fixed-fee contracts being administered by the Office of New York Operations. These contracts with Union Carbide and Carbon Chemicals Corp. and Linde Air Products Co., are both for the processing of feed material. They are of a different character than the ones given at the hearing, being operating contracts rather than contracts for construction and engineering work. Pertinent data regarding these contracts are: 1. Union Carbide, estimated obligations, fiscal year 1949; \$640,000 (including fee); annual fee (\$120,000). 2. Linde Air Products, estimated obligations, fiscal year 1949; \$986,000 (including fee); annual fee (\$120,000).

Mr. KELLEY. Those are the ones on which I have detailed information here.

Senator HICKENLOOPER. On your contract with Associated Universities for the operation of Brookhaven, is there any fixed fee over and above that?

Mr. KELLEY. There is no fee involved, and we audit all of the overhead accounts.

Senator HICKENLOOPER. In other words, they are operating contractors, and you audit their costs and then reimburse them or pay them for the cost of operation as your audit verifies their claim?

Mr. KELLEY. Yes, sir; but there is no fee for these universities for operating the job.

Senator HICKENLOOPER. Those five contracts you have referred to—

Mr. KELLEY. They all involve classified work except the last one I gave you, Senator.

Senator HICKENLOOPER. They don't quite add up to \$35,000,000. Is there another? I get about \$31,000,000 or \$32,000,000.

Mr. KELLEY. I was going by memory when I gave the \$35,000,000.

Senator HICKENLOOPER. I wasn't questioning that, except if there is something missing I would like to have it.

Mr. KELLEY. No, sir; I think that is all.

Senator HICKENLOOPER. Then, those five are the list of that particular type of contract. They constitute the cost-plus-fixed-fee contracts?

Mr. KELLEY. Yes, sir.

Senator HICKENLOOPER. Those are under your office?

Mr. KELLEY. Yes, sir; with the exception of the one for the design of the particle accelerator, they are prime contracts with my office; work not connected with Brookhaven.

Senator HICKENLOOPER. What other man of the AEC has responsibility for other contracts of that nature at Brookhaven?

You said that was all under your office. I didn't know whether there were others or not.

Mr. KELLEY. Other offices of the Commission would have other fee contracts that I would have no connection with.

Senator HICKENLOOPER. At Brookhaven?

Mr. KELLEY. No, sir.

Senator HICKENLOOPER. I am talking about Brookhaven. I understand that. Thank you. That is all I have.

The CHAIRMAN. All right, Mr. Kelley.

Mr. KELLEY. We have under our general supervision other field offices than Brookhaven, too. We have an office in St. Louis connected with our preparation of feed materials for Oak Ridge and Hanford.

We have a small office in Cleveland, Ohio. We have a small office at Tonawanda, N. Y.

These are to handle local contracts in that area. All classified work.

Senator HICKENLOOPER. Do any of those involve cost-plus-fixed-fee?

Mr. KELLEY. No, sir; they do not make contracts independently.

Senator HICKENLOOPER. These five contracts that you referred to in this 30-million-odd-dollars, are those all of the contracts under your office that are cost-plus-fixed-fee?

Mr. KELLEY. Unless I made a mistake in reading them off, Senator, that is correct. There is an additional subcontract—Excuse me, sir. There is an additional sub-subcontract under the Ferguson Co. that I did not give. That is for electrical work at Brookhaven. \$1,200,000 estimated cost, fixed fee, \$60,000. That should be the sixth.

Senator HICKENLOOPER. All right.

Mr. KELLEY. We also handle development work from our office in New York connected with some of the special equipment required at Los Alamos and Sandia. That I could not describe in detail.

The CHAIRMAN. What type of labor-relations clauses do you have in your contracts?

Mr. KELLEY. On the fee contracts, we require the submission of a complete wage and salary schedule for our approval.

As to the handling of labor relations during the life of the contract we feel very strongly that is the responsibility of the contractor, that it is his business to deal with unions.

The CHAIRMAN. Mr. Wilson, the President's Commission appointed to study labor problems in atomic energy plants is about ready to make a report, isn't it?

Mr. WILSON. The Commission appointed by the President, headed by Mr. Davis, has just about completed its studies and visits to the various installations, and we understand they will presently make their report to the President.

The CHAIRMAN. That report does go to the President?

Mr. WILSON. That report goes to the President, and we understand it will be made shortly.

The CHAIRMAN. That is a very important report.

What provisions do you make in your contracts to cover liability in the event of a disaster or latent physical injury to workers which is not discovered until after they leave the industry?

Mr. KELLEY. On a few of the contracts that involve the processing of radioactive materials, we have inserted a clause at the request of the contractor that he be held harmless from costs incurred as a result of personal injury of that kind.

At the moment we are engaged in renegotiating those clauses. We are, first of all, working with the association of insurance carriers in an attempt to work out an arrangement for insurance to cover this hazard rather than have us, as the Government, try to cover it by contract provision.

The CHAIRMAN. You mean to say that you are going to enter into another contract with an insurance company to cover this hazard?

Mr. KELLEY. No, the more desirable arrangement would be to have the contractor enter into an arrangement with the insurance company for this purpose. That is, if it appears economical to do so. We are discussing the possibility. We haven't received quotations.

Senator HICKENLOOPER. How are you going to get a quotation from the insurance company?

Will you let them go into the classified areas and learn about the hazard involved?

Mr. KELLEY. We have cleared representatives from the insurance industry, and we will disclose to them the minimum amount of information that they might need to make an evaluation. We certainly don't expect to disclose all of the weapons, manufacturing technique or anything of that kind. We certainly would be fair with them, though, in giving them access to all the pertinent data.

Senator HICKENLOOPER. Hasn't that been one of the paramount difficulties in establishing a proper insurance rate, the difficulty of insurance companies being able to, with any degree of accuracy, evaluate the hazards?

Mr. KELLEY. Yes, sir, that is correct, and we are exploring the possibilities, though. We do not think it should be neglected. A more desirable solution might be some kind of Federal insurance. We don't know.

Senator HICKENLOOPER. You haven't come to any conclusions on that score yet?

Mr. KELLEY. No, sir, we have not.

The CHAIRMAN. Have you had many claims?

Mr. KELLEY. Not under my supervision, no. I don't know of a single claim for radiation injury.

The CHAIRMAN. You said "the insurance industry." Are you dealing with an association of insurance companies?

Mr. KELLEY. Association of insurance carriers, rather than try to deal with individual companies. They have agreed among themselves to appoint representatives.

The CHAIRMAN. Are they handling it on a cooperative basis?

Mr. KELLEY. Yes, sir, but the placement of the insurance would be handled on an individual basis.

Senator HICKENLOOPER. As long as we have opened up that insurance subject, suppose somebody makes a claim, how are you going to try a law suit involving the hazard involved and the effects of this stuff and what it does without disclosing some classified information on occasions? Have you given consideration to that?

Mr. KELLEY. Yes, sir. As you know, we are carrying on a lot of research into the problem of injury to persons by radiation, and more and more of that may be declassified. In the event it is declassified, we would be able to present it in court, and we think that sometime in the future certainly we have enough information to be intelligent in court on the subject.

Senator HICKENLOOPER. It involves the question of whether the Government should undertake the responsibility for settling those things for the protection of classified information or whether insurance policies covering those things can be available, which, by the very nature of the insurance contract, would throw any dispute into a public hearing.

Mr. KELLEY. Well, sir, we are not unaware of those things but we feel that this may develop into a major problem sometime in the distant future and we should know as much about it as possible.

Senator HICKENLOOPER. It is not a major problem because you haven't had too much trouble, but it is a potential problem at all times.

Mr. KELLEY. We don't think it will ever develop into a serious problem because of the steps we take in operating our plants. We protect the workers so they won't be injured.

Senator HICKENLOOPER. That is all.

The CHAIRMAN. Would you care to tell us, Mr. Wilson, how many claims you have had for injury?

Mr. WILSON. Radiation injury throughout the Commission's operations, I don't think I have such information right with me now.

The CHAIRMAN. Is it classified?

Mr. WILSON. I don't believe so. We can furnish it to the committee.

The CHAIRMAN. How do you handle the claim? Do you evaluate it at the Commission?

Mr. WILSON. We do have a provision in some of our contracts with major contractors such as at Oak Ridge, at Hanford, and at Los Alamos, a plan which provides for payments as a result of death or disability from special hazards—that is, radiation hazards peculiar to our business. This provides for an arrangement whereby the contractor, if it is established that the death or disability is one which results from the definition of special hazards in the contract, the contractor shall determine and the AEC review for approval, that the nature of the disability, whether temporary or permanent and payments in amount not to exceed \$10,000 in a given case may be made.

This is a self-insurance scheme, if you will, for hazards, the special hazards, and this is in addition to any payments which may be made from workmen's compensation provisions in a given State.

The CHAIRMAN. Ten thousand dollars, if a man loses his eyes?

Mr. WILSON. That is the limit. If it is permanent or total disability or death.

Senator HICKENLOOPER. Have you paid any of those claims, Mr. Wilson?

Mr. WILSON. Yes, we have paid several. The details I would have to get.

I might mention, Mr. Chairman, that on pages 136 and 137 of the Commission's last semiannual report, there is a description of the insurance and benefits plans which the Commission had with various of its contractors. I think it is perhaps stated there as well as I can state it.

The CHAIRMAN. I see that the contractors have set up a fund of \$25,750,000, according to this report, as collateral which the Government has advanced securing the liability to claimants imposed by law.

Mr. WILSON. That is right. Part of that derives from the arrangement set up during the war with the contractors with the Manhattan District funds some of which are gradually reduced in amount as time goes by and probability of claims diminishes. This is true of the General Electric contract. There is a time base. That is also a fund set up in connection with the du Pont contract, which was established at the time the du Pont Co. built the Hanford Works, and this, I believe, carries on for a period of 10 years.

Senator HICKENLOOPER. In that paragraph that you referred to there on page 136, the last two or three sentences of the paragraph are as follows:

Normally, policies issued under this plan carry an upper limit on the amount of premiums payable, so that the risk of severe losses is borne by the insurance

company. Where special arrangements have been necessitated by the nature of the operations, however, this upper limit on premiums has been removed. Thus, the contractor has become obligated to reimburse the insurance company (and the Commission in turn to reimburse the contractor) for all claims payments, without limit, in addition to the charge for services of the insurance company in the administration and settlement of claims.

If the contractor is going to reimburse the insurance company for those special claims and the Commission in turn is to reimburse the contractor, what is the use of using the insurance company? If full and complete liability rests ultimately on the Atomic Energy Commission, that is.

Mr. WILSON. I believe these derive from the arrangement set up during the war. At that time, and I think it is still true, one cannot find an insurance company which will insure beyond a given amount, because of the uncertainty and lack of experience record in terms of hazards of this kind.

The arrangements described here reflect that kind of situation which exists at several installations where the insurance company has agreed to meet claims up to a given amount, but not without limit.

Senator HICKENLOOPER. This doesn't say that. This says for all claims payments of certain categories. These are not reinsurance contracts.

Mr. WILSON. May I ask Mr. Kelley to comment on one point there?

Senator HICKENLOOPER. Yes I want to get it cleared up.

Mr. KELLEY. Your question as to why we use the insurance company at all—

Senator HICKENLOOPER. I didn't say "at all." I said, in these cases, instances where the contractor, according to this statement, fully reimburses the insurance company for all losses and the AEC reimburses the contractor for all losses and also to reimburse the insurance company or the contractor for the charge for the services of the insurance company in the administration and settlement of the claims.

Mr. KELLEY. It is for that service and administration that we pay. We are not skilled in adjusting insurance claims.

Senator HICKENLOOPER. That is only part of it. The main thing you pay is the full claim.

Mr. KELLEY. We haven't been able to find an insurance carrier that would be willing to pay that for this particular type of hazard. It is beyond their experience.

Senator HICKENLOOPER. You say these arrangements were made under the Manhattan District probably. Are you still operating under Manhattan District contracts?

Mr. WILSON. A number of contracts are extensions and supplements to contracts entered into during the Manhattan District period.

Senator HICKENLOOPER. And with the same general provisions?

Mr. WILSON. Some provisions, with the same contractors.

Senator HICKENLOOPER. So that in effect there has been a time in most of these cases where the AEC could have, if the contractor was willing and the AEC was willing, the provisions could have been changed; is that right?

Mr. WILSON. That is correct. We have raised this question, that it is not easy to negotiate a change in the arrangements described here with contractors who recognize the uncertainty of the risks involved.

The CHAIRMAN. I asked you, Mr. Wilson, how many individuals had been paid and you stated you didn't have it.

Now, I note on page 138 of the report the statement that to date payments have been made under the terms of the plan to 5 individuals and not more than 14 additional potential claims are known to exist. Funds aggregating 16½ million were established by the Commission's predecessor, the Manhattan District, with contractors covering benefits that might be paid by the contractor during the period of the contract or in the ensuing 10 years.

Of course, we have got a lot of time to hear from some of those.

Mr. WILSON. Additional potential claims are those we have some knowledge of at the present time. These figures are the figures——

The CHAIRMAN. Ones where the claim has been made?

Mr. WILSON. That is right.

The CHAIRMAN. I think it is important that it be pointed out that this is not a high ratio to the number of man-hours that have been worked in the laboratories. We don't want the people of the country to get the idea that they are sure to be injured if they go to work for you. I think that is very important.

I would like to have your comments as to the safety record that this indicates or the lack of safety.

Mr. WILSON. The safety record of this industry since the outset throughout the war period—and we have succeeded in maintaining it—is a most impressive one in terms of any industry. I am not sure whether there is in this report——

Senator HICKENLOOPER. Isn't it a fair statement to say that since the inception of this project, since the establishment of the Manhattan District—I am saying what I believe to be the fact, I don't know, and if I am wrong, correct me—there has been no known provable injury in this project from radiation that was not already an anticipated hazard against which regulations had been issued, and that any injuries which have occurred, have occurred from the violation of existing regulations and from the violation of conduct against an already anticipated hazard.

The margin of safety has been very great, hasn't it; the margin of safety regulations has been very great?

Mr. WILSON. I believe that is a correct statement, Senator.

Senator HICKENLOOPER. That is my impression, that it is the case, and it is a magnificent and almost unique record there. I think there have been some injuries, but they have been injuries resulting when existing regulations have been violated in one way or another.

Mr. WILSON. That is correct.

Senator HICKENLOOPER. I think it is an unusual, and I think it is a unique situation, a unique record both in the Manhattan District and under the AEC in such a new enterprise.

The CHAIRMAN. How about these stories I have read in the press recently about some of the scientists going blind?

Are they included in the 14 potentials?

Mr. WILSON. No, Senator; because none of those, to the best of our knowledge resulted from exposures in connection with either the Manhattan District or AEC establishments.

In other words, the injuries which have been reported publicly resulted from exposure, I believe in all cases, to cyclotron radiation at establishments other than those operated either by the Manhattan District or now by the Commission.

Senator HICKENLOOPER. Resulted in independent research?

Mr. WILSON. Independent research in various universities and scientific institutions.

The CHAIRMAN. And<sup>1</sup> places where they didn't have set up regulations such as you have in your establishments?

Mr. WILSON. I can't say as to the regulations which existed at the time in those cases, but it is correct to say that there have been no comparable injuries known to us at this time from any exposure in either the Manhattan District or Atomic Energy Commission laboratories.

The CHAIRMAN. I shouldn't think from this record that you have here that it would be very difficult to get an insurance company to insure.

Mr. WILSON. The record is very impressive, Senator, and the longer the record goes on the better the basis is for believing that the elements of risk here are certainly not beyond the character of risks taken by insurance companies in other matters.

The CHAIRMAN. I presume, of course, that the Commission could set up some kind of sinking fund so that it could carry this insurance, but I presume that you have acted with the companies in the effort to carry out the free-enterprise idea that underlies the act, with reference to free enterprise, wherever it can be available; is that the underlying philosophy of it?

Mr. WILSON. That is correct, Senator, and the studies which Mr. Kelley described are directly in that line. We have cleared, as he indicated, representatives from this cooperative insurance underwriters group, and we hope it will be possible for them to develop sufficient information so that they can insure against these risks.

I might say, Senator, that this record of safety, particularly against the novel hazards in this business, is, I believe, a very impressive one. It has cost plenty of money. We believe it is money well invested, but the safety precautions, such as film badges and many other measures used to monitor and protect personnel against radiation injury are expensive. We believe it is a good investment, but it costs a lot.

The CHAIRMAN. You have carried out the same philosophy with regard to protecting surrounding areas, have you not, referring particularly to stories that have appeared in the press of people being worried about areas around Brookhaven and those towns around there. There have been stories in the press that they thought they were in some danger. You have obviated any danger that could come from any experiment there, haven't you?

Mr. WILSON. We believe we have taken all the measures we have any reason to believe are valuable at this time. I might say at Brookhaven there has been a particularly good opportunity to observe the atmosphere and the ground water and vegetation, et cetera, in the whole region of Long Island surrounding it before any pile is operated. The meteorological towers which were built there are to observe carefully the nature of the meteorological conditions in the vicinity, so that if any inversions or other unusual conditions should occur which would produce a hazard to the region resulting from the air which goes through the pile to cool, we would have notice of this in advance and will set up the appropriate measures for shutting down the pile or diminishing its power.

We have taken at our other installations numerous measures to diminish the danger to the region of contamination from our plants.

Last month, you will recall we had a meeting here in Washington and issued about a 40-page digest of the results of that meeting. It was a meeting which brought together public health officials, municipal waterworks people, sewerage people, from various parts of the country to review and observe the kind of programs we had under way and the measures we were taking and the nature of the hazards which do exist.

The CHAIRMAN. I have had letters from people down on Long Island protesting the building of any pile, asking why didn't they put it somewhere else. One lady said, "Why didn't you put it in Connecticut?" As far as the danger was concerned, if I had had the opportunity to, I think I would have put it in Connecticut, but I think it is important that the people be reassured against any wild stories that they are living in a danger zone.

Senator HICKENLOOPER. Is it safe to say that while there are always new fields in atomic energy that will be developed which will create new conditions, nevertheless, experience and efforts of the Commission have been devoted to the anticipation of all known or reasonably anticipated hazards and that you are doing everything you can to protect against any possibility of any such hazards occurring and to correct any potential hazards before they become hazards?

Mr. WILSON. That is correct, Senator.

Mr. KELLEY. Mr. Chairman, there was one point on these over-area surveys that might be of interest. We consider this very important to protect the Government from false claims, so that we will build up for as long a period as possible this evidence on the normal radiation background surrounding one of our installations.

The CHAIRMAN. That would seem to me to be a wise thing to do.

It now is a few minutes after 12, and the chairman has a couple of matters which he wishes to discuss in executive session, so we will convene again at the call of the Chair. Thank you very much.

(Whereupon, at 12:05 p. m., the committee adjourned.)

# APPENDIX

## EXHIBIT No. 1

(Copy Filed January 6, 1949)

### IN THE SUPREME COURT OF THE STATE OF NEW MEXICO

Sibyl H. Chaney, plaintiff-appellant, vs. Marion A. Chaney, defendant-appellee.

No. 5145

APPEAL FROM DISTRICT COURT OF SANTA FE COUNTY. CARMODY, JUDGE

O. Russell Jones, Esq., M. P. Gutierrez, Esq., Santa Fe, N. Mex., Attorneys for Appellant.

Robert W. Ward, Esq., Lovington, N. Mex. (amicus curiae).

#### OPINION

LUJAN, J.: Sibyl H. Chaney filed her complaint in the District Court of Santa Fe County against Marion A. Chaney, seeking an absolute divorce from him. She alleged, among other things, that she and the defendant were married at the city of Brownwood, Brown County, State of Texas, on or about December 1, 1940, and that she is and has been a bona fide resident in good faith of the county of Sandoval and State of New Mexico, for more than 1 year next preceding the filing of her complaint. The defendant entered his voluntary appearance, waived any and all questions relating to venue, and consented that the cause be tried in his absence without further notice to him.

The acquisition of the land comprising the Los Alamos project by the United States is related in detail in the case of *Arledge v. Mabry* (52 N. M. —, 197 Pac. 2nd. 844); therefore, we will not repeat it here.

It is not denied that the appellant has continuously lived in Los Alamos, a governmental project, since January 15, 1947, nor that the portion thereof upon which plaintiff resides was procured through condemnation proceedings, and that the Los Alamos project is situated within the boundaries of Sandoval and Santa Fe Counties, N. Mex.

The appellant, plaintiff below, first came to the State of New Mexico with her husband on December 15, 1946, from the State of Texas. They lived in a trailer house in Albuquerque for about 3 days then moved the trailer house to Santa Fe where they lived for a month. On January 15, 1947, they moved to Los Alamos where they lived in the trailer house until March 28, 1948, when she moved into one of the permanent houses located on the condemned land of the project and where she lived at the time she filed this action.

At the time the Los Alamos project was created, many people were employed to work there by the Los Alamos Atomic Energy Commission and private concerns, some of the employees were, and others of whom were not, at the time of their employment, residents of New Mexico. The appellant and her husband were legal residents of the State of Texas at the time they were employed and when they moved into Los Alamos.

At the conclusion of plaintiff's evidence, the district court refused to grant her a divorce because the jurisdictional residence relied upon by her was on condemned land belonging to the United States at the time she instituted her suit, and, in the court's opinion, residence thereon was not sufficient to give the court jurisdiction. Thus, the sole question before us is whether persons living at Los Alamos, on land acquired through condemnation by the United States, are residents of New Mexico, for purposes of maintaining a divorce suit.

The Constitution of the United States, article 1, section 8, clause 17, provides that Congress shall have power "to exercise exclusive Legislation in all cases

whatsoever, over such District (not exceeding 10 miles square) as may, by cession of particular States, and the acceptance of Congress, become the seat of the Government of the United States, and to exercise like authority over all places purchased by the consent of the Legislature of the State in which the same shall be, for the erection of forts, magazines, arsenals, dockyards, and other needful buildings." In discussing this clause of the Constitution, Mr. Justice Sadler, speaking for the court, in *Arledge v. Mabry*, supra, said:

"The New Mexico Statute whereby consent was given to the United States to acquire any land in New Mexico under the clause of the Federal Constitution quoted above for sites for arsenals and other purposes was enacted in 1912 as L. 1912, c. 47. \* \* \*

"Although the United States Constitution, in the clause quoted, mentions acquisition by purchase, it has long been settled that the same consequences attach from a jurisdictional standpoint when land is acquired through *condemnation* proceedings. Indeed, land so acquired is deemed to have been secured by purchase and the same consequences attach. Furthermore, the term 'exclusive legislation' employed in said clause 17 of the Federal Constitution is held to be synonymous with and carry the same meaning as if the term 'exclusive jurisdiction' had been employed. \* \* \* [Emphasis ours.]

The United States having acquired the land in question through condemnation proceedings, it thus obtained exclusive jurisdiction over the same, except to serve therein civil and criminal process of the courts of this State as to offenses and transactions originating outside the condemned area, and such land is not deemed a part of the State of New Mexico. Accordingly, persons living thereon do not thereby acquire legal residence in New Mexico (*Arledge v. Mabry*, supra).

In *Lowe v. Lowe* (150 Md. 592, 133 Atl. 729), the majority opinion said:

"The great weight of authority is to the effect that lands acquired in accordance with the provisions of the Federal Constitution cease to be a part of the State, and become Federal territory, over which the Federal Government has complete and exclusive jurisdiction and power of legislation. It is, therefore, clear that persons residing upon the Government reservation at Perry Point are not residents of the State of Maryland for the purpose of exercising the right of franchise \* \* \* for the reason that they reside upon territory belonging to the United States and not the State of Maryland; and, in our opinion, for the same reason, they are not such residents of the State as would entitle them to file a bill of divorce in any of the courts of the State. It might be said that it is an unfortunate situation, where, by reason of the fact that the Federal Government has failed to make provision for such cases, residents upon such reservation are left without any remedy; but this is a condition wherein the only relief which can be given is by the Federal Congress."

We are not unmindful that in *Tenorio v. Tenorio* (44 N. M. 89, 98 Pac. 2d 834), in discussing the case of *Lowe v. Lowe*, supra, we used language intimating some favor for the persuasive reasoning of Chief Justice Bond in his dissenting opinion in that case. We were holding in *Tenorio v. Tenorio* that one living on Pueblo Indian lands, territorially within New Mexico, could meet the statutory residential requirement for maintaining a divorce suit in the courts of this State. However, in that very case, as later in the case of *Arledge v. Mabry*, supra, we called attention to the fact that there was a difference in the status of Pueblo Indian lands and property acquired by the United States in the constitutional method when considered in relation to a question of "residence" for purposes of a divorce action, adding in the *Arledge* opinion for purpose of clarifying our views, the following:

"The seemingly tentative approval, provisional though it be, given the dissenting views of Chief Justice Bond in *Lowe v. Lowe*, supra, referred to in the quotation next above is, of course, to be qualified by what we today say and hold in the case before us."

The right to apply for or obtain a divorce is not a natural one, but is accorded only by reason of statute, and the State has a right to determine who are entitled to use its courts for that purpose and upon what conditions they may do so. See *Allen v. Allen*, (52 N. M. —, 194 Pac. 2d 270). Section 25-704 Comp., under which this action was brought, provides "The plaintiff in action for the dissolution of the bonds of matrimony must have been an actual resident, in good faith, of the State for 1 year next preceding the filing of his or her complaint. \* \* \*"

We are of the opinion, and so hold, that residence on the condemned area of the Los Alamos project does not suffice to supply the residence required by the fore-

going section of the divorce statutes. It follows that the judgment of the district court is correct and should be affirmed.

It is so ordered.

We concur:

## EXHIBIT No. 2

(Filed September 21, 1948)

### IN THE SUPREME COURT OF THE STATE OF NEW MEXICO

R. F. Deacon Arledge, informant, *v.* Thomas J. Mabry, Governor of the State of New Mexico, Charles R. Brice, Chief Justice of the Supreme Court of the State of New Mexico, and Mrs. M. A. Romero, Secretary of State, comprising the State Board of Canvassers of the State of New Mexico, and the State Board of Canvassers, respondents. No. 5144

#### ORIGINAL PROCEEDING IN MANDAMUS

Robert W. Ward, Lovington, N. Mex., A. T. Hannett, H. O. Waggoner, Stanley W. P. Miller, Albuquerque, N. Mex., attorneys for informant.

C. C. McCullough, attorney general, Santa Fe, N. Mex., attorney for respondents.

Adams & Chase, Martin A. Threet, Harry O. Morris, Albuquerque, N. Mex., attorneys for D. A. (Danny) MacPherson, Jr., real party in interest.

D. A. (Danny) MacPherson, pro se, Everett M. Grantham, United States attorney, Santa Fe, N. Mex., amicus curiae.

#### OPINION

SADLER, J.: The primary question for decision is whether that portion of Precinct No. 17 in Sandoval County, acquired by the United States through condemnation proceedings and incorporated into what is popularly known as the Los Alamos project, is "in New Mexico" within the true meaning of article 7, section 1 of the New Mexico constitution defining the qualifications of an elector entitled to vote at all elections for public officers. Incidentally, the right to vote of residents of other portions of the lands comprising the Los Alamos project lying within precinct No. 17, as affected by the fact of acquisition for its use from areas of the public domain, will be discussed and determined. And, finally, but for determination only, in the event of a holding that the portion of said precinct so acquired through condemnation is not "in New Mexico" within contemplation of the constitutional provision mentioned, whether conduct of an election at which all polling places for the precinct are located in the condemned area, invalidates such election.

The questions arise out of a contest between R. F. Deacon Arledge, the informant, and D. A. "Danny" MacPherson, his opponent, rival candidates in the primary election of June 8, 1949, for the Democratic nomination for the office of judge of the district court of the second judicial district, division No. 2. The informant, appearing upon the face of the returns to have received the larger number of votes, was declared to be the nominee by State canvassing board and a certificate of nomination was duly issued to him. Thereafter, both candidates having requested a recount of the ballots in certain designated precincts and voting divisions of the three counties comprising the second judicial district, the vote received by the candidates mentioned, after recount of the votes, was retabulated by the respective boards of county commissioners, acting as county canvassing boards. The result disclosed that informant's previous majority was overcome and a majority of 78 votes accumulated in favor of his opponent.

The corrected result of the primary election for Democratic nomination for the office mentioned having been certified to the State canvassing board composed of the Governor, chief justice, and secretary of state, the officers named were about to meet as the State canvassing board, recanvass the amended returns for the nomination involved, and as informant had good reason to believe, cancel inform-

ant's certificate of nomination and issue another one to his rival candidate. Thereupon, the informant applied to this court for a writ of mandamus against the above-named State officers, composing in an ex officio capacity the State canvassing board, as respondents, commanding them to recanvass the returns in the office of the secretary of state for the nomination mentioned, employing the amended returns resulting from the recount, but omitting and excluding therefrom returns from all voting divisions in precinct No. 17 of Sandoval County. It is agreed that if the returns from said precinct be ignored, the informant is rightfully entitled to the certificate of nomination which he now holds. We authorized issuance of an alternative writ and now the matter is before us on the writ and answer with all facts essential to a decision covered by written stipulation filed herein.

It could only result in confusion to endeavor to detail in this opinion the various steps by which the United States acquired title to the lands embraced in precinct No. 17 of Sandoval County, N. Mex. Hence, only the basic, ultimate facts touching this phase of the case and deemed essential to our decision will be stated. Suffice it to say that the Los Alamos project of the Atomic Energy Commission is a tract of land, located partly in Sandoval County and partly in Santa Fe County, N. Mex., containing approximately 68,991.30 acres. Title to all this land is held by the United States of America with custody and use of the land in United States Atomic Energy Commission, an agency of the Government. Precinct No. 17 (Los Alamos) Sandoval County, N. Mex., is a tract of land within the Los Alamos project of the Atomic Energy Commission. It contains approximately 580.29 acres and lies wholly within Sandoval County, N. Mex. Title to different parcels of this tract was acquired by the Government in two different ways.

Title to an area comprising 172.90 acres within precinct No. 17 was acquired by the United States together with a large additional quantity of land, from Mexico in 1848 under the terms of the Treaty of Guadalupe Hidalgo. It thus became a part of the public domain and enjoyed that character when on January 6, 1912, New Mexico was admitted into the Union as a sovereign State. It came immediately under administration of the Department of the Interior following its acquisition and in 1905 this tract, along with other lands, was established as a forest reserve. Subsequently, in 1905 the administration of forest reserves was transferred by Congress to the Department of Agriculture. This tract remained as a part of the national forest reserves, finally being incorporated into and becoming a part of Santa Fe National Forest. It was such when the custody, use, and occupancy of this and other lands, by agreement between governmental departments passed, first, to Corps of Engineers of United States Army, and finally, by Executive Order No. 9816 of the President, under authority of the Atomic Energy Act of 1946 (Public Law 585, 79th Cong.) into the custody, management, and control of the Atomic Energy Commission. So stood the title, control, and management of said tract of 172.90 acres at all times material to this case.

The United States acquired title to the remaining 407.39 acres of precinct No. 17 on June 18, 1943, through condemnation proceedings instituted against Los Alamos Ranch School, Inc., a corporation, in the United States District Court for the District of New Mexico. These lands, along with others included in the same condemnation proceedings, were acquired by the United States on behalf of the War Department and devoted immediately to the use and assigned to the custody of Manhattan District, Corps of Engineers of the United States Army. Thereafter on December 31, 1946, and by the same Executive Order No. 9816, mentioned above, the President of the United States under authority of Atomic Energy Act of 1946, transferred this 407.39 acres, along with all other property, real or personal, owned or in the possession, custody, or control of the Manhattan Engineer District, War Department, to the Atomic Energy Commission. Such was status of the title, control, and management of said tract of 407.39 acres at all times material to this proceeding.

It having been provided by section 355, Revised Statutes, as amended by the act of February 1, 1944 (54 Stat. 19), and by the act of October 9, 1944 (54 Stat. 1083; 40 U. S. C. 255), in effect, that unless and until the United States has accepted jurisdiction over lands acquired or in which any interest shall have been acquired after February 1, 1940, it shall be conclusively presumed that no such jurisdiction has been accepted, the Secretary of War under date of November 19, 1943, by letter addressed to Hon. John J. Dempsey, then Governor of New Mexico, at Santa Fe, gave notice that the United States was accepting and thereby did accept exclusive jurisdiction over all lands acquired by it for military purposes within the State of New Mexico, title to which had theretofore vested in the United States, and over which exclusive jurisdiction had not theretofore been obtained.

This letter from the Secretary of War further gave notice that "exclusive jurisdiction is also accepted over all lands reserved from the public domain for military purposes, over which such jurisdiction has not heretofore been obtained."

Subsequently, under date of August 21, 1944, the Secretary of War addressed another letter to the Honorable John J. Dempsey, Governor of New Mexico, at Sante Fe, referring to his letter of November 19, 1943, and to another letter of identical language from the Secretary to Governor Dempsey dated August 8, 1944, the letter of August 21 purporting to give a list of all military reservations over which exclusive Federal jurisdiction had been accepted, "comprising lands acquired and/or reserved from the public domain as of August 8, 1944." Included in the list submitted was "Los Alamos demolition range" in Sandoval County, which embraces the lands of precinct No. 17 in said county.

It was later discovered by the Secretary of War that he had made an error in compiling the list of lands over which United States accepted and claimed exclusive jurisdiction. Accordingly, under date of September 7, 1944, he addressed another letter to the Honorable John J. Dempsey, Governor of New Mexico, at Sante Fe, reading:

"Reference is made to my letter of August 21, 1944, furnishing a list of military reservations in the State of New Mexico comprising lands acquired or reserved from the public domain as of August 8, 1944.

"Exclusive jurisdiction has been obtained over all land in the State of New Mexico acquired in fee simple by the United States for military purposes prior to August 8, 1944, by purchase, condemnation, or donation; also over all lands set apart from the public domain for the Fort Wingate Military Reservation and the Fort Bliss target range.

"It has been discovered that in compiling the list furnished with the letter of August 21, 1944, certain military reservations, in addition to Fort Wingate and Fort Bliss target range, were included which consisted entirely of public domain land. Since the laws of the State of New Mexico do not cede exclusive jurisdiction over land reserved from the public domain for military purposes, excepting lands so reserved for Fort Wingate Military Reservation and the Fort Bliss target range, it was not the intention of this Department to include in the list such reservations. Therefore, in order to correct your records, there has been prepared and is enclosed a new list of military reservations in the State of New Mexico which are wholly or in part under the exclusive jurisdiction of the United States.

"It is regretted that the previous list furnished you included lands over which exclusive jurisdiction had not been obtained."

Each of the ballot boxes in use at said primary election on June 8, 1948, in precinct No. 17 of Sandoval County, contained ballots cast by persons who resided within the national forest area (public domain lands) within said precinct. They also contained ballots cast by persons who resided on lands within the condemned area within the precinct, some of whom were residents of New Mexico, residing on land now within such precinct, prior to the time title to the condemned area within such precinct was acquired by the United States and prior to the date that the letters from the Secretary of War to the Governor of New Mexico, above referred to, were written or received.

A portion of the lands contained in the Los Alamos project, including part of precinct No. 17, is devoted exclusively to scientific and technical purposes, being separated from the residential area and other parts of the project. No persons reside on the area so devoted to scientific and technical purposes and none of the voting places in the primary election were located there. All of the polling places employed in the primary election of June 8, 1948, were located within the residential and business areas of the town of Los Alamos, upon lands acquired by condemnation, as aforesaid.

The condemned area within precinct No. 17 was acquired by the United States Government for the United States Army in 1943 at a time when the United States was engaged in war. At the time of said election and at the present time, it is operated by the Atomic Energy Commission for the purpose of providing community and administrative facilities in connection with operation of the project designated as "Los Alamos project," which in turn is operated for one or more of the purposes set forth in chapter 14, title 42, sections 1801 to 1819, inclusive, United States Code, Annotated, and Executive Order No. 9816 signed by the President of the United States of America dated December 31, 1946.

Precinct No. 17 (Los Alamos), Sandoval County, is an unincorporated community of approximately 8,000 inhabitants located partly upon lands acquired by the United States by condemnation from private owners, and partly upon lands

previously within a national forest. Certain community functions frequently performed by municipal corporations, such as fire protection, electric, water, and gas utility service, sewage disposal, garbage collection, and other matters are at present conducted by the Zia Co., a corporation chartered under the laws of New Mexico, having its principal place of business at Los Alamos, and operating under a cost-plus-fixed-fee contract with the United States, executed by and under the administration of the manager's office of Santa Fe Directed Operations, United States Atomic Energy Commission.

This community, known as Los Alamos and as precinct No. 17, Sandoval County, is within a larger area, all of which is guarded by armed guards in uniform employed by the Atomic Energy Commission, and for which passes are required to enter. Within this larger area there are other restricted areas for which an additional pass is required to enter. Passes are granted to persons having business within said precinct, or desiring to visit persons who reside there. The Government does not interfere (except insofar as is necessary for security reasons and is consistent with its position as landowner) with the conduct in the community, either by persons who reside within precinct No. 17 or those who do not, of such matters as the following: Sale of insurance, sale and distribution of newspapers, and the conducting of political campaigns.

Persons residing in precinct No. 17, including those who reside on the condemned area therein and who voted in the Democratic primary election on June 8, 1948, have at all times material hereto paid or borne the incidence of New Mexico income taxes, sales taxes, gasoline and tobacco taxes; they have obtained New Mexico license plates for their private automobiles and resident hunting and fishing licenses. A deputy registrar of the bureau of vital statistics has an office within the precinct and reports births and deaths therein to the New Mexico Bureau of Vital Statistics; they obtain marriage licenses from the county clerk of Sandoval County for marriages conducted in said precinct No. 17. A United States commissioner holds court outside of the precinct in a building located immediately outside of the main gate of the project and tries cases involving Federal offenses committed within the precinct. This commissioner does not attempt to enforce any State laws within the precinct. So far as the parties to this stipulation are informed, there have been no prosecutions by State officials for violations of State laws committed within the precinct, nor do the parties hereto have knowledge of the occurrence of any such violations.

Concessionaires operating various business enterprises within precinct No. 17 and upon the condemned area therein, returned for assessment, and the county assessor of Sandoval County assessed for taxation during the year 1948, their personal property used in connection with said businesses.

With the foregoing facts in mind, we seek first an answer to the primary question propounded at the outset of this opinion, namely, whether that portion of precinct No. 17 in Sandoval County, acquired by the United States through condemnation proceedings and incorporated into the Los Alamos Project, is "in New Mexico" within the meaning of article 7, section 1 of the New Mexico Constitution defining the qualifications of an elector entitled to vote at all elections for public officers. If we could give an affirmative answer to this primary question, answers to the other two which were put along with this one, would follow as a matter of course. However, we may not so easily resolve our labors. Controlling precedents, affording unanimity of judicial opinion seldom encountered, convince us that a negative answer to the primary question submitted is called for.

There are three principal methods by which the United States may acquire land within a State. First, the method known as the constitutional method, as provided by clause 17, section 8, article 1 of the Federal Constitution. Second, by purchase without obtaining the consent of the State. Third, where the land acquired by the Government was the property of the State, such acquisition being by a cession by the State to the Federal Government in the nature of a gift (*Ft. Leavenworth R. R. Co. v. Lowe*, 114 U. S. 525, 29 L. Ed. 264; *Lowe v. Lowe*, 150 Md. 592, 133 Atl. 729, 46 A. L. R. 983). Different consequences follow acquisition under the three means permitted. When acquisition is made in the constitutional method, ordinarily exclusive jurisdiction for all purposes over the lands acquired attaches in favor of the Federal Government, with the single exception of the right in the State to serve civil and criminal process through its officers on such land relating to acts and offenses outside such land. This concurrent right in the State usually is recited in acts of cession passed by the legislature of the State in which the land lies. We have such an act in this State which will be referred to presently.

The constitutional provision mentioned is United States Constitution, article 1, section 8 (17), giving Congress power, among other things, "to exercise exclusive legislation in all cases whatsoever, over such district (not exceeding 10 miles square) as may, by cession of particular states, and the acceptance of congress, become the seat of the government of the United States, and to exercise like authority over all places purchased by the consent of the legislature of the state in which the same shall be, for the erection of forts, magazines, arsenals, dockyards, and other needful buildings."

The New Mexico statute whereby consent was given to the United States to acquire any land in New Mexico under the clause of the Federal Constitution quoted above for sites for arsenals and other purposes was enacted in 1912 as L. 1912, c. 47, the portions thereof material to this controversy, reading:

"The consent of the State of New Mexico is hereby given, in accordance with the seventeenth clause, eighth section, of the first article of the Constitution of the United States to the acquisition by the United States, by purchase, condemnation, or otherwise, of any land in this State required for sites for custom-houses, courthouses, post offices, arsenals, or other public buildings whatever, or for any other purposes of the Government.

"Exclusive jurisdiction in and over any land so acquired by the United States shall be, and the same is hereby, ceded to the United States for all purposes except the service upon such sites of all civil and criminal process of the courts of this State; but the jurisdiction so ceded shall continue no longer than the United States shall own such lands" (1941 Comp., secs. 8-202 and 8-203).

Although the United States Constitution, in the clause quoted, mentions acquisition by purchase, it has long been settled that the same consequences attach from a jurisdictional standpoint where land is acquired through condemnation proceedings. Indeed, land so acquired is deemed to have been secured by purchase and the same consequences attach (*Kohl v. United States*, 91 U. S. 367, 23 L. Ed. 449; *Hanson v. United States*, 261 U. S. 581, 67 L. Ed. 809; *United States v. Bechtold Co.*, 129 F. 2d 473; *United States v. Beaty*, 198 F. 284; *United States v. 2174 Acres of Land*, 32 F. Suppl. 55). Furthermore, the term "exclusive legislation" employed in said clause 17 of the Federal Constitution is held to be synonymous with and to carry the same meaning as if the term "exclusive jurisdiction" had been employed (*Ft. Leavenworth R. R. Co. v. Lowe*, supra; *Surplus Trading Co. v. Cook*, 281 U. S. 647, 74 L. Ed. 1091; *James v. Dravo Contracting Co.*, 302 U. S. 134, 82 L. Ed. 155; *Johnson v. Merrill*, 20 Cal. 2d 446, 126 P. 2d 873).

In a variety of situations, other than that involving the right of residents of ceded land to exercise the elective franchise, both State and Federal courts have held the jurisdiction of the United States to be full and complete, or as the selected word, "exclusive," implies. For instance, in *People v. Hillman* (246 N. Y. 467, 159 N. E. 400), it was held that an accused charged with a robbery alleged to have been committed on a road through the West Point Military Reservation was not subject to prosecution in the State courts. In *Commonwealth v. King* (252 Ky. 699, 68 S. W. 2d 45), a county court was denied jurisdiction to try a bank official charged with making false entries upon the books of a bank operating on the Fort Knox Military Reservation. In *Lowe v. Lowe*, supra, the Supreme Court of Maryland held that the plaintiff in a divorce suit, the only claim to residence being the fact of domicile on a military reservation, could not meet the statutory requirement of residence in the State essential to maintaining his action.

In *Standard Oil Co. v. California* (291 U. S. 242, 78 L. Ed. 775), the court rules that gasoline sold on the Presidio Military Reservation was not subject to tax. The court said:

"A State cannot legislate effectively concerning matters beyond her jurisdiction and within territory subject only to control by the United States."

In the case of *Johnson v. Yellow Cab Co.* (321 U. S. 383, 88 L. Ed. 814), in perhaps the latest expression by the United States Supreme Court on the subject, it was held that seizure at Oklahoma City, Okla., by State enforcement officers of a shipment of liquor en route from East St. Louis, Ill., to Officer's Club, as consignee, at Fort Sill, Okla., was illegal and its return to the carrier was ordered. The basic ground of decision was exclusive jurisdiction in the United States over Fort Sill Military Reservation.

The foregoing citations represent cases where exclusive jurisdiction in the United States over lands acquired in the constitutional method within the borders of States was fully sustained in respect of acts done or attempted not involving exercise of the elective franchise. However, there are several precedents in the books where that issue was involved. Without exception, under circumstances similar to those here present, the courts have denied the claimed right upon the

ground of want of residence within the State by the person asserting it (*Sinsk v. Reese*, 19 Ohio St. 306; *In re Town of Highlands*, 22 N. Y. Supp. 137; *Opinion of the Justices*, 42 Mass. (1. Metc.) 580; *McMahon v. Polk*, 10 S. D. 296, 73 N. W. 77, 47 L. R. A. 830; *State v. Willett*, 117 Tenn. 334, 97 S. W. 299; *Herken v. Glynn*, 151 Kan. 855, 101 P. 2d 946, on this point approved in the late case of *Miller v. Hickory Groves School Board*, 162 Kan. 528, 178 P. 2d 214; *State ex rel. Parker v. Corcoran*, 155 Kan. 714, 128 P. 2d 999).

The status of lands over which the Government of the United States, by cession from a State, had acquired exclusive jurisdiction, except for concurrent right to serve civil and criminal process in relation to offenses and causes of action originating outside such lands, is well stated by the courts in the following cases, to wit: *Collins v. Yosemite Park Co.*, (304 U. S. 518, 82 L. Ed. 1502) and *Yellowstone Park Transportation Co. v. Gallatin County* (31 P. 2d 644). In the *Collins* case, the court said:

"Except as to this reserved jurisdiction, California put that area beyond the field of operation of her laws."

The United States Circuit Court of Appeals for the Ninth Circuit in *Yellowstone Park Transportation Co. v. Gallatin County*, supra, said:

"In other words, after the date of cession, the ceded territory was as much without the jurisdiction of the State making the cession as was any other foreign territory, except insofar as jurisdiction was expressly reserved. For this reason, the taxing laws of the State of Montana are wholly inoperative in that portion of the Yellowstone National Park within the territorial limits of the State." [Emphasis ours.]

And, in *Consolidated Milk Producers v. Parker* (19 Cal. 2d 815, 123 P. 2d 440), where the question was whether State director of agriculture had jurisdiction to regulate milk distribution on the Presidio Military Reservation, the court said:

"California ceded exclusive jurisdiction over the Presidio to the United States by act of March 2, 1897 (Cal. Stats. 1897, p. 51), reserving only the right to execute civil and criminal process therein. [Citations omitted.] The area thus became a Federal territory removed from jurisdiction of the State." [Emphasis ours.]

The same declaration occurs in some of the so-called vote cases since, indeed, all rest their decision on the hypothesis that the land on which residence is claimed is outside the State territorially, within contemplation of law, so far as intended by the constitutional requirement of residence as a condition of the right to vote. In the case of *In re Town of Highlands*, supra, the court said:

"We turn to the question of the right of these people to vote. That has been decided in numerous cases. In the case of *Com. v. Clary* (8 Mass. 72), the Supreme Court of Massachusetts held that the people on the Government property at Springfield had no right to vote, and the question also arose, and was decided in a case reported in 1 Metc. 583 (Supp.) \* \* \*. So, as Judge Field says, there is a uniform current of authority from the beginning of the Government down to the decision of this (Fort Leavenworth) case in 1884,—all to the effect that this territory is not part of the state. [Emphasis ours] \* \* \*."

Counsel for respondents, and more especially Hon. Everett M. Grantham, United States attorney for the district of New Mexico, appearing amicus curiae, would have us believe that the law as declared in the foregoing quotation represents an earlier and strict construction, since abandoned in favor of a new approach, stemming from a more liberal philosophy toward the jurisdictional question involved. We find nothing in the decisions to warrant this conclusion. Indeed, the latest cases on the subject, under similar facts, adhere to the earlier precedents. See *Herken v. Glynn*, supra, decided by the Supreme Court of Kansas in 1940, and the still later case of *Miller v. Hickory Groves School Board*, supra, from the same court in 1942. We may add to these the decision of the United States Supreme Court in *Johnson v. Yellow Cab Co.*, supra, in 1944, where under different facts, the same principles of exclusive jurisdiction in the Federal Government is reaffirmed.

It is argued by counsel, although neither persuasively nor too hopefully, that the condemned area, as a whole, is not a "site" within the meaning of our consent statute; that by use of the words "customhouses, courthouses, post offices, arsenals, or other public buildings whatever," the legislature intended only building sites; and that in adding the phrase "or for any other purpose of the Government," under the doctrine of ejusdem generis, it could only have had reference to other purposes of a similar nature to these previously mentioned.

The argument hardly seems tenable in view of the obvious fact that our consent statute was adopted to afford cooperation on the part of the State with the Federal Government in acquiring lands for necessary governmental functions

and purposes. Indeed, reference appears in the act (1941 Comp., Secs. 8-802, et seq.) to United States Constitution article 1, section 8 (17), which itself does not employ the word "sites," but rather the word "places"—for forts, magazines, arsenals, etc. The second section of our act cedes exclusive jurisdiction over "any land" so acquired, yet in reserving jurisdiction to serve process relates the reservation to "such sites," disclosing that the words "sites" and "land" were to have a synonymous meaning, that meaning to embrace all lands acquired for the purposes stated. Certainly, such has been the meaning given it in all cases brought before the courts and that, too, without seeming question. To give it the narrow, restricted meaning urged by counsel would practically nullify the broad purposes reflected in clause 17, section 8, article 1, of the Federal Constitution and our consent statute enacted in pursuance of same.

Counsel argue at some length over statutes of the condemned lands as an "arsenal." We have no difficulty in classifying them as such in view of their acquisition for the United States Army in 1943 while we were at war and general knowledge on the extent to which, since acquisition, they have been devoted, among other things, to experimentation with fissionable materials and the manufacture and assembly of the most destructive agency the mind of man has ever succeeded in devising—the atom bomb.

We are forced to the conclusion that residence on the condemned area of Los Alamos project will not meet the constitutional requirement of "residence" for voting purposes.

Having reached the conclusion announced as to the condemned area or "deeded land" as a situs of residence for voting purposes in the constitutional sense, we proceed to determine the status of public domain lands within Los Alamos project, 172.90 acres in extent, within the precinct as a situs of residence for such purposes. In this connection, it will be recalled that, although the Secretary of War at one time asserted and claimed "exclusive jurisdiction" on such lands along with condemned lands, nevertheless, by declaration contained in letter of September 7, 1944, he made a correction as to public domain lands, stating:

"Since the laws of the State of New Mexico do not cede exclusive jurisdiction over land reserved from the public domain for military purposes, excepting lands so reserved for the Fort Wingate Military Reservation and the Fort Bliss target range, it was not the intention of this department to include in the list such reservations."

It will be observed, as the Secretary's letter states, that the New Mexico consent statute does not cede exclusive jurisdiction over land reserved from the public domain for military purposes. See, also, 16 U. S. C. A. section 480 recognizing concurrent jurisdiction as to national forest lands. It is not land acquired in the constitutional method as a place "for the erection of forts, magazines, arsenals, dockyards, and other needful buildings." The result is that the United States occupies and uses such lands in a proprietary capacity only (*Fort Leavenworth R. R. Co. v. Lowe*, supra; *Surplus Trading Co. v. Cook*, supra; *Six Cos. v. DeVinney*, 2 F. Supp. 693). The lands remain subject to the jurisdiction of the State in matters not inconsistent with the free and effective use of the lands for the purposes for which it was acquired. (*Johnson v. Morrill*, supra). In *Six Cos. v. DeVinney*, supra, the court said:

"Upon the question of acquisition it is contended by plaintiff that the setting aside of this land out of the public domain and withdrawing the same from public entry 'was an acquisition thereof within the meaning of that statute as fully as if the United States had purchased the land from others.' The fallacy of this contention lies in the fact that after the land had been withdrawn from entry and set apart for the purposes specified, no change had occurred in ownership. All that was done with the land was in exercise of ownership, consisting of the withdrawal of offers for its acquisition by the public and the setting of the same aside for certain uses or purposes of the Government. The United States did not acquire anything it did not already own. (*Surplus Trading Co. v. Cook*, 281 U. S. 647, 50 S. Ct. 455, 74 L. Ed. 1091; *Woodruff v. North Bloomfield Gravel Mining Co.* (C. C.) 18 F. 753)."

We conclude that exclusive jurisdiction has not been ceded to the United States by the State as to so much of the area of Los Alamos project within precinct No. 17 as was carved from the public domain. Bona fide residence for the stated period on such portion of lands within the precinct meets the constitutional requirement in that particular for voting. Hence, so many of the votes cast in said primary election by residents of this portion of lands within the precinct by electors otherwise qualified should have been received and counted, if legally cast.

This brings us to the third and final question, viz, the effect of holding the election on the condemned lands within the precinct. As already shown, this land was under exclusive jurisdiction of the United States, except for the right to serve thereon civil and criminal process from State courts. In legal effect, the case is not different from what it would have been if the polling places had been located and the balloting had occurred in Colorado or some other State. Nor is the position of respondents aided by the enactment of L. 1947, c. 100, 1941 Comp. (1947 Pocket Parts) Sec. 56-101, purporting to make residents upon lands such as the condemned lands here involved residents of New Mexico within the constitutional sense (*Sinks v. Reese*, 19 Oh. St. Rep. 306). In this case the court said:

“\* \* \* It is not constitutionally competent for the general assembly to confer the elective franchise upon persons whose legal status is fixed as nonresidents of the State.”

We are unable to avoid the conclusion that presence of the polling places outside the State, in legal intendment, is fatal to validity of the election. The voters participating in the election, some of whom without doubt were bona fide residents and qualified electors in New Mexico, did not, within the true meaning of State Constitution, article 7, section 1, personally appear and cast their ballots in the precinct of their residence “in New Mexico” (*Chase v. Lujan*, 48 N. M. 261, 149 P. 2d 1003). There are a few cases holding that under certain conditions an election held outside the precinct of the voter’s residence, although inside the State, will not be declared invalid (*People v. Graham*, 267 Ill. 426, 108 N. E. 699; Ann. Cas. 1916 C 391, and *Smith v. Hackett*, 129 Md. 73, 98 Atl. 140). In each case, the court cited somewhat critically and as holding otherwise or, at least, as being distinguishable, such cases as *Chase v. Miller* (41 Pa. 403); *Twitchell v. Blodgett* (13 Mich. 127), and *Bowland v. Hildrett* (26 Cal. 161), or one or more of them. These are cases cited approvingly and relied upon in reaching the conclusion we did in *Chase v. Lujan*, supra, and in the earlier case of *Thompson v. Scheier* (40 N. M. 199, 37 P. 2d 293), holding unconstitutional the law permitting absentee voting.

Even in those States permitting such voting, in order to avoid constitutional barriers, the ballot is deemed cast in the precinct where canvassed and counted—that of the voter’s residence. There is here no ground for indulging this somewhat fictional theory since the ballots were cast, canvassed, and counted outside any area in New Mexico able to supply basis for a voting residence. And, in view of our holdings in *Thompson v. Scheier*, supra; *Chase v. Lujan*, supra, and *Baca v. Ortiz* (40 N. M. 435, 61 P. 2d 320), that a statute purporting to authorize voting otherwise than through personal presence of the voter in the precinct of his residence in New Mexico was invalid it would seem somewhat anomalous to hold that the same thing the statute could not lawfully authorize, where done without the purported authority of a statute, will be given the badge of legality. It follows that there was no primary election for precinct No. 17 in Sandoval County on June 8, 1948.

Counsel for respondents as well as counsel appearing amicus curiae argue strongly that the conclusions we have reached are not to be indulged in view of the previous holdings of this court in *Tenorio v. Tenorio* (44 N. M. 89, 98 P. 2d 838), and *State v. Mimms* (43 N. M. 318, 92 P. 2d 993). We do not consider that the decisions reached in those cases are controlling. In the *Tenorio* case, we were dealing with the status of Pueblo Indian lands in relation to the question of “residence” for purposes of a divorce suit. We noted the difference between their status for the purpose indicated and property acquired by the United States in the constitutional method when viewed for the same purpose. We said:

“The status of the Pueblo Indian lands is so different from that of United States property acquired in the ‘constitutional method’ mentioned in the majority opinion in *Lowe v. Lowe*, that we do not deem the case decisive of the question involved, even if we were prepared to affirm its correctness, a conclusion we should be slow to announce without further study in view of the persuasive reasoning and forceful precedents employed by Chief Justice Bond in his dissent from the majority view.”

The seemingly tentative approval, provisional though it be, given the dissenting views of Chief Justice Bond in *Lowe v. Lowe*, supra, referred to in the quotation next above is, of course, to be qualified by what we today say and hold in the case before us.

The case of *State v. Mimms*, supra, presents more of a puzzle. It was a stipulated fact in the case that the land involved at Elephant Butte Dam was acquired for reclamation purposes pursuant to article 1, section 8 (17) of the Federal Constitution. It was upon a record containing such a stipulation that the court

trying the defendant, and this court in reviewing its judgment, decided the case. Counsel amicus curiae reminds us, however, a fact perhaps to be noticed judicially, that the lands, having come to the United States under the Treaty of Guadalupe Hidalgo, did not fall within the purview of the consent or cession statute. Nevertheless, as he says, it must be assumed the case was tried on the record before the court. So viewed, he and counsel for respondents as well find in it a precedent in favor of their position. They support their analysis of the case by the vigorous contention that, if acquired by condemnation under Federal constitutional provision mentioned, exclusive jurisdiction in the Government passed immediately by virtue of the consent statute, as argued by informant. Nevertheless, we uphold concurrent jurisdiction in the State.

On the other hand, counsel for informant say the case was correctly determined, even on the stipulated fact as to manner of acquisition. The purpose of acquisition being to promote the Government's program of reclamation, the mere fact that lands are acquired by condemnation, under United States Constitution, article 1, section 8 (17), without more, does not necessarily conclude the question whether exclusive jurisdiction, ipso facto, passes with the cession. So runs the engaging argument of informant's counsel. They cite and rely on *Silas Mason Co. v. Tax Commission of State of Washington* (302 U. S. 186, 82 L. ed. 187); *James v. Dravo Contracting Co.*, supra, and *Johnson v. Merrill*, supra.

We will not decide the issue between them. *State v. Minnms* having been correctly decided under the true fact as to character of the land involved, we have no hesitancy in saying we should decline to give it stare decisis effect whether correctly determined or not on a false fact, inadvertently stipulated to be true. So considered, we pass the effect of our decision on the Minnms case.

We are reminded by counsel of the several acts of jurisdiction exercised by the State on the lands in precinct No. 17, Los Alamos project, as to which the jurisdiction in the United States has been held to be exclusive. They point out, as the stipulated facts disclose, that residents of Los Alamos, including those who voted in this primary election, pay or bear the incidence of New Mexico income taxes, sales taxes, gasoline taxes, and tobacco taxes; that cost and cost-plus-fixed-fee contractors doing work for the Government on the condemned area within precinct No. 17 carry workmen's compensation insurance under the New Mexico compensation statute; and so on as to certain other acts and things done according to State law. Most, although not all, of the matters stipulated as being done, are expressly authorized by congressional acts and represent a recession to the State of jurisdiction on the part of the Government in the particulars indicated. See what is known as the Buck Act (4 U. S. C. A., secs. 12 to 16) giving States authority to apply gasoline taxes, sales, use, and income taxes on Federal areas; also act of June 25, 1936 (40 U. S. C. A., sec. 290), to the same purport regarding extension of State workmen's compensation laws in Federal areas.

To the extent any of the acts and things done on the condemned area in an application of State law are outside the purview of congressional authorization, they cannot impinge upon the exclusive jurisdiction of the Federal Government otherwise obtaining. If exclusive jurisdiction over certain landed areas be ceded to the United States by a State, such jurisdiction cannot be recaptured by the State by later statute without consent of the United States.

*Rogers v. Squier* (U. S. C. C. A., 9th Ct.; 157 F. 2d 948); *United States v. Unzueta* (281 U. S. 138; 74 L. Ed. 761). We find no Federal statute receding jurisdiction of the condemned area to New Mexico in the particulars here involved. We are informed by counsel in argument that such a measure was introduced in the recent special session of the Congress and never reached the floor for consideration due to the shortness of the session. The question is a legislative one and however strong our wish that residents of this community might enjoy the elective franchise, we may not properly further that desire by an act of judicial legislation.

The conclusion that residents of the condemned area in precinct No. 17 may not enjoy the elective franchise, based on residence there, does not necessarily mean they do not possess the right to vote elsewhere. As pointed out in a few of the so-called vote cases, particularly *In re Town of Highlands*, supra, and *Herken v. Glynn*, supra, certain residents of the condemned area may still have a voting residence at the place of their former domiciles. New Mexico Constitution, article 7, section 1, provides that no person shall be deemed to have acquired or lost a residence by reason of his presence or absence while employed in the service of the United States or of the State nor while a student at any school. Any residents of the condemned area in said precinct, to whom this constitutional provision applies as well as those from other States with like constitutional provision, and, indeed, aside from the effect of any such provision, where the only

thing evidencing an intention to change a former voting residence has been the futile act of seeking to acquire one in this Federal area, absent a fixed resolve to abandon the former residence at all events, may if otherwise qualified, cast his ballot at the place of former residence, in person, where so required as in New Mexico; or, by absentee voting in States where permissible.

As to those residents of the portion of precinct No. 17, which is not a part of the condemned area, who are qualified electors of the county and precinct in which they reside, a heavy responsibility rests on the Board of County Commissioners of Sandoval County to proceed forthwith with all dispatch and on their own notion to relocate the polling places, for the voting districts in such precinct to the end that the qualified electors therein may not be denied the right to vote in the forthcoming election. Time yet remains for such action and as well a remedy in the electors to compel same in the event of a refusal, which is not to be anticipated. See 1941 Comp. (1947 Pocket Parts), sections 56-201.

It follows from what has been said that the alternative writ should be made permanent.

It is so ordered.

We concur:

No. 5144

SEPTEMBER 19, 1948.

ARLEDGE V. MABRY, ETC. ET AL.

FOWLER, District Judge, dissenting:

I do not agree that the election held in precinct 17 (Los Alamos), Sandoval County, N. Mex., on June 8, 1949, was a nullity. The majority opinion admits that those persons who live on the 172.90 acres of former forest reserve lands in said precinct were or may have been qualified electors entitled to vote at said primary election. The election is declared a nullity, as to such persons, because all the polling places in said precinct were situated on the 407.39 acres of condemned land, which is said to be under the "exclusive legislation" or "exclusive jurisdiction" of the United States, and as such is deemed to be effectually "out of the State" for all election purposes.

New Mexico does have jurisdiction over said condemned land for some purposes. The State reserved some of this jurisdiction by its own acts of cession; some, on other matters, was retroceded to the State by acts of Congress, and it appears that the authorities agree that even after it has ceded jurisdiction the State still retains certain jurisdiction over the lands until and unless Congress acts by definitive legislation to prescribe for the acquired lands. If New Mexico retains any jurisdiction over this territory—and it does—then it cannot be a country "without the State." Subject to the right of the United States to exercise exclusive jurisdiction over it (which right the United States has waived by receding a part of such jurisdiction), this territory is still precinct 17 of Sandoval County of the State of New Mexico (*Collins v. Yosemite Park et al.*, 304 U. S. 518 58 S. Ct. 1009).

The County Commissioners of Sandoval County fixed the polling places at sites within the confines of precinct 17. Provisions regarding the fixing of polling places within a precinct are directory merely, and it is not the policy of the law to disfranchise and penalize electors merely because the public officials in charge have made some slight miscalculation in setting up the voting sites, if they did so, especially where this did not result in depriving a single elector of his chance to vote, and where no fraud is charged or appears. The election was held and the polling places were in the precinct where the electors offered to vote. No function or control of the government was in the least embarrassed nor was its jurisdiction impinged upon thereby.

As pointed out in the court's opinion, the weight of authority is to the effect that those persons who reside on lands which are acquired by the United States by the "constitutional method," as were the 407.39 acres of condemned lands in

precinct No. 17, do not have residence within the State within the meaning of the election laws. Although criticism might be leveled at this rule on principle it is probably too well established now for change. It may be inferred from these facts that there were illegal votes cast at said election which should not be counted or considered in the result. We are not informed how many such votes there were, and of course, no one knows for which one of the candidates any one or more or how many of the ballots were cast. The stipulation does not show that the number of those votes, by residents of the condemned lands, were sufficient to change the results, or were sufficient to invalidate the election in the precinct. I think the election was valid as to the qualified electors of said precinct 17 living on the former forest reserve lands.

Holding these views, I am of the opinion that the alternative writ should be discharged.

CHARLES H. FOWLER, *District Judge.*

Exhibit No. 3

STATEMENT OF CARROLL L. TYLER REGARDING SCHOOL FINANCING AT LOS ALAMOS

In connection with my testimony on February 17 before the joint committee, a question was raised concerning school financing in New Mexico which I feel requires some clarification.

If normal State jurisdiction is returned to the State of New Mexico over the small part of the Los Alamos project now in the exclusive jurisdiction of the United States, no change will automatically occur in the administration of the schools at Los Alamos.

It may well be that the State of New Mexico will consider the schools as private schools. As such, the United States Government may not be entitled to any share of the revenue derived from the New Mexico school tax.

Uniform State jurisdiction would permit the formation of an independent school district under State law. If this were done, a further basis would be established by which the school district might receive a share of the school tax revenue and be subject to the various provisions of State law governing the administration of public schools. Formation of such a district would require a vote of the local residents. The relative advantages and disadvantages of forming such a school district are under study.

EXHIBIT No. 4

UNITED STATES ATOMIC ENERGY COMMISSION,  
*Washington 25, D. C., April 5, 1949.*

MR. WILLIAM L. BORDEN,  
*Executive Director, Joint Committee on Atomic Energy.*

DEAR MR. BORDEN: At the hearings held by the joint committee on February 17 and February 21, 1949, members of the committee expressed an interest in a comparison of the costs of housing constructed for the Atomic Energy Commission with the costs incurred by the armed services. Attached is a statement and tabulation showing costs of representative housing recently built or now under construction for the Atomic Energy Commission and also showing the costs of current projects given us by the armed services.

A comparison of these cost figures is very difficult. Among other factors, we are advised that the armed services have lately engaged in relatively small programs of housing compared with the Atomic Energy Commission. Differences in location with attendant differences in wage scales, material costs, climatic problems, and similar local problems also prohibit an absolute comparison between housing costs in various parts of the country. Differences in standards of construction are of course a direct cause of noncomparative costs. If an over-all comparison is considered significant, however, attention is invited to the square-foot costs which the armed services are using in estimating costs for the ensuing year. These unit costs are listed at the end of the attached statement.

If any further or different analysis seems desirable to you, we will prepare it on request.

Sincerely yours,

C. SHUGG,  
(For Carroll L. Wilson, General Manager.)

MARCH 25, 1949.

In comparing costs of housing for the armed services with costs of housing for the AEC, the following facts must be kept in mind.

(a) The armed services are limited by statute to the following net usable areas for different grades of personnel:

	<i>Square feet</i>
For noncommissioned officers.....	1, 080
For company grade officers (lieutenants in Navy).....	1, 250
For majors and lieutenant colonels (lieutenant commanders and commanders in Navy).....	1, 400
For colonels (captains in Navy).....	1, 670
For generals or admirals.....	2, 100

We are advised, however, that virtually all current and planned armed forces construction has been within or under the 1,080 square-foot category. It also will be noted from the attached tabulation that in only one instance at Richland, two instances at Los Alamos, and one at Sandia has the area exceeded that of the armed services "enlisted personnel" and in no case has it equaled that for "company grade officers."

(b) The square-foot costs as used by the armed services are based on "net usable area" which is that area computed inside the outside walls, and excludes utility and storage rooms, porches, basements, common stairways and halls in apartments, and attics where not actually lived in. This results in a much higher square-foot cost than that obtained through the standard commercial practice of using the area of all finished parts of the house including used basements, attics, utility and storage rooms, and using the outside measurements for computing the areas. For purposes of comparison in this study, the AEC square-foot costs have been computed on this same basis. Hence the square-foot costs in this table should not be used for comparison with square-foot costs obtained through private or commercial channels.

(c) The costs shown are for the houses or apartments using complete contractors costs including contractor's own overhead and profit. The costs cover the water, sewer, and electrical services extended to a point 5'-0" outside the building, but do not include roads, streets, lot, lot improvements or water, sewer, and electrical connections from the 5'-0" point out.

There is no way by which a competent comparison of outside utilities such as road, streets, lot improvements, water, sewer, and electricity can be made due to the varied conditions of terrain, weather variations, and propinquity of trunk lines. Such services have varied on the Commission's operations from \$1,500 to \$4,200 per family. The Army's experience has demonstrated even wider variations, as for instance, the outside utility cost for housing shown in column N amounted to \$6,126 per living unit, while the outside utility cost for housing shown in column O amounted to \$1,134 per living unit.

The armed forces are using the following square-foot costs (on the same net usable area basis) in estimating costs for the ensuing year, which it will be noted are considerably higher than those contained in the table except for the AEC apartments at Oak Ridge and for the Army at West Point: \$15.97 per square foot for single dwellings, \$15.38 per square foot for duplex houses, and \$14.72 per square foot for row housing (eight units per building).

*Schedule of comparative costs—Housing—Continued*

## SPECIFICATIONS

- A. Concrete foundations, reinforced concrete frame and floors, poured gypsum roof slab on bar joists, concrete block walls, inside furred and plastered, exterior wall "gunited," asphalt tile floor finish, DH aluminum sash, steel exterior stairs. Modern design with large expanses of glass.
- B. Concrete foundation, concrete block walls, wood roof construction, concrete floor slab on ground, asphalt tile floor finish, radiant heating, DH aluminum sash, walls not plastered but painted with "sprayzon."
- C. Same as B.
- D. Wood frame, stucco finish, outside walls rock lath and plaster inside walls, Keene's cement in kitchen and bath, flat roof, hardwood floors, gas heat.
- E. Same as D.
- F. Same as D.
- G. Wood frame, shingle and siding exterior walls, plaster board inside walls (dry-wall finish), Keene's cement bath and kitchen, gas unit heat.
- H. Same as G.
- I. Precast pumice concrete walls and frame roof, inside and outside sprayed on finish, hard wood floors on sleepers, linoleum kitchen and bath floors, gas unit heat.
- J. Same as I.
- K. Same as I.
- L. Wood frame construction with weather board or shakes on exterior walls, plaster board inside finish (dry-wall finish), asphalt strip shingles on roof, concrete slab floor on ground with asphalt tile finish, forced draft coal fired warm air heat.
- M. Same as L.
- N. Brick exterior walls, furred and plastered inside walls wood joists, wood stud partitions, wood rafter, roof framing, asphalt shingle roof, No. 1 flooring over subfloor, coal-fired hot-water heating plant.
- O. Same as N.
- P. Same as N.
- Q. Light weight concrete exterior walls, inside finish furred and plastered, concrete slab floor on ground.
- R. Same as Q.
- S. Concrete foundations, wood frame asbestos shingle siding rock lath and plaster asphalt shingle roof, oil-fired hot-water heat with individual heaters.
- T. Same as S except that wood siding is used in lieu of asbestos shingle siding.

Exhibit No. 5  
Principal cost-type operation contracts

Contractor	Brief description of work	Estimated 1949 contract obligations (exclusive of fee)	Fee	Overhead and cost provisions
Monsanto Chemical Co. (contract No. AT-33-1-Gen-53).	The contractor is required to operate and maintain, in accordance with mutually agreeable plans and programs Mound Laboratory at Miamisburg, Ohio, and pending completion of construction of Mound Laboratory, units 3 and 4 of the contractor's research department located at or near Dayton, Ohio. The plans and programs include research, development, and production. The contractor is also to perform the necessary architectural, engineering, procurement of equipment and construction management services as may be required both for the Mound and Sclero Laboratories. The contract is for a term ending June 30, 1949.	\$6,044,623, maintenance and operations; \$120,000, overhead.  \$7,377, overhead (for Sclero).	\$375,000 for period Jan. 1, 1948, to June 30, 1949, for operation and maintenance of the plants (excluding Sclero). \$62,000 for engineering and construction services for Sclero Laboratory.	Contractor is to be paid for all of its costs and expenses (except as provided below for overhead) incurred in performing the contract. In connection with its operation and maintenance activities it is to be paid on overhead allowance of \$10,000 per month. This allowance is to cover costs and expenses of the contractor's main office, except salaries and wages and traveling expenses of personnel of that office, other than department heads, while engaged on contract work away from the main office, and certain costs and expenses of the operation of unit 1 of contractor's central research department in Dayton, Ohio. For its engineering and construction services in connection with the Sclero Laboratory, the contractor is paid an overhead allowance of \$614.75 per month which is intended as payment for the salary of an assistant director of unit 1 and for overhead expense of other employees. No provision is included for adjustment of the overhead allowances. The contract also provides a benefit fund arrangement. All work is performed at the expense of the Government. Overhead expenses incurred at Oak Ridge are reimbursable but no general administrative and other general overhead expenses of its New York office or other offices and plants are reimbursable. Contractor to be reimbursed for all of its costs and expenses. Payment for overhead is to be as follows: Factory overhead allowances for various departments ranging from 101 percent to 123 percent of direct labor costs, subject to revision at 6 months intervals; for administrative overhead a lump-sum of \$200,000 per month is paid. Provision is included that upon final settlement of the contract, if the total reimbursements, including the \$200,000 per month, exceed the contractor's total costs and expenses, the excess will be paid to the Government. Provision is included for an employee benefit fund.
Carbide & Carbon Chemicals Corp. (contract No. W-7406-Eng-26).	For operation of the gaseous diffusion plant (K-25 and K-27), parts of the electromagnetic plant (Y-12) and the Oak Ridge National Laboratory at Oak Ridge, Tenn. The contract is for a term ending June 30, 1951.	\$43,976,900, maintenance and operation; \$2,427,027, construction.	\$1,152,000 for K-25, K-27 per annum; \$228,000 for Y-12 per annum; \$504,000 laboratory per annum.	
General Electric Co. (contract No. W-31-100-Eng-52).	For performance of architect-engineer, construction, operation, research and development services at Hanford Works, at Knolls Atomic Power Laboratory, Schenectady, N. Y. and at General Electric Research Laboratory. The contract is for a term ending Dec. 31, 1950.	\$72,875,404, construction; \$44,122,433, plant operations; \$541,122, town operations; \$2,400,000, administrative overhead; \$119,938,959 total.	\$1.....	

*Principal cost-type operation contracts—Continued*

Contractor	Brief description of work	Estimated 1949 contract obligations (exclusive of fee)	Fee	Overhead and cost provisions
University of California (contract No. W-7405-Eng-36).	Work, in general, comprises research, and development and production of atomic weapons by the Los Alamos Scientific Laboratory, including operations both at Los Alamos, N. Mex., and at such other sites as have been or may be agreed upon by the parties to the contract either within or without the continental limits of the United States. The term of the contract is for a term ending June 30, 1952.	\$32,994,200, operations; \$185,800, overhead.	None	Contractor to be reimbursed for all of its costs incurred in good faith and arising out of or connected with the work under the contract including direct, indirect, and overhead costs. Overhead is provisionally charged at 7 percent of salaries and wages and adjusted at the end of the fiscal year on the basis of actual overhead expenses chargeable to the contract. Provision is included for an employee's benefit fund.
Iowa State College (contract No. W-7405-Eng-82).	The work under the contract consists of studies and experimental investigations on such problems related to the field of atomic energy as are agreeable to the contractor and authorized by the Commission. The work will involve such subjects as metallurgy, radio-chemistry, chemical engineering, physics, chemistry and others. Also included is development work with such materials as thorium and beryllium. The contractor will perform such engineering and construction services as it is in position to carry out. The contract is for a term ending June 30, 1953.	\$1,099,000, operations; \$275,000, adjusted overhead.	do.	The contractor is to be reimbursed for all of its costs and expenses which are actually incurred in good faith arising out of or in connection with work under the contract. \$250,000 per year is to be paid in monthly installments to cover overhead expenses and other expenses not specifically reimbursed under the contract. Not less often than once a year, the actual expenses intended to be covered by such payment are to be reviewed and any necessary adjustment made.
Associated Universities Inc. 383 7th Ave., N. Y., (contract No. AT-30-2-Gen-16).	For the establishment, management, operation and maintenance of the Brookhaven National Laboratory for the conduct of studies, experimental investigations and tests in the atomic fields described in section 3 of the Atomic Energy Act of 1946. The term of the contract is for a period ending Dec. 31, 1950.	\$8,323,675, operations; \$7,795,000, construction.	do.	Commission to reimburse for all costs and expenses incurred in good faith in performance of the work under the contract, including overhead computed in accordance with generally accepted accounting principles. Overhead of \$6,400 per annum is to be paid in monthly installments, subject to review and adjustment not less often than once a year. Benefit provisions are included.
University of California Berkeley, Calif., (contract No. W-7405-Eng-48).	For basic research and development work in the field of radiation phenomena, particularly as associated with high energy particles. Included are engineering and construction services in connection with alterations and new construction required in the conduct of the program. The contract is for a term ending June 30, 1952.	\$7,760,000, operations; \$1,461,000, construction; \$460,000, overhead.	do.	Commission to reimburse for all costs and expenses incurred in good faith in performance of the work under the contract, including overhead computed in accordance with generally accepted accounting principles. Overhead expenses chargeable to the contract are outlined in some detail in an appendix to the contract. Benefit fund provisions are included in the contract.

The University of Chicago, Chicago, Ill. (contract No. W-31-100-Eng-38).	The contract provides for the organization, operation, and maintenance of the Argonne National Laboratory. The work is to include research programs in the development and construction of new types of piles and research in nuclear science, physics, and chemistry, and in those phases of physics, biology, and engineering science, of interest to the atomic energy project. The contract is for a term ending Dec. 31, 1951.	Commission to pay all costs and expenses incurred by contractor in performance of the contract including overhead expenses, \$57,750, to be paid monthly for overhead costs. On final settlement, repayment to be made of any excess reimbursements under this contract and two previous contracts. Benefit fund provisions are included in the contract.
The University of Chicago, Chicago, Ill. (contract No. A.T. 40-1-Gen-42).	Contractor is to furnish all architectural, engineering, management, and construction work incident to the design and construction of the laboratory in Du Page County, Ill. The term of the contract is from May 27, 1947, to completion of the work.	Commission to pay contractor's actual costs, \$12,500 to be paid monthly as an overhead allowance. On final settlement, repayment to be made of any excess reimbursements under this contract and the three previous contracts.
The Zia Co., Santa Fe operations office (contract No. W-17-028-Eng-90).	The contractor, in general, will perform such management, operational, maintenance, architect-engineer, construction, and other related services, as may be mutually agreeable, in connection with the conduct of projects under the jurisdiction of Santa Fe operations office. The contract is for a term ending June 30, 1951.	Costs generally are limited to direct costs with no provision for a separate overhead payment.
Roane-Anderson Co., Oak Ridge, Tenn. (contract No. W-7401-Eng-115).	The contractor is to manage, operate and maintain facilities, utilities, roads, services, and properties, exclusive of processing facilities, at Oak Ridge, Tenn., as directed by the Commission. The contract is for a term ending Dec. 31, 1950.	Direct costs incurred by the contractor are reimbursable. No provision is made for payment of general overhead expenses.
American Industrial Transit, Inc. (contract No. W-14-108-Eng-53).	The contractor is required to operate a transportation system of passenger buses for both on-area and off-area operations at Oak Ridge, Tenn.	Direct costs incurred by the contractor are reimbursable. No provision is made for payment of general overhead expenses.

1 This is a gross figure on an obligation basis for fiscal year 1949. If gross revenues, estimated at \$4,171,000 are deducted, the net estimated obligation is \$7,988,000.

2 On the same basis as the Zia contract, deduction of gross revenues, estimated at \$7,138,367, leaves a net of \$5,890,000.

3 On the same basis as the Zia and Roane-Anderson contracts, deduction of gross revenues, estimated at \$700,000, leaves a net of \$998,016.

NOTE.—The above is intended only as a general indication of the scope of these lengthy and, in many instances, quite complicated contracts.

Fees on negotiated contracts let Jan. 1, 1947, to Nov. 15, 1948<sup>1</sup>

[Construction contracts over \$1,000,000]

Name of contractor	Project description	Date started	Amount of fixed fee <sup>2</sup>	Estimated cost of contracts (excluding fee) <sup>3</sup>
Oak Ridge Operations Office, Dayton, Ohio:				
Manion Construction Co.	Construction unit VI (Marion, Ohio)	Feb. 27, 1948	\$150,000	\$5,850,000

<sup>1</sup> General. Includes contracts and subcontracts under architect-engineer contracts, but no contracts for maintenance or operating-type services. Contracts let after Nov. 15, 1948, are not included, but other contracts let prior to this date have been shown at the current estimated cost, including changes up to about Feb. 18, 1949.

<sup>2</sup> General. Figures in some cases differ from those derived from earlier field reports of September and November 1948. The more recent data in this report contain up-to-date estimates. Cost estimates will necessarily vary on cost-type contracts.

<sup>3</sup> (Hanford). These services include research and development, experimental engineering, and basic-process design, as well as plans and specifications for construction of complete plant.

<sup>4</sup> (Oak Ridge). Negotiated for title I (preliminary design) only.

<sup>5</sup> (Oak Ridge). Tentative estimates only for complete engineering and construction costs.

<sup>6</sup> (Oak Ridge). Skidmore, Owings & Merrill contract includes \$19,000 fee for developing Oak Ridge master plan, but no related cost of construction is shown.

<sup>7</sup> See construction contract.

<sup>8</sup> (Santa Fe). This cost-plus-fixed-fee has some work involving titles I, II, and III, and all unfinished work of four terminated lump-sum contracts which had \$12,500,000 of work involving title III services only.

*Analysis of the cost of the ranch-type houses at Richland, Wash., exclusive of cost of land*

## Houses with utilities to 5-foot line:

House contract.....	\$9, 967, 180. 00
Refrigerators and stoves.....	280, 000. 00
Subtotal.....	10, 247, 180. 00
Streets, walks, and curbs.....	1, 344, 758. 00
Water system.....	537, 937. 00
Sewage system.....	342, 293. 00
Electrical system.....	520, 932. 00
Site preparation, grading, topsoiling, etc.....	595, 000. 00
Telephone system.....	50, 000. 00
Design of housing project.....	261, 300. 00
Indirect expense including field supervision, inspection, construction equipment use charges, etc.....	461, 273. 00
Total cost of 1,000 houses.....	14, 360, 673. 00
Complete cost per house.....	14, 360. 67

Residents handle seeding, planting and upkeep, etc.

## COST AND VALUE OF LAND OCCUPIED BY RANCH-TYPE HOUSES

The 1,000 houses occupy a gross land area of 312 acres. Original cost to the Government of the class of land occupied by these houses was about \$200 per acre. Recent survey of Richland rents by the firm of Barrett and Wheeler, real estate appraisers, determined the value of improved residential lots in the section of Richland now being developed with the ranch-type houses to be between \$1,000 and \$1,100 per lot. Based on its survey of current land values in nearby communities, the firm's appraisal of unimproved land suitable for residential development in Richland was about \$600 per acre. The original cost of raw land per dwelling therefore approximates \$62.40 and the appraised value of land per dwelling approximates \$187.20.

## ANALYSIS OF RENTALS FOR 1,000 RANCH-TYPE HOUSES, RICHLAND, WASH.

Rents paid by residents of houses in Richland include both shelter rent and charges for utilities and services. The present rent on a three-bedroom house is \$52.50, and for a four-bedroom house is \$57.50. An estimated break-down of these rents is as follows:

	3-bedroom	4-bedroom
Shelter rent.....	\$32. 75	\$35. 00
Water.....	1. 75	1. 75
Garbage collection.....	2. 00	2. 00
Electricity.....	6. 50	7. 75
Coal.....	6. 50	8. 00
Minor house maintenance.....	3. 00	3. 00
Total.....	52. 50	57. 50

The present rents on the 1,000 ranch-type houses at Richland were set by comparison with rents charged for existing houses on the site, taking into account differences in space, arrangement, and accommodations provided. Monthly rents on existing houses were originally set by the Manhattan District while Richland was under construction, and were calculated by taking 0.8 percent of the estimated cost of the houses, exclusive of land and land development costs to which was added estimated monthly cost of providing fuel, electric and water services, garbage and trash collection.

## COMMERCIAL FACILITY LEASE USED BY GENERAL ELECTRIC CO. AT HARTFORD

THIS LEASE, entered into this \_\_\_\_\_ day of \_\_\_\_\_, 19\_\_\_\_, by and between GENERAL ELECTRIC COMPANY, a corporation organized and existing under the laws of the State of New York with principal offices in the City of Schenectady, New York (hereinafter referred to as Lessor), and \_\_\_\_\_, a corporation organized and existing under the laws of the State of \_\_\_\_\_, a partnership consisting of \_\_\_\_\_, an individual trading as \_\_\_\_\_, of the City of \_\_\_\_\_ in the State of \_\_\_\_\_, (hereinafter referred to as Lessee):

## WITNESSETH THAT:

Whereas, Lessor, as a Pure Cost Contractor, has heretofore, to wit, on the 15th day of May, 1946, entered into a contract (W-31-109 Eng 52) which has been subsequently amended, and as amended, is hereinafter called the "principal contract" with the United States of America, hereinafter called the "Government", represented by the United States Atomic Energy Commission, hereinafter called the "Commission", to operate, expand and maintain the Hanford Works including the Community of Richland, Washington; and,

Whereas, pursuant to such contract, Lessor with the approval of the Commission invited Bids for the construction and operation of \_\_\_\_\_, (hereinafter referred to as the "Facility"), upon land owned by the Government, and the Lessee was the successful bidder;

Now, therefore, the Lessor hereby leases to Lessee and Lessee hereby leases from the Lessor, subject to the conditions and covenants hereinafter set forth in articles I to XXXVI, inclusive, the following described premises:

## ARTICLE I. TERM

The term hereof shall be \_\_\_\_\_ years, commencing \_\_\_\_\_, 19\_\_\_\_, and ending \_\_\_\_\_, 19\_\_\_\_, unless sooner terminated pursuant to the provisions of Article XII. At the expiration of this Lease the Lessee shall have the option of renewing the Lease for a term of \_\_\_\_\_ years upon the same terms and conditions as are contained herein, except that the amount of the payments payable under the renewed Lease shall be renegotiated. The Lessee shall exercise his option to renew in accordance with the preceding sentence by giving written notice of intention so to do not less than six months prior to expiration. Failure of the Lessor to receive such written notice shall be deemed to be conclusive evidence of the Lessee's intention not to exercise renewal option.

## ARTICLE II. USE OF PREMISES

The demised premises shall be used by the Lessee for the construction, maintenance, and operation of \_\_\_\_\_, and for no other purpose, unless the Lessor authorizes other and/or additional uses in writing in advance.

## ARTICLE III. RENT

Lessee shall pay to Lessor at Lessor's office at Hanford Works, Richland, Washington, or elsewhere, as designated from time to time by Lessor, the following amounts as rent for the use of the premises herein demised:

## 1. During the course of construction:

(a) \_\_\_\_\_ percent of gross receipts derived from any and all sales made on or from the leased premises; such payments to be made on or before the 15th day of the next succeeding calendar month, plus

(b) A fee sufficient to cover cost of building permit, inspections, and water and electricity used during course of construction, to be established by Lessor.

2. From and after \_\_\_\_\_, or such later date as may be fixed by Lessor, \_\_\_\_\_ percent of gross receipts derived from any and all sales made on or from the leased premises; provided that such payments shall in no event be less than

\$..... per month; such payments to be made on or before the 15th day of the next succeeding calendar month.

3. Interest computed at ---- percent per annum from due date of each payment, and upon each defaulted obligation, until paid.

#### ARTICLE IV. TITLE TO BUILDING(S)

It is understood and agreed that the premises demised hereunder are owned by United States of America; that the Lessor is entering into this Lease pursuant to the principal contract; and that any building(s) to be erected hereunder by the Lessee shall be and remain, during the term of this Lease and any renewal hereof, the property of the Lessee, irrespective of the manner in which the building(s) may be affixed to the land.

#### ARTICLE V. ENCUMBRANCES AND ASSIGNMENTS

1. Except with the prior written approval of the Lessor, which approval shall not be unreasonably withheld, the Lessee shall not sell, assign, mortgage, lease, sublease, license or otherwise dispose of or encumber, in whole or in part, the leasehold estate hereby created or the building(s) to be erected hereunder, nor suffer any voluntary or involuntary transfer or disposition of title or encumbrance to be made, and the Lessee will indemnify and keep indemnified the lessor and the Commission against losses resulting from the payment of any lien, charge or encumbrance. Nothing herein contained shall empower Lessee to do any act which can, may or shall cloud or encumber the Government's title to the land.

2. If, pursuant to the written consent of the lessor, Lessee shall mortgage, pledge or otherwise encumber the leasehold estate hereby created or the building(s) to be erected hereunder, then no termination provided for under Article XII, Section 1, of this Lease shall impair the validity of any such lien or encumbrance. Any notice of default on the part of the Lessee or intention on the part of Lessor to terminate or revoke this Lease shall be mailed to the agent designated by the mortgagee, pledgee, or other encumbrance-holder; provided, however, that no notice of such default or intention to terminate shall be required to be given to said mortgagee, pledgee or other encumbrance-holder, if he fails to designate such an agent.

#### ARTICLE VI. CONSTRUCTION

The Lessee agrees that he will, at his own cost and expense and pursuant to the following provisions, commence and complete construction of the building(s) to be utilized in the operation of the Facility:

1. The Lessee, before proceeding with the construction of the proposed building(s), shall submit to the Lessor, for inspection and approval by the Lessor, seven copies of the completely executed contract between the Lessee and his architect and builder and seven copies of completed drawings and specifications covering the proposed building(s). Upon approval of contract drawings and specifications, the Lessor shall return two copies to the Lessee.

2. The Lessee shall furnish the Lessor with one set of "as built" reproducible plans pertaining to the original building(s) and to any subsequent additional building alterations or additions, immediately following approval by Lessor and Commission of completed work.

3. Work on the building(s) shall be commenced as soon as practicable after receipt by Lessee, from Lessor, of notice of approval of the executed contract, drawings and specifications, and work shall be completed in accordance therewith not later than -----, 19----, or as this time may be extended by the Lessor because of delays beyond the control of the Lessee.

4. Whenever an actual or potential labor dispute or work stoppage arising therefrom, is delaying, or threatens to delay, the timely performance of work in connection with such building(s), the Lessee shall give immediate notice thereof to the Lessor. Such notice shall include all relevant information with respect to such dispute.

5. The Lessee shall procure, or cause to be procured, all licenses, permits, franchises, easements, rights of way, or other interests in real property necessary for the performance of work in connection with the construction of building(s).

6. In the construction of the building(s) hereunder, the Lessee covenants that he will not pay, or allow to be paid, any wages or allowances in excess of those prevailing at Hanford Works.

7. The Lessor shall extend existing water, electrical and sewer facilities to an agreed point near the building wall, at no additional cost to the Lessee.

8. The Lessor and the Commission shall have the right to inspect, in such manner and at such times as are reasonable, the work in process of construction.

9. The Lessee shall, at the discretion of the Lessor, require any or all of his contractors to furnish adequate performance and payment bonds.

#### ARTICLE VII. OPERATION OF THE FACILITY

The Lessee shall, at his own cost and expense, and pursuant to the following provisions, operate the Facility on the demised premises:

1. The Lessee shall maintain such stocks of merchandise, provide such services, employ sufficient personnel, furnish and install such fixtures and equipment and do all things necessary to render efficient and convenient service to customers.

2. The Lessee shall keep the premises open and available for business activity therein during all usual days and hours for such business in the community except when prevented by strikes, fire, casualty or other causes beyond Lessee's control and except during reasonable periods for repairing, cleaning, decorating, and for such other purposes as may be approved by the Lessor.

3. The Lessee shall fix charges and prices for merchandise and services that shall be fair and reasonable and in no case shall they be more than prices or charges of similar businesses for comparable merchandise and services in communities in the vicinity of Richland, Washington.

4. The Lessee shall include the address and identity of the Facility and the demised premises in all advertisements made by Lessee in which the address and identity of any other similar business, conducted by Lessee in the vicinity of Richland, Washington, shall be mentioned, and shall not divert elsewhere any trade, commerce or business which ordinarily would be transacted by Lessee in or from the demised premises, either during the period of construction of the building(s) hereunder or after completion thereof.

5. The installation, display, painting, affixing, or maintenance of signs, notices, pictures, billboards or other advertising material outside the building(s) shall be subject to the approval of the Lessor, and the Lessee shall remove all such signs, notices, pictures, billboards or other advertising material from the building(s) and premises at any time when directed by the Lessor so to do.

6. The Lessee shall not place nor permit any radio antennae, sound amplifiers, of similar devices on the roof or outside of the building(s) except with the written approval of the Lessor.

7. The Lessee shall keep the demised premises, the building(s), and all equipment therein, in good condition and repair. No additions to, or alterations of the building(s) shall be made, nor shall any additional building(s) be erected without the prior written approval of Lessor, which shall not be unreasonably withheld, nor shall any substantial change in the terrain of the premises be made without such approval.

8. The Lessee shall pay all charges assessed for the installation of telephones and the use of the telephone system.

9. The Lessee shall pay any and all taxes imposed by the Federal Government, the State or any political subdivision thereof.

#### ARTICLE VIII. UTILITIES

Electricity (for purposes other than heating) and water for the construction, maintenance, and/or operation of the Facility shall be furnished by the Lessor, and trash and garbage placed in containers furnished by the Lessee, shall be removed by the Lessor. The aforesaid utilities and services shall be furnished by the Lessor at no additional cost to the Lessee, except that separate billing may be rendered therefor; provided, however, that neither the Lessor nor the Commission, nor any of their contractors, shall be liable at any time for any loss or damage due to interruption or failure in the furnishing of such services or utilities for any reason whatsoever; and provided further, that in the event the furnishing of said utilities and services is taken over by others than the Lessor, the Lessor shall be relieved of its obligations under this Article and the Lessee shall make payment directly to the persons, firms, or corporations furnishing any or all of said utilities or services, and in such event the Lessee's payments shall be equitably adjusted.

## ARTICLE IX. SAFETY AND ACCIDENT PREVENTION

All activities in connection with the construction, maintenance, and/or operation of the Facility shall conform to all health and safety requirements and regulations of the Lessor and/or the Commission regardless of whether such activities be those of the Lessee or any of his contractors, or the officers, employees, or agents of the Lessee or any of his contractors; and the Lessee shall take, or cause to be taken, all reasonable steps or precautions to protect health and minimize danger from all hazards to life and property, and shall make, or cause to be made, all reports and permit all inspections as provided in such regulations and requirements.

## ARTICLE X. INDEMNITY AND INSURANCE

1. The Lessee shall indemnify and hold harmless the Lessor and the Commission from any and all liability whatsoever for injury to or death of persons or loss of or damage to property caused by or arising out of activities or nonfeasance in connection with the construction, maintenance, and/or operation of the Facility, whether such activities be those of the Lessee or any of his contractors, or the officers, employees, or agents of Lessee or any of his contractors.

2. The Lessee shall maintain or shall cause to be maintained insurance in at least the following amounts: Public liability for bodily injury, \$50,000/\$100,000; public liability for property damage, \$5,000; automobile public liability for bodily injury, \$50,000/\$100,000; automobile public liability for property damage, \$5,000, for purposes of providing protection against claims which may arise from activities in connection with the construction, maintenance, and/or operation of the Facility, whether such activities be those of the Lessee or any of his contractors, or the officers, employees, or agents of the Lessee or any of his contractors, and such other or additional insurance as will furnish reasonable protection against such claims. Certificates of such insurance shall be filed with the Lessor, and the Lessor shall be given ten (10) days advance notice by mail of changes in or cancellation of any such insurance.

## ARTICLE XI. COMPLIANCE WITH LAWS

The Lessee shall comply with the Industrial Insurance Act and the Medical Aid Act of the State of Washington, all Federal and State Social Security laws and all other Federal, State, and local laws, rules, and regulations applicable to the construction, maintenance, and/or operation of the Facility, or to the Lessee as an owner or employer, and shall comply with such rules and regulations as the Lessor or the Commission may from time to time establish pertaining to the construction, maintenance, and/or operation of the Facility, or to the Lessee as an owner or employer, or to the health, sanitation, fire protection, and safety of the community, and the Lessee shall take the necessary steps to require compliance by his contractors and their officers, agents, and employees, with the foregoing laws, rules, and regulations.

## ARTICLE XII. TERMINATION OR EXPIRATION

1. This Lease or any renewal hereof may be terminated by the Lessor, with the approval of the Commission, for the following reasons:

(a) Default in the payment of rent, when the Lessee is in default longer than ten (10) days from the date the rent is due hereunder; or, default in the performance by the Lessee, his agents, contractors, or employees in respect to any of the terms, conditions, or covenants of this Lease, whether or not such default is expressly declared to be a cause for termination elsewhere in this Lease: provided, however, that this Lease shall not be terminated for default (other than nonpayment of rent) if such default is remedied within ten (10) days after written notice thereof has been given to the Lessee by the Lessor.

(b) The filing of a petition or similar proceeding under any bankruptcy or insolvency laws, either by or against the Lessee; the appointment of a receiver of the property of the Lessee; or the making by the Lessee of a general assignment for the benefit of his creditors.

(c) Abandonment of the premises by the Lessee.

(d) A radical change in the control, management, or composition of a corporate or partnership Lessee resulting in an operation, which, in the opinion of the Commission, is contrary to the interest of the common defense and security.

2. In the event of termination or revocation by the Lessor for any of the reasons stated in Section 1 of this Article:

(a) The Lessee will be permitted to sell or otherwise dispose of the building(s), in place, for continued operation, within — days or as this time may be extended by the Lessor, to such person or persons, and upon such terms and conditions (including protective conditions to insure payment by Lessee of damages, if any, under Paragraph (c) of this Section), as the Lessor and the Commission may approve in writing in advance.

(b) In the event that the Lessee does not sell or otherwise dispose of the building(s) under Paragraph (a) immediately preceding, title to the building(s) shall vest in the Government, without any compensation therefor.

(c) If termination is for any of the reasons specified in Section 1 of this Article, the Lessee shall be liable to the Lessor and/or the Commission, for liquidated damages in an amount equal to the average of the monthly payments for the six-month period preceding the termination, multiplied by the number of months not to exceed six (6) from and after the date the demised premises are vacated or abandoned by the Lessee until another Lessee takes possession thereof.

3. In addition to the right of the Lessor to terminate this Lease or any renewal thereof, under Section 1 of this Article, the Commission, through notice given by the Lessor, may revoke this Lease whenever in the opinion of the Commission, such termination is essential in the interest of the common defense and security.

4. In the event that revocation is effected under the provisions of section 3 of this article and the Lessee is not in default of the provisions of this Lease or in violation of any law or regulation, which violation is the basis for such revocation, the Lessor, for and on behalf of the Commission, hereby agrees to purchase the Lessee's building(s) and the Lessee hereby agrees to sell said building(s) to the Lessor at the fair value thereof, as that term is hereinafter defined, *Provided, however:* That the Lessor reserves the right to pay such sums as may be due hereunder to any holder of a valid lien, mortgage or encumbrance.

5. Upon expiration of the term of the lease, title to the building(s) erected upon the demised premises shall vest in the Commission, and the building(s) shall thereupon become part of the realty.

6. The term "fair value" as used in this lease shall mean the actual original cost of the Lessee's building(s) to be purchased by the Lessor, less depreciation computed at ----- percent per annum of the actual cost of the original building(s); and plus the actual cost of any authorized additional building(s) to be so purchased, less depreciation at fixed percentages per annum to be agreed upon in advance in writing by the parties hereto with respect to any such authorized additional building(s). The rate of depreciation provided for herein is based on the understanding and agreement of the parties hereto that the actual cost of the building(s) now contemplated for construction by Lessee shall be totally and completely amortized within a period of ----- years, and that any authorized additional building(s) shall be deemed totally and completely amortized within the period agreed upon pursuant to the provision of section 7 of this article. In the event that this period of amortization is changed at any time by written agreement of the parties hereto, the depreciation figure will be revised so that the total depreciation will be prorated on a per annum basis for the period of amortization.

7. At the time the Lessee submits the drawings, plans, and specifications of the original building(s) to the Lessor for approval, pursuant to article VI, section 1, the Lessor and Lessee shall agree in writing, subject to the approval of the Commission, upon the items which properly may be included in the actual cost of said building(s), and within ----- days after completion of said building(s), or as this time may be extended by the Lessor, the parties hereto shall agree in writing, subject to the approval of the Commission, as to the amount of the actual cost of said building(s); at the time approval is obtained to construct any additional building(s) pursuant to article VII, section 7, the Lessor and Lessee shall agree in writing, subject to the approval of the Commission, upon the items which properly may be included in the actual cost of said additional building(s), and within ----- days after completion of said additional building(s), or as this time may be extended by the Lessor, the parties hereto shall agree in writing, subject to the approval of the Commission, as to the amount of the actual cost of said additional building(s) and as to the period within which said additional building(s) shall be totally and completely amortized.

8. In any case where the Lessor on behalf of the Commission purchases Lessee's building(s), or the title thereto is to vest in the Commission, the building(s) shall become part of the realty and shall become the absolute property of the Commission, at time that payment is made, if the transfer of title occurs prior to the expiration of the amortization period, or on the date fixed for termination or

revocation, if no payment is to be made. The Lessee covenants to execute, acknowledge and deliver any and all documents of title and to take all necessary steps to transfer of title, free and clear of all liens, encumbrances and charges, other than those expressly authorized and validly existing under the provisions of article V, section 2.

9. Upon termination, revocation, or expiration of this lease or any renewal hereof, the Lessee shall, at the request of Lessor, surrender possession and vacate the premises, remove all his property therefrom, and deliver possession of the premises to the Lessor, and hereby grants to the Lessor or the Commission full and free right to enter into and upon the premises in such event, with or without process of law, and to take possession of the premises and to expel or remove Lessee and any others who may be occupying the premises and to remove any and all property therefrom using such force as may be necessary, without being deemed guilty of trespass, eviction or forcible entry or detainer, and without relinquishing Lessor's rights to payments or any other right given to Lessor hereunder or by operation of law.

#### ARTICLE XIII. LESSEE'S RIGHTS UPON SALE OF PREMISES

The Lessor hereby covenants that the demised premises will not be sold during the term of this Lease unless and until the Lessee shall have been given notice of the intention to sell said premises and shall have been given a period of ----- days in which to make an offer for said premises, and the Lessor further covenants that, in the event this offer is not accepted, no such sale will thereafter be made unless and until the Lessee shall have been notified of the best offer received by the Lessor or the Commission for said premises and shall have been given an additional period of ----- days in which to make a further offer.

#### ARTICLE XIV. STATEMENTS AND BOOKS OF ACCOUNT

1. The Lessee shall keep records and books of account in accordance with recognized accounting principles approved by the Lessor and the Commission. Receipts shall be accounted for in sufficient detail to enable the preparation of a comprehensive statement of gross receipts. The Lessee shall furnish to the Lessor six (6) copies of a monthly statement of gross receipts on or before the fifteenth (15) day of the following calendar month, which said statement shall be sworn to before an officer authorized to administer oaths; and the Lessee shall furnish to the Lessor within thirty (30) days after the close of his fiscal year six (6) copies of an annual report, including balance sheet and statement of profit and loss prepared and certified to by a certified public accountant or other recognized accountant licensed pursuant to the laws of the State of Washington and who is acceptable to the Commission. The Lessor and/or the Commission shall at all times have access to all books and records of the Lessee concerning the operation of the Facility for the purpose of determining the amount of gross receipts.

2. In the event that the Lessor and the Lessee are unable to agree in respect to any matter pertaining to any monthly or other required statement, an examination and/or audit of all books and records of the Lessee, including Lessee's bank accounts, concerning the operation of the Facility shall be made by a certified public accountant to be selected by the Lessor with the approval of the Commission. All expenses of such examination and/or audit shall be paid by Lessee if the report of such accountant shows such statement to have contained error prejudicial to Lessor's receipt of rent in an amount equal to or greater than 1 percent of the amount of rent reported by said statement, otherwise such expenses will be paid by Lessor. The examination and/or audit of the certified public accountant made pursuant to this section shall be conclusive upon the parties and Lessee shall pay to Lessor within five (5) days after a copy of said accountant's final report has been delivered to Lessee the amount, if any, shown thereby to be due to Lessor.

#### ARTICLE XV. LIMITATION

Lessor is not and never shall be liable to any creditor of Lessee or to any claimant against the estate or property of Lessee for any debt, loss, contract, or other obligation of Lessee.

#### ARTICLE XVI. DISPUTES

Except as otherwise specifically provided herein, all disputes concerning questions of fact, which may arise hereunder and which are not disposed of by mutual agreement, shall be decided by a representative of the Commission duly author-

ized to supervise and administer performance of the Lessor's operations at Hanford Works, who shall reduce his decision to writing and mail a copy thereof to both the Lessor and Lessee. Within thirty days from this mailing, the Lessor or Lessee may appeal in writing to the Commission whose written decision thereon shall be final and conclusive. The Commission may designate an individual or individuals, other than the individual who made the initial decision, or a Board, as authorized representatives of the Commission to determine appeals under this Article who may make the final written decision on behalf of the Commission. Pending decision of a dispute hereunder, the Lessee shall diligently proceed under this Lease as construed by Lessor, unless otherwise authorized by the Commission.

#### ARTICLE XVII. ACTS OF SOVEREIGN

Neither the Lessor nor the Commission nor any of their agents, employees, nor contractors shall be liable for any interruption of the Lessee's business or interference therewith which may result from the repair, relocation, changing of grade, or closing down or opening of any streets, roads, or highways.

#### ARTICLE XVIII. FIRE OR OTHER CASUALTY

If the building(s) are totally or partially damaged or destroyed by fire, acts of God, or other casualty, the Lessee shall rebuild, repair, reinstall, or rehabilitate the building(s) at the Lessee's expense, subject to the approval of the Lessor in accordance with the provisions of article VI (Construction), in which event payment by the Lessee shall be equitably adjusted.

#### ARTICLE XIX. NOTICES

In every instance where it shall be necessary or desirable for Lessor to serve any notice or demand upon Lessee, it shall be sufficient either (a) to deliver or cause to be delivered to Lessee a written or printed copy thereof, or (b) to send a written or printed copy thereof by United States registered mail, postage prepaid, addressed to Lessee at the demised premises, in which event the notice or demand shall be deemed for all purposes to have been served at the time the copy is mailed, or (c) to leave a written or printed copy thereof with any person residing on or in possession of the demised premises or to affix the same upon any door leading into any building upon the demised premises, in which event the notice or demand shall be deemed to have been served at the time the copy is so left or affixed.

#### ARTICLE XX. MISCELLANEOUS

1. No receipt of money by the Lessor from Lessee after the termination of this Lease or after the service of any notice or after the commencement of any suit, or after final judgment for possession of the demised premises, shall renew, reinstate, continue or extend the term of this lease or affect any such notice, demand, or suit.

2. Failure of the Lessor to take any action with respect to any default by the Lessee hereunder shall not constitute a waiver of any of the Lessor's rights under this Lease, and no express waiver shall affect any default other than the default specified in the express waiver and that only for the time and to the extent therein stated.

3. The invalidity or unenforceability of any provision herein shall not affect or impair any other provision in this lease.

4. Provisions inserted herein or affixed hereto shall not be valid unless appearing in the executed copy hereof in the possession of the Lessor, and in event of variation or discrepancy, Lessor's duplicate original shall control.

5. Except as otherwise herein provided, each provision hereof shall extend to and shall, as the case may require, bind, and inure to the benefit of Lessor and Lessee and their respective heirs, legal representatives, successors, and assigns.

6. The headings of articles, sections, and paragraphs are for convenience only and do not define, limit, or construe the contents thereof.

#### ARTICLE XXI. RESERVED RIGHTS

Lessor reserves the following rights:

1. To change the name of the street or address of the building(s) without prior notice thereof or liability to Lessee.

2. To enter the premises or any part thereof at reasonable hours to make inspections, to exhibit the premises to prospective tenants, purchasers, or others, and to perform, consistently with this lease, any acts related to the safety, protection, preservation, sale, or improvement of the premises or the building(s).

#### ARTICLE XXII. DEFAULT UNDER OTHER LICENSE AGREEMENT OR LEASE

If the term of any license agreement or lease, other than this lease, made by Lessee and Lessor, be terminated or terminable after the execution of this lease because of any default by Lessee under such other license agreement or lease, the Lessor, at its option, may either terminate this lease or add any sums due to Lessor under the other license agreement or lease to the amount payable under this lease.

#### ARTICLE XXIII. HOLDING OVER

Lessee shall pay to Lessor, as liquidated damages, a sum equal to double the amount of the monthly payments as computed under the terms of this lease or a sum equal to double the average monthly payments for the six-month period immediately preceding the date the holding over begins, whichever is greater, for each month the Lessee retains unauthorized possession of the premises or building(s) in violation of the terms of this lease. For any period of holding over for less than a month, the amount of liquidated damages as above computed will be prorated on a per diem basis. Lessor's acceptance of any payments after holding over begins does not renew this lease. This provision does not waive Lessor's right of reentry or any other right hereunder.

#### ARTICLE XXIV. LITIGATION COSTS

Lessee shall pay upon demand all of Lessor's costs, charges and expenses, including the fees of counsel, agents and others retained by Lessor, incurred in enforcing Lessee's obligations hereunder or incurred by Lessor in any litigation, negotiation or transaction in which Lessee causes Lessor, without Lessor's fault, to become involved or concerned.

#### ARTICLE XXV. RENEGOTIATION

The Lessor or Lessee shall have the right to require renegotiation of the rent payable hereunder and adjustment of the amounts thereof at the end of each five-year period of this lease or any renewal hereof. If the Lessor and the Lessee are unable to agree, after renegotiation, on the amounts, if any, by which such payments should be adjusted, the question may be referred to the Commission under the provisions of article XVI (Disputes) herein; provided, however, that pending the determination of such a dispute the Lessee shall pay as rent hereunder the amount or percentage of gross receipts fixed by the Lessor.

#### ARTICLE XXVI. INTEGRATION CLAUSE

This lease contains the entire understanding between the parties, and there are no understandings, representations, or warranties not set forth or incorporated by reference herein. No subsequent modifications of this Lease shall be of any force or effect unless in writing, signed by the party claimed to be bound hereby.

#### ARTICLE XXVII. RIGHT TO OPERATE BUSINESS NOT EXCLUSIVE

The Lessor reserves the right to grant leases or licenses to others to operate similar or identical businesses at the Hanford Works, or to permit the conduct of similar or identical businesses under any other arrangement.

#### ARTICLE XXVIII. ANTIDISCRIMINATION

The Lessee shall not discriminate against any employee or applicant for employment because of race, creed, color or national origin.

#### ARTICLE XXIX. COVENANT AGAINST CONTINGENT FEES

The Lessee warrants that no person has been employed to solicit or assist in obtaining this lease upon any agreement for a commission, percentage, brokerage or contingent fee. This warranty shall not apply to commissions payable by

Lessee upon contracts or sales secured or made through bona fide commercial or selling agencies maintained by the Lessee for the purpose of securing business.

#### ARTICLE XXX. OFFICIALS NOT TO BENEFIT

No Member of or Delegate to Congress nor Resident Commissioner shall be admitted to any share or part of this lease nor to any benefit that may arise therefrom, but this provision shall not be construed to extend to this lease if made with a corporation for its general benefit.

#### ARTICLE XXXI. SECURITY CLEARANCE AND EMPLOYEES

1. Lessee shall comply with all regulations and rules in effect on the Hanford Works regarding passes, badges, list of employees and conduct on the property, and shall take the necessary steps to require compliance by his contractors and their officers, agents and employees with such rules and regulations.

2. The Lessee shall submit to the Lessor the names of all persons to be employed in connection with the construction of the building(s) and operation of the Facility. The Lessee shall also promptly notify the Lessor of all employee terminations. The Lessor may, with the approval of the Commission, refuse to allow the employment of any person, if, in the opinion of the Commission, such employment would be prejudicial to the interest of the common defense and security.

3. Unless otherwise authorized by the Lessor, all persons employed in the construction of the building(s) and operation of the Facility will be required to obtain security clearance before performing any work, and the Lessor, with the approval of the Commission, may require dismissal from the work of any employee whose employment is deemed prejudicial to the interest of the common defense and security, subject to right of appeal by the Lessee pursuant to the provisions of article XVI (Disputes) for reinstatement of any such employee in the event such action shall be taken.

#### ARTICLE XXXII. APPROVAL OF COMMISSION

This lease shall be subject to the written approval of the Commission and shall not be binding until so approved.

#### ARTICLE XXXIII. DEFINITIONS

1. As used in this lease, the terms "United States Atomic Energy Commission" and "Commission" shall mean the United States Atomic Energy Commission or its duly authorized representative or representatives.

2. The term "gross receipts" as used herein includes the total receipts from sales of merchandise, or charges for services and business transacted in, upon and from the building(s) and premises during the term hereof by Lessee. The term "gross receipts" shall not include amounts collected as taxes and paid over to Federal, State or local authorities, and refunds made to customers in connection with merchandise or services sold by the Lessee. Such term shall include receipts from sales, charges for services and business transacted for which orders are taken in or upon the said building(s) or premises regardless of where the services are to be rendered or the business consummated.

3. The term "building(s)" as used herein shall mean all structures, tenements and appurtenances constructed on the demised premises and such fixtures as are affixed thereto so as to become a part thereof, and not be severable wholly or in any portion without material injury to the freehold.

#### ARTICLE XXXIV. AVAILABILITY OF FUNDS

Any contingent liability or obligation for future payments assumed hereunder by the Lessor and/or the Commission shall be subject to the availability of funds appropriated by Congress, for the discharge of said obligation.

#### ARTICLE XXXV. ASSIGNMENT TO COMMISSION

This lease may be assigned at any time by the Lessor to the Commission or its designee and by such assignment the Lessor is relieved from all liability to the Lessee under this lease.

## ARTICLE XXXVI. ALTERATIONS

The following changes were made in this lease before it was signed by the parties hereto:

In witness whereof the parties have caused this lease to be executed on the day and year first hereinbefore written.

Attest:

-----  
Assistant Secretary.

By GENERAL ELECTRIC Co.,

By -----  
Assistant to General Manager.

Witness or attest:

-----

Lessee:

By -----  
Title.

Approved:

UNITED STATES ATOMIC ENERGY COMMISSION.

By

-----  
Manager, Hanford Operations Office.

STATE OF WASHINGTON,  
County of Benton, ss:

On this day personally appeared before me -----  
to me known to be the individual or individuals described in and who executed  
the within and foregoing instrument and acknowledged that he (she or they)  
signed the same as his (her or their) free and voluntary act and deed, for the  
uses and purposes therein mentioned. Given under my hand and official seal  
this ----- day of -----, 19-----.

-----  
Notary Public in and for the State of  
Washington, residing at -----.

My Commission expires -----

STATE OF WASHINGTON,  
County of Benton, ss:

On this ----- day of -----, 19-----, before me personally appeared  
-----, to me known to be the (president, vice  
president, secretary, treasurer, or other authorized officer or agent, as the case  
may be) of the corporation that executed the within and foregoing instrument,  
and acknowledged said instrument to be the free and voluntary act and deed of  
said corporation, for the uses and purposes therein mentioned, and on oath  
stated that he was authorized to execute said instrument and that the seal affixed  
is the corporate seal of said corporation.

In witness whereof I have hereunto set my hand and affixed my official seal the  
day and year first above written.

-----  
Notary Public in and for the State of  
Washington, residing at -----.

My Commission expires -----

## PRIVATE BUSINESS CONCERNS OPERATING CONCESSIONS IN RICHLAND, WASH.

As of February 23, 1949, there were 26 new and 43 existing commercial facilities in Richland. The 43 existing facilities were operating under license agreements in structures owned by the Government. Two of the twenty-six new facilities consist of additions to existing Government-owned buildings. With the exception of these two, plus one other, all awards for the new facilities have been based on competitive bids invited by the General Electric Co. in behalf of the Atomic Energy Commission. The one exception is an automobile agency which was negotiated, since it was the first automobile agency under the new program and there were no other interested dealers at that time. The awards which have been made to various operators under the private financing plan now underway were based on the following rentals:

Furniture store No. 1: \$500 + 1½ percent gross sales.

Furniture store No. 2: 2½ percent gross sales, with \$281.25 minimum monthly guaranty.

*Printing plant:* 1½ percent gross sales, with \$50 minimum monthly guaranty.  
*Cahoon Motors Automobile Agency:* one-fourth of 1 percent gross sales + \$60 per month, with minimum monthly guaranty of \$160.

*Anderson Automobile Agency:* one-half of 1 percent on new car sales, Richland delivery, less Federal, State and city taxes; one-fourth of 1 percent on used cars less service, insurance, finance charges, and tax, if made a part of the sales price; 1 percent on labor sales, 2 percent on parts, accessories and oil sales; one-half cent per gallon of gas, with \$148 minimum monthly guaranty.

*General repair garage:* 2½ percent gross sales, with \$250 monthly minimum guaranty.

*Frozen food locker building:* 5 percent gross locker rentals; 5 percent gross sales from flower counter; 2½ percent gross sales from delicatessen and retail bakery counter; 1 percent gross receipts from wholesale meat sales and service.

Operator-built food locker of 6,210 square feet adjacent to and supplementing his grocery store operated in Government-owned buildings.

*Garmo's Bakery:* 2½ percent gross receipt on retail sales; 1 percent on wholesale sales.

Title to building addition conveyed to Atomic Energy Commission at an estimated cost of \$30,000. Garmo constructed 4,320 square feet bakery addition to an existing Government-owned building in which he operates a grocery store.

*Grocery Store No. 1:* 1 percent of gross grocery sales with \$500 minimum monthly guaranty on total land area.

Lessee is subleasing space to drug store and will pay three-fourths of 1 percent of gross sales. He is also subleasing beauty and barber space paying 1 percent of gross sales and service from both operations.

*Grocery store No. 2:* 1½ percent of gross sales with \$300 minimum monthly guaranty.

*Drug store and beauty shop:* 1 percent gross sales with \$225 minimum monthly guaranty.

*Gas station No. 1:* 2¼ cents per gallon gas sold + 5.1 percent of all sales exclusive of gas, with \$400 minimum monthly guaranty.

*Gas station No. 2:* 2.63 cents per gallon gas sold with \$250 minimum monthly guaranty.

*Gas station No. 3:* 2.1 cents per gallon gas sold with \$150 minimum monthly guaranty.

*Fountain lunch:* 4 percent gross sales with \$58 minimum monthly guaranty.

*Milk depot:* 2 percent gross sales up to \$25,000; 2½ percent gross sales between \$25,001 and \$40,000; 2¾ percent gross sales between \$40,001 and \$60,000; 3½ percent gross sales between \$60,001 and \$90,000; 3¾ percent gross sales between \$90,001 and \$100,000; 3¾ percent on all gross sales over \$101,000 with \$300 minimum monthly guaranty.

*Men's wear:* 3 percent gross sales with \$150 minimum monthly guaranty.

*Women's apparel and fur shop:* 2¼ percent gross sales with \$155 minimum monthly guaranty.

*Sporting goods and florist and hobby shop:* 2½ percent gross sales with \$250 minimum monthly guaranty.

*Roller skating rink:* 3 percent gross admissions after State and Federal tax; 10 percent gross sales of merchandise, skates, shoes, etc.; 3 percent gross sales of confections with \$175 minimum monthly guaranty.

*Shoe store:* 3½ percent gross sales with \$200 minimum monthly guaranty.

*Barnhart Bakery:* 1½ percent gross sales with \$70 minimum monthly guaranty.

*Theater (1,200 seats):* \$500 per month flat rental for initial 15-year lease period; 17½ percent gross admissions and 5 percent on confections if option to renew is exercised.

*Dry cleaning:* 3.5 percent gross sales with \$250 minimum monthly guaranty for first year; \$300 minimum thereafter.

*Ready-mix concrete:* 10 cents per cubic yard of aggregate used plus 3 percent gross sales with \$250 minimum monthly guaranty.

Estimated total investment of private capital in above buildings, exclusive of equipment and fixtures is \$1,400,000.

*Women's apparel chain operation:* 1½ percent gross sales, with \$200 minimum monthly guaranty.

# NATURAL GAS FACILITIES FOR OAK RIDGE

MONDAY, MAY 2, 1949

CONGRESS OF THE UNITED STATES,  
SUBCOMMITTEE OF THE JOINT COMMITTEE ON ATOMIC ENERGY,  
*Washington, D. C.*

The subcommittee met at 10 a. m., pursuant to call, in room 48-G, the Capitol, Hon. Carl T. Durham (vice chairman of the joint committee and chairman of the subcommittee) presiding.

Present: Representatives Durham (vice chairman of the joint committee and chairman of the subcommittee), Holifield, Price, Cole, Elston, and Van Zandt.

Also present: Sumner T. Pike, Member, Edward J. Bloch, Division of Production, Everett L. Hollis, and F. Aley Allan, Office of General Counsel, Atomic Energy Commission; William L. Borden, Executive Director, Harold Bergman, Deputy Director, and E. L. Heller, staff member, Joint Committee on Atomic Energy.

Representative DURHAM. The subcommittee will come to order.

In order that this hearing may proceed smoothly and without avoidable misunderstanding, I think it is necessary to define our purpose as to why this hearing is being called.

First. Is what is here contemplated necessary to carry out the production of weapons for the Military Establishment?

Second. Is it necessary to carry out the basic research and technical research and development, the pure research and applied research, for which the act assigns responsibility?

If you can give us a clear picture, it will be important to the committee in judging the necessity for the physical addition at Oak Ridge. As your Government, we appreciate your work, and desire to give you excellent working equipment and in ample quantity for the purposes I have stated.

This meeting is a closed meeting, for various reasons. We have a reporter here to take down material for publication. If it is necessary to go off the record at all in this discussion, we will do it later in the morning. If so, we will request the reporter to leave. Therefore, I request the witnesses from the Atomic Energy Commission to confine themselves now to statements which can be made public, and later if necessary we will go off the record.

I understand that Mr. Pike will make an opening statement on the record; then he will later go off the record for a few minutes, and during that time the reporter will leave the room; then we will go back on the record and call the reporter back.

Mr. Pike, you may proceed with your statement.

**STATEMENTS OF SUMNER T. PIKE, MEMBER, AND EDWARD J. BLOCH, DIVISION OF PRODUCTION, ATOMIC ENERGY COMMISSION, WASHINGTON, D. C.**

Mr. PIKE. Our position of course is very simple. The plant at Oak Ridge is an essential part of the atomic energy enterprise. There are various specific features about it which I think for more logical presentation, we should perhaps go into in a little more detail in the off-the-record period. But the principle of the matter is quite a simple one. We have a large power plant at Oak Ridge, several hundred thousand kilowatts, and the electricity from that plant is necessary for the proper operation of the facilities.

Representative DURHAM. Right at that point: Is it off the record as to how much power, in kilowatts, that plant produces?

Mr. PIKE. The total capacity I think is about 230,000 kilowatts. It produces a variety of brands of electricity which are not commercially available, but very necessary for the operation of this plant. We have been using and do use coal. There are three boilers there, one of which is adaptable to be turned over to oil.

However, during the several years that this plant has operated there have been times when, due to disturbances in the coal labor situation and one or two brief disturbances in the railway labor situation, we felt we ought to have another source of supply of fuel for this plant, which would bypass both railroad transportation and the coal-mining industry, so that we would have another string to our bow.

This was one of the first things we looked at when we got to know about the whole set-up of manufacturing operation in this field. If I am not mistaken, it was a year ago last January when we went after the thing pretty hard to see what we could do to take us off of the uncomfortable position of a plant dependent upon one source of supply of fuel.

Since that time we first talked to and were talked to by several natural gas suppliers. Over a period, we worked up a contract with the East Tennessee Natural Gas Co., and the contract is now in finite form. I am sure the committee has it. Proceedings are before the Federal Power Commission having to do with both this specific line which goes to Oak Ridge, and also the gas supply of the furnishing company, the Tennessee Gas Transmission Co., which gets its gas mostly along the Texas Gulf coast.

As a subsidiary point, although not completely to be ignored, under the contract the gas will represent a real saving in the operation of the plant; as I remember it, estimated to be about a million dollars a year. And as a further subsidiary point, gas is about the only fuel which you can contract for several years ahead at very close to a fixed price.

There is also another rather small point: As operators of this town, you know, we have to furnish the fuel, bringing coal to every house and taking away the ashes. I am inclined to think that if natural gas came in we could effect real economies in town operation by having natural gas brought to these houses.

These are small points, but they are nevertheless points that add up somewhat to the major ones, that this K-25-27 plant, and 29, when and if built, are unique, and essential in the Nation's interest

and security. We should clear ourselves of all possible risks of this plant having to close down.

Perhaps, Mr. Chairman, if it suits you, we might have a small off-the-record period to go into one of those security aspects of this plant, the hazards which might come along if it were closed down, and the way in which it ties into the whole manufacturing enterprise. It may save some questions in your mind to go into these matters now rather than later. I make that as a suggestion.

Representative DURHAM. Is there any question, before we go into the off-the-record session?

If we get into some question that necessarily has to be off the record, Mr. Pike, say so, and we will stop.

Representative PRICE. Mr. Chairman, I would just like to ask a couple of questions that will fit in here with this.

What is your backlog of coal, of present fuel, Mr. Pike? How long could you operate in the event of a strike?

Mr. PIKE. I am not sure of that. Mr. Bloch possibly could answer.

Mr. BLOCH. At the present time it is equivalent to about 90 days' operation.

Representative PRICE. Do you know of any coal strike in the history of the country that lasted that long?

Mr. PIKE. My memory is not too good on that; but there was the harbor strike, about 1901.

Representative PRICE. Do you recall any strike during a period of emergency, in time of war?

Mr. PIKE. Oh, yes. There were coal strikes during the war.

Representative PRICE. There was not any coal strike during this last war, was there?

Mr. PIKE. Yes, sir.

Representative PRICE. How long did it last?

Mr. PIKE. Well, I think we had about two a year.

Representative PRICE. But for how long did they actually go out?

Mr. PIKE. Those are matters of record, Mr. Price. I was very much worried at those times, because I was in charge of fuel prices for OPA; and there were strikes, and then there were seizures, and wildcat strikes.

Representative PRICE. In any event, if we did have a coal strike during the war, and while I recall threats of strikes and possible calling out of the men, and I think maybe they did go out for a period of 1 or 2 days, they were under Executive order, and with the President invoking his powers they went back under certain conditions. So that there was not any prolonged lay-off in the mines. But at any rate, the President has the power, during time of such emergency and during time of war, to operate those mines, and he would certainly see to it that they were operated if such an emergency existed.

Mr. PIKE. With all due respect to that power, you know, about the third time this thing came up, it wasn't very well respected by the people who were dealing with mine operations. Government operation largely consists of the putting up of a flag at the mine, and having a colonel at the mine office, and the management went on about as before. I have always had the feeling and, of course, this is a matter of opinion, that after one of those so-called seizures and Government operation are carried out two or three times, respect for that seizure

decreases; and it did in this coal business for the last year or two of the war, to the point that nobody took it very seriously along at the end of it. I don't know how to describe it, but I could see over there among the coal operators and coal labor people that they were not very much impressed with the so-called taking over of the mines by the Government. I think it was Captain Carlson who was the Government man for the Department of the Interior. Of course, he would remember very clearly about these things. I think he would tell you the same thing. I have discussed the matter with him.

Representative PRICE. Mr. Chairman, I think maybe at the outset of this hearing we should perhaps find out just how far advanced this project is. I think we should go into the amount of participation in it by the Commission up to this point, so that we will know where to start in the questioning here.

Mr. PIKE. Mr. Bloch, who is our Deputy Director of Production, has that story well in mind, Mr. Price, and I am sure he can give you a better answer than I can.

Representative DURHAM. Give your full name to the reporter, Mr. Bloch.

Mr. BLOCH. Edward J. Bloch, Deputy Director of Production.

Representative DURHAM. All right. Proceed.

Mr. BLOCH. For about the year preceding our taking action on this problem, I think from about August 1946 until August or September 1947, we used coal at Oak Ridge at the K-25 plant at a rate of about 10,000 tons a month greater than our purchases of coal, and during that period we made very strenuous efforts to secure coal wherever we could.

Our experience was due to a combination of things; to some extent to strikes, and to some extent to the fact that we could not get cars to transport the coal and move it in. But we went from one crisis to another during that period, and subsequent to it, until the turn of the year.

If we hadn't, at the very outset, even back during the war, attempted to build up a reserve of coal, the plant probably would have shut down during that period of time, because we consumed in about 13 months about 130,000 tons more coal than we were able to procure. And at that period the plant was not operating at the level at which it is operating now.

Representative PRICE. But what I meant was: how far advanced is this project? Has the Commission entered into any definite contract with this fuel operator?

Mr. BLOCH. Yes; we have a definite contract with the East Tennessee Natural Gas Co.

Representative PRICE. What is the nature of that contract?

Mr. BLOCH. The contract obligates the Commission to take gas beginning within 30 days after the gas company serves us with notice that they are ready to deliver gas.

Representative DURHAM. I think at that point the contract should be placed in the record, if it is agreeable with you. I do not see why it should be off the record.

Mr. BLOCH. There is nothing classified about the contract.

Representative DURHAM. If there is no objection, we will have a copy of the contract included in the hearing.

Representative PRICE. I think it should be placed in the record.

Representative DURHAM. Any objections? If not, it will be placed in the record.

(The contract referred to will be found in the appendix on p. 25.)

Representative PRICE. The main thing I would like to know is how far advanced this project is.

Representative VAN ZANDT. I wonder if they will tell us whether or not they have purchased pipe.

Representative PRICE. Yes; how late are we getting into the inquiry on this?

Representative COLE. Along about that time I wish you would develop why we are getting into it.

Representative PRICE. I do not know any more about that than the gentleman does.

Mr. BLOCH. The joint committee has been kept informed of our progress by a series of letters and also by a quarterly report. I think the initial letter was sent over early last spring, telling the committee that we were investigating this problem.

As far as the progress to date is concerned, the gas company has orders placed for the pipe. The pipe is currently being fabricated. Delivery of the pipe to the gas company is contingent upon the East Tennessee Natural Gas Co. having a certificate from the Federal Power Commission, which they do not as yet have. The Federal Power Commission has recently concluded hearings on the application.

Representative PRICE. The gentleman from Pennsylvania had a question, I believe.

Representative VAN ZANDT. I wonder what your commitments already amount to in dollars and cents?

Mr. BLOCH. The commitments of the Atomic Energy Commission?

Representative VAN ZANDT. Yes.

Mr. BLOCH. Our commitment at the outset of the contract takes a form best described as a guaranty that we will take gas over a certain period of time. We are not obligated to spend any money on this matter except approximately \$240,000 that we will have to spend to convert the boilers to burn gas.

Representative VAN ZANDT. Have you spent any money in that direction?

Mr. BLOCH. No, sir; we have not. We will have ample time to make the conversion when the gas company starts constructing the line.

Representative VAN ZANDT. How about the steel that is being fabricated? Is that an obligation on your part, or on the part of the gas company?

Mr. BLOCH. On the part of the gas company. We have no obligation.

Representative VAN ZANDT. You said your present plant produces about 230,000 kilowatts. Are you disposing of any of your production to outside interests?

Mr. BLOCH. At times when we can safely operate the third boiler, we have helped out TVA by generating some power to reduce the load which they are committed to serve us.

Representative VAN ZANDT. How frequent is that?

Mr. BLOCH. Well, I believe over the past year it probably totaled about, oh, perhaps about 6 months. We have no obligation to fur-

nish that power, and we can stop on a moment's notice. The purpose is to be sure that we can generate for our own needs.

Representative VAN ZANDT. I think Mr. Pike said in his opening statement that your principal source of power depended upon coal.

Mr. PIKE. Yes, sir.

Representative VAN ZANDT. Do you have any other stand-by, other than natural gas?

Mr. PIKE. I think one more is available for conversion to fuel oil.

Mr. BLOCH. That is correct, sir. The background on that conversion is this: During the war we built a thermal diffusion plant, a small plant which was known as the S-50 plant. After the war, we stopped operation of that plant and dismantled it. That plant operated with some Navy boilers that we had secured, and it just burned oil. So in order to operate that plant we had to build a tank. Due to the difficulties we were having in maintaining the coal supply, this was one step that we could take immediately. We had the tank farm available. It would hold enough oil to operate one-third of the plant for probably 30 days. So we converted one boiler.

Representative VAN ZANDT. As it is now, you have coal storage facilities up to 230,000 tons?

Mr. BLOCH. Approximately, yes.

Representative VAN ZANDT. And you have 12 to 13 storage tanks for oil. That is stand-by.

Mr. BLOCH. I think that is correct.

Representative VAN ZANDT. Would it be possible for you to expand your coal storage facility as well as your storage tank facility?

Mr. BLOCH. It is possible; yes, sir. But at the time this problem was considered, there didn't appear to be any possibility of getting coal in stock pile. It would cost some money in rehandling costs, and so on, which you must consider when your stock pile spreads out over a large area.

Representative VAN ZANDT. But you would have the area there if you wanted to expand.

Mr. BLOCH. There is land; yes, sir.

Representative VAN ZANDT. What method do you employ to get your coal there at present? Is it not true that you employ railroads as well as trucks?

Mr. BLOCH. We employ both; yes, sir.

Representative VAN ZANDT. And how is your oil brought in? By tank car, or pipe?

Mr. BLOCH. The oil is brought in by tank car.

Representative VAN ZANDT. And is it not so that there is a pipe line 17 miles from Oak Ridge that transports oil and gasoline from points in the South to the northern United States?

Mr. BLOCH. It is my understanding that that pipe line is not designed to transport the bunker-C fuel oil, which is a heavy oil, a residual oil, that we burn in these boilers.

Representative VAN ZANDT. That is mostly for gasoline, I understand.

Mr. PIKE. And lighter oil products.

Mr. BLOCH. And lighter oil products; yes, sir.

Representative VAN ZANDT. In your desire to bring natural gas into Oak Ridge, is it not true that you not only want to have this definite supply of fuels, as we may call it, for your power-producing

plants, but you want to also supply natural gas for the community of Oak Ridge? Is that correct?

Mr. BLOCH. If the gas is brought in, we would like to extend it to the community.

Representative VAN ZANDT. What is the status of Oak Ridge at the moment? Is it an independent community, or still part of the AEC?

Mr. BLOCH. It is a community that is wholly owned and operated by the AEC.

Representative VAN ZANDT. No local or self-government?

Mr. BLOCH. No self-government.

Representative VAN ZANDT. That is all I have at the moment, Mr. Chairman.

Representative DURHAM. Mr. Pike, at the present time, how much power have we secured from the TVA?

Mr. PIKE. I would have to refer the question to Mr. Bloch, Mr. Chairman.

Mr. BLOCH. Our contract with TVA is for a demand of 225,000 kilowatts.

Representative DURHAM. Are you using all that?

Mr. BLOCH. We are using just about all of it. Yes, at this time, we are very close to our full demand. Of course, that power supplies all of the Oak Ridge area. It supplies more than just the K-25 plant.

Representative DURHAM. Is there an actual shortage, a situation of their not meeting their contract at the present time?

Mr. BLOCH. No..

Representative DURHAM. They are meeting all of their contract obligations at the present time?

Mr. BLOCH. That is correct.

Representative DURHAM. Do you need more?

Mr. BLOCH. We could not get from TVA the variable frequency power which is generated at this power plant on the site.

First of all, it is a question of TVA's not being able to furnish it even if it were available, because of the frequencies we would need.

Representative DURHAM. Do you think it should be off the record as to exactly what this pipe line will cost the Commission in actual figures? Should that be off the record?

Mr. PIKE. That is in the general contract, I think.

Mr. BLOCH. The formula is in the contract.

Representative DURHAM. I know it is in the contract, but your over-all total cost to the Commission in actual dollars was what I had in mind.

Mr. PIKE. If we keep on buying gas—

Representative DURHAM. I am not talking about what we will eventually save. I am talking about the actual investment.

Mr. PIKE. It will not cost us anything, if we take the gas. If we do not take the gas, there are various penalties.

Representative VAN ZANDT. The conversion of the boilers?

Mr. PIKE. Yes, the conversion of the boilers, \$240,000.

Representative ELSTON. Mr. Chairman, I am not a member of the committee, but was very courteously invited to sit in, because of the fact that we in Ohio are tremendously interested in the matter.

I would like to ask whether or not, before you decided to contract for this natural gas, you considered the hardships and the incon-

venience that would result to municipalities throughout the five States that are served by this pipe line. Did you consider that at all?

MR. PIKE. Mr. Elston, we, of course, do not want to cause anybody inconvenience. We were assured by the gas transmission people that the gas we require will come out of additional gas, which will soon be coming through the Tennessee Gas Transmission line, and there will be no cutting back. If I am not mistaken, that went on the Power Commission record during the last week.

MR. BLOCH. Yes, sir.

MR. PIKE. So this is not depriving anybody of gas that is now coming up and being served to other communities, but will come from additional gas, on which the Power Commission I believe is now holding hearings. There is no question, as you know, in the gas business, of a shortage of gas in the gas-producing States. There is roughly about twice as many years' supply of gas in sight in these United States as there is of oil supply. Compared with the somewhat less than 14 or 15 years of oil supply in sight, there is something like 30 years of gas supply in sight. The question is and has been for some years one of getting the gas from where it is available to the places that want to use it. Tennessee Gas Transmission is expanding its pipe-line capacity and this would be part of the additional supply which they expect to have coming along in the next 2 or 3 years.

Representative ELSTON. It is a fact, is it not, that there is a gas shortage every winter, and they have been compelled to shut off industries entirely for some of the colder periods of the winter in order that domestic users may have sufficient gas to heat their homes?

MR. PIKE. Yes, Mr. Elston. That is true. And regularly, as you know, a lot of contracts have been written with interruptible provisions, so that in case of shortage, let us say, in what you might call the utility outlet for gas, these industries which have, let us say, used gas during the summer, when there was no tremendous domestic demand, will go off the line during the shortage period. Some industries go to other sources of fuel, or to their stock pile; other industries close down or curtail for the period. But this is usually written right into the contract.

For the last several years, going back to the war period, as you know, line pipe for both gas and oil has been in great demand, and the expansion in supply has not been able to keep up with the demand. I think this past winter there were not many gas shortages. The winter before last, which was a very cold winter, had some very substantial gas shortages.

These pipe lines, of course, have been getting in further capacity just about as fast as they could. The way the thing looks at the moment, though anybody's guess is of course as good as mine, is that the steel shortage does not seem to be as acute as it was. I might say there that you have to go back to certain plate shortages. There is very limited capacity in these rolling mills that can do the plates from which the pipes are made, and the pipe rolling itself.

So we have had a steel shortage which has resulted in a gas shortage. Of course, it has not helped the whole situation any that during the war and since there have been among the railroads and other users of fuel some moves toward trying to protect themselves against interrupted coal supplies. This has sort of upset the whole equation in addition.

Representative ELSTON. Well, what assurances has the Atomic Energy Commission got that it will not be deprived of natural gas in the wintertime? Is it not running a risk in adopting natural gas as a fuel, in that it may have to shut down at a particular time in the winter, the same as industry has to shut down? Or resort to coal?

Mr. PIKE. To resort to coal, of course, would be a very easy thing for us, on a very few days' notice. Coal is a thing you can stock pile very easily. And it would be our plan, of course, to keep a good ample stock pile of coal.

Gas is a thing that you can't stock pile very well.

Representative PRICE. How would you do that, though, if you had reconverted all your boilers?

Mr. PIKE. Mr. Price, we have always seen to it that we can reconvert. That is the normal practice in the case of large consumption; so that it is possible to switch back and forth on very short notice.

Mr. BLOCH. This is almost instantaneous. The boilers are equipped with jets which introduce gas and another set of equipment which introduces coal. The coal is blown in. It is pulverized. You can burn the two simultaneously in the boiler if you wish.

Representative ELSTON. Was there anything in your contract indicating that the gas that the Atomic Energy Commission is to get is to be in addition to the gas supply already required to be furnished to the five States that are now served by this company?

Mr. PIKE. Of course, Mr. Elston, that goes to the Power Commission's responsibility. It is not in the contract, but they are sort of the watchdogs of the consumers on things, and one of the principal things they have been looking at, as I understand it, for the past several weeks has been not only an ample gas supply back in Texas, but an ample pipe line to bring it up there, so that none of the outlets which are now served will suffer because of this allocation to us.

Representative ELSTON. They have suffered every winter so far that I have known of.

Mr. PIKE. I think that is right.

Representative ELSTON. And there have been times in Cincinnati, Ohio, when the situation was rather serious. The whole idea was that they would in time have sufficient natural gas so that they would not have all of this trouble. Now they are quite alarmed at the fact that the Atomic Energy Commission is going to cut into this gas supply and perhaps deprive municipalities of their gas supply, when the Atomic Energy Commission at Oak Ridge is in a position, being nearer the coal fields to have an ample supply of coal at all times.

It has been pointed out too that the gas supply will not last more than 25 or 30 years at the most, whereas the coal supply will last hundreds of years. Of course, if the Atomic Energy Commission cuts into the gas supply, it will be one of the largest users of gas.

Because of that, the cities that are now using gas will run the risk of having an even greater shortage in the winter-time, because it becomes obvious that if conditions become bad in the wintertime, the Commission will get its gas first and municipalities in other States will get theirs next, on the theory that they cannot shut down the atomic energy plants.

So I say the matter is exceedingly serious as far as the State of Ohio is concerned, and the other States in connection with their getting this gas supply.

Representative DURHAM. Mr. Cole?

Representative COLE. Mr. Chairman, first I would like to inquire of you what interests have provoked this inquiry, which apparently raises some criticism or objection to the construction of the line and the use of the gas by the AEC, other than the process that has been indicated by Mr. Elston.

Representative DURHAM. It is nothing more than the regular procedure in which we have been looking into these different aspects of the whole operation of the AEC. That is why the meeting was called. Under the authority of the act, as I understand it, they are supposed to report to us. This subject was brought up at an earlier date. We had just simply not gotten around to it. I was asked by the chairman to hold a meeting.

Representative COLE. I do not dispute that it is in accordance with the responsibility and authority of the committee. But the Commission is undertaking all manner of operations that this committee does not inquire into, unless some serious question has been raised as to the advisability of it.

Representative DURHAM. I think my statement is very clear that we have been interested in only one thing, that is, the operation of the plan in the two fields in which we are operating, one being the national defense and development of weapons, and the other, research. I tried to make that plain in the opening statement.

Representative PRICE. On the question of saving money, I wonder if we could get some figures as to the comparative costs under natural gas and under coal.

Representative VAN ZANDT. That is all in here [indicating FPC transcript].

Mr. Chairman, in February I received a bulletin from the Fuels Research Council. They are identified with the National Coal Association, I think. That bulletin pointed out just what the substitution of gas for coal would mean to many communities in the United States.

When it came to Pennsylvania, I noticed that my district was very vitally affected. It simply ties into the problem that Mr. Elston, here, outlined a moment ago. During cold spells in the winter months, we had to shut down our industries and throw many hundreds, sometimes thousands out of work, because we did not have the gas. Those industries that did operate, had to go out and purchase bottle gas, which was quite expensive.

Then I got in touch with members of the professional staff of the committee, who furnished me certain information, and then I talked with the chairman of the committee many weeks ago. No other action, of course, on my part was taken until I received notice of my appointment to the committee. But the question itself has been before the Federal Power Commission, and I have a copy of the testimony presented so far. I think we should decide how far we are going, and what we are going to do.

Mr. PIKE. There is one other point that should perhaps be brought in here. Our requirement would be about 60 million feet a day, just by what the contract calls for.

There is one other thing that the Tennessee Gas Transmission Co. is doing in its present application. I understand their capacity will be about a billion feet a day, so that our contract use would be around

6 percent of the capacity of that line. Of course, as you know, Mr. Elston, that is not the sole source. Tennessee Gas Transmission is not the sole source of gas in either the Cincinnati or the Pittsburgh districts. In general, they both got their gas, until recently, from the West Virginia-Kentucky fields in general; Cincinnati through the Columbia gas system, and Pittsburgh through rather a mixture of systems, the old Standard Oil Co. subsidiary, which is now Consolidated Natural Gas, the Philadelphia Co. subsidiary, which is a pretty complicated set-up; and then if I am not mistaken, Columbia itself has a piece of the business.

Fairly recently, in the matter of the last few years, those gas supplies have been supplemented by gas from, let us say, the Texas areas. There was one weakness, of course, about gas coming in over a long gas transmission line. It is not a very flexible thing. If you get it from a nearby gas field, you get your gas in in a hurry, if a cold day comes along. When you are the end of an 1,100-mile line, you have a great lack of flexibility. You cannot get the gas from Texas to Ohio, say, as fast as cold weather can come from, let us say, Montana to Ohio.

Representative DURHAM. Last week when we were holding hearings down there, as I recall we had considerable complaint as to the frequency of the current going off. Of course, you intend to establish this line so as to service the homes in the whole community, as I understand the over-all picture of your plan.

Mr. PIKE. That would be the sensible thing, once we had gas in there: To get rid of that delivery and ash removal from every home in the place.

Representative DURHAM. That is a community of approximately 30,000 people or more at the present time. So furnishing them a public utility would be the same as furnishing it to some other city. It is just a question of what they desire, what they want to use.

Mr. PIKE. Yes, sir.

Representative PRICE. Is the line of the Tennessee Gas Transmission Co., that green line there on the map, coming in at the request of the Atomic Energy Commission? Or did they sell the idea of natural gas to the Commission?

Mr. PIKE. I think, Mr. Price, originally we felt that we wanted an alternate supply of fuel. We did ask several of the people who had gas pipe lines coming up in that direction to see what they could do. As you probably know, there is a pretty large pipe line, Southern Gas, which comes up through Atlanta, and I think they are figuring on shoving the stub up to Chattanooga. We talked to them.

To really answer your question: We wanted the gas, and we looked around to see who could supply it, and several people who thought they might supply it came in and talked to us. The Tennessee Gas Transmission Co. line was about the only line that looked as though it had enough gas, and was going to have enough pipe and was near enough to give us gas, let us say, in the winter of 1949 and 1950. It happened that the Southern people were well contracted up for their gas, and they would have had to go the whole way back and expand. They are expanding, but they would not have expanded fast enough to have any gas to spare.

Representative PRICE. What is the urgency of this project at the present time?

Mr. PIKE. From our point of view, Mr. Price, we would like to have this protection in there as early as we can. I do not think there is any specific urgency from our point of view, although it does happen that, as you know, the pipe was under certain allocation; and there were applications before the Power Commission for more capacity on the Tennessee Gas Transmission line. I do not know what particular urgency the East Tennessee Natural Gas people have. We figure that is pretty largely their business.

Representative PRICE. One of the chief complaints I run into when I am home is from contractors who have difficulty in securing small pipe, 3-inch pipes and domestic pipes. Of course, when they go to the manufacturer, the steel industry, and so forth, the reason they cannot get it is because the industry is engaged in production of the larger pipe. I was just wondering why there was so much urgency in projects of this character that keeps the industry from supplying domestic pipes that are vitally needed in housing.

Mr. PIKE. They are two pretty different businesses, Mr. Price.

Representative PRICE. They are different businesses only because this is the more profitable business, and they go to the larger pipe rather than the smaller pipe. They only go to the domestic building construction pipe when they do not have the other business available.

Mr. PIKE. There are not very many mills that can roll this large pipe.

Representative PRICE. I am giving you actual testimony from construction men, contractors.

Mr. PIKE. Of course, we are perfectly well aware that during the last couple of years, there has been an over-all shortage of steel, and I assume that in an over-all shortage situation the business has gone to the outlet that would provide the best market. I think the steel situation is easing up. I doubt if it is easing up so much in this large pipe field.

Representative PRICE. I would not want to know whether to favor this or oppose it. So far as our committee is concerned, it does not make much difference whether we do or do not. But perhaps our timing might be pretty bad on it.

Mr. BLOCH. We feel that until we have a second fuel supply for K-25, the plant does not have the security that it needs. And due to the nature of the plant, we feel it certainly needs all of this security.

Representative PRICE. In answer to that, I will say that I cannot quite agree with you, because the security situation has developed a little more favorably month by month, and you are reaching a point now where you are not going to have so much difficulty as you had for 2 or 3 years after the war.

I will say this: When you think of coal strikes, you must remember that there are a great number of mines in the country that have never been down. And in case of emergency, the Atomic Energy Commission can certainly get its supply. There are hundreds of mines in Illinois that have never shut down at any time. They belong to an entirely different union. So this thing is not quite as serious from the emergency angle as you might think it is.

Representative ELSTON. Will the gentleman yield?

Representative PRICE. Yes.

Representative ELSTON. As to the emergency angle, there are a great many industries that depend upon natural gas that are manu-

facturing things for the war effort and would be jeopardized the same as the Atomic Energy Commission would. Take the case of Cincinnati, for example. They started to produce a tremendous amount of war material during the war. To be cut off from gas supply at certain times, is a serious matter. They have to convert too. My notion is that one of the reasons for locating the atomic energy plant at Oak Ridge was the available coal supply.

Representative PRICE. And the existing power supply.

Representative ELSTON. Yes. And as the gentleman from Pennsylvania points out, there is barge transportation up the river.

But the availability of coal supply was one of the things that I can recall was stressed as a reason for locating at Oak Ridge.

Representative PRICE. They have river transportation and rail transportation both.

Representative ELSTON. I have been down there, and I know that you have plenty of areas in which you could stock pile from now until many years to come, whereas many industries do not have the opportunity to stock pile coal. Their area is quite limited.

Representative PRICE. I might bring out a point right here and now. All these small mines I have been referring to, that have never been down all through the war, that have never been on strike, that operated every day and disregarded orders from others to go out, are now working 1 or 2 days a week. You might be using their supply to stock pile, and you would never run out of coal.

Representative HOLIFIELD. Mr. Chairman, I would like to comment on that point. I would like to know about the union situation around Oak Ridge there as to all these various mines which are noted here in the report. Are those mines under the control of the John L. Lewis union, or are they unorganized mines? Are they small private mines? What is that situation?

Mr. BLOCH. I am reasonably sure that the bulk of them are unionized. I do not know the detailed figures.

Representative HOLIFIELD. Well, can you tell the committee whether, during the coal strikes in the past 2 or 3 years, those mines in proximity to Oak Ridge have been shut down?

Mr. BLOCH. Yes; they have been shut down; and shut-downs along with shortages of coal cars, which we experience from time to time, resulted in our not being able to secure sufficient coal to meet our operating requirements over a period of about 13 months during 1946 and '47.

Representative HOLIFIELD. What kind of a stock pile of coal do you have on hand down there at the present time? How many days?

Mr. BLOCH. Approximately 90 days' operation.

Representative HOLIFIELD. Is there any reason why you could not have 180 days' stock pile there?

Mr. BLOCH. It is physically possible. It increases costs. It raises a problem of whether there is sufficient coal and sufficient transportation to bring in over a reasonable period of time additional coal to stock pile. There certainly was not, at the time the Commission considered this problem. The opposite effect was true.

Representative HOLIFIELD. I think conditions have changed. I am inclined to agree with Mr. Elston that you have a problem here of sustaining your position under the present conditions. Maybe, during the war, conditions were different; but you have already got

your alternate supply of oil there, have you not? You have 12 or 14 storage tanks there, and you could have more there for an alternate supply.

Mr. BLOCH. The oil supply was a case of improvising to utilize what we had available at the site to get a little bit of protection. It was far from adequate to generate the amount of power we need for any reasonable period of time.

Representative DURHAM. There is quite a difference in the costs there, though, is there not?

Mr. BLOCH. The cost of oil from the standpoint of economics would be prohibitive. It is about equivalent to \$18-a-ton coal.

Representative HOLIFIELD. It would seem to me that you are situated there in the midst of one of the greatest coal-bearing areas in the United States and that at less cost than the cost of this pipe line something could be done along the lines of exploring the utilization of this tremendous stock of coal which is available there. Mr. Pike assures us this pipe line is not going to cost us anything, but we know it would be in the amortized rates of the gas companies, and it will eventually cost the taxpayers something. It seems, therefore, to me that you could explore the matter of coal utilization and of making your stock piles there a little larger. In the meantime this committee is going to have hearings on this labor situation. We are starting tomorrow morning some hearings on that to see if we cannot solve to a certain extent that problem, with the two of us working together.

Mr. PIKE. It is a queer thing, Mr. Holifield, that to transport coal 150 miles costs more than to deliver gas from nearly a thousand miles away, but it is a fact.

Representative HOLIFIELD. The gas is more economical from that standpoint?

Mr. PIKE. Yes, sir. You see, we are under some penalties if we do not use the gas for a period. That penalty, if I am not mistaken, runs out in about 10 years. In the matter of savings in costs, let me say this: We had thought, first of all, that we could build the line, but that was something which really did not make such sense when we got into it. But we figure on such a savings, if we take gas from the Tennessee Gas Transmission line that we could clear the cost in perhaps 8 years, besides having something like a firm price, which is something that you cannot get for coal beyond the period of the contract, usually about a year.

Representative DURHAM. How does your contract compare with the ordinary contract entered into by a city of about the same size as that?

Mr. PIKE. As I remember our contract, it is between 20 and 22 cents a thousand, according to what our volume would be. And as I remember it, that is against a city gate price of variously 30 and 40 cents. I believe that 30 to 40 cents would cover city gate prices at Cincinnati, Columbus, and Pittsburgh. We are getting rather a better price.

Representative DURHAM. I think that is a fair comparison: comparative figures on the contract price as against a city with sales of approximately the same size.

Mr. PIKE. Even much larger cities. Of course, we do have this pretty good-sized power plant.

Representative DURHAM. Is that due to the fact that you use and accumulate so much of it, or other factors?

Mr. PIKE. Of course, it is a steady thing. That has a good deal to do with the operation of a long pipe line, Mr. Durham, where it can practically be assumed that you will be a 24-hour consumer, 365 days a year. You can make a better utilization of the line there than if you are a variable consumer.

Representative DURHAM. Mr. Cole?

Representative COLE. Mr. Pike, is not the real question confronting the Commission a question of power rather than heat?

Mr. PIKE. Yes, sir. There is a little heat in it, but power is the main thing.

Representative COLE. We have a map here showing three pipe lines, one indicated in brown, which I assume is the line from the Texas field running up close by Nashville, and on up to Huntington, W. Va. Then there is also a pipe line, indicated in red, coming off the brown line at a point near Centerville, Tenn., running down to Chattanooga and up to Knoxville. There is also indicated a line in green from a point at the brown line near Springfield, Tenn., over to Knoxville.

First, who operates the brown line?

Mr. PIKE. That is the Tennessee Gas Transmission Co.

Representative COLE. Who operates the red line?

Mr. PIKE. That I believe is to be done by the same East Tennessee Natural Gas Co., but we have no particular interest in it. This is completely separable, although I believe it will be the same corporation.

Representative COLE. The red line has not been installed?

Mr. PIKE. No, sir.

Representative COLE. What is the reason, if it has not been installed, that that red line could not supply your needs, since it ends at Knoxville?

Mr. BLOCH. I believe I can answer that. The East Tennessee Natural Gas Co. about a year ago secured a certificate to bring gas into Chattanooga-Knoxville. In our discussions with them, relative to bringing the gas into Oak Ridge, we did not specify how the gas should be brought in. The decision of East Tennessee to bring it in by a separate line rather than to increase considerably the size of the line which would serve Chattanooga-Knoxville was an engineering and economic decision of theirs. We did not specify by what route they had to bring the gas in.

Representative COLE. Who is going to use off the green line other than the Atomic Energy Commission?

Mr. BLOCH. The Gas Co. plans, or had tentative plans eventually to extend that line on up to Kingsport and Bristol, Tenn.

Representative COLE. But until that extension is done, the Commission will be the only buyer.

Mr. BLOCH. We would be the only significant buyer.

Representative PRICE. Could I ask a question?

Do they have any application for funds from RFC on that particular line?

Mr. BLOCH. The green line?

Representative PRICE. Yes.

Mr. BLOCH. I am not sure. I believe not. I understand they have been negotiating for funds for the red line, the Chattanooga line.

Representative PRICE. From RFC?

Mr. BLOCH. Yes.

Representative PRICE. Do you have any idea how they would finance the green line, then?

Mr. BLOCH. I don't have the details. A financing plan was presented to the Federal Power Commission as part of an exhibit in their application, and that plan is in the record of the FPC hearing.

Representative COLE. What will it cost to construct the green line?

Mr. BLOCH. The estimates are approximately nine and a half million dollars.

Representative COLE. So that since the AEC is to be the only consumer, the cost of the construction of that green line will have to come out of the AEC through its purchases of gas; and not only the cost of the line, but whatever profit there might be.

Mr. BLOCH. That gets back to what earnings the gas company can get by with. We have a firm contract which, for the first 3 years of operation establishes a firm price at which we will buy gas. The contract, I believe, provides for renegotiation periodically.

Representative DURHAM. Every 2 years?

Mr. BLOCH. Every 3 years, I believe.

Representative COLE. You said that the Commission would consume 60,000,000 cubic feet a day out of a total of a billion?

Mr. BLOCH. That is right.

Representative COLE. What is that? The brown line?

Mr. PIKE. The brown line, yes. The main line. My memory may be inaccurate. The present capacity is, I think, around 640,000,000 feet on the brown line. They have applications and lines under construction to bring the total capacity up to about a billion feet, of which we will want about 60,000,000.

Representative COLE. Sixty, not sixteen?

Mr. PIKE. Sixty, yes.

Again, if I am not mistaken, total capacity of that line they intend to run into Oak Ridge, the 22-inch line, will be about 100,000,000 feet. Obviously they intend to run that line on when they can get the pipe and the permits, over, as Mr. Bloch said, to Bristol and Kingsport, and utilize the other 40,000,000 feet capacity for, I guess you would call it, public utility purposes. But our concern, of course, stops at this point.

I have the feeling that this contract probably is a good contract for us, in that we are getting a very good price; and probably it is a good contract for them, because it sort of carries this first 180 miles. I do not think they are going to make very much profit out of it. It carries this first 180 miles, so that when they take the jump over to Kingsport and Bristol they will be able to make a better contract with those communities than if they had to put in that whole line and make them carry the whole cost. We think that it is not unreasonable that they should make a fair profit. We are getting what I believe is a good price here.

Representative COLE. It has been indicated that one of the considerations which prompted the selection of Oak Ridge as the site for this operation, was the availability of coal. Would you not agree that the principal reason that Oak Ridge was selected was the availability of power from TVA?

Mr. PIKE. That would be my guess, sir. Of course, I knew nothing about it at the time.

Representative COLE. I did not either, but I think that was the main reason it was settled down in this locality. It was because of the availability of power.

AEC has bought its power from TVA and has also generated its own power. Which has been greater? For instance, in the past year, did you buy more TVA power than you produced yourself?

Mr. BLOCH. Yes.

Representative COLE. In what ratio?

Mr. BLOCH. I can give you those approximately. However, there is nothing classified about the TVA figures. We have considered as still classified the actual amount of this variable power that we use for K-25. The total capacity of the plant is not necessarily an indication. I would prefer to give that off the record.

Representative COLE. You can tell me on the record whether you bought 10 times as much TVA power as you produced yourself, or whether it was the same amount that you bought from TVA.

Is it not correct that the power plant at Oak Ridge is stand-by plant to fill in when you cannot get all the power you need from TVA?

Representative DURHAM. They have been selling power there.

Representative COLE. I realize they have been selling power, but that is when TVA has been short.

Mr. PIKE. I think at this point we ought to go off the record. That is something that is pretty classified.

Representative COLE. All right. But in connection with that, I want to inquire when this contract was made.

Mr. BLOCH. When was it? June of 1948. I believe it was approved the 13th of June.

Representative COLE. How long will it take to construct that line?

Mr. BLOCH. Probably 6 to 7 months.

Representative COLE. This decision then apparently was made by the Commission prior to the time it was determined by the Congress to build a steam plant at TVA, one of the major reasons for which was to permit TVA to have a greater capacity in order to supply and meet the needs of the Commission at Oak Ridge.

What explanation can you give—there must be one—to justify your going ahead with this gas contract, the cost of which eventually will be borne by the AEC, if you are able to get the power which you might need from TVA through this steam plant at TVA?

Mr. BLOCH. We are unable to get that power, because TVA cannot furnish power at the frequencies which are required.

Mr. PIKE. You see, this is not a matter of quantity entirely. It is a matter of kind of power.

Mr. BLOCH. It is type of power as well as total quantity.

Mr. PIKE. TVA does not furnish this.

Representative COLE. TVA can manufacture with its steam plant the same type of power which you can with yours?

Mr. PIKE. On this, I think we ought to get off the record. This is really one of the troublesome things in K-25.

Representative COLE. But still for the record: There is no connection, then, between the steam plant, the proposed steam plant for TVA, and the requirements of the Commission at Oak Ridge?

Mr. BLOCH. Not as far as our current requirements go. That is correct. There is a connection in connection with this expansion of the Oak Ridge plant, which we are contemplating.

Representative COLE. And it is in connection with the consideration of that expansion that you think we should go off the record?

Mr. PIKE. Yes, sir. We cannot even explain it to you on the record.

Representative COLE. I say, you think we should go off the record?

Mr. PIKE. Yes, sir.

Representative VAN ZANDT. Is it not true that the Commission has had to ask for a priority so as to purchase the necessary steel?

Mr. PIKE. The pipe? Yes, sir. Let us say it appeared in their application.

Representative VAN ZANDT. In other words, the voluntary allocation program that Congress authorized was put into effect?

Mr. PIKE. Yes, sir.

Representative DURHAM. You also do that for other companies. By that I mean you might have peak steel for the development of some other thing. You have done that all the way along the line.

Mr. PIKE. Yes, sir; but this was a pretty big chunk of tonnage. I think it ran around 25,000.

Representative VAN ZANDT. One other question: Have you ever approached the operators or the United Mine Workers for the purpose of perfecting an agreement whereby there would be no work stoppage in coal mines, so that you would enjoy a continued flow of coal?

Mr. PIKE. I do not think we have; no, sir. We do not happen to have the union that Mr. Price has down in the lower Illinois fields. It does not operate in our area.

Representative DURHAM. We will go off the record now.

You may be excused, Mr. Reporter.

(Discussion off the record.)

Mr. COLE. What is the reason why you can't stock-pile coal?

Mr. PIKE. There is the extra expense.

Mr. HOLIFIELD. Your requirements are 600,000 tons a year?

Mr. PIKE. Roughly. The trouble is we obviously need the alternate source. Coal is beautiful to stock-pile because you can stock-pile it—with gas, you can't.

Gas is no good as a stand-by, because it will not stock pile. Once you have it in, particularly since it means a saving of over a million dollars a year, I think we could go to coal and pull it off our stock pile. It would be the sensible thing to do.

Representative PRICE. Is gas there low pressure or high pressure?

Mr. PIKE. They bring it up in pretty high pressure in order to save pipe diameter.

Representative PRICE. Is there not a danger of explosion with high-pressure gas?

Mr. PIKE. No, sir; not if the thing is designed right. They usually use six to nine hundred pounds per square inch.

Representative PRICE. There are some regulations proposed in high-pressure gas, because of the numerous explosions which have happened, that blow houses just to bits. A spark of an electric switch will set off such an explosion.

Mr. PIKE. It never enters a community, sir, at that pressure. Of course, it is stepped down.

Representative PRICE. We had an explosion out in St. Louis County, and there have been numerous explosions in the Bronx and Queens.

Mr. PIKE. Of course, manufactured gas would do the same thing.

Representative PRICE. This is just a matter of a flick of the switch.

Mr. PIKE. But that 4-ounce gas will explode just as well as 600-pound gas. When it comes into the communities, they step down the pressure, usually to a matter of a few pounds per inch.

Representative PRICE. Is there any danger of explosion?

Mr. PIKE. No more than with the use of any other gas.

Representative PRICE. Is there a danger of explosion with gas?

Mr. PIKE. Yes. Of course, it is a thing that has to be handled in every household with care. We are all familiar with the fellow who blew out the gas. Gas is not foolproof.

Representative PRICE. One explosion there might shut your plant down for quite a while.

Mr. PIKE. You see, this is a very different thing. As far as the power plant is concerned, you have competent people around it, and there is no real danger there.

Representative PRICE. If I were to come in and flick a switch, it might be serious, though.

Representative HOLIFIELD. That is only in the case of a gas escape.

Representative PRICE. Yes.

Mr. PIKE. I would be more afraid of it in the community than around the power plant. I do not think there is any record of any trouble from gas on a well-operating power plant.

Representative PRICE. Of course, there are not too many of them operating from natural gas.

Mr. PIKE. Quite a few, sir. All through the South practically all of the utilities of Texas, Louisiana, Mississippi, Arkansas, Oklahoma; practically all their power plants are operated with natural gas.

Representative PRICE. If they all continue to get into the use of natural gas, you are not going to have a very good source of supply in about 20 years.

Mr. PIKE. We still keep finding more than we are using up. We have about 30 years' supply in sight. We keep discovering more than we use. Then, of course, looking at it from a purely financial point of view, we will have saved enough so that even if we had to pay for the cost of this line, we would have it four times over in the annual saving.

Representative DURHAM. Over a period of how many years?

Mr. PIKE. I think in 8 to 10 years we will about pay these boys off for the cost of this line.

Representative VAN ZANDT. Mr. Chairman, I think we have lost sight of one thing in this discussion, and that is the fact that you are displacing jobs.

Mr. PIKE. No question of it.

Representative VAN ZANDT. You are destroying the job of the railroader. The L. & N. and the Southern now carry coal to you over their lines. You are destroying the job of the coal miner. And here we are, the Government, using the taxpayers' money to destroy those jobs. I think that should be taken into consideration.

Representative PRICE. Mr. Pike, I believe there is an actual incident where a gas plant did blow up out in Kansas, and was out of service many weeks.

Mr. PIKE. It may have happened. I do not know about it.

Representative DURHAM. I do not believe the cost of coal and the cost of gas have been put in the record. Could you place those figures

in the record, as to the cost of operation with coal and the cost with gas, in the final production of your kilowatt? Is that reasonable or possible?

Mr. PIKE. Perhaps we could give it to you the way we have it, and then perhaps translate it into your terms, Mr. Chairman.

Representative DURHAM. That is right.

Mr. BLOCH. In the first letter we sent over to the joint committee, we said it appeared that we would save approximately \$650,000 annually, based on an estimated price of coal at \$6.50 a ton delivered to the boilers. The bulk of our coal right now is costing us \$7.14 a ton.

Representative DURHAM. Your figures were based on \$6 a ton?

Mr. BLOCH. Our figures were based on \$6.50. So based upon the current price at which we are buying—in which we are paying for approximately two-thirds of the coal we are using at K-25, the savings will be in the order of a million dollars a year.

It is true that the price of coal fluctuates. It may come down. But as a comparative figure, in order for coal to be as cheap as gas, to use the K-25 price of coal delivered to the boilers, it would have to be about \$5.45 a ton. Those are the latest figures that we have.

Representative VAN ZANDT. That is gas?

Mr. PIKE. The price of coal would have to be about \$5.45 to break even on this contract price for gas.

Representative PRICE. Do you make any provision for domestic use of this in the community?

Mr. BLOCH. Yes, sir.

Representative PRICE. Is it a different rate?

Mr. BLOCH. No, sir; the rate is the same. And incidentally, as to these coal prices, the coal at K-25 represents the most favorable and the cheapest price for coal. When you get into the community, by the time you include the cost of delivering the coal to the individual houses, picking up the ashes, and what not, coal has been costing close to \$14 a ton delivered to the houses in the community.

Representative VAN ZANDT. Would it not be proper to say that it would probably be a little more convenient to have natural gas down there than coal?

Mr. BLOCH. Yes.

Representative VAN ZANDT. You have pointed out the fact that you have ashes to carry away, or to dispose of.

Mr. PIKE. It would cut down our community operating problem very much. We had that, of course, in Los Alamos in a much more striking form, where we had to bring the coal up those steep pitches. But it still would simplify community operations.

Representative VAN ZANDT. Mr. Chairman, I would like to point out again that I think we are doing an economic harm to that community. We are destroying what would mean a lot to the community. I am thinking now of the communities along the Southern and the L. & N. Railroads, where this coal is dug. I am thinking too of the coal miner. I am thinking of the taxes that are paid to those communities by the railroads and by the coal miners. And I think we are destroying the economy of that community.

Representative PRICE. I do not think there is any question about that. That is definitely what we are doing.

Mr. PIKE. My memory is, Mr. Van Zandt, that the amount of coal we are using that we will not use afterward, will mean a difference of approximately 350 miners.

Representative DURHAM. It is always a very difficult problem to fit national security into economics. I think we all realize that there is going to be some—I will not say suffering, but some displaced people, probably, from the effects of this operation.

Mr. PIKE. This, of course, goes right through the whole expansion in the use of natural gas, and to some extent fuel oil. So the demand for coal is decreased, or at least the increase is cut down. I think it is pretty clear that the coal at the head of the mine is around 60 to 70 percent labor. So any change in labor cost, cost per man-hour, would have to be reflected in the cost of coal. It is a fact, and there is no use trying to disguise it.

When you come to gas, the labor element in the cost of gas is probably not over 5 or 6 percent.

Representative DURHAM. But you are basing your main reason for this operation on security.

Mr. PIKE. On security. We felt that security outweighed the other elements.

Representative VAN ZANDT. Mr. Chairman, we had the element of security during this last war, as far as coal was concerned. If my memory serves me correctly, did not the spokesmen for organized labor guarantee to the Government of the United States that there would be no interruption in production? And I believe that John Lewis and his coal miners were part of that guaranty. While I cannot speak for Mr. Lewis or any of the coal miners, yet I have a lot of them in my congressional district, and I know them as good Americans, and I just cannot believe that the United Mine Workers would deny the AEC a contract that would permit an ample supply of coal to be on hand at all times, even though the remainder of country may be on a strike; that is, the coal miners of the country. I am convinced that that angle has not been explored.

Representative DURHAM. In other words, you feel that you can get as much security out of a stock pile of coal.

Representative VAN ZANDT. I do, yes. In fact, I think there is more. Because we have encountered the experience in Pennsylvania during the cold spells of having the pressure go down. And there is only one of two things to do. You either go down and buy bottled gas, which is expensive, or you shut down your plants. And our plants have shut down.

Let us not forget that the hearings of the Federal Power Commission down there will show that the request of the AEC, or of this Tennessee Gas Co., for the right to build this line, is just part of the over-all situation that confronts the eastern United States. We in Pennsylvania, as well as Ohio, I understand, and other Eastern States are depending upon the extension of this line to relieve the shortage of gas during cold spells. Then they tell us that they cannot guarantee and will not guarantee that they will meet the demands on the part of the consumer during cold spells.

So we still may have to shut down.

Mr. PIKE. Of course, you know, Mr. Van Zandt, that a good many industries have voluntarily taken on those interruptible con-

tracts, at a preferred price. This is probably inescapable economics in the gas business: The longer your line, the more necessary it becomes to keep it full. Because a certain cross-section at a given pressure will only carry so much gas. Your investment in pipe line gets big, and bigger, but it will not carry any more gas than the short line. So on these longer pipe lines, 1,000 miles and up, it has been the custom for the pipe-line companies to see if some of the fellows on the other end would not take it with the provision that their supply would be interrupted when the community requirements ran too high, as they do on cold days.

In addition to that, the Columbia gas organization in Mr. Elston's area and the Michigan Consolidated up in Detroit have been bringing it up and poking it back in the ground, so that they can have some nearby gas to pull out in a hurry. The physical elements of the gas business are pretty clear. There is no question as to the fact that when you put gas in instead of coal, you displace miners. It is not a very happy thing.

In this town, for instance, in the last few years, we have gone from mixed gas to straight natural gas. It has cut out the use of a great deal of coal and oil. This is the only town on the Atlantic coast, by the way, that uses straight natural gas. Under some of these contracts, Philadelphia, Baltimore, New York, Boston, all will be using mixed gases. That is the tendency in the coal business. And I wish it were not true.

Representative VAN ZANDT. Mr. Chairman, I am convinced, further, that I do not think you have explored fully the possibility of using oil. You could build up your supply of oil. Here the Government has spent millions of dollars on deepening the channels of rivers. And within a few miles of Oak Ridge, you have a channel that will permit the use of barges. You can transport all the oil that is necessary to Oak Ridge by increasing your storage capacity. You have 12 to 13 tanks now capable of holding you for a period of 30 days.

Mr. PIKE. On one boiler, Mr. Van Zandt?

Representative VAN ZANDT. On one boiler. Well, you could build up your supply of oil.

Mr. PIKE. That is, of course, tremendously expensive. As Mr. Bloch said, as against a cost of around \$7.14 for our coal at present, oil at present prices would be equivalent to around \$18 a ton.

Mr. BLOCH. Mr. Van Zandt, when the Commission first explored this problem, our Oak Ridge office did look into the possibility of securing oil. They contacted eight or ten of the major oil producers, all of whom said that they were overcommitted, and said that they could not give us any relief and could not make oil available to us. Of course, that picture has changed.

Representative VAN ZANDT. That situation has changed today.

Mr. PIKE. And it may change back again. That is always true of the oil business. It is an up and down business.

Mr. BLOCH. We have looked at it from the standpoint of the amount of steel that would be necessary to build the tanks, and what was necessary to build the tank cars.

Representative VAN ZANDT. Of course, that situation has changed today. Tank cars are in excess.

Mr. BLOCH. But if that situation came about again, oils would be the tightest fuel on the market. Your demands for oil would be tremendous, and it would be really premium material.

Representative DURHAM. You are expecting to up the production of fissionable materials in the next 12 months?

Mr. PIKE. Twelve months may be a little optimistic.

Mr. BLOCH. We have, through certain improvements mentioned in the semiannual report, made possible certain increases. It will be about 2 years before we can start operating this plant in addition.

Representative HOLIFIELD. There are two things that bother me about this, Mr. Chairman. One is the fact that your security problem, it seems to me, does not necessarily depend upon this alternate supply. It seems to me you could take care of your security problem by increasing your stock pile of coal if necessary to a year's supply. That point would seem to me to answer the security problem. There would be, it is true, a little more investment in the stock pile of coal that you would have there; but that would be an inventory investment and would not be an expenditure. The \$1 a ton for extra handling in case it was ever needed might be considered as an expenditure, but I think if you increased your stock pile of coal there, you would not have to handle all of that coal, because it would be in the nature of an unused inventory to draw from in case of an emergency. I think with increased attention to certain types of labor contracts with these miners, if these miners see that their strike procedures are going to kill the industry in that area, self-service alone would cause the mines in that area to make an exception in their contracts as to continuity of supply to your Oak Ridge installations.

In considering the economic saving per year that you would get from the use of gas, if you can sustain that at the figure you gave, I think you would have to offset that from the standpoint of our whole economy with the loss that would accrue in the form of income taxes from the miners' wages, and from the whole communities that would be affected by this from the standpoint of the taxation which would accrue to the Government.

I wonder if you have gone into the full impact of this thing from an economic standpoint, and if these factors which I speak of, and others which I am not aware of, would not offset to a certain extent your immediate saving by using gas in the place of coal.

These are things that bother me to some extent, and I do not think that you have completely answered them.

Mr. PIKE. Of course, Mr. Holifield, some of that money would come back in the form of income taxes, just the same as if you spent too much money in anything else. If there was an excessive profit, the Government would recapture some of it in income taxes. On the other hand, you know, this coal business is not a very profitable business. It is not particularly well managed, nor are the labor relations particularly good. We have all recognized it as a business which has had elements of grave illness and some of them quite fundamental. We have probably 16,000 coal mines in the country of which probably 8,000 operate pretty regularly in reasonably active times. Others only operate seasonally, at best. This happens in Iowa, where a man will go out and get his season's supply of coal and sell it to his neighbors. When those conditions operate things are pretty hard.

It is a business where things are always going to be affected by the condition of the economy, insofar as marginal producers are concerned. They go up very quickly, and they drop very quickly.

Representative VAN ZANDT. That is not true in Tennessee.

Mr. PIKE. Of course, the coal business is also characterized by a tremendous difference in man-hours per ton. In your district, as you know, you have some mines that will run a long while, and there is not enough life left in some of those mines to warrant thorough mechanizing, and some of them, frankly, are running their mines out because they cannot afford to put a lot of expensive machinery in a mine that only has, say, 5 or 10 years to run.

Representative VAN ZANDT. But they are bringing new mines in, and some of them are highly mechanized.

Mr. PIKE. That is right. There are high profits in some of those cheap costs. And costs, again, go to labor in tonnage per man-hour. Those are your costs, really. I think a survey has been made showing that we have quite a lot of small-to-medium mines, some of which are profitable, and some of which are not. This is characteristic, even in a given district, where you will have mines within a couple of miles of each other, producing exactly the same quantity of coal, but in which the costs will vary considerably.

Representative PRICE. The Congress charges the National Security Resources Board with the coordinating of all planning of power supply for industries important to the national defense. Now, has the Commission coordinated this plan with the National Security Resources Board? And has the Board given its approval to this plan?

Mr. PIKE. That I do not know, sir.

Representative PRICE. I think that is very important.

Representative VAN ZANDT. They have not, I may say to the gentleman from Illinois. According to the hearings before the Federal Power Commission, they have not.

Representative PRICE. I think you are overlooking a provision in an act of Congress that should be considered.

Mr. BLOCH. We do work with the National Security Resources Board. We have coordinated our power requirements, projected power requirements, with them. To my knowledge, we have not held any discussions with them relative to our requirements for coal or gas or any other fuel. Power, manpower, and a few other such requirements we have already given information on.

Representative DURHAM. Any further questions?

Thank you very much, Mr. Pike.

(Whereupon, at 11:59 a. m., the committee adjourned, subject to the call of the Chair.)

## APPENDIX

---

### CONTRACT BETWEEN THE UNITED STATES ATOMIC ENERGY COMMISSION AND THE EAST TENNESSEE NATURAL GAS COMPANY

Contract No. AT-40-1-GEN-244

THIS AGREEMENT, entered into the 19th day of June 1948, by and between the UNITED STATES OF AMERICA (hereinafter referred to as the "Government"), and EAST TENNESSEE NATURAL GAS COMPANY (hereinafter referred to as the "Gas Company"), a corporation duly organized and existing under the laws of the State of Tennessee,

Witnesseth, that:

Whereas the Government desires to obtain natural gas for use in the Oak Ridge area; and

Whereas the Gas Company is authorized by its charter to engage in the business of supplying natural gas; and

Whereas the Gas Company will obtain its requirements of natural gas from the Tennessee Gas Transmission Co.; and

Whereas the United States Atomic Energy Commission deems it to be in the best interest of the Government to obtain natural gas from the Gas Company on the terms and conditions hereinafter set forth; and

Whereas this agreement is authorized by and is executed under the Atomic Energy Act of 1946, and is certified by the Commission to be necessary in the interest of the common defense and security;

Now, therefore, the parties hereto mutually covenant and agree as follows:

#### ARTICLE I—SCOPE

1. The Gas Company shall apply for promptly and use due diligence (a) to obtain all necessary materials and authorizations for the construction of the facilities and for the purchase of a supply of natural gas necessary to enable it to deliver to the Government at the Points of Delivery, defined herein, the volume of natural gas contemplated by this agreement, and (b) to secure such certificates, licenses, or permits as may be found necessary to authorize the sale and delivery to the Government of said volume of gas. When requested by the Commission, and to the extent that the Commission may require, the Gas Company shall submit to the Commission adequate information concerning the status of its undertakings under this paragraph.

2. Upon the receipt by the Gas Company of authorizations therefor, deemed requisite and satisfactory by it, the Gas Company shall proceed with due diligence to construct the necessary facilities for its performance hereunder as expeditiously as practicable. When requested by the Commission, the Gas Company shall submit to the Commission written progress reports covering the construction of said facilities.

3. Upon the issuance of authorizations deemed requisite and satisfactory to the Gas Company for the construction of the requisite facilities and for the purchase and sale of the volumes of natural gas and natural gas service contemplated by this agreement, and upon the completion of the construction of such facilities so as to enable the Gas Company to deliver to the Government said volume of natural gas, the Gas Company shall be ready to sell and deliver to the Government, at the charges provided in Article IX hereof, a contracted demand of 60,000 MCF of gas per day.

4. The Government shall use due diligence (a) to secure necessary materials and (b) to construct or cause to be constructed, the facilities necessary to enable it to receive gas by the time the Gas Company is prepared to deliver gas hereunder.

5. After completion of construction of the Government facilities and commencing with the initial delivery of natural gas hereunder, the Government may pur-

chase and receive a contracted demand of 60,000 MCF of gas per day, and shall pay the Gas Company therefor at the charges provided in Article IX hereof.

6. Notwithstanding the provisions of paragraphs 1 and 2 of Article IX hereof, the Demand Payments and Commodity Payments therein provided for shall become applicable on the day specified in a written notice given by the Gas Company to the Commission at least thirty (30) days prior to the said day, provided that on the day so specified the Gas Company is actually ready to commence delivery of gas hereunder at the rate of 60,000 MCF of gas per day. In such event the specified day shall be deemed to be the day of commencement of delivery and of initial delivery, of natural gas to the Government hereunder. The Gas Company shall give such notice as soon as practicable and, except with the prior written consent of the Commission, shall not make deliveries from its said facilities to any other customers prior to the said specified day.

#### ARTICLE II—TERM: TERMINATION FOR CONVENIENCE: AND OBLIGATION OF FUNDS

1. This agreement shall be effective on the date hereof first above written, and shall continue in effect for a period of twenty (20) years from the day of initial delivery of gas hereunder unless it otherwise expires or is terminated as herein provided.

2. The Commission may, at any time, upon at least twelve (12) months' prior written notice to the Gas Company, terminate this agreement after the initial delivery of gas hereunder.

3. Notwithstanding any other provisions of this Article and regardless of cause, this agreement shall expire upon the happening of the first of following events, (a) when and if the application of the Gas Company for the certificate of public convenience and necessity requisite to enable it to construct the necessary facilities for performance hereunder is finally denied, (b) when and if the Gas Company notifies the Commission in writing that it deems the certificate of public convenience and necessity issued to it to be unsatisfactory, (c) when and if construction of such facilities has not been substantially completed within two years after the Gas Company gives written notice to the Commission that the certificate of public convenience and necessity issued to it is deemed to be satisfactory, or (d) on June 30, 1952, or such substituted later date as the Commission, from time to time, may designate by written notice to the Gas Company, unless the Gas Company is actually ready to deliver 60,000 MCF of gas per day hereunder on or before such stated date or such later date, as the case may be. The Gas Company shall, upon receipt of said certificate of public convenience and necessity, promptly notify the Commission in writing whether or not it deems the same satisfactory unless the Commission consents in writing to a later notification.

4. The Commission has initially obligated for this agreement from obligational authority available to the Commission the sum of Four Million Four Hundred Thousand Dollars (\$4,400,000). The Commission will for each Government fiscal year, beginning with the fiscal year in which gas is initially delivered hereunder, review and revise this obligation to provide for estimated payments hereunder for that fiscal year, in addition to the variable charge set forth in paragraph 5 of Article IX. It is understood that, except to the extent of the initial obligation of Four Million Four Hundred Thousand Dollars (\$4,400,000) and any subsequent obligations, all payments under this agreement are subject to the availability of appropriations for this purpose.

#### ARTICLE III—CHARACTER OF SERVICE

Natural gas delivered by the Gas Company to the Government under this agreement shall not be subject to curtailment or interruption except that caused by force majeure and deliveries hereunder shall have priority over all other deliveries made or to be made by the Gas Company for industrial use. This agreement shall obligate the Gas Company to sell and be ready at all times, commencing with the day of initial delivery, to deliver to the Government the contracted demand and the Government shall have the right to purchase and receive from the Gas Company up to the contracted demand. Such deliveries of gas shall be as nearly as practicable at uniform hourly rates of flow and in uniform daily amounts, but on account of variations deemed for purposes of this agreement to be due to the inability of the Gas Company to maintain more precise control, daily deliveries shall be subject to an allowable variation of not more than ten percent either above or below the scheduled daily delivery, and total deliveries in any month of the calendar shall be subject to an allowable variation of not

more than five percent above or below the average scheduled daily delivery multiplied by the number of days in said month.

#### ARTICLE IV—POINTS OF DELIVERY

1. There shall be not more than three Points of Delivery for all of the natural gas purchased under this agreement, and they shall be located at points mutually agreeable to both the Gas Company and the Government on the Gas Company's transmission system or laterals therefrom as near as the Government desires to the boundary of the Oak Ridge Area, but outside thereof.

2. The Government may accept delivery of the natural gas which the Gas Company is obligated to deliver to the Government hereunder at any or all of the respective points of delivery, only one of which, however, shall have a capacity equal to the contracted demand.

#### ARTICLE V—PRESSURES

1. The Gas Company shall deliver the natural gas to the Government at points of delivery at a regulated pressure of one hundred pounds (100 lbs.) per square inch gauge pressure, with the least practicable variation.

#### ARTICLE VI—QUALITY

1. *Heating value.*—The gas to be delivered under this agreement shall be natural gas from the Gas Company's present or future source of supply; provided, however, that helium, natural gasoline, butane, propane, and any other hydrocarbons except methane may be removed prior to delivery to the Government. In no event shall the natural gas delivered by the Gas Company have a total heating value at the Points of Delivery below one thousand British thermal units per cubic foot. The Gas Company may subject, or permit the subjection of, the natural gas to compression, cooling, cleaning and other processes. In the event that the total heating value of the gas, per cubic foot, in any month of the calendar when determined as provided in paragraph 2 of Article VII hereof, falls below one thousand British thermal units per cubic foot, the Government shall have the option (a) to refuse to accept said gas so long as said total heating value remains below one thousand British thermal units per cubic foot, or (b) may continue to accept delivery of gas, in which case a reduction shall be made in the total amount which the Government would otherwise pay for such month if the total heating value were one thousand British thermal units or above. Such reduction shall be determined by multiplying said amount so otherwise payable by a fraction, the numerator of which is the deficiency in total heating value per cubic foot below one thousand British thermal units and the denominator of which is one thousand. Such reductions shall be reflected on the bill rendered for such month and the net amount is the total amount to be paid by the Government for that month.

2. *Freedom from objectionable matter.*—The natural gas to be delivered by the Gas Company under this agreement:

(a) Shall be commercially free from objectionable odors, dust, or other solid or liquid matters which might interfere with its merchantability or cause injury to or interference with proper operation of the lines, regulators, meters or other appliances through which it flows;

(b) Shall contain less than one grain of hydrogen sulphide per hundred cubic feet of gas volume when tested in accordance with the following procedure; a strip of white filter paper previously moistened with fresh 5% lead acetate solution shall be exposed to the gas for one and one-half minutes in a previously purged apparatus through which the test gas is flowing at a rate of approximately five cubic feet per hour; the gas shall not directly impinge upon the test strip during the test. At the end of the stated time the test paper thus exposed shall be compared with a second test strip similarly prepared but not exposed to the test gas. If the exposed test strip is not noticeably darker than the comparison strip the gas under test shall be considered acceptable. If the exposed strip is definitely darker than the comparison strip the gas shall be tested quantitatively for hydrogen sulphide by the Tutweiler method; and

(c) Shall not contain more than twenty grains of total sulphur per hundred cubic feet of gas volume as determined by methods to be mutually agreed upon.

3. *Failure to conform to specifications against objectionable matter.*—If the gas offered for delivery by the Gas Company shall fail at any time to conform to any of the specifications set forth in paragraph 2 of this Article, then the Government

shall notify the Gas Company of such deficiency and thereupon may at Government's option refuse to accept delivery pending correction by the Gas Company. Upon the Gas Company's failure promptly to remedy any deficiency in quality as specified in paragraph 2 of this Article, the Government may accept delivery of such gas and may make changes necessary to bring such gas into conformity with such specifications, and the Gas Company shall reimburse the Government for any reasonable expense incurred by it in effecting such changes.

#### ARTICLE VII—MEASUREMENTS

1. *Sales unit.*—The sales unit of the gas delivered by the Gas Company shall be one thousand cubic feet of gas measured according to Boyle's Law for the measurement of gas under varying pressures with deviations therefrom as provided in paragraph 2 (f) below on the measurement basis hereinafter specified.

2. *Determination of volume and total heating value.*—The volume and the total heating value of the gas delivered by the Gas Company shall be determined as follows:

(a) The unit of volume, for the purpose of measurement shall be one cubic foot of gas at a temperature of sixty degrees Fahrenheit and at a pressure of eight ounces per square inch above an assumed atmospheric pressure 14.4 pounds per square inch (14.90 pounds per square inch absolute pressure).

(b) The term "total heating value per cubic foot" shall mean the number of British thermal units produced by the combustion at constant pressure of the amount of water vapor free natural gas which would occupy one cubic foot of space at a pressure of 14.90 pounds per square inch absolute, at a temperature of 60 degrees Fahrenheit. The heating value of the gas shall be measured by the use of a Cutler-Hammer, or equal, recording calorimeter, operating at a constant pressure and at a temperature of 60 degrees Fahrenheit, when saturated with water vapor, and under a pressure equal to that of 30 inches of mercury at 32 degrees Fahrenheit and under standard gravitational force (acceleration 980.665 cm. per second) with air of the same temperature and pressure as the gas, when the products of combustion are cooled to the initial temperature of the gas and air, and when the water formed by combustion is condensed to the liquid state, and the readings so obtained shall be corrected by the use of factors published in National Bureau of Standards Circular C-417 from the conditions of the recording calorimeter to those set forth in the first sentence of this paragraph, and corrected for the water vapor conditions at the points of measurement.

(c) The total heating value of the gas per cubic foot shall be determined for any month of the calendar by taking the arithmetical average of the heating value in the gas in the Gas Company's transmission line as recorded each day by a Cutler-Hammer or any equally efficient recording calorimeter located so as to record the heating value of the gas delivered to the Government at the intersection of the Gas Company's facilities with those of its source of supply.

(d) The temperature of the gas passing through the meters shall be determined for any day by the use of continuous recording thermometers so installed that they may properly record the temperature of the gas flowing through the meters. The arithmetical average of the temperature recorded each day at each delivery point shall be used in computing gas volumes at such delivery point.

(e) The specific gravity of the gas delivered by the Gas Company shall be determined by the use of a recording gravitometer of approved type which shall be checked at least once each month by the use of Edward's Balance or any other approved method mutually agreed upon.

(f) The deviation of the natural gas from Boyle's Law shall be determined by tests upon the request of either party to this agreement, but tests shall not be made more frequently than once in any thirty day period. The apparatus and the method to be used in making such tests shall be in accordance with the recommendations of the National Bureau of Standards of the United States Department of Commerce or any other method or methods mutually agreed upon. When the deviation factors, based on the results of such tests, agree with those published by the California Natural Gasoline Association in Bulletins TS-354 or TS-402, or amendments thereof, for the composition and conditions at the point of measurement, within a tolerance of plus or minus two tenths of one percent (0.2%), said California factors shall be used in computing the volume of gas delivered under this agreement. When the results of such tests do not agree with said California deviation factors within said tolerance, then beginning on the date such tests are run, provided the results of such tests are accepted by both parties to

this agreement, computation of deliveries under said agreement, shall be based on the results of such tests retroactively to the date thereof, and deliveries shall continue to be so computed until additional tests have been made as provided herein.

(g) The water vapor content of the natural gas that the Government receives hereunder shall be determined from time to time, at the request of either party, by such methods as are mutually agreed upon.

#### ARTICLE VIII—MEASURING EQUIPMENT

1. The Gas Company shall furnish, install, operate and maintain, at or near all points of delivery, measuring stations, which shall be properly equipped with standard orifice meters, flange connections, orifice plates, recording thermometers, and all other equipment necessary for determining the volume of the natural gas to be delivered hereunder. Orifice meters shall be installed and operated in accordance with the joint Bureau of Standards, A. G. A., A. S. M. E. specifications published May 6, 1935, as Gas Measurement Committee Report No. 2 of the American Gas Association, as same may be modified and shall include the use of straightening vanes. Each measuring station shall be located as near as is practicable to the point of delivery. The Gas Company shall likewise furnish, install operate and maintain such instruments and equipment at points other than points of delivery as may be necessary to obtain the information to measure properly the natural gas to be delivered to the Government hereunder.

2. The Government shall have the right to have such individuals as the Commission may designate present at the time of any installing, reading, cleaning, changing, repairing, inspecting, testing, calibrating, or adjusting of the Gas Company's measuring equipment used in measuring or checking the measurement of the natural gas delivered to the Government hereunder.

3. The Gas Company shall maintain, and shall preserve for a period of four (4) years after collection, all test data, charts, and other similar records and data, and calculations therefrom, pertinent to its undertakings under this agreement. Said data shall be available at all reasonable times for inspection by such individuals as the Commission may designate.

4. (a) The Gas Company shall cause its measuring equipment to be installed in such manner that it will, among other things, permit an accurate determination of the quantity and heating value of the natural gas received by the Government hereunder and ready verification of the accuracy of measurement.

(b) The accuracy of the Gas Company's measuring equipment shall be verified by the Gas Company at least once each month of the calendar.

(c) If, upon tests, any measuring equipment used in determining volume and heat content of natural gas delivered to the Government is found to be inaccurate in an amount exceeding two percent (2%), at a recording corresponding to the average hourly rate of flow for the period since the last preceding test, then all previous recordings of such equipment shall be corrected, as provided in subparagraph (d) next following, to zero error for a period extending back to the time such inaccuracy occurred, if such time is ascertainable, and if not ascertainable then extending back one-half (½) of the time elapsed since the date of the last previous test, not exceeding a correction period of 16 days. If, upon such test, said measuring equipment is found to be inaccurate in an amount not exceeding two percent (2%), previous recordings of said equipment shall not be changed but said equipment shall be adjusted at once to record correctly.

(d) If for any reason meters are out of service, or registering inaccurately, so that the volume of natural gas received by the Government cannot be ascertained or computed from the readings thereof, the volume of said natural gas during the period such meters are out of service or registering inaccurately shall be determined:

(1) By using the registration of any check meter or meters, if installed and accurately measuring; or in the absence of (1),

(2) By correcting the error, if the percentage of error is ascertainable by calibration, test, or mathematical calculation; or in the absence of (2),

(3) By estimating the volume of natural gas received by the Government by volumes of natural gas received by the Government during periods of similar conditions when the meters were registering accurately.

5. The Government may procure, install, operate, and maintain regulating, check-measuring, dehydrating, and other equipment in its facilities which shall not interfere with the operation or maintenance of the Gas Company's facilities.

## ARTICLE IX—CHARGES TO BE PAID BY GOVERNMENT

*1. Demand charge and payment*

(a) The Demand Charge hereunder is Two Dollars and Sixty Four Cents (\$2.64) per MCF per month of the calendar. The Government shall pay the Gas Company, for each month of the calendar, a Demand Payment in an amount equal to the Demand Charge multiplied by the contracted demand of 60,000 MCF. It is understood that said Demand Payment shall become applicable on the date of commencement of delivery of natural gas to the Government hereunder and shall cease to be applicable upon expiration or termination of this agreement. It is further understood that said Payment shall be prorated, on the basis of the number of days in the month of the calendar involved, for the months of commencement and expiration or termination if less than a full month of the calendar.

(b) In the event the Gas Company, by reason of Force Majeure, fails to deliver such part of the maximum volume of 60,000 MCF of natural gas that the Government desires to receive on any day or days, the Demand Payment otherwise payable for the month of the calendar in which such failure or failures occur shall be reduced by an amount determined as follows: The aggregate of the differences in MCF between the volumes of natural gas received by the Government on the day or days of failure and the volumes of natural gas which the Government desired to receive on such day or days shall be divided by the number of days in the month of the calendar in which such failure or failures occur; the quotient thus arrived at shall be multiplied by the Demand Charge and the resulting figure shall represent the amount by which the Demand Payment otherwise payable shall be reduced.

(c) In the event the Gas Company fails to deliver such part of the maximum volume of 60,000 MCF per day of natural gas that the Government desires to receive on any day or days, and such failure or failures are not due to Force Majeure, the Demand Payment otherwise payable for the month of the calendar in which such failure or failures occur shall be reduced by an amount determined as in subparagraph *b* above, subject to the allowable variations provided for in Article III and the provisions of Article XVI.

(d) Refusal by the Government to accept gas pursuant to the provisions of paragraph 1 or paragraph 3 of article VI shall be deemed to be a failure to deliver within the meaning of subparagraphs *b*. and *c*. of this paragraph 1.

*2. Commodity charge and payment*

(a) The Commodity Charge hereunder is 12.1 cents per MCF. The Government shall pay the Gas Company, for each month of the calendar, a Commodity Payment in an amount equal to the Commodity Charge multiplied by the number of MCF of natural gas actually received by the Government at all Points of Delivery during such month of the calendar, or the Commodity Payment provided for in subparagraph *b* below, whichever is greater.

(b) Except as otherwise provided in this agreement, the Government shall pay the Gas Company, for each month of the calendar, a minimum Commodity Payment in an amount equal to the Commodity Charge multiplied by 40,000 MCF, multiplied by the number of days in the month of the calendar. This monthly payment shall be made irrespective of the actual volume of gas deliveries. It is understood that said minimum Commodity Payment shall become applicable on the day of commencement of delivery of natural gas to the Government hereunder and shall cease to be applicable upon expiration or termination of this agreement. It is further understood that said Payment shall be prorated, on the basis of the number of days in the months of the calendar involved for the months of commencement and expiration or termination if less than a full month of the calendar. If, subject to the allowable variations provided for in Article III, the Gas Company fails to deliver the volume of natural gas that the Government has given the Gas Company notice it desires to receive of less than 40,000 MCF on any day or days, then the charges set forth in the first sentence of this subparagraph *b*, shall be reduced by an amount equal to the Commodity Charge multiplied by the volume of gas the Gas Company failed to deliver. Refusal by the Government to accept gas pursuant to the provisions of paragraph 1 or paragraph 3 of Article VI shall be deemed to be a failure to deliver within the meaning of this subparagraph *b*.

(c) In the event the Commission estimates that the Government will not require the minimum of forty thousand (40,000) MCF of natural gas on any future day or days, and the Commission notifies the Gas Company in a writing, mailed at least 10 days prior to the day or days referred to above, that on such day or days

the Government will require such volume of natural gas less than forty thousand (40,000) MCF per day, then the Gas Company will use due diligence to attempt to sell to others the volume of natural gas representing the difference between 40,000 MCF per day and the volume that the Commission specified the Government would require on such day or days, provided such sale or sales shall not interfere with sales or prospective sales by the Gas Company to other customers (but the Gas Company shall not increase its demand requirements from its supplier after such notice from the Commission for the period of time specified therein), and provided, further, the Commission and the Gas Company agree upon the terms of such sale or sales and upon the credit to be derived therefrom by the Government. This credit shall apply only to the extent that the average volume of gas delivered by the Gas Company during a given month of the calendar shall be less than 40,000 MCF per day.

### 3. *Mutual privilege to negotiate for revision of rates*

(a) From time to time, either party to this agreement may give written notice to the other that it desires to have the demand and commodity charges set out above in paragraphs 1 and 2, of this Article IX, revised. No such notice shall be given prior to the expiration of a period of three years minus ninety (90) days from the day of initial delivery of natural gas by the Gas Company to the Government hereunder. Thereafter, no revision notice shall be given less than three years minus ninety (90) days after the effective day of any prior revision.

(b) Within thirty (30) days after the receipt of such written notice, it shall become the obligation of both parties to negotiate in good faith to agree upon new demand and commodity charges.

(c) Upon receipt by either party of the notice specified in subparagraph (a) above, it shall be the duty of the Gas Company promptly to furnish to the Commission all available information as to costs, such information however to be limited to the scope and kind of information required by the Federal Power Commission in a contested rate case under its jurisdiction. Such information will be submitted in the form required by the Federal Power Commission in obtaining similar information. The Gas Company will be further required to certify to the Commission, with supporting information showing, that it has allocated that portion of its over-all costs to the obligations assumed by the Gas Company under the terms of this agreement on the same basis as similar costs are allocated to contracts with other customers under Federal Power Commission jurisdiction. It is understood that in no event shall the cost allocated to this agreement exceed sixty percent (60%) of the initial construction costs, less depreciation, of the facilities described in paragraph *d* of Article XVIII and sixty percent (60%) of operating and administrative expenses chargeable to these facilities.

(d) If, as a result of such negotiation for revision of rates, the parties are unable to agree upon a new rate within ninety (90) days from the date of mailing the required notice, such disagreement shall then at the option of either party be deemed to be a dispute and shall be resolved as provided in Article XIV of this agreement, titled "Disputes." The objective to be attained in resolving a dispute as to rates under this subparagraph is to adjust rates charged by the Gas Company to the Commission up or down so that the return to the Gas Company from this agreement will be, as nearly as practicable, on the level with the allowable return approved by the Federal Power Commission in fixing rates charged by the Gas Company over which the Federal Power Commission exercises jurisdiction. It is understood that the return and rate under this agreement shall be figured upon construction costs and upon operating and administrative expenses allocated to this agreement as described in subparagraph (c) above.

(e) Whenever any new rates shall be agreed upon by the parties or settled under the Disputes Article, such rates shall become effective on the ninetieth day following the mailing of the required notice, and shall be included in a revised rate schedule amendatory of this agreement.

### 4. *Adjustments*

(a) The Demand and Commodity Charges provided for in paragraphs 1 and 2 above shall be subject to the following adjustments:

(1) Plus or minus the amount of any increase above or decrease below such charges exacted from the Gas Company by the Tennessee Gas Transmission Company for gas and gas service furnished hereunder. The amount of increase or decrease shall be determined by calculating the difference in the charges for gas and gas service furnished hereunder which are purchased by the Gas Company from Tennessee Gas Transmission Company under its 1947 charges applicable to

sales within the State of Tennessee on file with the Federal Power Commission and any new authorized charges for such gas and gas service payable by the Gas Company to Tennessee Gas Transmission Company or any other supplier.

(2) Plus any increase or additional tax or minus a decrease of tax directly allocable to the sale or delivery of the quantities of gas sold and delivered hereunder.

(b) It is agreed and understood that should any tax, levied against the Gas Company for the privilege of doing business, as now provided in Sec. 1248.136 of the Code of Tennessee, based upon gross receipts from deliveries of natural gas made to the Government, be collected from the Gas Company by the State of Tennessee, then the Government shall reimburse the Gas Company for the full amount of such tax, less refunds and credits, as has been calculated upon the amount of gas sold to the Government by the Gas Company.

(c) (1) If, because of the Gas Company's inability to maintain precise control over the rates of flow and quantities of gas delivered, the Gas Company has actually delivered to the Government in any month of the calendar a quantity of gas which is greater than the contracted demand multiplied by the number of days in such month, then the quantities of gas which the Gas Company would otherwise have delivered to the Government during the next succeeding three months of the calendar may be reduced as an adjustment by an amount the total of which is equal to the net aggregate amount of the overage, or, at the Government's option, the Government may continue to take natural gas up to the contracted demand during said three-month period, and the Government shall pay a demand payment on the volume of natural gas so delivered in accordance with subparagraph (e) below.

(2) If, for like reason, the Gas Company has actually delivered to the Government in any month of the calendar a quantity of gas which is less than the contracted demand and which the Government otherwise would have received from the Gas Company and have paid the Gas Company for, then the Gas Company after reasonable notice shall tender to the Government an amount of gas equal to the net aggregate amount of the deficit but not exceeding the allowable five percent variation for the month as an adjustment during the next succeeding three months of the calendar, in such quantities and at such rates of flow as the Gas Company may determine. The Government's refusal or inability to accept "deficit gas" so tendered by the Gas Company during said three-month period shall reduce the net aggregate amount of the deficit by the quantity so tendered by the Gas Company and refused by the Government provided, however, that nothing contained in this subparagraph or elsewhere in this agreement shall be construed as requiring the Gas Company to deliver to the Government during any day a volume of gas in excess of the contracted demand.

(d) If, due to emergency conditions on either the Government's or the Gas Company's facilities, quantities of gas are delivered by the Gas Company to the Government over and above the total contracted demand plus the allowable variations, then the quantities of gas which the Gas Company otherwise would have delivered to the Government during the next succeeding three months may be reduced as an adjustment by an amount the total of which is equal to the net aggregate amount of the overage; or, at the Government's option, the Government may continue to take natural gas up to the contracted demand during said three months period, and the Government shall pay a demand payment on the volume of natural gas so delivered in accordance with subparagraph (e) below.

(e) The demand payment for gas delivered under subparagraphs (c) (1) and (d) above shall be an amount equal to the demand charge in effect at the time of the overdelivery, multiplied by the quantity of gas in MCF overdelivered, divided by the number of days in the month of the calendar in which the overage occurred.

##### *5. Variable charge*

(a) If, after the initial delivery of gas hereunder, this agreement is terminated by the Commission in accordance with the provisions of paragraph 2 of Article II, the Government shall reimburse the Gas Company a portion of the capital expended by the Gas Company in construction of the facilities required to enable the Gas Company to discharge its obligations under this agreement, which reimbursement shall be computed as follows:

(1) Two thirds of the following algebraic sum: (i) sixty percent (60%) of the total cost of construction and installation of the Gas Company's facilities, to be determined by figures furnished by the Gas Company to, and approved by, the Federal Power Commission, minus (ii) sixty percent (60%) of the accrued depreciation on the said facilities, at the rate of five percent (5%) per annum for the period from the date of initial delivery of natural gas to the Government to the

effective date of termination, plus (iii) sixty percent (60%) of the then present value, computed at interest of  $3\frac{1}{4}$  percent ( $3\frac{1}{4}\%$ ), of the State and County ad valorem tax payments, without penalty, on the said facilities for the years remaining after termination of this agreement in a 20-year period beginning on the date of initial delivery of natural gas to the Government on the agreed assumption that annual tax payments during that period will be equal to the tax payment in the year in which the termination becomes effective. Such reimbursement shall be made on, or at the election of the Government before, the termination date of this agreement provided that the Gas Company's bill therefor has been properly presented in accordance with the requirements of the Commission at least thirty (30) days prior to the termination date.

#### ARTICLE X—BILLING

1. The Gas Company on or before the twelfth day of each month of the calendar, shall render bills to the Government for the demand and commodity payments payable under the provisions of this agreement for the preceding month of the calendar.

#### ARTICLE XI—PAYMENTS

1. Payments on bills properly presented in accordance with requirements of the Commission shall be paid by the Government as follows:

(a) Ninety percent (90%) of the total monthly billing within ten (10) days after receipt.

(b) The remaining ten percent (10%) within thirty (30) days after receipt.

#### ARTICLE XII—POSSESSION OF GAS

1. As between the parties hereto, the Gas Company shall be deemed to be in control and possession of the gas deliverable hereunder until it shall have been delivered to the Government at the Point or Points of Delivery, after which the Government shall be deemed to be in control and possession thereof.

2. The Government shall have no responsibility with respect to any gas deliverable hereunder until it is delivered into the facilities of the Government, or on account of anything which may be done, happen or arise with respect to such gas before such delivery, and the Gas Company shall have no responsibility with respect to such gas after its delivery into the facilities of the Government or on account of anything which may be done, happen or arise with respect to such gas after such delivery.

#### ARTICLE XIII—WARRANTY OF TITLE TO GAS

The Gas Company agrees that it will, and it hereby does, warrant for itself, its successors and assigns, that it will at the time of delivery have good title to all gas delivered by it hereunder, free and clear of all liens, encumbrances and claims whatsoever; that it will at such time of delivery have good right and title to sell said gas as aforesaid, and that it will indemnify the Government and save it harmless from all suits, actions, debts, accounts, damages, costs, losses and expenses arising from or out of adverse claims of any or all persons to said gas or to royalties, taxes, license fees or charges thereon, which are applicable before or at the moment the title to the gas passes to the Government. In the event any adverse claims of any character whatsoever are asserted in respect of any of said gas, the Government may retain any moneys otherwise payable to the Gas Company hereunder up to the amount of such claims without interest until such claims have been finally determined, as security for the performance of the Gas Company's obligations with respect to such claims under this Article or until the Gas Company shall have furnished bond to the Government, in an amount and with sureties satisfactory to the Commission, conditioned for the protection of the Government with respect to such claims.

#### ARTICLE XIV—DISPUTES

To the extent that applicable laws do not require that a particular governmental instrumentality exercise jurisdiction and determine, all disputes which may arise under this agreement, and which are not disposed of by mutual agreement, shall be decided by a representative of the Commission duly authorized to supervise and administer performance of the Gas Company's undertakings hereunder, who shall reduce his decision to writing and mail a copy thereof to the Gas Company.

Said decision shall be final and conclusive, subject to the two rights of appeal provided for in this Article. Within thirty (30) days from the date of said mailing, the Gas Company may appeal in writing to the Commission, whose written decision thereon, or that of its duly authorized representative, representatives, or board, not including the representative mentioned in the first sentence of this Article, shall be final and conclusive, subject to the right of appeal provided for in the sentence next following, and a copy of which decision shall be mailed to the Gas Company. Within thirty (30) days from the date of said latter mailing, the Gas Company, by written notice to the Commission, may elect to not be bound thereby in which event the dispute shall be determined de novo by arbitration, each of the parties selecting one arbitrator and those two selecting the third, the decision of any two or more arbitrators to be final and conclusive. Each of the parties hereto shall pay one-half ( $\frac{1}{2}$ ) the cost of such arbitration. Pending decision of a dispute hereunder the Gas Company shall diligently proceed with the performance of its undertakings under this agreement.

#### ARTICLE XV—NOTICES

1. All notices under this agreement, shall (i) if given by the Commission, be mailed to East Tennessee Natural Gas Company, Hamilton National Bank Building, Chattanooga 2, Tennessee, or delivered to a responsible official of the Gas Company at said address, and (ii) if given by the Gas Company, be mailed to United States Atomic Energy Commission, P. O. Box E, Oak Ridge, Tennessee, or delivered to the Manager, or Deputy Manager, Oak Ridge Directed Operations, at Oak Ridge, Tennessee. Either party may designate other addresses or other recipients of notices by notifying the other party in writing sufficiently in advance.

2. Unless otherwise provided in this agreement, written notices, payments, and other communications shall be considered as duly given or made when duly mailed by ordinary or registered mail or when delivered as provided in paragraph 1 above.

#### ARTICLE XVI—FORCE MAJEURE AND TERMINATION FOR CAUSE

1. *Relief from liability.*—Neither the Gas Company nor the Government shall be liable in damages to the other for any act, omission or circumstances occasioned by or in consequence of any acts of God, strikes, lock-outs, acts of the public enemy, wars, blockades, insurrections, riots, epidemics, landslides, lightning, earthquakes, fires, storms, floods, washouts, arrests and restraints of rulers and peoples, civil disturbances, explosions, breakage or accident to machinery or lines of pipe, line freeze-ups, temporary failure of gas supply, the binding order of any court or governmental authority which has been resisted in good faith by all reasonable legal means, and any other cause not within the control of the party claiming suspension and which by the exercise of due diligence such party is unable to prevent or overcome. A failure to settle or prevent any strike or other controversy with employees or with anyone purporting or seeking to represent employees shall not be considered to be a matter within the control of the party claiming suspension.

2. *Liabilities not relieved.*—Such causes or contingencies affecting the performance of this agreement by either party shall be deemed to be "Force Majeure" within the meaning of this agreement but, however, shall not relieve it of liability in the event of its concurring negligence or in the event of its failure to use due diligence to remedy the situation and remove the cause in an adequate manner and with all reasonable dispatch, nor shall such causes or contingencies affecting the performance of this agreement relieve either party from its obligations to make payments of amounts then due thereunder, nor shall such causes or contingencies relieve either party of liability unless such party shall give notice and full particulars of the same in writing or by telegraph to the other party as soon as possible after the occurrence relied on.

3. *Termination of agreement.*—If either the Gas Company or the Government shall fail to perform any of the covenants or obligations imposed upon it by this agreement, then in such event the other party may at its option terminate this agreement by proceeding as follows: the party not in default shall cause a written notice to be served on the party in default stating specifically the cause for terminating the agreement and declaring it to be the intention of the party giving the notice to terminate the same; thereupon the party in default shall have thirty days after the service of the aforesaid notice in which to remedy or remove the cause or causes stated in the notice for terminating the agreement, and if within said period of thirty days the party in default does so remove and remedy said

cause or causes and fully indemnify the party not in default for any and all consequences or such breach, then such notice shall be withdrawn and this agreement shall continue in full force and effect. In case the party in default does not so remedy and remove the cause or causes or does not indemnify the party giving the notice for any and all consequences of such breach, within said period of thirty days, the agreement shall terminate. Any termination of the agreement pursuant to the provisions of this paragraph shall be without prejudice to the right of the Gas Company to collect any amounts then due to it for natural gas delivered prior to the time of termination, and shall be without prejudice to the right of the Government to receive any gas which it has not received but for which it has paid prior to the time of termination and without waiver of any remedy to which the party not in default may be entitled for violations of the agreement.

#### ARTICLE XVII—MISCELLANEOUS PROVISIONS

1. *Waiver.*—No waiver, by either party, of any one or more violations of the terms of this agreement by the other party, shall be deemed to be a waiver of any subsequent violation or violations, whether of like or different character.

2. *Modification.*—This Agreement shall not be modified in any manner other than by mutual written agreement of the parties hereto.

3. *Assignment.*—Except as provided in paragraph 4 below, neither this agreement, nor any part thereof, nor claim thereunder, shall be assigned or transferred by either party without the prior written approval of the other party, provided, however, that this shall not be deemed to prohibit the substitution hereunder for the Commission of any other executive department, agency or independent establishment of the Government of the United States of America.

4. *Assignment of rights hereunder.*—(a) Claims for monies due or to become due the Gas Company from the Government under this agreement may be assigned to a bank, trust company or other financing institution, including any Federal lending agency. Any such assignment shall cover all amounts payable under this agreement and not already paid, and shall not be made to more than one party, except that any such assignment may be made to one party as agent or trustee for two or more parties participating in such financing.

(b) In the event of any such assignment the assignee shall file four signed copies of a written notice of the assignment, together with one copy of the instrument of assignment, with each of the following:

- (i) General Accounting Office;
- (ii) the Commission;
- (iii) the surety or sureties upon the bond or bonds, if any, in connection with this agreement;

(iv) such other person as the Commission shall designate in writing.

(c) Any claim under this agreement which has been assigned pursuant to the foregoing provisions of this Article may be further assigned and reassigned to a bank, trust company or other financing institution, including any Federal lending agency. In the event of such further assignment or reassignment, the assignee shall file one signed copy of a written notice of the further assignment or reassignment together with a true copy of the instrument of further assignment or reassignment with the Gas Company, and shall file four signed copies of such written notice and one copy of such instrument with each of the parties designated in the preceding paragraph.

(d) Indication of the assignment of claim and of any further assignment thereof and the name of the assignee will be made on all vouchers or invoices certified by the Gas Company.

5. *Officials not to benefit.*—No member of or delegate to Congress or resident commissioner shall be admitted to any share or part of this agreement or to any benefit that may arise therefrom but this provision shall not be construed to extend to this agreement if made with a corporation for its general benefit.

6. *Convict labor.*—The Gas Company shall not employ any person undergoing imprisonment at hard labor. This provision shall not be construed to prevent the Gas Company or any subcontractor hereunder from obtaining any of the supplies, or any component parts or ingredients thereof, to be furnished under this agreement or any of the materials or supplies to be used in connection with the performance of this agreement, directly or indirectly, from any Federal, State or territorial prison or prison industry, provided that such articles, materials or supplies are not produced pursuant to any agreement or other arrangement under which prison labor is hired by or employed or used by any private person, firm, or corporation.

7. *Covenant against contingent fees.*—The Gas Company warrants that it has not employed any person to solicit or secure this agreement upon any agreement for a commission, percentage, brokerage, or contingent fee. Breach of this warranty shall give the Government the right to annul this agreement, or, in the discretion of the Commission, the right to deduct from any money due the Gas Company under this agreement the amount of such commission, percentage, brokerage, or contingent fees. This warranty shall not apply to commissions payable by Contractors upon contracts or sales secured or made through bona fide established commercial or selling agencies maintained by Contractors for the purpose of securing business.

8. *Antidiscrimination.*—The Gas Company in performing its undertakings under this agreement, shall not discriminate against any employee or applicant for employment because of race, creed, color, or national origin. The Gas Company agrees that the provisions of the preceding sentence will also be inserted in all of its subcontracts hereunder.

9. *Operating information and estimates.*—At the Gas Company's request, the Government will furnish to the Gas Company estimates of the daily, monthly, and annual quantities of natural gas which the Government desires the Gas Company to furnish to the Government for as least two years in advance. Such estimates shall not be binding on either party.

10. *Law of the agreement.*—This agreement shall be construed under the laws of the State of Tennessee.

11. *Compliance with applicable laws and regulations.*—The Gas Company shall, in the course of its undertakings hereunder and as a part thereof, obtain all required licenses, permits and other authorizations and shall otherwise comply with all applicable federal, state and local laws and regulations thereunder.

12. *Records.*—The Government shall, at all reasonable times, have the right to inspect the books and records of the Gas Company for any and all purposes related to this agreement. The Government shall not have the right to require the Gas Company to keep any records or use any system of accounting which are not required by the Federal Power Commission.

13. *Resale or other disposition of gas.*—The Government in its discretion, may sell, or furnish without charge, to others in the Oak Ridge area, all or any part of the gas furnished by the Gas Company hereunder.

14. *Approval.*—Notwithstanding any other provisions hereof, this agreement shall not be effective unless approved by the General Manager of the Commission.

#### ARTICLE XVIII—DEFINITIONS

Except where the context expressly states another meaning the following terms when used in this agreement shall be construed to have the following meanings:

(a) "*Commission*" shall mean the United States Atomic Energy Commission or its duly authorized representative or representatives.

(b) "*British thermal unit*" shall mean the amount of heat required to raise the temperature of one pound of water one degree (1°) Fahrenheit (at atmospheric pressure of 14.7 pounds per square inch absolute and at a temperature of sixty degrees (60°) Fahrenheit).

(c) "*MCF*" shall mean one thousand (1,000) cubic feet.

(d) "*facilities*," when used in reference to the Gas Company's facilities, and/or "*Pipe line*" shall mean the gas transmission system originating at the point of connection with the pipe line of Tennessee Gas Transmission Company, between Tennessee Gas Transmission Company's compressor station No. 10 near Lobelville, Tennessee, and Tennessee Gas Transmission Company's compressor station No. 11 near Mitchellville, Tennessee, and terminating at the most distant point of delivery to the Government; it shall not be deemed to include any facilities connected to said system specifically for purposes other than delivery of natural gas to the Government hereunder. The Pipe line from the point of origin to the point of connection with the lateral to the last Point of Delivery shall have a nominal diameter of twenty (22) inches.

(e) "*month of the calendar*" shall mean a period beginning at 8:00 o'clock A. M. Eastern Standard Time (or such other time standard as may be in effect in Knoxville, Tennessee) on a calendar date marked "1" and ending at 8:00 o'clock A. M. Eastern Standard Time (or such other time standard as may be in effect in Knoxville, Tennessee) on the calendar date marked "1" in the following month.

(f) "*day*" shall mean a period beginning at 8:00 o'clock A. M. Eastern Standard Time (or such other time standard as may be in effect in Knoxville, Tennessee) on a date of the calendar and ending at 8:00 o'clock A. M. Eastern Standard Time

(or such other time standard as may be in effect in Knoxville, Tennessee) on the date of the calendar next following.

(g) "*contracted demand*" shall mean the volume of natural gas specified in this agreement which the Gas Company obligates itself to be ready to deliver to the Government commencing with the day of initial delivery.

(h) "*scheduled daily delivery*" shall mean the volume of natural gas which, during any one day, the Gas Company is obligated to be ready to deliver to the Government and which the Government requests the Gas Company to deliver.

(i) "*Oak Ridge Area*" shall mean the area located within the Counties of Roane and Anderson, State of Tennessee, in the possession or under the control of the Commission from time to time.

IN WITNESS WHEREOF, the parties hereto have executed this agreement the day and year first above written.

THE UNITED STATES OF AMERICA,  
By: UNITED STATES ATOMIC ENERGY COMMISSION,  
By: s/JOHN C. FRANKLIN,  
*Manager, Oak Ridge Directed Operations.*  
EAST TENNESSEE NATURAL GAS COMPANY,  
By: s/G. H. MCKAY,

*Executive Vice President.*

I, F. M. Cantrell, certify that I am the Secretary of the East Tennessee Natural Gas Company, referred to in this agreement as the "Gas Company"; I further certify that G. H. McKay, who signed this agreement in my presence, was then Executive Vice President of the East Tennessee Natural Gas Company, and that this agreement was thus duly signed for and on behalf of said Corporation by authority of its governing body and is within the scope of its corporate powers.

IN WITNESS WHEREOF, I have hereunto affixed my hand and the seal of said Corporation this 19th day of June, 1948.

s/F. M. CANTRELL,  
*Secretary.*

[CORPORATE SEAL]

Approved this 23d day of June, 1948:

s/WALTER J. WILLIAMS,  
*Acting General Manager, United States Atomic Energy Commission.*

## OAK RIDGE DORMITORY FACILITIES

---

THURSDAY, APRIL 21, 1949

CONGRESS OF THE UNITED STATES,  
SUBCOMMITTEE OF THE JOINT COMMITTEE ON ATOMIC ENERGY,  
*Oak Ridge, Tenn.*

The subcommittee met at 10 a. m., pursuant to call, in the auditorium of the Oak Ridge Recreation Center, Oak Ridge, Tenn., Hon. Carl T. Durham, vice chairman of the joint committee and chairman of the subcommittee, presiding.

Present: Representatives Durham (vice chairman of the joint committee and chairman of the subcommittee), Holifield, and Price.

Also present: William L. Borden, executive director of the joint committee, and E. L. Heller, staff member.

Representative DURHAM. The subcommittee will come to order.

The purpose of this hearing is to learn the facts about the dormitory rental problem and related matters here at Oak Ridge.

We want to give the various viewpoints that may exist an opportunity to be heard.

Let me emphasize that this subcommittee has come here with no preconceived ideas. Neither have we prejudged anything. We are not conducting an investigation. We want to hold a hearing in the true sense of that word, a hearing as to the facts and as to the opinions which exist locally.

I might say that we have received letters in Washington from various citizens here at Oak Ridge regarding the dormitory problem. As members of the Joint Congressional Committee on Atomic Energy, of course, we are keenly interested in the community problems here, especially because Oak Ridge is a Government-owned and operated city.

It is our hope that this hearing will throw light on the rental question and will help both the joint committee and the Atomic Energy Commission to proceed wisely in the future.

The subcommittee spent some time this morning going around to the different dormitories in the residential area. Therefore, we have the benefit of a first-hand look at the subject under discussion here today.

I believe that our first witness is Mr. Minor, who is the chairman of the Central Dormitory Committee.

Mr. Minor, will you come around?

Will you give the stenographer your full name and whom you represent, Mr. Minor?

**STATEMENT OF WILLIAM H. MINOR, OAK RIDGE, TENN., APPEAR-  
ING AS CHAIRMAN OF THE CENTRAL DORMITORY COMMITTEE**

Mr. MINOR. I am William H. Minor, chairman of the Central Dormitory Committee, representing the residents of the dormitories at Oak Ridge.

First, I want to get my paraphernalia over here, if you please, sir.

Representative DURHAM. You may have a seat and proceed to tell us what you know about this matter, Mr. Minor.

Mr. MINOR. I would like to give the chairman and each member some typewritten sheets, which I will mention as I go along. There is a list there, and I have a few random notes here which I hope to follow.

The dormitories as built here at Oak Ridge by the Army had a rental structure set up on them. That structure was set up by the Army, in consultation with the rent-control authorities at that time. It was based rather largely on amortization over a period of years and on the basis of what was a reasonable rental at that time.

We who have come here at a later date, living in those dormitories, had held up to us the fact that those rentals were thus applied, and that quarters could be obtained at such a figure. Of course, we had a surprise waiting for us one morning, when we found in our mail boxes a memorandum which stated that services which workingmen had depended upon were to be no longer rendered. This was followed very quickly by a statement that for \$7.50 a month those services would be restored.

We endeavored to secure such facts as might be available as to why \$7.50 was required to cover the services which were being removed.

To date, three different sets of unrelated figures have been used by the Atomic Energy Commission and their representatives.

Representative DURHAM. Mr. Minor, will you name those services, right at the present time, that were discontinued?

Mr. MINOR. We formerly had maid service for 5 days a week, including the making up of beds. We lost 4 days of maid service. We had clerks 24 hours a day, and, of course, we lost that clerical service. We had towel service twice a week, and we now have towel service once a week, though I don't believe there would be too much complaint on the towel picture.

The mail situation is quite disagreeable, in that you have to get the mail in the afternoon during the short number of hours that the clerk is on duty; otherwise you have to wait 24 hours for it.

To go on: We have the unrelated sets of figures here that were made available through publicity or exchange of letters between AEC officials. These figures cover the cost of operating the dormitories during the year prior to March 1. There are three sets of figures covering that. Then there are three sets of figures covering the prospective costs to the Federal Government by the Atomic Energy Commission for the year to follow March 1.

The first of these figures was released by AEC under date of February 12. The second set of figures was released by General Manager C. L. Wilson on February 21. The latest ones were used by the Chairman of the Board in his latest series of letters, copies of which you have in the information which I have placed before you, and, of course, there is the likelihood of still a fourth set of figures.

But throughout all of these letters it seems that all officials of AEC—F. W. Ford, Director of Community Affairs locally; Carroll L. Wilson, General Manager; Walter J. Williams, Director of Production; Sumner T. Pike, Acting Chairman; and Hon. David E. Lilienthal, Chairman—have stated—and their letters are included in the exhibits that you have there—that the increase in dormitory rent, or decrease in services, was a result of a “study of comparability.”

Mr. Carroll L. Wilson has given us in his letter of February 25, 1949, his letter addressed to Mr. William L. Borden, Executive Director of the Joint Committee on Atomic Energy, the table of comparability that was used for this study.

All officials of the AEC have now stated that comparability was the only factor involved in both the study and the decision to increase the rents or reduce services. That being the case, then the important item here is the yardstick of comparability used by the Atomic Energy Commission. If that yardstick is not a true, accurate, or factual document, then the true basis for altering the rent of the dormitories falls of its own weight, and it is the desire of the Central Dormitory Committee to bring to the attention of you gentlemen the fact that the yardstick used by AEC was not a true, accurate, or factual document.

In the information which I placed before you, there is the letter of Mr. C. L. Wilson to Mr. Borden, and attached to that is the table of comparability that he gave you at that time. We will use that in the process of tearing it apart, if we can.

We can start with the first item, the dormitories of Oak Ridge, Tenn. There, the rates quoted are not complete, as single rooms are rented for \$15—that is one rate they give, and the only rate—\$20, \$25, and \$50 a month. As for double rooms, where they only quote one rate, of \$20, these rooms rent for \$20, \$30, and \$50 per month. There are, of course, daily and weekly rates, as well. But it is, of course, to be noticed that the entire picture was not portrayed in this comparison of rents charged and services supplied dormitory residents, for several of the rates were omitted from the comparison.

Now we can consider, under Oak Ridge dormitories, the column “Services supplied, present.” We find at the head of the list “Linen service daily.”

Gentlemen, that is as untrue a picture as could be painted, for it was not supplied and has not been supplied within several years, if ever.

The next item is “Maid service daily.” For the past several years, at least, maid service has been on a 5-day-a-week basis insofar as the rooms of the dormitory residents were concerned.

The next item is “Towel service three times weekly.” I have lived in three different dormitories during the year 1948, and in none of these was this service extended to me, and I have talked with many residents of the different dormitories that are now in operation, and they did not have this service extended to them. However, I have found that certain residents of Boone Hall say that they had this service; and therefore, it may be possible that AEC was under the impression that their contractor, the James H. Moore Co., was supplying that service. In such case, the Moore company was not delivering in accordance with contract, for it was not a service that was generally extended to the residents of Oak Ridge dormitories.

Representative DURHAM. You speak about a contract. What contract do you mean? The contract with the dormitory residents?

Mr. MINOR. The contract between the Moore company and the Roane-Anderson Co. This document which you have in front of you was used by AEC in their study of comparability. In that, supposedly, they set down what they believed to be the facts in the case. And they must have believed that the dormitory residents were getting towel service three times a week. The only agency that could supply that service three times a week was the contractor who operated the dormitories, the James H. Moore Co.

Now, if they felt that the Moore company was supplying that—and he wasn't supplying it—perhaps he was not living up to his contract.

The next item was "Desk service 24 hours." This was on the basis of a 6-day week, with Sunday generally a day off for desk service.

We can now look at the column headed "Proposed," and we find at the head of the list "Linen service weekly." That is just about what we had before, so that represents no change.

We then come to "Maid service weekly," and this covers a decrease in maid service of 4 days per week.

The next item is "Towel service twice weekly." Since the maid assigned to each dormitory is expected to service one-fifth of the rooms in that dormitory each day, one wonders how it was proposed to give this service, if it ever was intended to supply it. It is not supplied and has not been supplied under the changes that were effective March 1.

The ensuing item, "Desk calls received 4 to 9 p. m., daily except Sunday," could also include mail service, for those are the hours for receiving mail. "Nightly watchman service to be provided 11 p. m. to 7 a. m." is the next item. The money spent for this service could well be saved; for, were one of the Oak Ridge dormitories to catch on fire during the absence of the watchman on his other rounds, it is quite unlikely that the building could be saved or many of the residents rescued if the fire were detected on the watchman's next round.

Now let us see what it is that we have found out in taking the first section of the "Comparison of rents charged and services supplied dormitory residents," as it was prepared for or by the Atomic Energy Commission. We have found that the rate-structure picture was incorrect by a wide margin, in that only one rate for single rooms was given, whereas there are four distinct rates, and only one rate was given for double rooms, whereas there are three rates.

Representative HOLIFIELD. At that point, Mr. Chairman, I would like to ask the witness to give us the rates.

Mr. MINOR. Going back to the single rooms, the rates are \$15, \$20, \$25, and \$50. For a double room, the rate is \$20, \$30, and \$50.

Representative HOLIFIELD. Of course, the heading at the top there says "Basic monthly rent."

Mr. MINOR. Well, you have three dormitories.

Representative HOLIFIELD. I assume that your \$15 for a single room is the minimum; and then, where larger rooms or additional services of some kind are rendered, they charge more, and that that is the case as to the \$20, \$25, and \$50 rentals.

Mr. MINOR. This is what I say: If you are going to compare the facilities here at Oak Ridge with facilities elsewhere that provide what is given here or more for \$25, you should quote \$25 for compara-

tive purposes. If you are going to quote rooms that rent for \$25 a month and have certain services, then you should use the \$25 rate here for comparative purposes; don't you think?

Representative HOLIFIELD. I assume that in a study of comparability you would contrast the \$15 single room with a similar room and take the cost of that room. You could not consider it from the standpoint of money. You would have to consider the type of quarters and services rendered.

Mr. MINOR. That would be an intelligent approach.

Representative HOLIFIELD. And I would say that in this chart, which uses a basic monthly rent, the comparison would be a comparison of quarters and services.

Mr. MINOR. But, if you look at the next item below, you will find that you are there dealing with a rate of \$26 and \$32.50, in comparison with \$15 and \$20; you are dealing with a fireproof structure as against a firetrap; and you are dealing with a picture in which in one instance you have membership included in your rental, and where you have swimming pools and athletic equipment available to you in the center of a city of 135,000 population. So, if you are going to make a portrayal of each and lay one thing alongside the other, you should have the whole picture to do it. And that is not presented there.

Well, we are now ready to consider the next entry in the AEC "Comparison of rents charged and services supplied dormitory residents."

This is the consideration of the Knoxville YMCA, where single rooms are listed at \$26 minimum and \$32.50 maximum. The Knoxville (Tenn.) YMCA has 104 single rooms, and their lowest weekly rate is \$6. Their highest rate is \$7.50, and their average or majority rate is \$6.50. They have 24 double rooms, and their lowest weekly rate is \$5.50. Their highest weekly rate is \$5.50, and the average or majority rate is \$5.50. Now, it must be understood that these rates include membership in the YMCA; and while these rates can be broken down in rates per day, and multiplied by 30 to reach the monthly rate, it can be readily seen that this monthly rate will be slightly less than \$26 for the minimum and slightly less than \$32.50 for the maximum.

At this point it is well to understand that the YMCA and the YWCA in Knoxville are brick, stone, and concrete, fireproof, and soundproof structures, each with fireproof interior stairwells and exterior steel fire escapes. They are modern structures, equipped with interior buzzers, interfloor telephones, and convenient-to-your-room floor phones that are available to all residents for Knoxville local calls at no charge to the resident. There are large, luxurious lounges and assembly rooms for the residents of the YMCA and YWCA. Clerks are on duty 24 hours per day, 7 days per week. The full use of swimming pool, athletic equipment, game rooms, and tennis courts, is included. The resident's mail is available to him 24 hours per day, 7 days per week.

These units are centrally located in a modern city of 135,000 population, that offers a wide variety and range of shopping and entertainment facilities that are not available in the five scattered villages that make up Oak Ridge.

Let us consider "Services supplied, present."

We find that for the Knoxville YMCA it states "Linen service weekly." This is only slightly in error, as the bottom sheet is removed

at midweek and a new top sheet supplied, and the linen change is made at the end of the week.

The next item, "Maid service daily," is correct, as is the next item, "Towel service daily." And it could be added that soap is supplied free. It is to be noted that desk service is supplied on a 24-hour basis and that janitor service is also provided. All of this is in modern, light, airy rooms that are well furnished, in structures that are equipped with modern plumbing, tile toilets, and lavatories that are well maintained, where each room is supplied with heat that can be controlled by the resident.

We should stop here for a moment and give great credit to the very active imagination that could consider all of this, at the figures given, and then consider that there was some basis of comparability between the Knoxville YMCA and our Army barrack dormitories here at Oak Ridge, with their cardboard partitions, inadequate maintenance, obsolete plumbing and lighting, and poorly controlled heating, which were rented at rates in excess of those charged by the YMCA prior to March 1.

We now come to the third item of comparability, the University of Tennessee type I de luxe accommodations. With your permission I would like to show you a picture of those de luxe accommodations as put out by the University of Tennessee.

This, gentlemen, is considered comparable to dormitories at Oak Ridge. The rates are on the preceding page. They include, of course, board and lodging. Each one of these wings has a lounge the size of this room here for that floor. There are foyers on each floor for each 10 residents. There is in the basement a mailroom with lockboxes such as are provided in the United States post office. And, of course, that is included in the rent, and there is no extra charge for it.

The individual's personal belongings are insured for \$200. These dormitories are equipped with within-the-building telephones, automatic elevators, large, luxurious, well-furnished lounges with modern, maintained-like-new furniture, ample floor coverings, combination radio and phonograph players in the lounge; and in addition there are assembly foyers for each 10 residents, that are well and tastefully furnished, on each floor.

In addition, there is a within-the-building post office, as I said, with a lockbox for each resident, at no extra charge, where he can obtain his mail at any time during the entire 24 hours of each day, 7 days per week.

These buildings are equipped with game and date rooms, all under the supervision of hostesses and house mothers. In addition, it must be considered that these buildings are located in the heart of a modern city of 135,000 population, with a wide range of shopping and entertainment facilities that are not available to the residents of Oak Ridge dormitories.

We note, of course, that in the comparison as given by AEC, the rates single, double, and triple, are covered at \$25 per person per month. However, the rates quoted by the university are based on room and board for a term of 6 weeks at rates of \$82.50 to \$92.50, which covers the location of the room in that range.

Of course, it is understood that the basic room rental of \$25 a person is made.

Under the heading "Service supplied, present" we can go along with what has been offered in AEC's comparison with the exception of "desk service 8 hours daily." The house mother in each section is on duty 24 hours a day, and is available for all day or night, 7 days a week. And, of course, it is pretty hard to understand how structures of that kind could have been used or compared with the Oak Ridge dormitories.

We go down a little further, and we have the type II and the type III dormitories, which are embraced in the four-story dormitories that are located under the university stadium.

This picture here is a slice through the stadium at the University of Tennessee. This horseshoe [indicating] is built clear around here at the present time; but that is the start of the dormitories at the stadium, which covers your types II and III dormitories, which you have listed there at \$15 and \$12 a month.

There are other pictures in there which you please might look over. They are pictures of the interior of various rooms in various dormitories.

When they came to the type II and type III dormitories there, they went overboard just a little bit in coloring the picture. Nothing was said, of course, about their being fireproof structures, or equipped with automatic elevators, interfloor communication, luxurious lounges, and so on. And under "Services supplied, present" they decided in the comparison to go overboard and picture it just a little blacker than it actually is. Maid service is supplied, and each section of the dormitory is under a house mother, or faculty member. And, of course, it was rather portrayed that none of that was available.

Now we are in a position to consider page 2 of the AEC "Comparison of rents charged and services supplied dormitory residents."

At this point, it is well to go back and consider what is offered in a table which attempts to make a comparison of fireproof structures and Army barracks with cardboard interior partitions. We have had, up to this point, examples of fireproof structures in large cities, with a wealth of services, at rents that compare favorably with what we are paying here.

Now, of course, we are going into the TVA section of the country, over at Norris. We will have to see what it is that we run into. This shows TVA, Norris, as the location, "Single" as the type of accommodations, and a basic monthly rent of \$20. I am going to come back to that \$20, but I will skip over it for the moment.

Here we must consider that the dormitory at Norris is located at a vacation paradise, a suburban retreat within easy motoring distance of Knoxville, where the sportsman has the fishing, swimming, and boating of Norris Lake within easy reach, while living in a rustic dormitory that has a restaurant on the ground floor and the concessionaire living in the dormitory. We look at "Services supplied, present," in order to find out how this picture was distorted, and we find that we can go along with "Linen service weekly" and with "Maid service for linen change," and "Towel service daily," but the last statement, "General utility serviceman takes some desk calls if he is available"—the person who inserted that really went to great lengths to stretch his powerful imagination; for, since the concessionaire who operates the dormitory lives in the dormitory and operates the restaurant and

fountain in the dormitory, he is available at all times to take phone calls for the residents.

So we have here solid, rustic dormitories, with fairly soundproof walls, at a well-advertised vacation spot, at a figure given to us in the comparison list of \$20 a month. But, gentlemen, I am not asking you to take my word for the picture. It is portrayed by the Office of the Housing Expediter, the Knoxville Area Rent Director. And it is not \$20 a month. And the services are much greater than we have here. And this letter in itself completely licks the entire argument of AEC. For this, gentleman, knowing all of the accommodations that are available in this neighborhood, clearly states that it is the only comparable picture that we have in the entire area. That rate is \$16.08 a month, not \$20. The Norris area has not been decontrolled.

Representative HOLIFIELD. What type of building is that Norris building?

Mr. MINOR. It has a wooden partition between the rooms. It is a rustic type of dormitory with wooden partitions instead of cardboard partitions.

Representative HOLIFIELD. How about the sides of the rooms and the furnishings?

Mr. MINOR. I have that in my brief case. Just a moment, sir.

Representative DURHAM. Would you like this letter to go in the record?

Mr. MINOR. If you please, sir.

Representative DURHAM. If there is no objection, we will put it in the record.

(The letter referred to is as follows:)

OFFICE OF THE HOUSING EXPEDITER,  
Knoxville, Tenn.

Mr. FREDERICK H. SWEETON,  
203 Canton Hall, Oak Ridge, Tenn.

DEAR MR. SWEETON: This is in response to your letter of March 26 requesting this Office to give you some information about comparable rents in this defense-rental area on your dormitory housing at Oak Ridge.

The most nearly comparable accommodations in this area would be the dormitory accommodations as disclosed by registrations filed in this Office by the Tennessee Valley Authority for dormitory occupants at Norris, Tenn. These registrations were filed in the area office on September 9, 1943.

One dormitory contains 60 rooms with 2 bathrooms, and the registered rent is \$3.75 per week for 1 person in occupancy. Another dormitory contains 21 rooms with 5 bathrooms and has a registered weekly rental of \$3.75 per week for 1 person in occupancy.

It is my opinion that these dormitories maintained by the Tennessee Valley Authority during that period of construction work at Norris Dam are as nearly comparable to the dormitory accommodations at Oak Ridge as I could find in this area.

This Office extends to you its facilities to assist you in any manner possible in the near future, and I hope this information will be of benefit to you.

Very truly yours,

HARRY S. HYMAN,  
Knoxville Area Rent Director.

Mr. MINOR. The sizes of the rooms are 9 by 9 and 9 by 12.

Representative HOLIFIELD. How does that compare?

Mr. MINOR. That is about the same, as far as room size is concerned.

Representative HOLIFIELD. How about the furnishings?

Mr. MINOR. Fairly comparable. It is just about an equal picture. There is not an awful lot of difference. Of course, their furniture

has been beaten around, just the same as ours has here. It has taken a whipping. Of course, there have been from time to time additions made to certain rooms, which perhaps would make that more outstanding than would otherwise be the case; but taking it generally, by and large, it would be about the same. In fact, as Mr. Hyman states there, that is the only comparable facility that we have in this neighborhood.

Representative DURHAM. Mr. Minor, I believe that I will ask you to read this letter, so that some of these other people who have not received a copy may hear it.

Mr. MINOR. This is addressed to Mr. Frederick M. Sweeton.

Representative DURHAM. Who is he?

Mr. MINOR. He is a resident in the dormitories and represents that particular dormitory, Canton Hall, on the central committee. He is their delegate to the central committee.

Representative PRICE. I notice there is no date on that letter.

Mr. MINOR. That is an odd thing. But it was received April 20.

Representative PRICE. What year?

Mr. MINOR. 1949; this year. It is one of the things like Mr. Wilson sometimes sends out, which also have no date. That letter of February 25 which came to your office, carried no date on it.

This letter is in response to your letter of March 26 requesting this office to give you some information about comparable rents in this defense rental area on your dormitory housing at Oak Ridge.

The most nearly comparable accommodations in this area would be the dormitory accommodations as disclosed by registrations filed in this office by the Tennessee Valley Authority for dormitory occupants at Norris, Tenn. These registrations were filed in the area office on September 9, 1943.

That was the date that all of us in this area that owned property that was for rent filed with the rent control office.

One dormitory contains 60 rooms with 2 bathrooms, and the registered rent is \$3.75 per week for one person in occupancy. Another dormitory contains 21 rooms with 5 bathrooms and has a registered weekly rental of \$3.75 per week for one person in occupancy.

It is my opinion that these dormitories maintained by the Tennessee Valley Authority during that period of construction work at Norris Dam are as nearly comparable to the dormitory accommodations at Oak Ridge as I could find in this area.

This office extends to you its facilities to assist you in any manner possible in the future, and I hope this information will be of benefit to you.

Very truly yours,

HARRY S. HYMAN,  
*Knorrville Area Rent Director.*

That, of course, in itself, coming from a person thoroughly versed in the rental picture of this entire area, who formerly had the Oak Ridge area under his control, is about as reliable a picture as could be portrayed.

Now we are in a position to consider the final item in the AEC table of comparison.

The last entry in this abortive attempt to show comparability by partial listing of important factors is TVA Watauga Dam. This is an isolated TVA operation located back in the hills of Tennessee between Elizabethton and Johnson City, somewhat off the beaten path. It was never intended to house very many people in the facilities that were made available. And the rates and services supplied were not intended to make dormitory residence on the project attractive. Yet

it is to be noted that the rates and services leave the Oak Ridge dormitories in a bad light when the complete rate structure and list of services of Oak Ridge dormitories are given in comparison.

This is a letter from the TVA authorities, under date of March 15, 1949, which covers what is available at Watauga :

There is no town of Watauga. Watauga Dam is located in an isolated section approximately 8 miles east of Elizabethton, Tenn. TVA established a temporary work camp near the dam site to be operated only during the active construction period. At present housing facilities at this camp are one dormitory for white men, capacity 104; one demountable dormitory for white men, capacity 14; and one dormitory for Negro men, capacity 42. Rooms in the dormitories are 9 feet by 9 feet cubicles which accommodate two men. Furnishings are double-deck steel bunks with cotton mattresses, cane bottom or similar straight chair for each occupant, a small rough table for writing, et cetera, a minimum of shelved storage space combined with space for hanging clothing. In some instances a partition has been removed making a 9-foot by 18-foot room for 4-man occupancy. Rental rates on these accommodations are \$6 per 14-day pay period for each occupant. For less than a pay period the charge is 50 cents per night, the total not to exceed the pay-period rate. Shower bath, lavatories, and sanitary facilities are provided in a central washroom located between the two wings of the dormitory. The demountable dormitory has some smaller rooms than indicated above which are furnished in like manner and used for single occupancy. The single rate is \$8.50 per 14-day pay period. For less than a pay period the rate is 70 cents per night, the total not to exceed the pay-period rate. Janitor service is provided but is limited primarily to sweeping out and general maintenance of cleanliness in dormitories and changing bed linens once per week.

A cafeteria and small community lounge are operated for employees on the project, and a library service is provided through a contract with the city of Kingsport and the State of Tennessee. One person is employed to plan and direct a recreational program.

That is signed by J. Ed Campbell, director, Reservoir Properties Division, Tennessee Valley Authority. That is the Watauga picture.

Apparently all that we have that is comparable, out of the entire picture portrayed there by AEC, is the Norris properties.

In summation, it is safe to say that the AEC comparison of rents charged and services supplied dormitory residents is far from being a factual document, due to the omissions, distortions, and the fact that in only one case is the truth reported with respect to the facilities that are used as a basis of comparison. Since the table of comparability fails to measure up to the actual facts involved, then the whole basis of dormitory rent charge falls of its own weight; for the only leg to which the change was anchored was the table of comparability, as stated in Mr. Carroll L. Wilson's letter that was transmitted to Mr. Borden on February 25, 1949.

In the fourth paragraph of this letter, we find that Mr. Wilson stated:

FEBRUARY 1949.

MR. WILLIAM L. BORDEN,  
*Executive Director, Joint Committee on Atomic Energy,*  
*Capitol, Washington, D. C.*

DEAR MR. BORDEN: Reference is made to your letter of February 19, 1949, concerning the dormitory rental problem at Oak Ridge.

The dormitories are operated by the James H. Moore Co. on a lump-sum contract. This contract has recently been renegotiated. Announcement on January 31, 1949, of the changes in services to be provided dormitory residents under the renegotiated contract resulted in the comment concerning the dormitory rental problem referred to in your letter.

The proposed new arrangements scheduled to go into effect on March 1, 1949, do not provide for increase in any rental charges to dormitory residents. Some of the dormitory services heretofore provided are being eliminated or curtailed as

indicated in the attachment enclosed. Under the new arrangements the Commission will receive an estimated annual revenue of \$65,424 from operation of the dormitories. Under the present agreement, which terminates on February 28, 1949, the Commission is making an annual subsidy payment of approximately \$73,968.36 for operation of the dormitories.

The rents charged, and the services provided under the new arrangement, have been set on a basis deemed by AEC management at Oak Ridge to be more nearly equivalent to rents and services charged for comparable accommodations available in surrounding communities. Attached is a table showing these comparisons. Rentals to be charged and services supplied are in no way related to whether the dormitories are operated by force account, by the prime contractor, or by a subcontractor, or to operating costs, contractors' fees, or profit. This is in accord with the Commission's new policy of adjusting rents and services for all living accommodations in AEC communities toward levels which will compare with those existing in surrounding communities.

No specific census indicating type of person and average income is available of the some 2,000 residents of the dormitories at Oak Ridge. However, careful estimate has been made of the type of personnel and earnings of the dormitory residents as follows:

(a) Types of personnel housed in the dormitories range from concessionaire to the highest technical and scientific worker. A high percentage of the residents are female and are predominantly engaged in clerical or teaching work.

(b) Estimates of income of the dormitory residents are—

Average annual earnings:	Present dormitory residents
\$5,000 or over.....	3.4
4,500 to 5,000.....	2.4
4,000 to 4,500.....	3.6
3,500 to 4,000.....	8.2
3,000 to 3,500.....	18.5
2,500 to 3,000.....	29.3
2,000 to 2,500.....	20.8
Under 2,000.....	13.6

This compares with \$3,150 average annual income for all residents of Oak Ridge.

Sincerely yours,

CARROLL L. WILSON, *General Manager.*

*Comparison of rents charged and services supplied dormitory residents*

Location	Type of accommodations	Basic monthly rent	Services supplied	
			Present	Proposed
Oak Ridge.....	(Single room.....	\$15.00	(Linen service daily.....	Linen service weekly.
	(Double room.....	20.00	Maid service daily.....	Maid service weekly.

*Comparison of rents charged and services supplied dormitory residents—Con.*

Location	Type of accommodations	Basic monthly rent	Services supplied	
			Present	Proposed
TVA: Norris.....	Single.....	20.00	(Linen service weekly..... Maid service: None (except linen change). Towel service daily..... General utility serviceman takes some desk calls if he is available.	None.
Watauga Dam.	Single..... Double..... Triple.....	18.20 26.00 31.80	(Linen service weekly..... Maid service weekly..... Desk clerk and janitor service: None. Towel service: None.....	

Therefore, since the table of comparability is not a sound basis, and there are no comparable facilities, the services which have been removed from the residents of the dormitories should be restored at the rate structure as it presently exists.

Representative HOLIFIELD. May we return to Mr. Wilson's letter, to the bottom comparison there, of type III, University of Tennessee?

I notice the rates are quite close to the Oak Ridge basic monthly rents.

Mr. MINOR. This is a picture of those dormitories [handing]. They are four stories high, and they are located in this wing of the stadium. Now, that stadium today makes a notch, so that these two join.

Representative HOLIFIELD. I notice there are three different types here, type I, type II, and type III. What is type III?

Mr. MINOR. That is the last type, isn't it?

Representative HOLIFIELD. Yes.

Mr. MINOR. The last type is where the student supplies his own linen and makes his own bed. However, he does not clean his own room.

Representative HOLIFIELD. And what size room is it, and how is it furnished?

Mr. MINOR. The room there is a little larger, in most cases, than what we have here. Those rooms are furnished with a bed, inner-spring mattress, and springs, night table, study table, chest of drawers, table lamp, floor lamp, ceiling light, and a clothes cupboard with doors on it instead of the hanging material which we have here.

In a majority of cases, the floor covering is asphalt tile. We have, of course, the bare wood floors.

Representative HOLIFIELD. You would say that it would be furnished better?

Mr. MINOR. Oh, yes. And it is much better maintained. Our furniture has taken an awful beating.

You can get some idea, by looking at these tables here, of the beating the stuff has taken over the years. You walk into one of those places, and you think, "My golly, they must have just unloaded the furniture off the vans." They are just brand new.

When you go into one of those lounges there, it is quite different from this. I noticed when I sat down over there, that the arms of the chair just about lifted off; and that is quite customary around Oak Ridge. You would think, if you went into one of those lounges, that

the furniture had just been unloaded from the furniture manufacturer's truck.

Representative HOLIFIELD. These rooms are provided by the university for students only?

Mr. MINOR. For students only. And that is like the YMCA. At the YMCA you have a limit; 30 years old. That is all they will accommodate. They won't take anyone over 30 years of age. But those facilities were considered to be comparable for working people. You can do a lot different with students. I was a young student myself once, as practically all of us were. As a young fellow, making a bed or doing something like that didn't work a hardship. But when you come home tired at night to a place as messy as you left it in the morning, it is a pretty cold reception, particularly when the majority of the people living in dormitories are away from home. After all, they should be given an inviting atmosphere, rather than one that is cold, indifferent, and just not very pleasant.

One of the greatest things in our American life is mail. We made every effort, in both of the last wars, to make sure that the soldier got his mail as quickly as it could possibly be rushed to him. We have done that up and down the country on construction jobs. That is something that anyone with any heart in him at all has honored to the extent of making extreme efforts to get the individual's mail to him. Here the mail is delivered to the dormitories at 10 o'clock. That is the time the clerk goes off duty in the morning.

And we have had this case happen: You would happen to see the man, and you would say, "Have you any mail in there for me?"

The reply: "Can't tell you anything about it now. I am going off duty."

Of course, that leaves a man without a chance to get his mail, if he happens to be going off work in the morning hours, or sometime, until such time as he can catch the clerk on duty to get his mail.

Representative HOLIFIELD. Are you giving us a typical case? Is it not a fact that most of the people have already gone to work at 10 o'clock in the morning, and they have had a chance to inquire for their mail, and they will not have another chance until after 4 when they return?

Mr. MINOR. Let's say it this way: When the man goes out in the morning, the clerk is not on duty. There is no clerk there when I clear out of the dormitory in the morning, in a dormitory located in this area.

Representative PRICE. What time do the clerks go on duty?

Mr. MINOR. Let me see. They have shifted that a little bit. He is on duty now from 4 in the afternoon until 10 o'clock at night.

Representative HOLIFIELD. Four to nine, the chart says.

Mr. MINOR. They have changed that, you see. They have altered that picture.

Representative PRICE. What are his morning hours?

Mr. MINOR. I wanted to work back to that. I think now he comes on about 7 or 7:30 and is on until 8 o'clock.

Mrs. EDWARDS (Mrs. Alice Edwards, teacher, Oak Ridge schools). Mr. Minor, I checked that for you. There is no clerk on duty in the morning when the night clerk goes off at 6 o'clock. The matron who

supervises the maids and checks the linens is on duty at 8 o'clock, from 8 to 10, but she is not near the desk.

Representative HOLIFIELD. I was going to ask you why it has been found necessary to lock the mail up during those hours when there is no one at the desk. I notice you have little squares to put the mail in. Has it been found necessary for safety reasons to do that? Why could they not be left in the boxes for the men to come pick up?

Mr. MINOR. Whether the postal authorities would permit that or not, I do not know. However, that has been the rule from March 1 on: that the clerk receiving the mail will lock it up when he is not on duty. He puts it out in the boxes in the afternoon when he comes on duty. When he goes off duty at 10 o'clock, he goes back through the boxes and ties the mail up and puts it in the basket and carries it back to his room. That, of course, has been a factor that just doesn't set too well and doesn't make for good relations. We have tried every way in the world to get something done about that, and, through Mr. Franklin and Mr. Ford, we were politely and in a nice way told to mind our own business.

Representative DURHAM. If I sum up your statement correctly, Mr. Minor—and if I am wrong, say so—you are not objecting so much to the present charge, the rental, as to the services rendered. Is that correct?

Mr. MINOR. That is correct in this way: If we get full service for the money we are paying, then we are right back where we started, and that is the best place to be.

Representative DURHAM. You do not consider the \$15 per month rental too high?

Mr. MINOR. No, sir; not with all services. By comparison, it might be, but the residents of the dormitories will not complain if they can have the services restored to them at the rental that they have been paying. With the services removed, the rental should be reduced.

Representative DURHAM. Does that complete your statement?

Mr. MINOR. That would complete it, sir.

Representative DURHAM. Mr. Price, have you any questions?

Representative PRICE. No questions.

Representative DURHAM. Mr. Holifield?

Representative HOLIFIELD. Let us pursue the question of availability of similar quarters in the surrounding area. Let us assume that a person does not want to stay in the dormitories at the present price, or proposed price, and he wants to move out of the community. How far would he have to go to get any type of room?

Mr. MINOR. Well, the closest approach that we would have would be the village of Clinton.

Representative HOLIFIELD. How far is that, please?

Mrs. EDWARDS. Seven miles.

Mr. MINOR. I was going to say 8 miles, but someone said 7, and I believe that is right.

Representative HOLIFIELD. Is there bus service to Clinton?

Mr. MINOR. There is. I might say this, if it would be of advantage to you: There are 10,000 people working on the area who clear in and out, back and forth; people who go in and out of Oak Ridge daily.

Representative HOLIFIELD. Let us assume a person moves to Clinton. Are there single rooms available in Clinton in quantity enough to supply the demand?

Mr. MINOR. I doubt it.

Representative HOLIFIELD. There are no comparable facilities in Clinton?

Mr. MINOR. There are no comparable facilities outside of TVA, at Norris.

Representative HOLIFIELD. And that is too far away from here, of course.

Mr. MINOR. And not sufficient.

Representative HOLIFIELD. Otherwise they would have to go to Clinton, if there were rooms available; and there are no rooms available in Clinton.

Mr. MINOR. There might be a few.

Representative HOLIFIELD. But I mean there are not enough for all practical purposes.

Mr. MINOR. No.

Representative HOLIFIELD. What is the bus rate to Clinton?

Mr. MINOR. Forty-five cents.

Representative HOLIFIELD. One way or round trip?

Mr. MINOR. Round trip.

Representative HOLIFIELD. The bus rate to Clinton is 45 cents a round trip. What is the next closest town?

Mr. MINOR. Oliver Springs.

Representative HOLIFIELD. How far is that?

Mr. MINOR. That would be about the same distance, about 8 miles.

Representative HOLIFIELD. And we will assume the bus fare is about the same.

Mr. MINOR. I would take it that it would be about the same.

Representative HOLIFIELD. Let us assume there are two men working on the job here in Oak Ridge doing the same kind of work. One is living in the dormitory here at \$15 a month. The other one cannot find quarters here and he has to go to Clinton or some other surrounding community and rent a room. He probably has to pay a higher price, although he gets a better room. He has to pay a rental that is somewhat higher. He also has to pay the equivalent of \$15 a month bus fare, 50 cents a day.

Mr. MINOR. I will have to differ with you in one respect. He would get that room for a lower rate than is paid here. When we started to question this dormitory situation here, we advertised for rooms outside the area and got numbers of answers to them; and the answers were offering beautiful rooms that were available at a lower rate than we were paying here. Some people, some few people, did avail themselves of what was offered at that time. Particularly at Oliver Springs, there were facilities for some of the women residents.

Representative HOLIFIELD. Of course, when they added the price of their bus fare to the price of the room, it made it quite a bit more expensive. You have a matter of convenience here. Let us try to take into consideration all of the factors.

Mr. MINOR. If you would cross off the matter of convenience, you have this: You have a greater diversification of entertainment and merchandising at Oliver Springs or Clinton than you have here. The only matter of convenience that you have here is your location near your job. For that you must pay the premium of merchandising limitations and entertainment limitations.

Representative DURHAM. What do you have at Oliver Springs in the way of recreation? [Laughter.]

Mr. MINOR. In any small community in Tennessee, you have local entertainment that is participated in by the residents of that particular section.

Representative PRICE. There are 35,000 people here?

Mr. MINOR. There are 35,000 people here, scattered in five different villages. We could say six; but there are really five scattered villages, and this community that you are sitting in here is the center of operations. This is the biggest community we have.

You start with your East Village. Then you come down here to your Jackson Square. Then you move up, and you have Middletown, Grove Center. Last but not least, on the straight line, you have your East Village, where you have a grocery store, a motion-picture theater, a drug store, and an eatery.

Representative PRICE. I did not mean to interrupt, Mr. Holifield.

Representative HOLIFIELD. I think it is well to find this out. You made the statement that they have superior recreational facilities there. And I notice, as we go around here, that you have some nice ball fields, and athletic grounds. You have bowling alleys, and you have theaters, or at least one theater.

Mr. MINOR. We have a theater in each one of the separate and distinct communities, with the exception of East Village, and there are two villages that don't have theaters, and three that do.

Representative HOLIFIELD. It seems to me that you are rather overrating the recreational features of a small place like Clinton or Oliver Springs in comparison to this area.

I also notice that you have a lot of civic clubs here, softball teams, bowling teams, and that sort of thing.

Mr. MINOR. That is true. But you have things of that kind in every community. You spoke of softball fields, and baseball fields. There is not a high school in any community without there being recreational facilities.

Representative HOLIFIELD. I am not saying that you have superior facilities here. But they are comparable.

Mr. MINOR. They are comparable. But the main citation here of comparability is directed to a city of 135,000 population. Here you have nothing to compare with it. If I want to go to buy a shirt, I have a choice of two places. If I happen to be in Knoxville, I have a choice of 20 places where I can buy it. The same thing is true as to the choice of theaters. If I want to go to a picture show here, I have to wait maybe 6 months before a picture comes along that I haven't seen 2 years ago.

Representative DURHAM. How about the public utilities, such as light, water, heat, and so forth? You have not mentioned that. Is that satisfactory?

Mr. MINOR. The picture as to your light is this: If a bulb burns out in one of your dormitories, maybe 2 days later you will get it replaced. That happens very frequently in the washrooms. You go in there in the morning to shave to go to work. You can't see, so you crowd into the other facility, in the other half. You have then 140 people sharing one washroom, with four washbowls, because the light is out, and it will take 24 to 48 hours to get the light replaced.

You step in to take a shower. Maybe the faucets work and maybe they don't. The hot water has been running in the end shower for a week, because the faucet can't be turned off. So you are very clever if you can adjust the valves so that you won't get scalded, and still can take a lukewarm bath. That is part of the water and electricity situation.

As to the heat proposition, if you happen to live in the S dormitories, which are along the highway down here, your room is heated with a pipe that has fins on it. There is no control within the room, and there is no control within the dormitory. If tonight it should turn cold, after being an extremely warm day, it would take until tomorrow night at least to get the heat turned on. That is the comparable picture. And to get that picture, you need to ask the residents within the dormitories themselves.

After the heat has been turned on tomorrow night, which is about the time that our weather starts to change to warm weather again, you will roast for 24, 36, or 48 hours, until a man comes around and turns it off.

Actually, Roane-Anderson, the operating company, knows all about operating controls, and some of these dormitories no doubt have had them on at night. But they don't function. You have to have the man come around and turn it on and turn it off for you. You can go around here on a warm day, just after a cold spell, and you will find all the windows open in the recreation room, or the lounge room, and the heat going full blast. About 10 minutes is all you can take it inside. You will have to get out, because there is no control of the heat.

Then there is the feature of those rooms in which they have the warm-air system. If you are located on the ground floor, you have pretty good control of your heat, and you are not too badly fixed, but if you happen to be in the upstairs back wing and somebody has opened a window a hundred feet or 60 feet from you, every time the blower starts, you have about 20 minutes of extremely cold air blowing on your neck. And there is no way you can duck it unless you stand directly under the register during the time the blower is on.

Representative DURHAM. I ask the question, Mr. Minor, for this reason: You realize, if you have had any experience in running a private home in the last 2 years, that services like that have increased tremendously in the matter of cost of labor. For instance, when I call a plumber now to fix a valve in my house, he charges me for a full hour, \$2.25.

Mr. MINOR. There is a picture here that we might consider at this time.

Representative DURHAM. I am trying to bring this out from the standpoint of the over-all picture.

Mr. MINOR. I understand. These dormitories could not be built today for what you originally paid for their construction, what they originally cost the Army. You will say that is a tremendous figure, but actually if you check your construction costs, you could not build them today for anything like that. However, the plumbing in them should have been replaced if the dormitories were to be used. And they should be used. But regardless of whatever plans are ahead for the future, or anything else, you cannot, with all the factors involved, go out and build what you have there for the money that was originally expended on them.

But, as we mentioned, as to the water and the light, when you go into the YMCA or when you go into the dormitories of the University of Tennessee, you open a spigot and the water actually comes out of it in fine shape. When you close the spigot, it actually closes off. When you regulate one, you really can regulate it. It is surprising to people going there from Oak Ridge to find that the turning-on-and-off process is such that they all turn exactly as they should; whereas here you try to open your spigot and you find you are turning it the wrong way. They are in reverse in most of the cases.

Representative DURHAM. How was the committee that you represent formed?

Mr. MINOR. Originally the thing was like Topsy. When this picture was portrayed in these notices that were put into the dormitory residents' boxes, the place was a hive of angry protest.

Representative DURHAM. Do you feel that it represents a majority of the residents of the dormitory?

Mr. MINOR. I was going to go ahead and tell you exactly about that. These are the memorandums that were issued at the outset of this thing by the Moore Co., the Roane-Anderson Co., and so forth. There is the original picture. And these are the latest rules which have been posted.

Now to get the picture of what took place in the formation of this: A group met at the American Legion. It was just an angry protesting mob whose toes had been stepped on; whose rights had been invaded. And nothing was said: "Here it is. Like it or lump it. You have got it."

So from that, there was a notice in the paper that a meeting was to be held at a given time and place for representatives of all dormitories to attend. And as a dormitory resident, belonging to no group, affiliated with no group, I went over to see what it was all about. It was not a case of whether I could well afford, which I could, to pay \$7.50 more. It was not a matter of affording it. It was that I didn't like something crammed down my neck, any more than you or any other good American would. And I heard various people offer suggestions and speak of their feelings on the matter. The chairman who was operating at the time was one of the councilmen of the community. They were asking for a suggestion. I made a suggestion as to how I would move, if it were me, in the case. And folks jumped up from all around the room and said, "That is the man we want for chairman of the central group."

An election was held from those representatives of the various dormitories who were there, and I was elected their chairman. I instructed those people at that meeting to go back to their dormitories and bring in from each dormitory a duly elected committee to represent each dormitory on that central group.

That, of course, is the way the thing has evolved. The various dormitories have had their acting committee people, who have attended; one, two, and sometimes three representatives from the individual dormitory have come to the Central Dormitory Committee meeting. They, of course, carried back to the dormitory where they lived, the portrayal of whatever moves the central group was making.

Representative DURHAM. You do represent the majority, then, of the dormitory residents?

Mr. MINOR. We feel that we do; yes, sir.

Representative DURHAM. You feel that you do.

Mr. MINOR. That is right; having representation from each dormitory, elected by that dormitory, we have every reason to feel that we represent the majority of the dormitory residents.

Representative DURHAM. Any further questions, Mr. Price?

Representative PRICE. How long have you lived at Oak Ridge, Mr. Minor?

Mr. MINOR. About a year and 2 months.

Representative PRICE. What would you say are the average monthly earnings of the people who live in these dormitories?

Mr. MINOR. Well, I might differ a little bit with the table that is given by Mr. Wilson, there. Mr. Wilson has attached to his letter a table showing what the estimated average earnings of the resident of a dormitory are. I think he is a little bit optimistic, because there are clerks, and there are people who work in homes, and there are people who work as sales clerks in stores, and there are bus drivers. Everybody lives in dormitories, from whatever walk of life. There are engineers, scientists, and so forth, all living in the dormitories.

So I would be a little bit inclined to get down around \$1,600 or \$1,800 a year, which I believe is quite a bit under what Mr. Wilson states there. After all, his is only an estimate, and so is mine.

Representative PRICE. In his estimate of income of the dormitory residents, he indicates that 13.6 percent of the dormitory residents have average annual earnings of under \$2,000 a year, and the next three categories, running from \$2,000 up to \$3,500, have about 68 percent.

Mr. MINOR. He clearly gives that as an estimate.

Representative PRICE. Yes; he only makes the claim that it is an estimate.

Mr. MINOR. That is all I am doing.

Representative PRICE. But we must assume that he has access to the pay rolls.

Mr. MINOR. In that case, it would be accurate. It would be a statement of fact, not an estimate.

Representative PRICE. What type of work do you do here?
